The President reiterated several times in his message that the five-point program he submitted is not socialized medicine and should not be misrepresented as such.

He insisted that the health of the American people is a national concern and must be treated as a national problem on an insurance basis.

Besides health insurance, the President's program included increased grants to States for construction of hospital facilities; expansion of public health, maternal and child-care services; sickness and disability insurance for workers, and Federal grants to public and nonprofit institutions to promote medical education and research.

In most respects the program was similar to that contained in the original Murray-Wagner-Dingell bill which was originally drafted by the American Federation of Labor.

Mr. Green pledged support to the President in a telegram which said:

"I congratulate you on your vigorous and forward looking message to Congress on national health. Your five-point program is in complete accord with the program initiated and supported by the A. F. of L. It meets the urgent human needs of our Nation and merits support of all men of good will."

In his message the President said:

"Under the plan I suggest, our people would continue to get medical and hospital services just as they do now—on the basis of their own voluntary decisions and choices. Our doctors and hospitals would continue to deal with disease with the same professional freedom as now. There would, however, be this all-important difference: Whether or not patients get the services they need would not depend on how much they can afford to pay at the time."

Mr. Truman said that Americans would be free to choose their own physicians and hospitals, and free also to pay for medical service outside the health insurance system—just as they are free to send their children to private instead of public schools, although they must pay taxes for public schools.

Likewise, he said, physicians would remain free to accept or reject patients. They would

be allowed to decide for themselves whether they would participate in the health insurance system full time, part time, or not at all.

Hospitals, he said, would have the same freedom of action.

President Truman told Congress that he favored the broadest possible coverage for the national health insurance system.

"I believe," he said, "that all persons who work for a living and their dependents should be covered under such an insurance plan. This would include wage and salary earners, those in business for themselves, professional persons, farmers, agricultural labor, domestic employees, Government employees, and employees of nonprofit institutions and their families."

In addition, the President said, needy persons and other groups should be covered through premiums paid for them by public agencies. Congress, he said, should vote appropriations to reimburse the States for such premiums as well as for expenditures made by the States in paying for medical services provided by doctors and hospitals to needy persons.

The program would be financed largely through increases in social-security taxes.

---

CONGRESS OF INDUSTRIAL ORGANIZATIONS,
*Washington, D. C., November 20, 1945.*

CIO President Philip Murray today issued the following statement on President Harry S. Truman's message to Congress on health legislation:

"The CIO lends its hearty support to the general principles set forth in President Truman's special message proposing a five-point national health program. This organization and its affiliated international unions is already on record in favor of the five recommendations laid down by the President for legislative action. We commend Senators WAGNER and MURRAY for offering a bill embodying the President's recommendations.

"The CIO takes the following stand on the President's five-point program:

"1. We congratulate the President on his statement with respect to the construction of hospitals and related facilities and for saying that 'in approving State plans and individual projects, and in fixing the national standards, the Federal agency should have the help of a strictly advisory body that includes both public and professional members.'

"In our testimony on the Hill-Burton bill—S. 191—we have been emphatic that the form of advisory board called for by the President is to be desired instead of that embodied in the Hill-Burton bill as reported to the Senate. We urge all Senators, in voting on this bill which is now being debated, to restore the advisory commission to the form asked by the President.

"2. The CIO is on record supporting the expansion of public health and maternal and child-care services as called for both in the Wagner-Murray-Dingell bill (S. 1050) and in the Pepper maternal and child-care bill (S. 1318). The record of maternal and infant care for wives and children of servicemen has demonstrated the need for expansion of this program. Furthermore, no program for construction of hospital and clinical facilities can be adequately maintained if other parts of the President's program are not undertaken.

"3. The CIO has already endorsed the Kilgore bill (S. 1297) for scientific research, including the sections on medical education and research. We are also on record as supporting the related provisions in the Wagner-Murray-Dingell bill.

"4 It has long been apparent to the CIO that a national health-insurance system for prepayment of the costs of medical care is a necessary next step. We have indicated our willingness to consider the participation of voluntary organizations in the insurance system, but favor the general principle of compulsory insurance as necessary to Nation-wide coverage.

"5. No group in the community knows better than organized labor the importance of disability insurance as protection against the loss of wages from sickness and disability. The CIO is already on record as supporting this principle as set forth in the Wagner-Murray-Dingell bill.

"We urge Congress to proceed at once to a consideration of these measures, and especially to the immediate passage of an amended Hill-Burton bill to meet the objections set forth by President Truman and by Senator JAMES E. MURRAY in . is minority report, in their opposition to turning over control of hospital construction to a private organization or group."

## OPA Rent Division Under Investigation in Los Angeles

REMARKS
OF
## HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. McDONOUGH. Mr. Speaker, Los Angeles County, already aggravated almost beyond endurance with overpopulation and overcrowded housing conditions and facing a heavy increase in taxes in real property to maintain local government, has the additional burden of maladministration in the Rental Division in OPA, which is causing serious friction between tenants and landlords.

The following is a copy of a letter to Los Angeles County Board of Supervisors and was sent to me by Mr. John Anson Ford, a member of that board, asking them to appoint a special committee to investigate these intolerable conditions. They are not asking for removal of rent ceilings. All they ask is fair and efficient administration:

APARTMENT ASSOCIATION OF
LOS ANGELES COUNTY, INC.,
*Los Angeles, Calif., October 9, 1945.*

*To the honorable the Board of Supervisors, County of Los Angeles, Hall of Records, Los Angeles, Calif.*

GENTLEMEN: The county assessor proposes to increase the assessed values of rental housing properties effective next year. A sampling of member properties discloses that the increase will be as high as 120 percent in the case of many properties and will average 54 percent above present assessed values.

We recognize that governmental costs, as well as other prices, have risen sharply and we fully expect to pay our share.

However, for 3 years the income of rental housing properties has been frozen. Meanwhile, maintenance costs have skyrocketed, prices now being two and three times prewar levels.

Property owners have had to choose between paying these costs or making only essential repairs and allowing the property to deteriorate. Many have chosen the latter course, also reducing services and discharging employees. Total rental income has not been sufficient otherwise to cover inflated costs.

The blight already begun will spread like a disease into every neighborhood of the county if our citizens must absorb new tax burdens, bled from fixed rental incomes.

We see little possibility of adjustment of rent ceilings. Rather, the trend is quite the opposite in this area. The Office of Price Administration has made the operation of rental housing increasingly difficult and expensive. Our people are discouraged and disinterested in their properties. Friction between management and tenants is mounting. Litigation is crowding the court calendars and is increasingly costly.

It is the mismanagement of the rent-control program that is spreading this blight upon rental properties throughout the county. Fair and reasonable administration of the law will permit adjustments to be made.

An investigation into the administration of the program will reveal such conditions as the following:

1. Landlords and tenants alike have lost all confidence in the ability of the rent department to administer fairly the law.

2. Hidden evasions of rent controls are running riot, especially in the cheaper properties and slum areas.

3. Petitions of landlords and complaints of tenants even now remain for weeks and months unanswered in the files.

4. Rent department employees, misrepresenting themselves to be agents of the FBI, visit tenants and incite them against the landlord.

5. Employees, while in the employ of the rent department, have offered to serve for compensation the interests of individual landlords.

6. Rent department investigators, making highly technical appraisals and decisions, are without prior experience or qualifications.

7. Undesirable tenants are so protected in their occupancy that the owner may obtain possession only after protracted and expensive litigation.

8. Landlords who rely upon the advice and instructions of rent department employees subsequently have been prosecuted or otherwise penalized for having so acted in good faith.

9. Landlords who defy arbitrary decisions of rent department employees and appeal to the courts for protection of their constitutional rights subsequently are subjected to persecution.

10. Rent department employees withhold documents before recording their receipt in the area rent office, thus subjecting landlords to penalties for alleged failure to file within required time limits.

11. Rent department proposals for reduction in rents are made without verification of complaints, thus causing the landlord great expense and effort to answer and prove false any fictitious complaints.

12. Petitions for adjustments because of hardship due to greatly increased costs have been denied without reason, although conforming entirely to regulations publicized as the basis for adjustment.

13. Rents are reduced and refunds ordered retroactively for long periods of time, although the owner has filed a lawful appeal with the proper higher authorities. He is not permitted to deposit the disputed amounts with a trustee. When the order is reversed on appeal, the owner is estopped from recovering the refunds wrongfully ordered by the rent office.

14. Employees acting arbitrarily and without prior inspection reduce the rents of newly rented properties. This not only discourages any offering of new rental units but has caused owners to place exhorbitant first rentals on the property in the hope of salvaging a reasonable rate in the end.

Only through immediate relief from these abuses can we avoid the grave threat of continued deterioration of income properties that ultimately will be reflected in lowered values of all properties in the county. We ask that you, as the representatives of all the citizens of the county, order an investigation into the practices of the OPA Rent Department which threatens the welfare of the county and the soundness of the tax base. We suggest this be done by a special com-

mittee of independently representative citizens equipped with qualified investigators and counsel to hear evidence of such charges as we herein make.

Respectfully submitted by order of the board of directors, Apartment Association of Los Angeles County, Inc.

E. P. CONSER,
*Secretary-Manager.*

Following is a resolution recently adopted by the Los Angeles County Board of Supervisors asking aid from the state:

Whereas the housing situation in California, and particularly in Los Angeles County, has reached a serious crisis resulting in great hardship to returning servicemen and many other persons; and

Whereas there is no expectancy of immediate relief from the Federal Government; and,

Whereas, the solution of the housing problem is a joint responsibility of Federal, State, and local governments: Now, therefore, be it

*Resolved by the Board of Supervisors of the County of Los Angeles as follows:*

1. That Gov. Earl Warren be respectfully urged to include in his agenda for the special session of the legislature, provision for the legislature to grant or loan sufficient funds to the proper public agency in Los Angeles and other counties, in order to provide construction costs for temporary housing for returning war veterans and their families and others in such distress, such grant or loan to be repaid from rents and income derived from the project.

2. That such measures be undertaken as soon as possible to afford temporary relief until the Federal Government discharges its responsibility and until such time as private construction can adequately take care of the housing needs.

3. That a meeting be called of the representatives of Federal, State, county and city agencies interested in the housing problem in order to decide the proper authority or agency to operate such temporary housing projects.

It is further resolved and directed that copies of this resolution be sent to the Governor, to members of the California Legislature, Congressional representatives from Los Angeles County, and to the official housing agencies in this area, Federal, State, and local.

## Frightened

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. HOFFMAN. Mr. Speaker, you better be frightened. I am. You will be, too, if you do a little thinking. Then we all, once we have thought the situation through, may be able to reach the inevitable conclusion that, while we may not all hang together—if we do not all stick together—we may all be hungry, lack the necessities of life, and come, as did France, to civil strife, if we do not all now act for the common good.

The strike of the bus and streetcar workers here in Washington, which twice within a month tied up the Government's business, delayed the processing of the discharge papers of veterans being demobilized, did not hurt or frighten me. I live within walking distance of the Capitol. A telephone operators' strike will not seriously hurt me. I will not miss the service half as much as the operator, after a few weeks, will miss her pay check.

Waking up hungry this morning, I remembered that I could not, as in days gone by, go to the kitchen, get some eggs that my own hens had laid, go into the cellar for a ham that came from my own farm, bring up a few potatoes grown in my own garden, get some milk and butter from a nearby farmer, and, with a little coffee and some bread my wife had baked, have breakfast. I realized that everything edible in the house came from grocery or market. All those items reached Washington only because someone had grown, processed, and transported each item.

If 150,000 General Motors employees go out on strike and they, with perhaps a half million or more others—automobile dealers, salesmen, mechanics—those dependent upon the automobile business for their livelihood—all lose their pay checks; if the demands of the CIO steel workers are not met and the production of steel is cut off and a million or more others go unpaid for a week or two, someone—in fact, several million someones besides myself—may be hungry, either through lack of pay checks or a scarcity of food.

If the bus drivers and teamsters go on strike, just what will happen—not to me, because you do not care anything about that—but to you, to all of us who are in the same boat? Do I hear you saying, "That will not happen—not to us"? It may. Do you ask, "What are you, Mr. Congressman, going to do about it? Why do you not pass a law to stop it all?"

Well, one answer is that, as long as the administration continues its political alliance with the labor leaders and politicians who are demanding and getting special favors, there is small prospect of getting any legislation, no matter how beneficial to the union worker himself, through this Congress. When the administration sees the necessity of legislating in behalf of all the people, instead of in behalf of Sidney Hillman and his PAC, Murray and his UAW-CIO, we will get some relief.

Now, do not fly off on a tangent. I am not "mad" at anyone. I do not know whether motors, steel, the telephone company, or other corporations, can or cannot give a 30-percent increase in wages without increasing the cost of the things they sell. I am not talking about the merits of any controversies.

Ford; Wilson of General Motors; Mosher, president of the NAM; Fairless of steel; a thousand other big businessmen; Hillman of the PAC; Philip Murray of the CIO; William Green of the A. F. of L.; John Lewis, and many other labor organizers and officials, will continue to have an adequate income, but the pay checks of the rank and file of the unions will cease when they quit work.

An employee cannot exist unless he receives an adequate wage. An employer will not create a job, operate a factory unless he makes a profit. Labor leaders advocating and calling strikes will not give any worker a worth-while job. A job must come from men who want to make money, who have the ability and the desire to build and operate a factory, open a business and hire others.

It is time we do a little sober thinking—act intelligently—remember that, if what appears to be coming actually comes, we will all suffer. Today, as always, to those who are dependent upon pay checks for their livelihood hardships come first; their suffering is always the most grievous.

The Fords, Wilsons, Chryslers, the Hillmans, the Murrays, and the Thomases—can get along all right. But what about you and me? If the strikes continue to spread, if violence, rioting, and civil strife come, just what will happen to you and to me—the average citizen? What will we eat? Wear? How continue in business?

Of what I see coming, I am afraid. Are you?

## Postwar Problems

EXTENSION OF REMARKS
OF
### HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech which I made last night at Baltimore:

Good evening, ladies and gentlemen. I am delighted to have this opportunity to speak to you tonight. Our good friend, Mr. Ian Ross MacFarlane, is ill and confined to his bed and has asked me to speak to you over this network. I know you all join with me in wishing for him a speedy recovery and a quick return to the microphone.

I have served in Congress in the prewar years, during the war, and now in this postwar era. It is hard to imagine any period in our history that was more important. This time we must view events from a world-wide perspective rather than from any narrow point of view. You have heard so many people say, "Now that we have won the war, we must not lose the peace." This is a trite expression, but it is nevertheless true. I am thinking of the millions of inhabitants of Europe suffering from starvation and disease, whose homes were bombed out and who are living in cellars and attics. Their clothing is gone, and they face a terrible winter. Fuel supplies will be short and there will be starvation, disease, and death stalking over Europe. We cannot say this is not our problem, for it is out of the seeds of misery that new wars are born. It is from these distressing conditions that hates are engendered.

Today in Congress we are asked to keep our promise to save the starving men, women, and children of the occupied countries, a promise made by President Roosevelt and ratified by Congress. We pledged ourselves to contribute to the United Nations Relief and Rehabilitation Administration certain sums of money. Of course, there has been inefficiency and waste. Some say the job could have been done better. But that's not the question. Should we allow these horrible, distressing conditions to continue, or should we keep our promise to pay the balance of our obligation into the treasury of UNRRA for the relief of the sick, the needy, and the dying.

I am on the Appropriations Committee of the House of Representatives, and I voted

in the committee and on the floor of Congress for this appropriation, with no political strings attached to it. There are some who would play politics with misery, but they are unthinking and do not realize what they are doing. The Senate of the United States has agreed to strike out the unfair provision inserted in this bill to prevent the relief being administered to the poor peoples of some of the occupied countries unless certain conditions were met. I am confident that when the bill is returned to the House of Representatives it will approve the action of the Senate, and I am glad that I consistently took the stand in committee and on the floor that this money must be paid to UNRRA to save the starving, sick, and homeless millions.

I say that we dare not lose the peace, but if we do not come to the aid of these starving, homeless people, then we cannot escape our full measure of responsibility for what follows.

This has been a war of liberation, a war against fascism and its evil threat to civilization. Our armies, together with the armies of our allies, have liberated Europe, but it will prove a miserable liberation indeed if we have simply smashed the gates of tyranny and oppression to let in final destruction by starvation, disease, and political strife. I hope that in a few days Congress will finally approve this appropriation, and the supply of food and clothing can continue on its way to these war-stricken inhabitants of the occupied countries.

While we are talking about the possibilities of losing the peace, let me call your attention to a domestic situation that I believe needs to see the light of day. Recently I wrote to the chairman of the House Committee on Un-American Activities, calling his attention to the fact that there has been an insidious "klandestin" revival of the Ku Klux Klan. I pointed out in my letter to him that we had concluded a world-wide war to preserve the principles of democracy, liberty, and freedom. We cannot permit organizations like the Ku Klux Klan and others of like type, by whatever name they may be called, to bore from within. They aim to array citizens against citizens and to strike at minorities. There were no racial groups in fox holes and no bullet asked a man's religion before it struck. I hope that my request for a complete investigation of this organization will bear fruit and that its membership, small as it may be, will scurry to cover. The dangers to domestic peace and tranquillity that such an organization means are perfectly apparent. True Americans will not tolerate subversive groups, whether they take the name of fascism, communism, Ku Klux Klanism, or any other. There has been criticism of this Un-American Activities Committee in Congress because of emphasis claimed by some on investigation of certain groups. This is an opportunity for the Un-American Activities Committee to show in a forthright way that un-American activities means exactly what it says, and that it is just as un-American to be a Ku Kluxer as it is to be a Fascist or a Communist.

Now for a moment let me come back to another subject. Just a day or so ago all foods were made ration-point free, except sugar. Housewives I know will rejoice, and rightly so. Still we have to be sure of what we are doing and watch those in power to prevent any serious mistakes being made. Just the other day I saw in the public press that someone in Washington was talking about slaughtering a hundred millions hens so they would stop laying eggs and this would keep up the price of eggs. Somebody in the Department of Agriculture was more anxious to keep up the price of eggs for the benefit of the farmers than he was to help the housewives of America. I promptly wrote to Mr. Clinton Anderson, Secretary of Agriculture, and told him that I could never believe that there could be a surplus of food as long as there existed hungry people. There might be something wrong with distribution of food to consumers, but you don't solve the problem by destroying food. If they want to find some way to protect the farmers, there are better ways than by destroying eggs. I reminded the Secretary of Agriculture that 150 years ago Marie Antoinette said to the starving people of Paris, "Let them eat cake," when the poor people were only crying for bread. "Mr. Secretary of Agriculture, you say, 'Let them eat hens,' when what they want is a continual supply of eggs." Marie Antoinette lost her head. Let's make sure we don't lose our heads because of the clamor of one group for special costly favors to the detriment of the great masses. It is not the, philosophy of destruction but the philosophy of production upon which national prosperity depends.

My time is growing short, but I cannot close without reminding you of a few recent events in history. There are many who today have brilliant hindsight but when our country faced its greatest challenge had no foresight at all. They are investigating the Pearl Harbor disaster. That's good. But don't let us ever lose sight of events as they really happened. I was in Congress when a bill was presented to fortify the Island of Guam, one of the outposts in the Pacific protecting our country. That appropriation was defeated by a group who believed that an ocean constituted a real barrier against our enemies. There were some of us who joined with our great President in voting for this appropriation, not because we could anticipate events yet to come, but because we believed that it was wise to prepare ourselves against events that were likely to happen. Then later came Germany's attack on Russia. Japan welcomed this war because it meant that she need fear no attack from Russia. So Japan looked southward toward our country. Then came the occupation by Japan of Indochina, and yet in the face of that—known as it was to every American, indeed to everyone who could read the newspapers—I repeat, in the face of what was so obvious, there were men in this country who on August 12, 1941, after all of these events, voted to discontinue our Selective Service System. It was saved by only one vote. I am glad that I was with that majority who believed in preparedness, and each of us has a warm feeling in his heart knowing that it was his vote that helped bring about that slim majority that prevented the abandonment of our civilian army.

I ask you to bear these facts in mind when you hear criticisms of events of the past.

Let me close now by saying that I am one of those optimists who believe that our domestic affairs will soon be on a less chaotic and more tranquil plane. I believe, too, that under the leadership of President Truman and Secretary of State Byrnes that our Nation will steer the proper course in this new atomic world that faces us, and I believe that as the weeks pass on into months and years, and as Mr. Ian Ross MacFarlane continues to keep you abreast of current events, you, too, will agree with me that events will so shape themselves that we will have a lasting peace and a prosperous Nation.

---

## Letter of Beverly-Westwood Citizens Committee

EXTENSION OF REMARKS

OF

## HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. PATTERSON. Mr. Speaker, I received this letter from one of the largest functioning citizens groups in my district this morning, and feel that their voice should be heard.

The Beverly-Westwood Citizens Committee has expressed herein the sentiments of many of my constituents who are addressing me daily on the subject.

I am sure that many of my colleagues here have gotten similar reactions from their constituents, and are concerned themselves over our departure from the traditional American foreign policy of self-determination for all peoples in the nations of the world.

The letter reads as follows:

NOVEMBER 20, 1945.

President HARRY S. TRUMAN,
*The White House, Washington, D. C.*

DEAR MR. PRESIDENT: The executive board of the Beverly-Westwood Citizens Committee, representing 1,500 precinct workers in the fifty-ninth and sixtieth assembly districts of California, who in turn influence 15,000 voters, decided unanimously to communicate to you our concern over your departure from basic policies which had guided this Nation during the war and which were to have laid the foundations for a durable peace.

When we organized and voted for the Roosevelt-Truman ticket in 1944 we were not supporting a political party or pledging allegiance to a personality. We were registering our approval of principles which we deemed essential to the future security of our country.

The basic question in the 1944 elections was whether the keystone of American foreign policy would be the growing unity of the United States, Great Britain, and the Soviet Union for the preservation of world peace or whether we were to embark on a new era of power politics with nations taking unilateral action and developing blocs that must inevitably lead to new, disastrous war.

The American people chose the former policy and gave a mandate to your administration to carry it out.

It is our considered opinion that your administration has departed from that policy.

Wars cannot be prevented by armament races, by military conscription, by threats of secret weapons, or by swinging a big stick. The German Nation is a classic example of the failure of such policies.

Wars cannot be prevented by intervention in the internal affairs of other countries, by nourishing reactionary forces in a nation while starving the progressive elements.

Wars can be prevented only when the Big Three act in unison to create the conditions of peace.

Mr. President, what has become of the spirit of Dumbarton Oaks and Bretton Woods and the Potsdam Declarations?

Are our American marines in China carrying out a policy of nonintervention? Are we furthering the cause of democracy and peace by giving material aid to Chiang Kai-shek—a dictator who has resisted every effort to broaden the democratic base in his country, a man who has expressed in writing his contempt for western cultures, an inept statesman who has brought his country to the verge of ruin, and who now coddles the Japanese and their puppet troops while he uses American arms and men to force civil war upon 90,000,000 anti-Fascist Chinese?

And Mr. President, if American troops are used against the Chinese people today, and if American materials of war are used against the Indonesian people, what guaranty have we that the atomic bomb will not be used tomorrow to further American interests which do not happen to coincide with the interests of some other foreign power?

We can no longer be content with verbal gestures toward unity while act after act of your administration runs counter to these promises. The time has come to call a halt

to this spirit of nationalism that is permeating our State Department.

Therefore we are calling upon you to take immediate positive steps to set the machinery of the United Nations Organizations into motion and to make that organization the decisive factor in all international questions. Let the United Nations Security Council decide on common policies for handling the atomic bomb, Japan, China, Indonesia, Spain, and all other explosive forces which may now or in the future threaten the peace of the world.

To do less is to depart from the Roosevelt tradition and to split the forces forming the democratic coalition both internally and on a world scale.

For all the A-bombs, battleships, and pious phrases in the world cannot change the basic truth that peace is indivisible.

Sincerely yours,

NELDA SALINGER,
*Executive Secretary, Beverly-Westwood Citizens Committee.*

## Peacetime Conscription

EXTENSION OF REMARKS
OF
## HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. PATTERSON. Mr. Speaker, I would like to call to the attention of the House this letter from Mr. Paul Shoup, president of the Los Angeles Merchants and Manufacturers Association. I believe that Mr. Shoup has given a very good analysis of the peacetime conscription question, and feel it most worth while to be included in the RECORD:

MERCHANTS AND MANUFACTURERS ASSOCIATION,
*Los Angeles, November 16, 1945.*

The Honorable ELLIS E. PATTERSON,
*House Office Building,*
*Washington, D. C.*

DEAR MR. PATTERSON: The Merchants and Manufacturers Association as an association does not deal with such questions as peacetime conscription, our problems being entirely those related to labor relations.

Speaking personally, I feel that the present Army and Navy organizations should be preserved in such numerical strength as will give them the necessary vitality; in other words, that the fire should not be allowed to go out and that there should be plenty of material available to make it as large as needs require. Aside from that, I do not at this time believe there should be peacetime conscription, taking young men a year out of their natural activities in order to give them military knowledge. I have reviewed the subject with President Tresidder, of Stanford University, where I am a trustee, at some length. He was a flyer in the First World War and as a trained observer found, after the war, that the discipline and training of the young men in the war did not better them materially in any way subsequent thereto. With that premise the only question, then, is of military necessity.

Before determining military necessity and involving the great expense to the country and deprivation of young men of free control over their own time for a year, it should be, in my judgment, very clearly and fully developed as to what the changes are in the art of war that have been brought about by science and its application. Certainly the public has no clear idea as to that. No one knows what has been made obsolescent, temporarily at least, or not. Obviously if control of the air and of effective bombing either through that control or long-range guns has the power with use of the atomic bomb now attributed thereto, then arises the question of what use our present Army and Navy will be, aside from occupation following the powers of destruction.

Putting it briefly, what are these young men to be trained to do? Until we have an answer to that I do not see the value of peacetime conscription.

With respect to what we might call the science end of warfare, the situation is much more clear, and volunteers should be asked for with ample preparation and ample pay, not only to provide the necessary force through training, but develop further power through research. And the pay should be such as will be attractive. Fifty thousand men at eight or ten thousand dollars a year, if qualified for such work, might well be worth a great deal more in event of conflict than an army of 5,000,000 men with a military training that they could achieve in a year; and the expense would be very much less, and certainly our Nation needs to guard the use of expenditure of the Government dollar as it never did before.

The foregoing is rather by way of illustration than presenting any conclusions; but leads to the suggestion that the present Congress pass up for this session the question of a universal or widespread peacetime conscription and devote the money and thought of the country to the development of science and its application; and make room for the use of highly qualified men in limited number in that work.

Yours truly,

PAUL SHOUP, *President.*

---

A bill relating to the reentry of Chinese laborers and Chinese wives and children into the United States

*Be it enacted, etc.*, That any wife or child of a Chinese merchant and any Chinese wife of a citizen of the United States who, after May 27, 1941, and before the date of enactment of this act, received a permit (commonly referred to as form 631) to reenter the United States under section 10 of the Immigration Act of 1924, as amended (U. S. C., 1940 ed., title 8, sec. 210), shall be permitted to reenter the United States as though such permit was issued on the date of enactment of this act.

SEC. 2. Any person temporarily admitted to the United States under section 6 of the act of Congress entitled "An act to prohibit the coming of Chinese laborers to the United States," approved September 13, 1888, as amended (U. S. C., 1940 ed., title 8, sec. 277), as a merchant and any person temporarily admitted to the United States as a wife or child of a Chinese merchant shall be considered for purposes of section 10 of the Immigration Act of 1924, as amended (U. S. C., 1940 ed., title 8, sec. 210), as having been admitted to the United States for permanent residence.

## Where Do Wages Come From?

EXTENSION OF REMARKS
OF
## HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Peter F. Drucker from the Saturday Evening Post of November 17, 1945:

WHERE DO WAGES COME FROM?
(By Peter F. Drucker)

In the welter of claims and counterclaims, charges and countercharges, which accompany the current union drive for higher wages, one question is rarely discussed: Where will the higher wages come from?

Union leaders, if they raise the question at all, try to answer it with the time-worn slogan of high business profits out of which labor's demand for higher wages will be satisfied. But this is really only an attempt to evade the answer by playing on popular ignorance. In the most successful business, profits are only a tiny fraction of wages—less than 5 percent, to be correct. Even a very small boost in wages could not be paid for out of profits, let alone the large increases the unions demand today.

If we take the income of all American business in 1944—the last year for which complete statistics are available—and take out all the money paid to people outside the business—the supplies of raw materials and machines, the creditors, the Government in the form of taxes—we find that labor got practically all the rest. Out of each dollar available after obligations to outside suppliers and creditors had been paid, 92 cents went to labor in the form of wages. Even of the remaining 8 cents a large share—actually, more than half—was not profit available to the shareholders and owners, but had to be plowed back into the business for future expansion from which labor benefits as much as shareholders. Actually, only 3½ cents out of each dollar available in American business and industry last year went to the owner of the business as a profit. Even if we distributed all business profits to labor, wages would only be increased by less than 4 percent as against the 30 percent increase demanded by the unions.

We find the same situation if we look at individual businesses rather than at the national average. In the United States Steel Corp., the worker received, in 1944, 93 cents of every available dollar; in Bethlehem Steel, 95 cents; in General Motors, 90 cents; and at Goodyear Rubber, 91 cents. In some industries such as railroading, labor's share is even larger; 97½ cents out of every dollar available at the Illinois Central Railroad was spent on wages.

Nor is the picture very different if we analyze the prewar period. In 1941, the year during which American business made its highest profits, labor received a little more than 88 cents out of every dollar of available income, with the rest split halfway between the shareholders and the future expansion needs of business. In bad years, such as 1932 or 1938, labor gets 100 cents of each dollar of available income or more; in other words, the business operates at a loss. In other countries it may still be possible to pay higher wages by whittling down the profits of business; for in no other country does labor obtain anywhere near the share in business income it receives in this country. But in the United States surely higher wages cannot be paid for out of business profits.

There are thus only two sources of higher wages. Industry can charge higher prices for its products. Or we can obtain the money for higher wages by a greater efficiency of labor under which the worker produces more goods in the same period of work. In either case, a surplus income would be available with which to increase wage rates.

The first way—higher prices—clearly defeats its own purpose. If we increase prices in order to increase wages, the worker would simply lose as a consumer what he has just gained as a producer. Actually, the worker would not only not gain anything, he would lose on balance. The people whose incomes have not risen together with that of the worker—employees on fixed salaries, farmers, small businessmen, and professional men—would be unable to buy as much as

before. Thus the demand for the workers' products would go down, and with it employment. And high wage rates are of no use to the worker who cannot find a job.

There is thus only one real source of higher wages—increased productivity. Greater output per man-hour alone makes it possible for the workers to get a higher income. The whole tremendous increase of the standard of living since the industrial revolution has been based on a steady increase in productivity per man-hour. And of the additional wealth created by higher productivity, the worker has always received the lion's share. Real wages—that is, the amount of goods and services which the worker's wage will buy—have actually risen considerably faster than has productivity. In other words, the greater the industrial efficiency, the less will be the shares that go to the middleman and to the owner.

The best recent example is the rayon industry. Between 1929 and 1941, the productivity of the worker in the rayon industry was increased more than fourfold by technological progress. This made possible a cutting of the rayon price by almost two-thirds, which, in turn, led to a sixfold increase in the consumption of rayon goods. But during the same period the wage of the rayon worker also increased two-thirds; and even though technological progress made it possible for each worker to turn out more than four times as much as he had done in 1929, the industry employed one-third more men than at the peak of the boom.

Although few industries equaled rayon in technological progress in the years before the war, the general picture was the same: steady increase in productivity per man-hour, resulting in steady cuts in prices and a steady increase in the wage rate. Since the war, however, things have changed considerably. Of the 21 industries on which the Department of Labor published detailed figures, 11 have managed to continue the increase in productivity right through the war, in two industries the output per man-hour is the same as before the war, but in 8 industries it has gone down. These figures do not include the new industries such as aircraft, nor the industries which changed to completely new products, such as, for instance, the automobile industry. But we know that in these war industries productivity per man-hour fell sharply—though less in this country apparently than in Great Britain or Germany.

Wages at the same time have gone up steeply everywhere throughout industry. As a result, it costs, today, much more to produce goods than it did before the war in practically all American plants. In the cement industry, for instance, the 1944 worker turned out only four-fifths as much cement as before the war, but his income was 50 percent higher. In the cotton industry, production per man-hour was maintained, but for the same work the worker received twice as much money. In the production of boots and shoes, a worker turned out in 1 hour about as much as he turned out in 1939, though less than he produced in 1941. But his pay was half as high again as it was before the war started.

This does not mean that American industry or American labor is less efficient than it used to be. Actually, it is remarkable that American industry and American labor could be as efficient as they have been, considering the inexperience of our wartime labor force, the change in products and in methods of production, and the strain under which the industrial machine has been laboring. And the main reason why wage costs have risen so much faster than productivity was the widespread use of overtime and nightwork with higher wage rates. Altogether, there can be little doubt that American industry has learned a great deal during this war and that we can expect a very rapid rise of industrial efficiency and productivity, now that the war is over. Many industrial leaders are certain that an increase of 15 percent in wage rates on top of the 20-percent wartime increase can be balanced by higher productivity. Nevertheless, the question remains: Can we satisfy the unions' demands that the worker receive as much for a 40-hour week as he now receives for 52 hours of work—the slogan of the "unchanged take-home pay"—without raising prices so high as to make inevitable an economic collapse? Can we expect productivity per man-hour to go up so fast during the next year or two as to catch up with a jump of one-third in labor costs?

Even if productivity increases fast enough to make possible the satisfaction of the unions' demand, there would still be the question whether all this increase should go to the worker or whether it is not more equitable and also more profitable for the worker himself to cut in the consumer through lower prices. But before we can even discuss this much-debated and difficult question, we must realize that the only source of higher wages for the worker is the worker himself.

## Statement of Archbishop Richard J. Cushing, of Boston, on Peacetime Military Conscription

EXTENSION OF REMARKS
OF
### HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement opposing peacetime military conscription by Archbishop Richard J. Cushing, of Boston. This statement appeared in the Pilot, official publication of the archdiocese of Boston:

HIS EXCELLENCY OPPOSES PEACETIME CONSCRIPTION

Speaking at the communion breakfast of St. Patrick's Alumnae, Roxbury, and later at a similar event sponsored by St. Joseph's Alumni, Archbishop Cushing repeated his opposition to peacetime military conscription. "There is another matter," he said, "on which I wish to comment briefly. It is a matter which would affect the lives of all. It would affect the future of individuals and their personal, vocational plans. It would affect the futures of families and their morality. It might even have a serious indirect effect upon the church itself, especially upon the future of its education and the vocations to its priesthood. It would radically change, in many important respects, our whole American way of life.

"I refer to the proposal that we adopt a program of permanent conscription of young men for peacetime military training.

"Judging from the daily papers, many people propose to defeat this program for political and military reasons. There are many good grounds upon which, apparently, they can do so. I am not concerned with these. I am concerned with moral and social reasons why peacetime conscription would be disastrous for our democracy."

NOT A NEW IDEA

"First of all, let it be remembered that this idea is not a new one. If we adopt it, we will not be the first nation to have done so. Wherever permanent conscription has been tried by any major nation, it has a bad history. Since first Napoleon used peacetime conscription and Prussia followed his bad example, the system invariably led to dictatorship, to militarism, and to those competitive armaments which have been the curse of Europe and the crippling of its culture.

"That is what Cardinal Gasparri meant when he counseled the nations to outlaw this system after the last war. Cardinal Gasparri knew Europe well. He knew its history and the causes of its wars. He knew the things which alone could save Europe; he knew the things which had ruined it. He blamed peacetime conscription for the conditions and the atmosphere in Europe which produced wars in every generation. He said 'Peacetime conscription in Europe has been the true cause of so many and such great evils for more than a century that the only hope (for the future) lies in its total, simultaneous abolition by the nations.'

"The great Cardinal was right, and those who refused to heed his advice on this point were wrong. By tolerating the continuance of peacetime conscription in Europe, they made World War II inevitable. God forbid that we now imitate Europe in her worst systems. God forbid that a program which has been so bloodily discredited in Europe should now become part of our postwar program. It may interest you to know that many of America's greatest peoples came to this country precisely in order to escape the moral and social conditions in the Europe of the last century which conscription caused. One of America's most envied characteristics in the years before the war was her freedom from the regimentation and the moral decay which permanent conscription has always brought with it in Europe."

APPALLING EFFECTS

"Our people have never refused their wholehearted cooperation to any military program made necessary by a real emergency. But, emergencies are by their very nature temporary. If a temporary emergency ever exists which appears to require conscription, then people living in a democracy have a right to know what that emergency is, what is being done about it, and why military measures are necessary in order to meet it. But no temporary emergency should be made the excuse for a permanent program of militarism, a program spelling the end of our total way of life.

"Religious people have further grounds for reservation with regard to these proposals. We are faced with appalling evidence of the effects on national morality of conscription in Japan, in France, in Germany, and in the other major nations which have established this system. We hear disturbing reports of what the Army policies on morality, especially sex morality, can do and have done to the moral philosophies and practices of even our boys. Even temporary, necessary wartime conscription brings with it serious moral problems. I do not need to elaborate that point. But the proposals to make this permanent and part of our permanent peacetime set-up are frightening. If every American boy in his late teens is going to be exposed to this system and to all that goes with it in the way of "moral" and "hygienic" education, then America and religion have some dark days ahead for them. We are going to be a very different people, and the history of Europe and of Asia gives us no reason to believe that we are going to be a better people or a more prosperous people.

"That same history makes us fear that we will not even have the peace which, we are told, conscription will protect. Germany had peacetime conscription, and Germany did not keep the peace. France had peacetime conscription and France could not keep the peace. Every losing nation in World War II was a nation which relied for its defense on peacetime conscription, and which had been bled white in its moral and physical life by the conditions which peacetime conscription

makes inevitable. I hope you will not be deceived by emotional arguments in favor of this system; read its actual history elsewhere and meditate on its moral implications before you decide that it is a good idea for America."

## Foreign Loans

EXTENSION OF REMARKS
OF

### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I am submitting herewith a copy of the speech which I made before the National Industrial Conference Board, an organization composed of some of the leading businessmen in the country, at the Waldorf-Astoria Hotel in New York City on November 20, last, on the subject of foreign loans.

The speech follows:

Mr. Chairman and members of the National Industrial Conference Board, I feel very highly honored to be invited to discuss such an important subject as that of foreign loans before such a distinguished and enlightened assemblage of American business leaders. Permit me in the premises to acknowledge with humility my own knowledge of my inability to appropriately and adequately do the job. I should also like to disclaim in the beginning any pretense to a knowledge of world economics or, for that matter, to being an economist. But after some 2 years of arduous application to the job of serving as chairman of the Special House Committee on Postwar Economic Policy, I do modestly confess that I have arrived at some definite conclusions about the common horse-sense variety of economics.

FOREIGN TRADE AND LOANS

The subject assigned me for discussion is foreign loans. But, Mr. Chairman, since the question of foreign American loans is inseparable from American foreign trade, it is impossible to deal with the one without discussing the other. I assume that my invitation to appear here before you this evening arises from the fact that seven members of the full Postwar Economic Policy Committee recently returned from a mission to Europe to study first-hand the economic situation there and to check up on the sixth report of that committee dealing with foreign trade, which was issued last May. That subcommittee was composed of Representatives ZIMMERMAN of Missouri, WOLVERTON of New Jersey, HOPE of Kansas, WOLCOTT of MICHIGAN, LEFEVRE of New York, SIMPSON of Illinois, and myself; we were accompanied by Messrs. Marion B. Folsom, our staff director, and Dr. William Y. Elliott, as special consultant. Upon our return we made a report of our findings to the full committee, which consists of 10 Democrats and 8 Republicans. In addition to the 7 who made the European trip, the committee is made up of the following: Representatives COOPER of Tennessee, WALTER of Pennsylvania, VOORHIS of California, MURDOCK of Arizona, LYNCH of New York, O'BRIEN of Illinois, FOGARTY of Rhode Island, WORLEY of Texas, GIFFORD of Massachusetts, REECE of Tennessee, and WELCH of California.

And I am happy to be able to report to you that those findings were unanimously approved, without dissent, by this full committee. In fact, I hope I may be pardoned in expressing justifiable pride in the fact that all of the eight reports filed by this committee, composed of men representing various phases of our political and geographical views—and dealing with a wide variety of subjects—have all been unanimously reported to the Congress and the country.

This report, which was filed with the Congress last week, deals with the whole subject of the economic reconstruction of Europe. Foreign loans and foreign trade are but two aspects of the report. And I hope it will be borne in mind that in the discussion of foreign loans, with which the report deals in part, it is assumed that private loans will follow if suitable conditions for those loans are made by the borrowing countries.

FOREIGN LOANS

Foreign loans in our opinion can only be justified (1) on the broad basis of humanity and good will; (2) for economic reasons, including the fostering of American trade; and (3) for political purposes, looking to world economic rehabilitation coupled with a resultant world peace.

On the first justified principle it will be borne in mind that the United States today is contributing, as a gift, approximately 80 percent of all of the funds and goods that go to the relief of the stricken countries of Europe under the administration of the United Nations Relief and Rehabilitation Administration. And while that laudable undertaking is rendering a very high and noble purpose, there are many barriers—due to the conflicting interests of the various foreign states—which substantially handicap the purpose undertaken of feeding and clothing, to a subsistence level, the unfortunate peoples of war-ridden Europe, it is nevertheless recognized that in the name of humanity that work must continue.

The objective of American policy with reference to foreign loans should be primarily to increase in every way possible the total trade of the world as a contribution to a stable and enduring peace. It is recognized that America's share in this increased world prosperity would play a very important part in determining the size of the national income in the United States and the extent of its employment and production. Without a substantial world trade it is difficult to foresee just how America is going to be enabled to maintain its goal of full employment, its high standard of living, and at the same time retire or even carry, without inflation, any substantial portion of its stupendous national debt.

But while the opportunities for American foreign trade are more than an idle dream, there are many obstacles to overcome. There must first be a rehabilitated Europe. Those of us who visited postwar Europe a few weeks ago were nothing short of amazed, in spite of our reading knowledge, of the destruction that exists there. The economic plight of Europe beggars description. The destruction of many of the principal cities of Europe is beyond belief. One sees piles of debris where once beautiful cities thrived and then cannot believe his eyes. While the destruction of the factories—the source of production of raw materials into finished products—is not as complete as one might have anticipated from the heavy bombardments that took place, the ability of the remaining factories to produce and of the remnants of those cities to function and thereby furnish employment and facilities for livelihood is shattered. The whole transportation system is so completely devastated that orderly economic functioning is not possible. In fact, the prospects for the people in parts of France, Norway, Belgium, Russia, and all of Germany, to come through the ensuing winter without serious hardships and deterioration below minimum levels of subsistence are anything but good. Moreover, ruinous inflation is the rule in most of these countries rather than the exception. If some of these countries, and particularly Germany, are not driven into communism or anarchy within the next few years it will be most surprising. That there is a necessity and a crying need for financial assistance in the form of long-term loans to most of these countries is unquestioned. Of the 14 countries which we visited, Sweden alone bears any resemblance to a normal peacetime economy and degree of prosperity, and even Sweden's industries are marking time for lack of coal.

As a part of the short-term problems these countries must have dollar exchange with which to purchase capital goods, all types of locomotives, rolling stock, trucks, rails, and other items of transportation and communication. The housing problem is most acute. Some cities had as much as 50 percent of their dwellings destroyed. In Germany most cities ran to a much higher percentage. Moreover, these people must have food, raw materials, medicine, and other immediate necessities if millions are not to die from the slow and pitiful process of starvation.

Next to the transportation and communication difficulties of Europe and perhaps on a par in importance is the shortage of coal and other fuels for the resumption of industrial production. France, for example, always had to import at least one-third of its requirements and was in very large measure dependent upon coal from the Ruhr and the Saar areas. Belgium and Holland require special coal from the Ruhr areas; and Luxemburg is dependent upon the Ruhr for its whole industrial life. In addition to these sources, the large centers of coal production of Europe were in former German Silesia, now Polish territory, and in Czechoslovakia. In spite of the machinery afforded by this country under lend-lease to improve British production, coal production in England is still far short of the needs for industry and heating plus the necessary bunker exports of coal. The coal problem presents not only the difficulties of securing adequate transportation but of getting miners and skilled operators as well as management. The removal of Polish and Russian coal miners from the liberated areas of France and Belgium has further complicated the picture.

SOURCE OF LOANS

Unfortunately, from our point of view, there is only one substantial source to which these countries can look for financial assistance in the form of loans to rehabilitate their devastated countries and that country is America. While it is true that Britain is offering credits, Canada is making sizable loans, and Sweden, Switzerland, and some of the South American countries are making comparatively small loans, in the final analysis these countries turn their eyes again toward Washington for relief from the chaos that threatens their economies and their governments. As one who believes and has repeatedly stated that America cannot forever be expected to play the role of a gargantuan Santa Claus, I am nevertheless convinced that there is a place in this dismal picture for American loans.

But, like most average American citizens, I am not unmindful of what happened after World War I when America, playing its traditional role of big brother, made large loans to the European nations who had suffered from the ravages of that war. Then the immediate post-armistice loans suffered the same general fate as the war debts. Neither am I unmindful of American public opinion today. And it is to be doubted whether American public opinion currently would approve of large-scale loans without assurances and guaranties of the protection of our interests, even though the economic and humanitarian aspects abroad are more forceful now than then. The fact that those loans were largely repudiated is sure to be revived in any argument for large American loans now. Moreover, that situation today is aggravated by the reaction toward some of the recent policies of our allies in the late European war.

All through its trip the committee found that the countries visited, almost without exception, were returning to the principles of

bilateralism; barter, with the accompanying features of frozen or controlled exchanges; quotas on imports; subsidized exports; and other devices which hamper world trade. This was due, it was recognized, to the present lack of adequate holdings of foreign assets to support large import programs and the inevitable absence of exports that accompanied the destruction of the productive systems, or their almost total use for war purposes.

With a view to seeking remedies for these conditions the committee interviewed the heads of the governments concerned, including Generalissimo Stalin and Prime Minister Attlee, the finance and commerce ministers, and the heads of the planning agencies. In nearly all countries the foreign ministers were included because of the direct bearing of political obligations on economic policy.

CONDITIONS OF LOANS

As imperatively needed as this financial assistance is to these war-devastated countries, and as strong as is our desire to assist in their rehabilitation and to bring about the coveted goal of a stabilized peace, we are convinced that our assistance and cooperation should not continue to be a unilateral undertaking. And while the barriers previously mentioned, as well as others, are being raised by most of the countries now seeking, or which will hereafter seek, loans from this country, it is recognized that the largest loans sought are those by Great Britain and Russia, with France a close third. China is sure to follow, and many another country is lined up with outstretched hands. Throughout this war, as in the previous one and the peace that followed it, America is called upon to play the role of the good Samaritan. And though this role has been a laudable one, it is doubtful that we can always continue it. Somewhere along the line America's own interest must be considered. Cooperation cannot always be a one-way street. And in this connection I should like to repeat here that, in my judgment, there must be a stiffening of our collective backbones in dealing with some of our allies of the late war. The policy of coddling can be taken for weakness.

Assuming that world economic stabilization and world peace were our only goals, one could well visualize America's unrestricted contribution of fifty or even another hundred billion dollars, added to its already staggering national debt, if, by such contribution or gift, it had definite assurance of that peace. But in the light of present events, and in the knowledge of the selfishness of human beings, which is reflected in human organizations called governments, we are forced to realize that perpetual peace among men cannot be bought that way. We must consider the practical aspects of the situation which confronts us.

Therefore, our committee has recommended to the American Congress and through it to the American people that before such large-scale loans can be made the borrowing nations should make certain reasonable concessions, and that our financial assistance should redound to the interest of the creditor as well as the debtor. The committee, broadly representative of the House of Representatives, felt that loans should be used to increase world production and get other nations on their feet and off relief. But it felt strongly that we should not let nations use our funds to flout our own policies, loans must be made an instrument of our total foreign-economic policy.

GREAT BRITAIN

Our recent mission brought about a rather lengthy stay in London and extended conferences with our American officials there and the responsible British officials, including Prime Minister Attlee, Mr. Bevin, Sir Stafford Cripps, Mr. Dalton, and other cabinet ministers, as well as business leaders and former cabinet ministers.

With the political situation existing in Europe today, our committee could certainly not be charged with approaching the question of British economy and security with a lack of sympathy. The committee appreciates the extremely difficult economic problems which the United Kingdom faces as the result of 6 years of war. Prior to the war, Great Britain met her unfavorable balance of trade by the income received from overseas investments, and the income from shipping, insurance, and other services. Not only has she been forced to sell a substantial proportion of her investments but new overseas debts to the extent of $14,000,000,000 were incurred. Her income from shipping and other services has also been greatly reduced. On the other hand, she faces the problem of repairing and replacing homes damaged by the war and of making up the deficit incurred in the war years when no houses were built. The committee was informed that over 200,000 houses have been damaged beyond repair and 3,000,000 others damaged to some extent. Industry is also in need of new machinery and new buildings and must repair or replace those damaged during the war.

Britain's foreign assets have diminished by one-third, or perhaps nearly one-half. But she still controls the richest raw material resources of the world.

Our trade with Great Britain in the past has been greater than with any other single nation. Britain's present position requires assistance to get back on a sound trading basis. To facilitate this recovery is to facilitate our own trade and to promote world stability and recovery. Over 5 to 7 percent of foreign trade, in terms of our national income, fertilizes all the rest of our trade and transportation, and make up 30 to 40 percent of some of our most important industry—total trade.

The committee feels that a solution to the present problems involved in American foreign trade with countries within the so-called sterling area must be worked out as a prime requisite for large-scale loans to Britain. It recognizes the basic need of Britain for exports in order to maintain the living standards of its population. The great burden of loans from Empire and other countries has resulted in sterling balances in London that cannot be liquidated on any short-term basis.

It is clear that under the present conditions of a shortage of foreign exchange, and without the availability of large-scale loans, some temporary restrictions on British imports are necessary. These measures, however, should not be continued beyond such time as loans are made available to clear up outstanding difficulties of exchange shortage. The committee feels that while it is natural for England to resort to a continuation of import controls, government purchases, and quotas, there must be assurance of freeing trade within the shortest possible period. Exchange controls through London should be the first to go. It is also felt that productive loans can be made to England and to the countries to whom England owes large sums of blocked sterling for war debts. We are convinced that scaling down and funding of the war debts of Britain to these countries is a preliminary step to any agreement to furnish loans by the United States. All loans, settlements, of lend-lease agreements, and surplus property agreements should be made contingent upon the willingness of England to remove the temporary restrictions on imports, with a schedule agreed upon for their timely removal.

The same principle would apply to the removal of exchange controls which have been made necessary in wartime and are continued as a result of war debts in neutral areas and countries of the sterling area. These controls effectively prevent at the present time any large purchases from the United States by countries like India and Egypt. They are supplemented by bilateral agreements presently being negotiated and by a continuation of the Ottawa agreements affording tariff preferences within the Empire. These should also be modified.

SOVIET REPUBLIC

Among the countries visited by our committee was that of the Soviet Republic. We spent a strenuous and productive week there endeavoring to learn first-hand the economic structure of that great country—to determine as far as possible what portion of Russia's economy was going into armaments and, generally, to ascertain just what this resurrected giant of the Old World had as its objective in a world remade by World War II. Of course, in the proper appraisal of Russia and its objectives, as well as its needs, one must take into consideration the inherent differences that exist between the peoples of that republic and their political system as contrasted with the English-speaking races. But notwithstanding this, the committee was amazed—in spite of the efforts of the Government to make our stay there as pleasant as possible—at the lack of economic and political freedom of the individual as compared with that of the average American citizen. It was disappointed in the absence of opportunities afforded other peoples to visit Russia and to fraternize with a friendly ally. Likewise, the committee was disappointed in its inability to find the answer to some of the questions that it asked. It was difficult for a committee of American Congressmen to understand, for instance, why our great and friendly ally, the Soviet Republic, would not permit American planes to fly into Russia, or why even the figures on gold production should be treated as an official secret. In general, the large degree of secrecy with which the Russian Government surrounds itself and its people, preventing friendly commercial and even diplomatic relations between itself and its recent allies in war, is difficult to understand. Unless Russia reconverts its war machine to peace, why should we support it? It may mean business, but from the world point of view, as well as our own, it may not be good business. And our committee upon its return made some very pointed references to that policy, and particularly pointed out that the almost complete Russian censorship of news by the correspondents of her allies since the war was highly deplorable. In this connection, it might be interesting to note that as a result, certainly in part, of that criticism, we are told that this ban is now being removed.

But the committee fully recognizes the tremendous destruction in Russia caused by Hitler's armies. At least 40 percent of the industrial capacity of Russia was at one time under German domination; its coal mines in the Don Basin were largely wrecked; Stalingrad, a center of important industrial production, was reduced to ruins. The all-out war efforts of its people, the loss of many millions of men, and the destruction and scattering of many more millions of the civilian population, as well as the "scorched earth" policy that covered large parts of the farming areas of Russia, have reduced the standard of living of the people far below the levels—never high—of prewar Soviet Russia.

There would seem to be a real economic opportunity for extensive trade between the United States and Russia. The committee was informed that Russia needs immediately and during the next few years a wide variety of tremendous quantities of goods produced by the United States—locomotives, rolling stock, transportation equipment of all kinds, machine tools, construction equipment, and capital goods in general. On the other hand, Russia can supply the United States with minerals such as manganese, chrome, and asbestos, as well as timber, various wood products, and furs in limited amounts, as well as large amounts of gold. How much of the latter can we reasonably continue to take raises another question.

Whether these possibilities of trade expansion can be realized for the benefit of both countries depends not only on the possibility of granting productive loans by the United States to Russia but also upon the full cooperation of both countries in respect to working out the economic conditions for repayment of loans and for working together on equal terms. Cooperation with Soviet Russia on equal terms is certainly a basic objective of the foreign policy of the United States. If, however, the Russian policy continues to insist upon a high degree of secrecy on fundamental aspects of its economy, including its armament policy, and to prevent the entry into Russia and the free passage within Russian boundaries of technicians and members of the press from the United States and other countries, a barrier exists against real cooperation.

It is therefore our opinion that a sound relationship between the United States and Russia, which is obviously an important objective, and the granting of loans, must in the nature of the case be dependent upon the satisfactory clarification of the following points:

(a) What is to be the policy of Russia in devoting to armaments the production over which it has control? What portion of Russian production will continue to be devoted to armaments and what relation does this bear to her needs? How does Russian policy in this regard compare with that of other countries?

(b) The full and frank disclosure of Russian statistics and an opportunity to scrutinize the facts upon which they are based with regard to economic production in all parts of Russia.

(c) The fulfillment of Russia's political obligations on the same terms as those of other governments. This includes the withdrawal of Russian occupation forces in accordance with the Potsdam agreements and the Yalta Conference and other agreements.

(d) The disclosure of the terms of the trade treaties made by Russia with the eastern European countries now under Russian occupation and control. Without this information it is impossible to estimate what should be American policy toward these countries as well as Russia.

(e) The administration of relief in these areas on nonpolitical lines and in a way that does not permit the siphoning off of supplies to Russia which will have to be replaced by the relief afforded from the United States and UNRRA sources.

(f) The committee feels that the protection of American property, including copyrights, in the countries under Russian control in eastern Europe should be a condition for loans to these countries. We cannot see our books, periodicals, newspapers, and movies blocked out in countries asking us for aid and loans.

The Department of State has insisted upon the protection of the freedoms guaranteed at the Yalta Conference—freedom of religion, press, and elections. The committee feels that Russia itself should afford adequate opportunities both for diplomatic and uncensored journalistic inquiries and representation within Russia, and should agree to the rights of entry of planes such as is accorded freely to Russia by other countries.

While I have singled out England and Russia for consideration, there are some general conditions attaching to loans to any country that the committee also felt should be borne in mind if congressional support is to be had for a constructive loan policy.

1. Lend-lease settlements and surplus property should be made a first requirement for cleaning up outstanding problems through earmarking such parts of the loans to be made as may be required for these settlements. There is a real question about the return of unexpired lend-lease materials or its payment on the same terms as other surpluses. We feel that no country which has refused to make an equitable settlement for the disposal of our permanent installations under lend-lease is entitled to come in once again for aid from the American taxpayer.

2. The equitable protection of our civil aviation rights, communications and the exports of our most valuable advertising media, such as books, periodicals, newspapers and movies, ought to be insisted upon as a condition for loans.

3. Countries which have not shown their willingness to support the Bretton Woods program, supported by the American Congress and public as a means of internationalizing the burden of large-scale rehabilitation and exchange stabilization, have small claim for sympathetic consideration for purely American loans until they at least show a disposition to cooperate in getting Bretton Woods underway.

CONCLUSION

Sirs, in conclusion, permit me to reiterate that it is not the position of either the chairman or the members of the Special Committee on Postwar Economic Policy of your House of Representatives to strike a hard bargain, or to attempt to play the role of a Shylock in dealing with our less fortunate Allies of the recent deplorable conflict. But I believe that even a casual reading of the report of this committee will convince any fair-minded person that we believe in and earnestly desire to cooperate in the rehabilitation of these devastated countries, and to relieve the suffering occasioned by the mad dreams of the fanatical, totalitarian Hitler and his comic puppet, Mussolini. But in this desire we must be realistic; we must see to it that our efforts are not again in vain. We must insofar as possible keep the faith with our own returning soldiers and with those of our sacred dead who lie beneath the soil of foreign lands.

The United States of America entered this war with but one objective—the prevention of the realization of the dreams of world conquest, the destruction of the freedom of humanity, and the setting up of a world dictatorship. While it is true that her cities escaped the ravages of bombardment and her civilians the unprovoked death of the innocent, it is also a salient fact that America suffered more than a million casualties and today faces a staggering national war debt never heretofore approached in even a slight degree by any other people. The United States has freely and boldly made this tremendous contribution with but one goal in sight—peace on earth and good-will toward men. Assuredly, now that the bugle of peace has sounded, the American people should have a voice in the use to be made of additional billions of financial assistance to her Allies. Certainly we have a duty to see that such financial assistance so granted should be expended with the least possible injury to our own economy. In the name of justice and humanity it is our duty to see to it that our dollars shall never again be used to break the peace.

## Black-Market Thievery Multiplied by OPA Stupidity

EXTENSION OF REMARKS

OF

### HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. BUFFETT. Mr. Speaker, racketeering and gangsterism was a dangerous moral illness in America during the prohibition days. However, that evil situation will look like a game of post office at a Christian Endeavor social alongside the black-market thievery now developing, unless the OPA and the administration have the honesty and the courage to face our economic problems realistically.

The following editorial from the New York Times outlines this problem with simplicity and frankness:

BLACK MARKETS

A study by the Office of Price Administration has revealed that for many goods and services black-market transactions have become more frequent and of greater significance since VJ-day. The goods and services for which illegal prices are still being charged include coal, furniture, housewares, clothing, building materials, used cars, apartments, and repairs and other services. For food it was reported that there were more than twice as many criminal prosecutions in the 3 months since VJ-day as in any previous 3-month period.

The black market arises because the demand for goods and services at the fixed prices is substantially in excess of the supply available. Normally this disequilibrium between supply and demand would be adjusted through rising prices. With prices fixed, however, the adjustment takes place through a deterioration in the quality of the goods sold and supplementary payments. When there is a serious unbalance between supply and demand we have a choice of paying higher prices over the counter or paying them under the counter. Today the payments are being made under the counter. While this procedure may slow up the advance in some cases, it tends to increase the size of the price rise in others because there must be included in the illegal price a sum adequate to cover the penalties and the risks incurred by the seller, who may be caught.

We will continue to have black markets as long as prices are fixed below levels which would be warranted in a free market. Moreover, as long as OPA attempts to control practically all prices it is faced with an impossible enforcement job. There is no reason why luxury products should continue under price control. OPA should confine its activities only to the fundamental necessities. The alternative is black-market prices and a smaller volume of supplies as producers refuse to go into production or to send their products to the market at what they consider to be low prices.

## How "Dry" Are the "Dry" States?

EXTENSION OF REMARKS

OF

### HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. CELLER. Mr. Speaker, the so-called "dry" States are still at the old game of buncombe—exacting taxes and license fees from purveyors of liquor and thereby placing halos over the heads of bootleggers.

The Associated Press recently had a story in the Washington Post. It contained a compilation from official reports of the Bureau of Internal Revenue, United States Treasury Department, showing the number of special taxpayers purchasing special-tax stamps in the

State of Kansas during the fiscal years 1944 and 1945, as follows:

| | 1944 | 1945 |
|---|---|---|
| Wholesale liquor dealers | 18 | 19 |
| Retail liquor dealers | 546 | 603 |
| Retail dealers in medicinal liquors | 7 | 6 |
| Manufacturers of nonbeverage products: | | |
| Less than 25 gallons | 1 | 1 |
| 50 gallons or more | 2 | 3 |
| Not exceeding 50 gallons | | 1 |
| Retail dealers in wines and malt liquors | 132 | 68 |
| Wholesale dealers in fermented malt liquors | 148 | 167 |
| Retail dealers in fermented malt liquors | 3,157 | 3,140 |
| Temporary dealers in liquors (beer or wine) | 5 | 50 |

In other words, if you want to sell liquor in Kansas, all you need do is to get a Federal license, Kansas State laws to the contrary notwithstanding. A Federal license is the open sesame to a lucrative liquor business.

I insert hereby an interesting statement appearing in Collier's of November 24 entitled "The Sip in Mississippi," by an outstanding writer, Carlisle Bargeron.

THE SIP IN MISSISSIPPI

(By Carlisle Bargeron)

The muttering around the State capitol in Jackson is growing louder every day. Many of the citizens are growling that Mississippi's black-market law makes the State look a little silly. The law, a little more than a year old, ostensibly collects taxes on commodities the sale of which is forbidden by law. But no matter how the legislature says it, it comes up liquor, and everybody knows that Mississippi is dry.

Mississippi was the first State to ratify the eighteenth amendment and, with Oklahoma and Kansas, has never repealed it. And the people in Jackson and down on the Gulf coast are saying that it looks ridiculous to be as officially dry as all that and then go out and collect $550,000 in liquor taxes. On the other hand, the realists in the State say that it is reasonable to have a prohibition law on the one hand and a law to collect liquor taxes, too. "Get this straight," they say, "we Mississippians will vote dry just as long as we can stagger to the polls."

Gov. Thomas L. Bailey, in a din of W. C. T. U. protests, signed the bill in April 1944, and denied that the law legalized the sale of liquor by placing a 10-percent tax on it.

"Its purpose is to place a greater penalty on law violators, and not to encourage them or make it easy for them." He invited the good people of his State to inform Carl Craig, the State tax collector, of any bootlegging activities within their ken.

Craig's collectors are everywhere, disguised as thirsty men who would like to know where a man can have the sand washed out of his throat. They collect a lot of taxes that way. Craig's second check on the liquor business is to get reports from Federal authorities and jobbers and distillers, which show sales of liquor to Mississippians. This information tells Craig how much, where to, the name of the purchaser, and the license number of the truck used to transport the stuff into the State. Several traveling auditors check the State liquor records of Louisiana, Illinois, Arkansas, Alabama, Tennessee, and Kentucky. They check on how much is headed for Mississippi and who bought it.

"Of course," says Craig, manfully, "some liquor is slipping by the 10-percent tax, but we have them on the run." He has the names, addresses, and places of business of 800 self-confessed bootleggers who lay the 10 percent on the line and remain unconvinced of violating the State prohibition law. Craig figures that parched citizens drank $17,000,000 worth of the stuff in 1942 and he can't for the life of him see why the State should not collect the revenue.

Mr. N. S. Jackson doesn't share this view. Jackson is superintendent of the Anti-Saloon League and he had been concentrating on the evils of 4-percent beer, which is legal in otherwise bone-dry Mississippi. His campaign was to concentrate on one of the State's 82 counties and dry it up, then proceed to the next one. So far, 35 counties have outlawed even 4-percent beer. However, when the State beer industry's representative heard the roar emitted by the antisaloon group over the black-market law, he knew that a division had been created and that Mr. Jackson would be far too busy on liquor to be able to concentrate on liberating the people from the evils of beer.

Mr. Jackson is now positive that the black-market law will be repealed in January. However, the Methodists, in their annual north Mississippi conference, refused to pass a resolution calling for repeal of the black-market law.

Some of the drys accuse Tax Collector Craig of wanting to continue the law because his office gets 10 percent of all collections. On $550,000 in 1944, this would mean $55,000. The law also removes the ceiling on Craig's earnings, which were $5,000 per year. However, his enemies fail to mention that Craig has had to hire 12 agents for work in Louisiana alone. The drys hoot down this statistic and say that Craig now has the bootleggers so tame that they walk into his office once a month, books in hand, and permit Craig to tell them how much they owe. Further, they charge him with neglect of Mississippi's old triple five-hundred law, under which a convicted bootlegger is liable to a fine of $1,500, which must be split equally among the municipality, the county, and the State.

This, they say, is the more drastic way of handling bootlegging. They point out that one bootlegger who wouldn't permit examination of his books and wouldn't pay the 10 percent was suddenly charged with violation of the triple five-hundred law, and he promptly came through handsomely with books and money.

As of April 1945, the Internal Revenue Bureau lists 1,078 Mississippians as holders of $25 Federal liquor licenses. The Government looks with a jaundiced eye on Mississippi's official bias against spirits. In fact, early in 1945, the OPA threatened nine wholesalers with prosecution for violating liquor price ceilings. The State is now dotted with places advertised as lounge, cocktail lounge, drinks of all kinds, and others which dilute the word drinks with quotation marks. In most of them, a bonded whisky highball costs 60 to 65 cents. There is no longer any attempt to run speakeasies as such, even though the saloons are not wide open.

Probably the biggest liquor operator in the State is Pete Martin, a squat man of 60, who gives Craig the 10 percent without quibbling. He averages $60,000 a year in taxes. Pete's wife wears a diamond as big as a quarter.

Another prosperous liquor man is Frank Schenck. He has a big air-cooled cocktail lounge in the business section of Biloxi. During the war he needed more trucks to transport bottles, and no trucks were to be had. So he purchased four Army ambulances at a surplus property sale. He was too busy to take the red cross off the sides, so he ran the liquor in the ambulances with the insignia still on them. The citizens thought that this was a bit too rich, so they applied the heat, and Frank removed the red crosses. Another operator, who had much liquor to transport and one truck, applied to the OPA for gasoline coupons and new tires and got them.

The drys regard characters like these as "beyond salvation." But this should alarm no one because, among the drys, it has been noised about that the Governor himself fell from grace in merely signing the black-market tax bill

There is a sign over a Gulfport bar which I can't forget:

"The right to drink is ours
And we will not lose it
If you and I are wise
And do not abuse it."

## The Housing Problem

EXTENSION OF REMARKS

OF

## HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. HÉBERT. Mr. Speaker, the first signpost on the road to permanent regimentation of American lives has been erected by the proposal to set up a so-called housing czar.

It was my impression that we were going to get rid of controls, Government regimentation, and centralization of government as quickly as possible. There had been reports for a long time that efforts under some guise or other would be made to continue controls after the desirable death of the OPA on June 30, 1946.

I think it about time that those of us who believe in free enterprise, private initiative, and the American way of life, alert ourselves to a constant vigil against any encroachment which tends to curb the right of every American to conduct his own way.

I do not challenge the sincerity of those who disagree with my point of view, nor do I impugn their motives, but I vigorously voice objection to any proposal which is going to regiment this Nation.

Even the word "czar" is repulsive to the better American instincts. It was my appreciation that we had fought this war to destroy czars, fuehrers, dictators, and so on ad infinitum. This plan for a housing czar is merely an expression of the real thoughts and purposes of Chester Bowles to perpetuate himself and his administration in power over the lives of Americans.

Why do we need further dictatorship and regimentation when the builders of America, the men who actually build the homes, stand ready and willing to do a job without first heiling some autocratic, bureaucratic would-be czar. These builders, through such organizations as the National Association of Homebuilders, have fought and are fighting a valiant fight to preserve the American way of life.

The men who compose the National Association of Homebuilders are not dreamers or theorists. They are practical, realistic men who have come up the hard way, the American way, and have made success of themselves and supplied homes to Americans without benefit of regimentation and the blessing of any czar.

These people have steadfastly said they could do the job if only the Government would let them alone and let them perform in the only way they know how to

perform—the American way of free initiative and free enterprise.

While the announced purpose of such legislation may be laudible, the results would be disastrous.

The time has come, I believe, for a clear-cut statement answering various charges, proposals, and counterproposals in connection with the effort to hamstring the American businessman.

No one will deny that there exists a housing shortage which began with the migration of some millions of war workers in 1941. Nearly 2,000,000 dwelling units have been made available since then by private builders and Government construction in congested war areas, part of which is becoming vacant as war plants have closed and workers return to their former homes. Many veterans now being discharged from the armed forces would like and should certainly have a new home at the earliest possible moment. Until such time as building materials are available and the new homes can be supplied it will be necessary for them to live with their families. Others whose earnings have been high during the war period would naturally like to purchase a new home, but it will be necessary for them to continue for a time in their present homes.

Never before have we had such an immense demand for new housing just as we have never had a similar demand for new automobiles, radios, washing machines, and all consumer durable goods. It is this demand which comprises our primary hope for a continued new housing market in the first postwar decade. Its existence is certainly nothing to become hysterical about.

The National Housing Administrator, John B. Blandford, Jr., has served as a housing czar since April 1942. The establishment of a competing czar would create considerable confusion if not actual revolution. Certainly the building industry is seeking to be freed of all bureaucratic domination.

War Mobilizer John Snyder with almost unlimited authority over all agencies of government concerned with the production of materials has that responsibility. During the last 5 months great progress has been made under the direction of a Construction Coordinator and encouraging reports as to the production of these materials are being received daily. Recent price increases by OPA to brick manufacturers, producers of gypsum products, lumber, soil pipe, and so forth, are giving these industries the necessary incentive. Nothing would be accomplished by duplication of this effort on a lower level than the Office of War Mobilization and Reconversion.

It would be no less than disastrous to channel the present inadequate flow of building materials into Federal projects, much of which would be barrack-type shelter. The draining off of construction labor and mechanics and building materials would completely destroy the private-building industry now struggling to rebuild its organization after nearly 4 years of inactivity—excepting for the small percentage of home builders who built war housing. Some proponents of public or socialized housing would, of course, welcome this as a means of advancing their plans and proving the inadequacies of private-enterprise operations.

After many weeks of careful study the Government agencies concerned determined that the only method of reestablishing private residential construction was to remove all controls instituted during the war period. Although it was realized there would be some isolated abuses, it was agreed that the industry should have an opportunity to resume normal operation on the premise that the best answer to inflation in housing is the maximum production of new housing. Home builders in every city in the country, recognizing the inherent dangers have established committees to police the pricing of new houses in their communities. The public is being urged not to buy at inflated levels and to report individual cases where unfair prices are being asked. Normal competition will soon operate to remedy this condition. The great majority of builders operate over a period of years in the same neighborhood and cannot afford to lose the good will of the buying public by overpricing. Theoretically desirable, pricing controls simply will not work in housing under current conditions where costs are in a constant state of flux and have moved up from 30 to 50 percent since 1940.

Granting that the demand far exceeds the supply; that patience in waiting for new housing and good judgment in buying must be urged upon the public; that price controls of new construction would retard such construction; that until there is an adequate flow of building materials in the spring, materials and manpower should not be drained off into public construction; granting all this, it is clear that the remedy does not lie in the establishment of additional czars or agencies. The home-building industry like all other industries in this country must go through a difficult period of conversion during the next 6 to 12 months. The fewer restrictions imposed upon it the more rapidly it can supply new housing in volume. In this way the veteran will be housed, the industry rebuilt and the threat of inflation eliminated, and the American way of life preserved without assistance from czar, fuehrer, or dictator.

Let us have free American enterprise for free Americans if we really mean what we preach. If we do not mean it then let those that advocate such proposals come out frankly and admit that what they want is a completely regimented and centralized government where even the right to live will be rationed and controlled by some super authority instead of the will of the people themselves.

## Labor-Management Conference

EXTENSION OF REMARKS

OF

### HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SAGINAW, MICH., *November 21, 1945.*

Hon. HARRY S. TRUMAN,

*The White House,*

*Washington, D. C.*

DEAR MR. PRESIDENT: It appears that small business is not represented at the labor-management conference now taking place in Washington, and yet small business in the aggregate employs more people than all of the giant corporations combined.

Small business is also much more representative of the great majority of our population whose incomes are not influenced by so-called pressure groups and consequently average much below the incomes that organized labor already enjoys. The great majority of our people are the involuntary victims of strife between management and labor. Therefore, I respectfully submit that small business should have been represented at the labor-management conference.

As a member of National Small Business Men's Association, and as an individual, I also wish to endorse the recommendations of Judge Tiffany, counsel, and DeWitt Emery, president, recently submitted to you that manufacturers, wholesalers, retailers, and dealers be free to fix their own prices, provided the maximum increase in price is not more than 15 percent above October 1941.

Competition is so very keen and the great majority of our business enterprises honest and intelligent enough to continue the widely established principle of building for the future. They vie with each other to make the best possible article for the lowest price. They expect to be in business for a long time, and common sense is their motive for treating the public fairly.

Reconversion should not be handicapped nor inflation augmented by penalizing honest business with an endless amount of wartime limitations in order to control a few chiselers or black-market operators. These, like gold-brick traders, we always have had with us in one way or another, and there should be more simple methods of curbing their activities.

Sincerely yours,

J. B. PITCHER.

## Fire and Police Departments of the City of New York

REMARKS

OF

### HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. O'TOOLE. Mr. Speaker, this morning I addressed a letter to the Secretary of War and the Secretary of the Navy asking for the release of all policemen of the city of New York who are now in the armed services. Unfortunately, our city is in the midst of the greatest crime wave that it has ever had to face.

New York City, despite its size and tremendous cross currents is one of the most peaceful communities in the world. We are now facing a backwash from the hysteria which existed during the war. Ordinary restraints have broken down and our splendid police department, due to its great manpower shortage, is faced with a herculean task.

At the time the original conscription bill was before the House I went to Police Commissioner Valentine, Fire Commissioner McElligott, and Mayor LaGuardia and discussed with them the likelihood of the war creating an emergency such as now exists. I suggested that I offer an amendment to the Selective Service Act exempting policemen and firemen from the large cities from the provisions of that act. The police and fire commissioners agreed with me, but the mayor said that that might be true in the case of firemen who were technically trained men, but did not believe it to be so in the case of the police. He further advised me not to do anything, that he would take care of the matter in Washington.

Sometime later, noticing that Mr. LaGuardia had not done anything on the situation, and that our fire and police departments were sadly depleted, I introduced into the House a resolution calling for the exemption of all policemen and firemen from cities containing more than 250,000 population. Due to lack of support, I was not successful with the measure.

I believe that the manpower shortage in the New York Police Department may also be charged to the actions of the present city administration in reducing the salaries of probationary policemen from $2,000 to $1,200 a year. This was done despite the fact that the country was facing the highest cost-of-living scale in its history. From this measly $1,200 was deducted the withholding tax, several hundred dollars for equipment, a considerable item for the pension and matron's fees in the stationhouse. After these deductions, a probationary policeman would receive a sum far less than that paid to a messenger boy. As a result, during the late conflict it was impossible to obtain men to accept these extremely essential positions.

It is my sincere hope that the Secretary of War and the Secretary of the Navy will answer my request in the affirmative and relieve the crime situation in the city of New York.

## Full Employment

EXTENSION OF REMARKS

OF

### HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. MICHENER. Mr. Speaker, much is being written and said about the so-called full employment bill. My attention has just been called to an article appearing in the Concord News, one of the oldest weekly newspapers published in Michigan.

Mr. Speaker, the average small-town newspaper is pretty close to the thinking of the people in the community and the publishers of these papers usually have a pungent, common-sense way of telling their story. In this case D. W. Rutz, the publisher, speaks a lot of truth in understandable language and I commend the article to all Members of Congress. It reads as follows:

YOUR COUNTRY EDITOR LOOKS INTO FUTURE—FULL EMPLOYMENT ADVOCATED FOR EVERYONE

"Full employment for everyone? Sure, I'm for it, and so is everyone else in Michigan," replied the country editor. He adjusted the green visor over his eyes and smiled.

"I'm also in favor of having good government and having all the churches packed every Sunday morning and abolishing war and the atomic bomb. Jobs for all? Of course, I'm for it."

We had dropped into the newspaper office for one of our occasional chats. The country editor had a habit of keeping his finger on the public pulse in his home town. As the saying goes, he "got around" quite a bit and he did a lot of listening.

"Now I've been reading up about this so-called full employment bill," the editor continued, pointing to a stack of CONGRESSIONAL RECORDS and Government reports. "Senator VANDENBERG'S first bill in the Senate back in May 1928, was a plan for a 'prosperity reserve,' to use the Senator's own words. The Government was to plan for useful public works in advance of a possible depression. When a depression threatened, this reserve was to cushion the shock by providing jobs.

"In Michigan the State Legislature created a prosperity reserve during the recent World War boom. It impounded millions of surplus State revenue into a postwar fund for needed public improvements and also for aid of Michigan's returning veterans.

"Now take my own home town here. We paid off some of our bonded indebtedness, just like many a farmer reduced his mortgage. We planned public improvements to provide jobs.

"Let's see what the bill at Washington calls for. One provision is to stimulate, encourage, and assist State and local governments, through the exercise of their respective functions, to make their own effective contribution to assuring full employment—to use the official language. Michigan has already done that. So has my own home town.

"The Federal bill goes on to say that it is the responsibility of the Federal Government to foster free competitive private enterprise and the investment of private capital and furthermore that all Americans able to work and seeking to work are entitled to an opportunity for useful, remunerative, regular, and full-time employment.

"Now that's a mighty constructive idea. Jobs for all. We're for it.

"You will note there are no partisan lines to the idea. Michigan's own Tom Dewey went on record in a campaign talk at San Francisco that the Government can and must create job opportunities because there must be jobs for all in this country of ours. There you have it, jobs for all.

"Senator HATCH, Democrat of New Mexico, proposed an amendment which was adopted by the Senate. It proposed that the government's underwriting of full employment should be 'consistent with the needs and obligations of the Federal Government and other essential considerations of national policy' to quote the Senator's own words. Senator TAFT, Republican of Ohio, sponsored another amendment, also adopted, which would require the Government to finance all this by 'a program of taxation designed and calculated to prevent any net increase in the national debt.'

"Apparently these two senators don't favor perpetual deficit spending at Washington any more than you or I. Pay as you go is just as sound for the Government as it is sound for your family and my family. To do otherwise is to invite disaster.

"What I am wondering about is this: What's the chance of the idea working? The president would have to estimate the number of jobs needed, estimate the number of jobs industry is likely to provide, and finally estimate the amount of Government spending needed to make up the difference. Simple, isn't it?

"Well, let's look at the actual record of the Federal budget at Washington and see how successful the President and the Budget Director have been in their estimates of Federal expenditures, revenues, and deficits during peacetime fiscal years. You'll recall that Harold Smith, the present Budget Director at Washington, was formerly State budget director at Lansing and left Michigan in the spring of 1939.

"The average error in Budget estimates of Federal receipts in 7 of the 10 years, 1935–41, omitting our war years, was 9 to 10 percent. The average error in estimates of Federal expenditures during these peacetime years was 23 percent. And remember, exactly 23 percent of American workers were unemployed in 1933—the same percentage.

"How about the Budget's estimates of the annual net deficit? Well, hold on tight. The Budget's error averaged just 150 percent in these peacetime years.

"Now, if the above is true and here are the official figures, what I'd like to know is this:

"If the President and the Budget Director cannot estimate accurately what Congress is going to spend, even though the President has a veto power to control spending, how can the Government estimate accurately what 48 State governments, thousands of local governments, hundreds of thousands of business firms, and 140,000,000 people are going to spend, when a lot of them don't know themselves?"

The country editor paused. Outside of the office window the autumn foliage was turning to bright gold. It was harvest time in Michigan. There was work to be done.

"That just reminds me," he said. "My wife hopes to finish her canning this afternoon. We like good things to eat. We had our own garden. One way to make sure you're not going to be hungry is to grow food, can food, and cook or bake food yourself. Maybe there's still something to the old saying, 'God helps those who help themselves.' I wonder."

And so do we.

## Starvation in Central Europe

REMARKS

OF

### HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. BUFFETT. Mr. Speaker, "If a hard peace requires the elimination of eight to ten million Germans, it would be much more humane to eliminate them at once," is the declaration of the House Postwar Committee.

The Treasury Department last week advised me that no communication is permitted from America to natives of Germany and Austria, so that Americans with relatives in these countries today must stand by helplessly while their own kinfolk die of cold, starvation, or disease.

Also, the State Department informed me that no American churches or private charities are allowed to send relief into Germany or Austria.

If the foregoing policies are not changed immediately, the victims of the

ruthless barbarism of the Nazis may yet be outnumbered by a mass extermination in which many American people shall be unwilling partners.

Mr. Speaker, I protest a Government policy which forces 70,000,000 Christians in America to stand by helplessly while eight or ten million old men, women, and children of their faith die needlessly in central Europe.

If anyone can square the foregoing situation with the pledge made in 1943 by President Roosevelt, I believe the people should have that explanation. The pledge follows:

Except for the responsible Fascist leaders, the people of the Axis need not fear unconditional surrender to the United Nations. I have said that we shall bring food for the starving and medicine for the sick in the areas liberated by the United Nations. We have done so, under lend-lease, in north Africa. We are doing so in Sicily. We shall continue to do so in other areas, as they are liberated, to prevent economic break-down and to aid the liberated peoples to produce and to help themselves. We shall provide these necessary civilian supplies in support of our military operations and as a matter of simply humanity. The people of Axis-controlled areas may be assured that when they agree to unconditional surrender they will not be trading Axis despotism for ruin under the United Nations.

Moreover, no such obvious policy of vengeance has been followed in the case of Italy. So I ask this question, What is behind the administration's cold-blooded refusal to allow relief in central Europe?

## Full Employment and World Peace

EXTENSION OF REMARKS
OF
### HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include the following statement entitled "Full Employment and World Peace":

When we fired at Hiroshima the blast that was heard around the world, it became clear beyond any possibility of doubt that the only hope for world peace—indeed the only hope for survival—lies in genuine international cooperation.

And more and more men everywhere are beginning to recognize that this necessarily implies genuine economic cooperation throughout the world. Which means, however, that we in America must bear the brunt of the responsibility, simply because we are the world's leading industrial nation.

I want to try to outline for you in about 2 minutes just why it is that the burden falls so largely upon us.

The first prerequisite of international cooperation is expansion of world trade, because this leads to international specialization, growing productivity, and rising living standards throughout the world, and rising living standards are the answer to those economic ills which cause nations to wage war.

Expansion of world trade requires an increase in imports and exports—both of them, mind you, since an increase in either one alone inevitably leads to the kind of international snarls which severely restrict the volume of world trade.

Now, the chief point I want to make is that there can be no significant expansion of trade throughout the world unless we achieve and maintain a full employment level of activity right here at home in the United States.

For one thing, such a level of activity would mean a large increase in the demand for both imports and exports. Full employment increases imports because the size of our national income is so great relative to the rest of the world. When our national income goes up our imports increase by a few billion dollars, and these few billions can make the difference between prosperity and depression in many of the nations with which we trade.

And full employment increases exports because other nations can buy from us only when they have a way of paying us, and their means of payment depends upon how much we buy from them. We can always count on a huge demand for America's goods and capital if that demand can be made effective, which means if other nations have the necessary dollar exchange. If any of you want to be convinced of this point, I recommend that you take a look at a chart of how industrial production, imports, and exports rise and fall together.

In the second place, full employment in the United States would not only create a greater demand for exports and imports throughout the world, but it would automatically reduce the barriers to such two-way exchange. Both export and import barriers grow out of the fear of depression, and they will vanish along with that fear.

Import barriers, or tariffs for instance, reflect a fear of foreign competition, which in turn reflects inadequate markets at home. The only reason we ever want to protect our home industries and steal markets abroad is because we think there is not enough consuming power on this side of the water. So what we try to do is export our unemployment by shutting out imports.

Of course, we are only fooling ourselves, and we never actually succeed. Protection of this kind is always illusory, because the balance of payments sooner or later collapses under this one-way kind of exchange. Meanwhile other nations in self-defense retaliate with restrictive measures of their own, and we lose our markets abroad. And it is this kind of economic warfare which eventually leads to military conflict.

In short, if we have full employment at home, there will be no motive for export barriers. And full employment will make it possible to reduce tariffs or other barriers, because it provides alternative opportunities for displaced resources. Finally, full employment and increased imports will create dollars in other nations so that they can buy from us instead of shutting out our goods.

What would all of this mean for world peace?

In the first place, it would mean elimination of the motive for imperialism. It would mean that all nations would have access to colonial markets and raw materials through free trade, and that there would be nothing to be gained by colonial domination. Lebensraum would no longer serve as an excuse for war.

In the second place it would mean that other nations would cease to fear us. If we maintain full employment, they would no longer find it necessary to take restrictive measures to insulate themselves against depression in the United States. And they would be more willing to bind themselves in international agreements—for example on the international bank, currency stabilization, and an international food organization. These economic arrangements are basic to political organization for peace.

In the third place, it would mean that we would cease to fear other nations. Isolationism and distrust stem from depression at home, from fear of the breakdown of capitalism and infiltration of other isms. If we can make our own system work, we can freely cooperate with other nations in building toward peace.

This, gentlemen, is what full employment here at home would mean for world peace.

## Cost of St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. PITTENGER. Mr. Speaker, on Monday, November 19, I addressed the House in connection with the St. Lawrence project, and my remarks will be found in the CONGRESSIONAL RECORD for that date on page 10810. I pointed out the physical aspects of this project, because a great many people want to know what it is all about. So, I told you where it started and where it stopped, and just what it meant. My remarks were factual and the chief witness for the project was Gen. Thomas M. Robins, of the War Department engineers. I quoted from his testimony. Today I want to discuss the proposed cost of the project, and I again want to put General Robins on the witness stand, because he is a disinterested witness.

FALSE PROPAGANDA OF WATERWAY OPPONENTS

It is well known that the opponents of the waterway project consistently circulate all sorts of falsehoods and resort to every trick and subterfuge to mislead the people and to defeat favorable action. I quote exactly from a propaganda sheet issued by an outfit which has unlimited resources to fight the project. This outfit in discussing the seaway says:

Conservative estimates indicate that it will cause the expenditure of more than a billion dollars of the taxpayers' money, diverted from other needed things to a project which is unnecessary and at present economically unsound.

Now this is a fine bit of skillful and resourceful propaganda. It is just as false as hell itself, but there are no standards of integrity employed by professional lobbyists who feel that the end justifies the means and that everything is fair in love, war, politics, and the assassination of the seaway project. Now listen to what a disinterested and impartial and high type of American citizen has to say about this.

GENERAL ROBINS TESTIFIES AS TO COST

As I pointed out in my remarks on November 19, General Robins, of the War Department engineers, testified before the Rivers and Harbors Committee of the House, June 19, 1941, and I quoted part of his testimony. I now quote

exactly what he has to say on this subject of costs:

GREAT LAKES-ST. LAWRENCE BASIN

(Thursday, June 19, 1941)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RIVERS AND HARBORS,
*Washington, D. C.*

The committee met at 10 a. m., Hon. JOSEPH J. MANSFIELD (chairman), presiding.

The CHAIRMAN. Gentlemen, we have General Robins before us this morning. You may proceed, General.

STATEMENT OF BRIG. GEN. THOMAS M. ROBINS, CORPS OF ENGINEERS, UNITED STATES ARMY

General ROBINS. Mr. Chairman, and gentlemen:

The plans for the Great Lakes-St. Lawrence seaway and power projects are now complete, having been worked out in detail and agreed upon wholeheartedly by duly accredited representatives of both the countries concerned.

There is no longer any argument as to what should be done and it is possible to make reliable estimates of costs of the undertaking.

This cost is not unreasonable or excessive and under the pending agreement will be divided as equitably as possible between the United States and Canada. The State of New York offers to take over and operate the power facilities that will be built on the American side of the border and to reimburse the United States for the cost of these power facilities.

It is safe to assume that the net outlay to the United States Government, that is the first cost of the Great Lakes-St. Lawrence seaway, will not exceed $200,000,000, a sum that this country can well afford to invest in such a worthy project.

It must be obvious to all thoughtful people how thankful we would be today if the Great Lakes-St. Lawrence seaway and power project were completed and available for use in the present emergency. No one knows how long the emergency will last or how soon it will occur again. I am convinced that immediate authorization of the St. Lawrence project is essential to all-out defense effort and that it is advisable to proceed with construction at as fast a rate as may be consistent with other pressing needs of national defense. * * *

The total cost of the project as now estimated, with the best figures available—and I may say we have reestimated the cost of all these works in the light of the investigations, borings, and surveys and studies that have been going on for the past year.

The total cost of the project now figures $579,252,000, of which $277,090,000 is chargeable to Canada under the agreement, and $302,162,000 is chargeable to the United States.

Canada has spent to date $132,672,000 on the project; the United States has spent to date, $17,105,485. The total spent to date by both countries is $149,777,485, leaving the cost to complete for the entire project, $429,474,515, of which $144,418,000 is to be expended by Canada; $285,056,515 by the United States.

New York State offers to pay, under the terms of the bill before the committee, $93,300,000. Subtracting that from the $285,000,000 that the United States still has to spend makes a net cost to the United States, based on these estimates, of $200,000,000, as I stated before.

I have copies of this estimate that I will be glad to pass around to the members of the committee.

(The estimate passed around to the members of the committee is as follows:)

*Estimate of cost of St. Lawrence waterway*

| | Canada | United States | Total |
|---|---|---|---|
| Great Lakes section: | | | |
| New lock at Sault Ste. Marie, with approach channels | | $8,000,000 | $8,000,000 |
| Connecting channels | | 66,029,000 | 66,029,000 |
| Welland Canal | $133,000,000 | | 133,000,000 |
| St. Lawrence River: | | | |
| Thousand Islands section | 772,000 | 516,000 | 1,288,000 |
| International Rapids section: | | | |
| (a) Works solely for navigation | | 48,857,000 | 48,857,000 |
| (b) Works primarily for power | 39,950,000 | 78,550,000 | 116,500,000 |
| (c) Works common to navigation and power | 22,414,000 | 100,210,000 | 122,624,000 |
| Canadian section: | | | |
| St. Francis channel | 1,330,000 | | 1,330,000 |
| Soulanges Reach | 25,785,000 | | 25,785,000 |
| Lachine Reach | 55,839,000 | | 55,839,000 |
| Total | 277,090,000 | 302,162,000 | 579,252,000 |
| Expenditures to date | 132,672,000 | 17,105,485 | 149,777,485 |
| Cost to complete | 144,418,000 | 285,056,515 | 429,474,515 |

FACTS DISPROVE CLAIMS OF WATERWAY OPPONENTS

So, there you are, Mr. Speaker, with figures furnished by a representative of the United States Government, namely, General Robins, of the War Department engineers. He says the net cost to the United States of the St. Lawrence seaway and power project would be $200,000,000. Are you going to believe him, or are you going to believe these apostles of falsehood who know they are not telling the truth when they broadcast to the American taxpayers that this project will cost the American people an expenditure of more than $1,000,000,000? How are you going to answer the question?

Incidentally, do not forget that the expenditure the United States made to carry on World War II for a single day was about $200,000,000. So the money we spent in 1 day for destructive purposes would pay for one of the most constructive projects to be found anywhere in the world measured in terms of benefits to the people.

---

## Delay Is Seen for Bretton Woods Plan

EXTENSION OF REMARKS
OF
**HON. DANIEL A. REED**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. REED of New York. Mr. Speaker, it is quite obvious that the large nations among our allies are not so anxious to approve the Bretton Woods plan as they are to get a huge loan or gift of many billions of dollars with no strings attached. They seem to be sensitive about its being made a part of their national debt. It seems to me that I have heard the doctrine preached that a national debt and a deficit financing program are conditions precedent to peace, happiness, and prosperity. We were told by an eminent economist along in 1933 that such would be the case if we adopted such a program, and this foreign policy was adopted by the Roosevelt administration and put into practice. If it be true that this philosophy of deficit financing and an ever increasing national debt is as sound a public policy as was then recommended by our foreign economists, why should not the same philosophy be applied by our foreign allies in handling their own debt and deficit problems? Why turn to us for help?

Under leave to extend my remarks, I insert an article which appeared in the New York Herald Tribune on Sunday, November 25, 1945:

DELAY IS SEEN FOR BRETTON WOODS PLAN—APPROVAL OF PROGRAM BY 43 NATIONS IS AWAITED BY DECEMBER 31 DEAD LINE—BRITISH LOAN TALKS PARTLY RESPONSIBLE—NEW CONFERENCE IS HELD POSSIBILITY UNLESS ACTION IS TAKEN IMMEDIATELY

(By H. Eugene Dickhuth)

Unless 65 percent of the exchange quota has been approved by December 31 next, the Bretton Woods program to which the United States is committed to the extent of about $6,000,000,000 will have to be taken up again with the 43 other governments which concluded the original agreements.

When the deadline was set in the summer of 1944, it seemed sufficiently remote so that the majority of the participants would have ample time to pass the necessary legislation or decrees. At this time, there are only five more weeks to go and none of the nations except the United States has taken any official action as yet.

While the reason for this state of affairs is well understood in financial circles, particularly among those who were articulate in their beliefs that Bretton Woods would solve little unless other basic conditions were straightened out, the general public has only a vague idea of what is going on.

BANKERS WERE CRITICIZED

When bankers argued in print and before congressional committees that international financial machinery would be incapable of coming into play without taking care of the war-disrupted British balance of payments, they were labeled as "saboteurs of international cooperation."

Pointed references were made in official quarters at the time that isolationist elements in the United States Senate had similarly prevented participation of this country in the League of Nations. But what has happened since?

The Bretton Woods Agreement Act finally became law with the blessings of most interested factions by President Truman's signature on August 4 last. Since that time there has been a good deal of discussions and for the last 10 weeks almost daily negotiations between United States and British financial experts for some financial assistance to the United Kingdom.

Treasury officials say privately they have been much disturbed to find from samplings of public opinion by independent agencies that an increasing number of individuals throughout the Nation with the advent of peace are losing their internationalist fervor and are beginning to even question the necessity of financial aid to Britain, not knowing, of course, that without such support, the

entire program of international economic and other cooperation may collapse.

Unfortunately, once the Bretton Woods enabling legislation was passed by the Congress little official effort has been made to explain the relationship between the British loan negotiations and the blueprint for world trade and finance, it is held here.

LITTLE OPPOSITION SEEN

The polls clearly reflect this misunderstanding or lack of understanding. Washington authorities continue to be extremely confident that the negotiations with London will be successfully concluded in the near future and that following an agreement Britain and the Dominions will immediately approve participation in Bretton Woods before the December 31 dead line.

The quotas for the international monetary fund aggregate $8,800,000,000. The required 65 percent would amount to $5,720,000,000. Nearly one-half of this sum is assured by the United States whose share is $2,750,000,000.

If the contention of Washington experts is correct, provided the loan discussions are concluded and Britain and the Dominions ratify their participation, another $2,350,000,000 would be added to the pledged quotas. This would still be about $600,000,000 short.

Should Russia decide to approve its share of $1,200,000,000, the dead line could be kept, also by addition of a number of other countries such as Belgium and Holland, Norway, France, and China, coupled with perhaps Brazil and a combination of Latin countries in this hemisphere.

It is true that outside of the United States, the United Kingdom and some other countries little, if any, parliamentary opposition is expected. In fact, the decision of the executive may constitute legal approval and participation to the Bretton Woods plan in many nations, experts maintain.

Every day which passes with the Anglo-American loan talks hanging in the air makes it less likely that the December 31 dead line can be met. In theory, it might just be necessary to ask authorized representatives of 43 countries to agree to an extension of the date.

Since the dead line is not part of the Bretton Woods Agreement Act passed this year, congressional approval for prolongation may not be required. The danger, however, as seen in informed quarters, is that once the subject of Bretton Woods is taken up again with foreign emissaries, the capitals in question may raise new questions creating new problems which may require a new conference and thus postpone materialization of the entire program.

---

## Nation's Home Crisis Calls for Drastic Action—Housing Bill Would Give President Power To Name Housing Director With Authority To Meet Crisis on Wartime Basis, To Control Home Prices and Give Veterans Priority

REMARKS

OF

### HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. PATMAN. Mr. Speaker, providing adequate housing for the people now has become one of the Nation's gravest domestic problems.

Hundreds of thousands of servicemen are vainly seeking shelter, with thousands more returning daily from Europe and the Pacific to add to the demand. In our major cities people are scrambling grimly for any kind of a place to stay. In metropolitan areas from Boston to Chicago, to Dallas, to Los Angeles, city governments already are being forced to take emergency action to meet the housing crisis.

Meanwhile prices on homes are soaring to fantastic levels, with unscrupulous speculators piling profit on profit at the expense of the home seekers. Supplies of building materials have sunk to an all-time low.

During the war, when similar problems arose, we did not hesitate to take swift and drastic action in meeting them, and the people fully approved. When rubber became critically scarce a rubber czar with real power to cut red tape and increase supplies was appointed, the money spent, and the problem was solved.

Now we are faced with a housing scarcity, a problem just as critical as many of those we successfully met during the war. We must and can meet it with the same vigor and speed we used in dealing with wartime bottlenecks.

However, there has arisen considerable question as to whether the executive branch of government now possesses sufficient authority to take the drastic action necessary, since the end of the war.

In order to arm the executive branch with power to meet the housing problem, the same emergency power it used during the war period in similar crises, I have introduced H. R. 4761.

This bill has been referred to the Banking and Currency Committee. The urgency of the emergency is such that I have requested the chairman of that committee to hold hearings on the measure at the earliest possible moment.

The bill has two major objectives:

First. To give first priority to returning veterans on every apartment and home that can be made available or built. It provides that scarce construction materials be channeled into reasonably priced homes for veterans' rental and purchase.

Second. To halt some of the inflationary pressure ballooning into our business economy by holding down home prices to fair and reasonable levels.

The bill creates an Office of Housing Stabilization. Its director would have full authority to cut governmental red tape to speed production of construction materials to provide additional housing and to make the maximum usage of existing housing.

He would be empowered to issue directives to any administrative agency dealing with housing, so as to fully coordinate all Government activity in dealing with the housing problem. In this way, the ultimate effort could be made in breaking bottlenecks slowing down production of materials in all lines.

A priorities and allocation system would be set up to channel available stocks of construction materials for the most urgent purposes, with veterans given top priority. At present, farmers of the country are finding it almost impossible to find any kind of lumber for their uses, while much of the Nation's timber supply is being drained into high-cost, high-profit country homes and mansions. The director would be empowered to see to it that such hardship cases could be taken care of.

Prices of new construction would be controlled. A builder would be allowed the full legal price of his materials and services, plus current labor costs, plus the same margin of profit made on comparable construction in his community in 1941.

A similar control would be used to hold down prices on existing houses. Present owners would be permitted to sell their homes one time after the effective date of the act, at whatever price they could get. However, that price would become during the emergency the automatic ceiling price plus the cost of improvements. This provision would give a bona fide home owner complete freedom of sale, but would prohibit the speculative resales which now are causing much of the inflationary danger.

However, I would like to point out that it would not be mandatory for the director to clamp ceiling prices on all old and new houses in the Nation.

He is given the discretion to use his pricing power only in areas where, in his judgment, prices have gone so far out of line as to demand such drastic action. Furthermore, such ceiling would apply only to nonfarm dwellings.

This bill is designed solely as an emergency measure, to meet the crisis that confronts us now. It would expire December 31, 1947, but can be rescinded sooner at any time the two Houses of Congress, by concurrent resolution, determined that the housing emergency had ceased to exist.

When that time comes, I will be the first Member of Congress to vote to remove control of housing prices and construction. However, I sincerely feel that we need such strong legislation during this next critical 8 or 9 months if we are to meet the crisis and intend to prevent the economic boom-bust cycle of World War I.

Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I should like to include the text of H. R. 4761:

H. R. 4761

A bill to amend the National Housing Act by adding thereto a new title relating to the prevention of speculation and excessive profits in the sale of housing, and to insure the availability of real estate for housing purposes at fair and reasonable prices, and for other purposes

*Be it enacted, etc.*, That the National Housing Act, as amended, is amended by inserting after title VI thereof a new title, as follows:

"TITLE VII—STABILIZATION OF HOUSING PRICES

"SEC. 701. (a) The purposes of this title are to stabilize the prices of real estate to be used for housing purposes, and to prevent speculative, unwarranted, and abnormal increases in the selling prices of such real estate; to eliminate and prevent profiteering in the sale of real estate for housing purposes, the hoarding of materials necessary for the construction of housing and other buildings, and other disruptive practices; to encourage the production of housing at a fair profit; to improve the housing of the people of the Nation in order to foster their health and general welfare; to encourage employment in the housing construction industry, and to maintain such industry at a high level of

productivity; to prohibit an undue dissipation of the savings of the people in the Nation in the purchase of homes at speculative prices; to permit returning veterans to acquire housing at fair prices; and to prevent a post-emergency collapse of values in the housing field and to promote a swift and orderly transition to a peacetime economy.

"(b) The provisions of this title, and all regulations and orders issued thereunder, shall terminate on December 31, 1947, or upon the date specified in a concurrent resolution by the two Houses of the Congress, declaring that the provisions of the act are no longer necessary to deal with the existing national emergency, whichever date is the earlier.

"(c) The provisions of this act shall be applicable to the United States, its Territories and possessions, and the District of Columbia.

"SEC. 702. (a) There is hereby created the Office of Housing Stabilization, which shall be headed by a Director of Housing Stabilization (hereinafter called the "Director"). The Director shall be appointed by the President, by and with the advice and consent of the Senate, and shall receive compensation at the rate of $12,000 per annum. The Director may, subject to the civil-service laws, appoint such employees as he deems necessary in order to carry out his functions and duties under this title, and shall fix their compensation in accordance with the Classification Act of 1923, as amended.

"(b) The Director shall formulate and develop a comprehensive national program to effectuate the purposes of this title. In order to carry out this program, the Director shall have the power to issue directives on policy to those Federal departments and agencies which have functions relating to or affecting housing.

"SEC. 703. The Director is authorized to make such studies and investigations, to conduct such hearings, and to obtain such information as he deems necessary or proper to assist him in formulating policies, issuing regulations, and performing any other functions under this title. The Director is authorized to require any person who owns, holds an interest in, deals in, or offers to sell or to buy any housing accommodations to furnish information under oath or affirmation or otherwise, to make and keep records, and to make reports. The Director may require any such person to permit the inspection and copying of records and other documents and the inspection of housing accommodations. For the purpose of obtaining any information under this section, the Director may by subpena require any such person to appear and testify or to appear and produce documents, or both, at any designated place. In case of refusal to obey a subpena served upon any person under this section, the court for any district in which such person is found or resides or transacts business, upon application by the Director, shall have jurisdiction to compel compliance with such subpena.

"No person shall be excused from complying with any requirements under this section because of his privilege against self-incrimination, but the immunity provisions of the Compulsory Testimony Act of February 11, 1893 (U. S. C., 1934 ed., title 49, sec. 46), shall apply with respect to any individual who specifically claims such privilege.

"SEC. 704. (a) Whenever in the judgment of the Director the sales prices of housing accommodations have risen or threaten to rise to an extent or in a manner inconsistent with the purposes of this act, he may by regulation or order establish maximum sales prices for housing accommodations in accordance with the provisions of this title. Any such regulation or order may be limited in its scope to such geographical area or areas and to such types or classifications of housing accommodations as in the judgment of the Director may be necessary to effectuate the purposes of this title. Before issuing any regulation or order under this section, the Director shall, so far as practicable, advise and consult with representative members of industries affected by such regulation or order, and he shall give consideration to their recommendations and to any recommendations which may be made by State and local officials concerned with housing conditions in any area affected by such regulation or order.

"(b) Any regulation or order issued under the authority of this title establishing maximum sales prices for housing accommodations the construction of which is completed after the effective date of this title shall provide for the fixing of a maximum sales price consisting of (i) the actual costs of the construction of the unit which are not in excess of the legal maximum prices of the materials and services entering into such construction, (ii) the fair market value of the land sold with the housing accommodation, but in no event less than the actual cost of land purchased prior to the effective date of this act, and (iii) a margin of profit reflecting the generally prevailing margin of profit upon comparable units during the calendar year 1941. Any prospective seller of such housing accommodations may apply for the establishment of a maximum sales price at any time, including before the commencement of construction, during its progress, or after its completion. In any case where a maximum sales price has been fixed on a basis of estimated costs the prospective seller may, at any time before the first sale and upon a showing that the actual legal costs have substantially exceeded the estimated costs, apply for such revision of the maximum sales price as may be justified under the circumstances; and the Director may similarly reduce the maximum sales price if the estimated costs were substantially in excess of the actual legal costs. No subsequent sale of such newly constructed housing accommodation shall be at a higher price than that established for the first sale.

"(c) Any regulation or order issued under the authority of this title establishing maximum sales prices for housing accommodations in existence and occupied on or prior to the effective date of this title shall establish as the maximum prices the price of the first bona fide sale of such housing accommodations after the effective date of this title.

"Any regulation or order under this subsection shall provide for the making of appropriate adjustments in the maximum sales price where substantial improvements have been made subsequent to the last sale.

"(d) The Director may promulgate such regulations as he deems necessary and proper to carry out any of the provisions of the title and may exercise any power or authority conferred upon him by this title through such department, agency, or officer as he shall direct. Any regulation or order under this title may contain such classifications and differentiations and may provide for such adjustments and reasonable exceptions as in the judgment of the Director are necessary or proper in order to effectuate the purposes of this title.

"(e) Whenever in the judgment of the Director such action is necessary or proper in order to effectuate the purposes of this title, he may by regulation or order make such provisions as he deems necessary to prevent the circumvention or evasion thereof and he may regulate or prohibit speculative or manipulative practices (including the requiring of the purchase of land prior to or as a condition of undertaking construction work or the requiring of the purchaser of housing accommodations to buy additional land or any commodity or service as a condition of securing such housing accommodation) in connection with the sale of any housing accommodation which in his judgment are equivalent to or likely to result in price increases inconsistent with the purposes of this title.

"SEC. 705. (a) Whenever in the judgment of the Director there is a shortage of building materials for the construction of needed housing accommodations, he may by regulation or order allocate such materials in such manner and upon such conditions as he deems necessary and appropriate in order to effectuate the purposes of this title, with particular regard for the need for the construction of low-cost housing accommodations and the need for housing accommodations for rental.

"(b) Whenever in the judgment of the Director there is a shortage of housing accommodations, he may by regulation or order give preference in purchase or renting of housing accommodations, the construction of which is completed after the effective date of this title, in such manner and upon such conditions as will effectuate the purposes of this title, with particular regard for the housing needs of veterans of World War II and their immediate families.

"SEC. 706. Whenever in the judgment of the Director there is no practicable alternative method for securing the construction of adequate housing accommodations in an area where the shortage of housing accommodations is acute, he is authorized to subsidize the construction of new low-cost housing accommodations. Any such subsidy assistance shall be granted on terms involving the minimum expenditure of funds necessary to secure the needed construction, and upon such other terms as are necessary and approximate to effectuate the purposes of this title. Appropriations are hereby authorized to be made for subsidy payments under this section.

"SEC. 707. It shall be unlawful for any person to effect, either as principal or broker, a sale of a housing unit at a price in excess of the ceiling price which shall be applicable under the provisions of this title, or to offer, solicit, attempt, or agree to making any such sale. Notwithstanding any termination of this title as contemplated in section 701 (b) hereinabove, the provisions of this title, and of all regulations and orders issued thereunder, shall be treated as remaining in force for the purpose of sustaining any proper suit, action, or prosecution with respect to any such right, liability, or offense.

"SEC. 708. Any person who is aggrieved by any action taken pursuant to any regulation or order issued under the authority of this title may petition the district court of the district in which he resides or has his place of business for a review of such action, and such district court shall have jurisdiction to enjoin or set aside, in whole or in part, such action or to dismiss the petition. No such action shall be enjoined or set aside, in whole or in part, unless the petitioner establishes to the satisfaction of the court that such action is not in accordance with law or is arbitrary or capricious.

"SEC. 709. (a) Whenever in the judgment of the Director any person has engaged or is about to engage in any acts or practices which constitute or will constitute a violation of any provision of section 707 of this title, he may make application to the appropriate court for an order enjoining such acts or practices, or for an order enforcing compliance with such provision, and upon a showing by the Administrator that such person has engaged or is about to engage in any such acts or practices a permanent or temporary injunction, restraining order, or other order shall be granted without bond.

"(b) Any person who willfully violates any provision of section 704 of this title, and any person who makes any statement or entry false in any material respect in any document or report required to be kept or filed under section 703, shall, upon conviction thereof, be subject to a fine of not more than $5,000, or to imprisonment for not more than 1 year, or to both such fine and imprisonment. Whenever the Director has reason to believe that any person is liable to punishment under this

subsection, he may certify the facts to the Attorney General, who may, in his discretion, cause appropriate proceedings to be brought.

"(c) The district courts shall have jurisdiction of criminal proceedings for violations of section 707 of this title, and, concurrently with State and Territorial courts, of all other proceedings under the section. Such criminal proceedings may be brought in any district in which any part of any act or transaction constituting the violation occurred. Such other proceedings may be brought in any district in which any part of any act or transaction constituting the violation occurred, and may also be brought in the district in which the defendant resides or transacts business, and process in such cases may be served in any district wherein the defendant resides or transacts business or wherever the defendant may be found. Any such court shall advance on the docket and expedite the disposition of any criminal or other proceedings brought before it under this section. No costs shall be assessed against the Director or the United States Government in any proceeding under this title.

"(d) If any person selling housing accommodations violates a regulation or order prescribing a maximum selling price, the person who buys such housing accommodations may, within 1 year from the date of the occurrence of the violation, bring an action for treble the amount by which the consideration exceeded the maximum selling price, plus reasonable attorney's fees and costs as determined by the court. If the buyer fails to bring an action under this subsection within 60 days from the date of the violation, the Director may bring such action on behalf of the United States within 1 year from the date of the violation. If such action is brought by the Administrator, the buyer shall thereafter be barred from bringing an action for the same violation.

"SEC. 710. There are authorized to be appropriated such sums as may be necessary or proper to carry out the provisions and purposes of this title.

"SEC. 711. If any provision of this title or the application of such provision to any person or circumstances shall be held invalid, the validity of the remainder of the title and the applicability of such provision to other persons or circumstances shall not be affected thereby."

VETERAN FINDS INFLATION AND DOESN'T LIKE IT

The following is a letter to the editor of the St. Louis Post-Dispatch from a returned veteran, William Howard Morgan:

Early in 1943 I sold my new home in St. Louis County to enter the Army. At that time there was no inflation in real estate, and the price I got just about covered what I had put into it. I was in the Army 28 months, 18 of which were spent overseas, and during that time I dreamed of the home I left behind and the postwar home I'd have some day.

Well, I did get home, and was discharged in September. Since the first day of October my wife and I have left no stone unturned in trying to locate a home, but up to this moment the best we have been able to do is get a hotel room, which is too expensive for us and which is certainly not the home I dreamed of while I was in the ETO.

I'd like to buy a home like the one I left behind, but the inflated real-estate prices prohibit that. Homes similar to mine have gone up as much as $4,000 and $5,000. Is it fair to returning GIs to have to pay the inflated price after having paid sweat and blood as our part in the war?

The Veterans' Administration's only hope of finding a place for me is "in a rooming house in one of the less desirable locations in St. Louis." That is quoted because that's all I was promised when my name was put on the list.

Since that time I have called on real-estate people in the hope of finding a reasonably modestly priced home. I learned that most of the real-estate operators are promising to find places for rent to people who are selling their homes at handsome profits today, leaving the ex-GI at the bottom of the ladder on rentals, which are at least controlled by the OPA.

## Heed These Scientists

EXTENSION OF REMARKS
OF
**HON. ESTES KEFAUVER**
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Chattanooga Times, Chattanooga, Tenn., of November 20, 1945, and also a letter entitled "Russia and Atom" which appeared in the Chattanooga Times and written by Charles W. Heard of East Chattanooga, Tenn.:

HEED THESE SCIENTISTS

The grim warning given America by the scientists who led in developing the atomic bomb should not go unheeded. These scientists were brought together at a joint meeting of the American Philosophical Society and the National Academy of Sciences in Philadelphia last week. They pictured disaster for America if wise measures are not taken to prevent the use of atomic energy as a military weapon, and they all agreed that the only way to prevent it was to prevent war.

In an account of the meeting, on the first page of Saturday's New York Times, Dr. Irving Langmuir, Nobel Prize chemist, is quoted as saying that if an atomic bomb war is ever allowed to come to pass the whole earth may become uninhabitable. Dr. Langmuir said that such a war would release radioactivity in the atmosphere which would be distributed by winds.

Dr. Arthur H. Compton warned that one-tenth of any country's population would be destroyed in the first night of atomic bombing and that no city of more than 100,000 would remain as an effective operating center after the first hour of the war.

Dr. Langmuir said that if the United States is short-sighted enough to engage in an atomic armament race, the condition of insecurity resulting from the threat of the atomic bomb will probably develop in four stages. He outlined those stages as follows:

"There will be a period in which we alone will have the atomic bomb and during this stage we may perhaps acquire a stock pile sufficient to wipe out all the cities of any nation that we might wish to attack.

"In the second stage one or more other nations have begun to produce atomic bombs, but have not yet acquired a sufficient stock pile to wipe out all our cities.

"In the third stage one or more other nations will have enough bombs to wipe out all our cities.

"If the armament race continues, a fourth stage will probably be ultimately reached in which one nation (possibly not the United States) has bombs of such high power, or in such large numbers, that in one surprise attack an enemy nation can be so completely incapacitated that no retaliation can occur.

"It may well be that it will take a thousand times more power for bombs to reach stage 4 than to reach stage 3, but we can have no assurance that stage 4 will not be reached with the further development of nuclear knowledge and the improvement of technical processes."

In the opinion of Dr. Langmuir Russia might reach stage 4 before we do. She is more willing to make sacrifices in living standards in order to develop atomic superiority.

Other atomic bomb makers declared at the meeting that atomic bombs will be produced cheaply and in abundance if they are permitted.

The need for an understanding with Russia is obvious. Dr. Langmuir said, "We must break down the barriers between ourselves and Russia. Neither of us has the desire to go out and conquer the world. The Russians desire peaceful development as much as we do."

The outstanding scientists for the first time gave a true picture of what we may expect if we have any more wars.

The most pressing issue facing the world today is a good understanding between the United States and Russia so that we may go into the United Nations Organization with the certainty that wars will be avoided and that there will be no need for use of the atomic bomb.

RUSSIA AND ATOM

WRITER STATES WASHINGTON COULD USE A SEEING-EYE DOG

To the EDITOR OF THE CHATTANOOGA TIMES:

In re your editorial, "Russia and the A-bomb," in today's Times.

Statesmen solve problems; politicians never solve anything.

We are told that whatever is wrong with our domestic economy is due to communistic influence; that whatever is wrong with our foreign policy is due largely to Russian stubbornness or desire for war.

There is no evidence of the existence of a single convinced Democrat in Rumania or Bulgaria. Yet we tell Russia to set up "democratic governments" in those countries and warn her to keep out of the Western Hemisphere, and that we intend to rule Japan.

This despite the fact that for years we have coddled Franco, Vichy, the House of Savoy, and the Argentine Fascist dictatorship—and are now backing the Chungking government which, on the record, is bitterly opposed to freedom for the Chinese people.

Russia has one-sixth of the land surface of the globe; has every variety of climate, and its natural resources exceed those of any other nation. Perhaps 140,000,000 or 150,000,000 people there survived Hitler's onslaughts.

And these people have a domestic economy that is a cross between socialism and state capitalism which includes the most potent forces of collectivism and individualism; namely, production for use plus the incentive wage, plus freedom to adventure in the realms of discovery, invention, and social experimentation; with abundant rewards to the individual for outstanding discoveries, inventions, or service to the state.

And they have security from the cradle to the grave, which inspires faith in the present and hope for the future of Russia. Faith and hope abundantly justified by Russian achievements in the war.

But the Russian people cannot produce for use as long as they are forced to produce for war or preparation for war in an armament race under threat of the atomic bomb in order to survive in this chaotic world.

The interests of the peoples of Russia and the United States have never conflicted and do not conflict now. Therefore the assumption that Russia wants war with the United States is sheer lunacy.

Said Ruskin: "Hundreds can talk to one who can think; thousands can think to one who can see."

Official Washington could do with a good seeing-eye dog.

## Massachusetts Clerical Association on Control of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. GOODWIN. Mr. Speaker, in connection with current consideration and discussion concerning the control of atomic energy, I believe a most intelligent and valuable contribution is found in a resolution passed unanimously by the Massachusetts Clerical Association, comprising 240 clergy of the Episcopal diocese of Massachusetts, and which I include herewith under consent to extend my remarks:

Whereas:

1. The use of the atomic bomb marks the discovery of the most destructive force known to mankind;

2. Any attempt to formulate our foreign policy on the basis of temporary superiority in atomic weapons will force other nations, as well as ourselves, into an atomic armaments race;

3. A domestic policy providing for free scientific investigation and discussion as well as public surveillance and criticisms of the application of atomic energy is the best guaranty that peace will be secured and that the public will be given full use of any scientific developments which, furthered under Government sponsorship, belong primarily to the people;

We, the members of the Massachusetts Clerical Association, comprising the clergy of the Episcopal Diocese of Massachusetts, resolve:

1. That a system of international control and cooperation be established in order to safeguard world peace, and we urge that the President of the United States immediately invite the governments of Great Britain and the Soviet Union to a conference to prevent a competitive armament race, to plan international control of mankind's most devastating weapon, and jointly to utilize international machinery to make available to all people the peacetime benefits of atomic energy.

2. That a domestic policy for the control and development of atomic energy, in harmony with an international system of control and cooperation, be established by the President and the Congress of the United States providing for scientific freedom and a peacetime utilization of atomic energy in the interests of the people as a whole.

## School and College Teachers Need Better Pay

EXTENSION OF REMARKS
OF
### HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. HAGEN. Mr. Speaker, during these days when labor groups all over the country are asking for higher wages, it behooves us to look around us to determine whether or not there are other sections of our population which need special attention in the way of wage increases at this time.

An editorial recently appeared in the Minneapolis Tribune setting forth the case for the school-teaching profession. It struck me as being such a strong argument in behalf of an increase in wages and salaries for teachers and instructors that I am reprinting it here for your information. I sincerely hope that in the scramble for increased wages, the fine citizens engaged in the teaching profession will not be forgotten.

LET'S NOT BE TIGHTWADS

Writing in the October Reader's Digest, Robert Littell cites some startling evidences of a "tightwad tradition" which is largely responsible for the Nation-wide teacher shortage.

Flint, Mich., starts its school teachers at $400 a year less than it starts its garbage collector.

At Salt Lake City teachers can attain a maximum of $2,724 yearly after 16 years' experience while the dog catcher makes $10,000 a year.

In Tuscumbia, Mo., the salary of the school janitor with less than an eighth-grade education is the same as that of a teacher with a university degree.

A $30-a-week teacher in South Omaha had in her class a 15-year-old boy earning $35 weekly for part-time work in a packing plant.

In Georgia the minimum salary for teachers works out to $4.25 a week less than the compensation to the unemployed.

Prodded by the pinch of rising living costs, enough teachers were lured away from their profession last year to "hold classes for a million and a half pupils," Littell says. In addition, competent men and women have in many cases been replaced by "anyone whose wages were low enough to make teaching seem a step upward." About half of the Nation's 850,000 teachers were paid less than $1,800; 200,000 less than $1,200 and 25,000 less than $600.

Obviously there's something wrong here. We don't begrudge janitors, dog catchers, or garbage collectors whatever incomes they can command. We need their services, too. But taxpaying parents ought to be in there bidding for the services of more competent teachers to educate their children. As Littell points out, we can immeasurably improve American education by paying more for it. He is talking to America at large, but what he has to say is applicable to Minnesota. There are from 2,500 to 3,000 fewer available teachers in the State today than in 1940–41. Digging a little deeper to make the profession more attractive is the only realistic corrective.

## OPA Price Regulation

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE S & M CO.,
*Minneapolis, Minn., November 2, 1945.*
The Honorable WALTER H. JUDD,
*United States Congressman,*
*Washington, D. C.*

DEAR MR. JUDD: We would like to bring to your attention certain practices of the Office of Price Administration which create an adverse effect on business, thereby retarding what would otherwise be a rapid and orderly conversion to peacetime trade and commerce.

This letter does not originate with a pressure group or organized lobby, but comes to you from a firm with 145 employees, doing an annual business of $2,500,000. We have no criticism of the principle of price control, but we do criticize the administration of OPA.

We have put forth every effort to comply with OPA regulations, even though many of them are conflicting and even contradictory, and have received letters from the OPA district office commending us for our cooperation. In many cases OPA representatives themselves do not agree on the interpretation of various regulations which is evidenced by the fact that within the last 2 years we have prepared two different sets of current records at the insistence of OPA examiners. This constant pressure has required so much time and effort on the part of our key personnel that they have lost their effectiveness in the discharge of their regular duties.

We hired additional help, at considerable expense, to complete the records demanded in the limited time, but in spite of our prodigious efforts we learned through the daily press that our firm and six other large, reputable business firms were being sued by OPA for failure to prepare "adequate records." All of this, of course, has a very detrimental effect on business. We are not pleading our cause alone, but the cause of business as a whole and its effect on the welfare of the Nation.

It would require too voluminous a report to give you complete details on all of the difficulties we have encountered, but we are enclosing brief outlines on two specific cases, and will be glad to send you innumerable specific instances if you are interested.

Yours very truly,

THE S & M CO.,
PHIL SIEFF.

ILLUSTRATION OF OPA PRICE REGULATION

In 1942 we handled bicycles on which we realized a gross margin of 31 percent, which is a normal mark-up for this class of merchandise. We are handling a similar bicycle today. OPA has allowed the manufacturer a price adjustment and has also set a dollar and cents ceiling on our resale price, which allows us a gross margin of 12 percent. You can readily see that the permitted margin is not sufficient to allow us to operate without a loss on this item. A comparison of 1942 and 1945 prices follows:

| | |
|---|---|
| Year 1942: | |
| Our cost | $22.96 |
| Our selling price | $33.90 |
| Margin, percent | 31 |
| Year 1945: | |
| Our cost | $23.21 |
| Our selling price | $26.52 |
| Margin, percent | 12 |

We also sell an electric toaster which is not the same finish as the one sold in 1942. The manufacturer has been permitted a price adjustment but we must, under OPA regulations, sell at the same or a lower price. Price comparison follows:

| | |
|---|---|
| Year 1942: | |
| Our cost | $1.37 |
| Our selling price | $2.19 |
| Margin, percent | 28 |
| Year 1945: | |
| Our cost | $1.97 |
| Our selling price | $2.19 |
| Margin, percent | 10 |

Our operating cost for the first 9 months of 1944 was 19.19 percent of gross sales. In 1945 our operating costs have been 21.15 percent of gross sales for the first 9 months.

## The Republican Party and the Democratic Process

EXTENSION OF REMARKS
OF
**HON. ROSS RIZLEY**
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. RIZLEY. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a recent editorial from the Los Angeles Times. It is timely and to the point and I recommend its reading, especially to those Republicans who have in the past and who continue to try to out-deal the New Deal. After they have read this article, I hope they will come back home where they belong.

THE REPUBLICAN PARTY AND THE DEMOCRATIC PROCESS

One of the first necessities of successful democratic process is two major political parties. The party in power must have the full responsibility of administration and positive action. The party out of power must be the check upon the majority by debate, by vigorous opposition to extremes, and by constant exposure of misdoing. It must constantly voice the rights of minorities.

Ten democratic governments set up after the last war in Europe failed largely because they could not concentrate into two major parties. They degenerated into bloc government where agreement on positive constructive policies and action could seldom be obtained. They survived for a few years by compromise of negative action until they died.

But the purpose of two major parties is wider than this. They must present alternative programs and issues in government. It is only thus that our revolutions are at the ballot box and not by street mobs.

The natural division between men in private life and the natural division between old age and youth is conservatism and radicalism. Interpreted into our present political scene it is the division between those on the "right" and those on the "left."

Today the radicals on the left are organized and vigorous. The conservatives on the right are unorganized and impotent. The American people need and have a right to organized expression of conservative thought. Being a conservative is not a sin. It is not fascism or reaction. It means today the conservation of representative government, of intellectual freedom, and of economic freedom within the limits of what does not harm fellow men. It means the conservation of natural resources, of national health, education, and employment. A conservative is not allergic to new ideas. He wants to try them slowly without destroying what is already good.

This division between conservatism and radicalism, between the right and the left, as the basis of our political parties has been developing slowly in America. The roots of the old party division grew out of the Civil War with its echoes of major territorial locus of the Republican Party in the North and of the Democratic Party in the South. There were also differences of economic interest of the two regions and attitudes on race questions. In the reshuffle of ideas during the past few years, the Democratic Party has adopted the radical field. And the radical parties are infected with bureaucracy, with socialism and with communistic ideas. The Republican Party has been uncertain and divided.

If there were a man-in-the-moon, who understood the ways of democracy and the imperative need in that process for a two-party system, who had never heard of the United States but who came down here and stayed 24 hours, he would say: "If you Republicans wish to give the country the service of a real two-party system and if you wish to prevent disintegration of your party, you will at once take the conservative position and gladly declare it. The Democratic Party holds the radical fort. There is no room for you in it and there is no position to the left of it. You have tried to compromise, you have tried to outdo the radicals in promises, you have failed, and you will disappear, as the Whigs did, if you continue to try to straddle."

The people deserve an opportunity to express the conservative point of view. Such a party could eventually come into power against the radical excesses and the accumulation of errors and blunders which are the inevitable result of long continuance of one party in power.

The Republican Party should proclaim itself the conservative party—the party on the right—and do it with pride in its principles and in the service it can perform for the country. It does not need to be afraid of a word. Whatever party opposes radicalism is going to be smeared. That is their technique. The American people see through smears sooner or later. Republicans should have the courage to adopt the word that means what a large part of the American people are—conservative.

P. S.—We do not use the word "liberal." That word has been polluted and raped of all its real meanings. The fundamentals of political liberalism were established by Morley, Gladstone, John Stuart Mill in the nineteenth century in England. Liberalism was founded to further more liberty for men, not less freedom. Therefore, it was militant against the expansion of bureaucracy, against socialism, and all of its ilk. The conservatives in America are akin to the nineteenth century liberals of England.

Lenin's instructions on propaganda included the deliberate distortion of accepted words and terms and Lenin has surely had his way with the word "liberalism." The Socialists and Communists daily announce that they are "liberals." They have nested in this word until it stinks. Let them have the word. It no longer makes sense.

## Amendment of the Federal Trade Commission Act

EXTENSION OF REMARKS
OF
**HON. B. CARROLL REECE**
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks I wish to include an address which I delivered at the annual meeting of the Association of National Advertisers in New York November 20, 1945:

It is a pleasure to be your guest today and afforded the opportunity to meet so many of my old friends and to get acquainted with other members of your fine association, which is making so valuable a contribution to sound national economy and free enterprise on a basis to best serve the highest public interest.

I experienced some difficulty in getting away from Washington on schedule. In fact, I missed one train. In the effort to make it, I hurriedly rushed up to one of the porters and asked him how much time I had to make the train, and he replied, "Boss, if you hurry you won't miss but 5 minutes." In my effort, I was hardly in the position of a countryman down home who decided after a season's hard work to go on one of the railroad's advertised excursions to the Natural Tunnel. He had his savings for the trip all in one big bill. He went down to the station on Sunday morning, got in line, and finally worked his way up to the ticket window. He laid his 10-dollar bill down and asked for his ticket. The agent in a very businesslike manner shoved his ticket and his considerable change out through the window. The countryman, always careful about his money, began to finger through his change, counting it. The ticket agent, busy and getting nervous that the line was being held up, called out in a brusque manner, "What in the hell's the matter? Didn't I give you the right change?" By this time, having carefully completed the count, the old gentleman calmly replied, "Yes; but you just barely did."

H. R. 2390, A BILL TO AMEND THE FEDERAL TRADE COMMISSION ACT

It has been suggested by the chairman that I talk about H. R. 2390 which I introduced in the present Congress. It is a bill to amend the Federal Trade Commission Act in the following respects: (1) to afford effective judicial review of the Commission's cease and desist orders; (2) to put a ceiling upon the aggregate amount of penalties which may be assessed for a single violation of these orders; and (3) to avoid duplication of administration between the Commission and the Food and Drug Administration.

The Federal Trade Commission Act deals with methods of competition and acts and practices in commerce. Except as to banks, common carriers, air carriers, meat packers, and operators of stockyards, which are covered by special statutes, the act applies to all commerce, and just to mention the scope of it makes manifest its relation to private enterprise and to a competitive economy.

Therefore, the bill, in amending that act, would have an important influence upon our basic industry. In one part the bill deals particularly with advertising of specified products—foods, drugs, and cosmetics; but in other parts it affects generally all advertising and all methods of competition and acts and practices in commerce.

Thus the bill has considerable to do with private enterprise and a competitive economy—subjects which are identified in an interdependent way with advertisers and advertising. Thriving enterprise needs alert advertising—advertising which heralds the coming of new goods and opens and expands markets; which creates demands for which production sources must produce new goods and increased quantities of old goods; which assumes proportionate public responsibilities, recognizing that the higher the standards for truthfulness and sales appeal in the advertising message, and the stricter the adherence to them, the more surely and the more effectively does advertising serve a system of free enterprise.

THE PROBLEM OF ADMINISTRATIVE ACTIVITIES GENERALLY

No phase of Government activity is more closely related to our economy of the future—to our system of free enterprise—than the regulation of business and other private activity by agencies of the central government. All of us know of the vast extension of this form of government during recent years. In my considered judgment, one of the most important postwar mandates is a restudying of the administrative agency in our Federal Government.

I am not certain how many such commissions, boards, and other agencies are now in operation, either including or excluding wartime agencies. Estimates vary, depending, perhaps, on how one defines the term "administrative agency." But by any computation there are a great many of them, and the exact number does not matter.

What does matter is that some of these agencies have gradually spread out from the field of legislation into the field of adjudication. Once the legislative, the executive, and the judicial functions of government were separate powers. Today numerous agencies, regulating much of daily business and private life, combine these powers and in the exercise of them combine multiple and contradictory offices. Of the Federal Trade Commission, with which my bill deals, the Circuit Court of Appeals for the Second Circuit said:

"It is called upon simultaneously to enact the roles of complainant, jury, judge, and prosecutor." (*John Bene* v. *F. T. C.* (229 Fed. 468, 471).)

The Lord Chancelor sings in Iolanthe:

"The law is the true embodiment
Of everything that is excellent.
It has no kind of fault or flaw,
And I, my lords, embody the law."

And in the Mikado, before consulting Pooh-Bah, it is necessary to indicate in which of his many capacities he is to be consulted. But we are not accustomed to conducting our affairs that way. The Anglo-Saxon fight for freedom was to get away from the enactment of multiple roles by one authority. Our general concept of justice is grounded in the ancient doctrine that no man should be judge in his own cause.

But in the field of administrative regulation, the agency acts as both prosecutor and judge; and then, to aggravate the matter, the agency is immune to judicial supervision if its findings are supported by evidence. It is sometimes stated that the findings must be supported by substantial evidence, but I cannot discover that the word "substantial" is of any practical significance. The situation—so held by many authoritative cases—is that the agency's position cannot be disturbed by the court unless it is plainly arbitrary. That is, beyond the scope of the agency's statutory authority or in abuse of its discretion. The net effect of this is that there is really no court review of the facts or of the remedy.

This problem has attracted the attention of the Government and of the organized bar. Several years ago there was a committee appointed by the Attorney General at the request of the President, to study administrative practices and procedures. A committee of the American Bar Association also studied the problem for several years and drafted a proposed bill, which has been introduced in the present Congress. It seeks to reform the administrative practice with respect to all except certain-named agencies. It does not accomplish a separation of the legislative, executive, and judicial functions and does not provide for any expansion of court review. In fact, the report of the committee of the American Bar Association explains that its bill would merely reenact the existing form of review and that it would do that merely to avoid the bill being construed, by virtue of an omission, to exclude or diminish the existing court review.

It seems to me a very difficult matter to deal in one bill with all of the many agencies and to deal with them in so many of the details pertaining to practice before them, as the bar bill attempts to do. The details of practice vary among the agencies. So does subject matter. The problem as to many of these agencies may be resolved or materially changed by what the President may do under the pending reorganization bills when they are finally enacted. Those bills, it is estimated, deal with over 100 agencies. The Senate bill exempts 13 and applies, it is said, to 90. The House bill exempts only 3. The Federal Trade Commission is exempted in both.

### THE PROBLEM OF PROCEDURE IN THE FEDERAL TRADE COMMISSION

The bill deals only with the Federal Trade Commission. This is an old agency with a fine record of service, especially in supplying the facts from which the Congress has formulated such memorable statutes as the Export Trade Act, also known as the Webb-Pomerene Act, which gives small businessmen the right to combine against the big cartels of Europe; the Packers and Stockyards Act of 1921; the Federal Communications Act of 1934; the Securities Act of 1933; the Public Utility Holding Company Act of 1935; and the Federal Power Act of 1935.

In this realm the Commission has functioned notably as an aid to the Congress. That was one of the great intentions inspiring its formation, and my bill does not affect in any way its powers with respect to this phase of its work. The bill deals with other powers which have been enlarged to encompass subject matter and activity far beyond what was contemplated when the Commission was created in 1914. It deals with the parts of the Commission Act under which the Commission is widely engaged in the trial of specific issues of fact between the Government and its citizens.

The bill does not relate just to advertising cases. It would, of course, affect all such cases, whatever the advertised goods might be; but it would also apply to all the actions which the Commission may institute under section 5 of its act. Those actions involve, in the words of the act, "unfair methods of competition and unfair or deceptive acts and practices in commerce." The subject matter for these cases is just as broad as the terms "unfair methods of competition" and "unfair or deceptive acts and practices" and can involve almost anything a man does in the conduct of his business.

The bill would take nothing away from the Commission that should not be taken away from it or that the Commission should object to having taken away from it. Indeed, the bill may not go far enough. Perhaps it should go to the extent of separating the functions which the Commission exercises, so that the trial of issues of fact would be transferred to the courts, the Commission being the complainant or the prosecuting agency, but the adjudication being by the courts which regularly determine issues of fact in specific cases and have been doing it for generations.

However, it has seemed to me that perhaps it might not be necessary to go that far if a material correction could be made with respect to court supervision. Perhaps it is not so objectionable for the agency to combine these functions if there is available a review whereby the courts may examine what the Commission has done in its multiple capacities; whereby the courts may determine whether the Commission has acted contrary to the weight of the evidence; whereby the court may examine the whole record; whereby the court's power to modify the order of the Commission is not limited to a showing that the order is plainly arbitrary.

It does not offend the stature or the dignity of the Commission to say that, if it is to exercise judicial functions, it should be subjected to the same review that pertains in the judiciary. The Commission, in the unusual circumstances pertaining to it, should not be given the same finality on findings of fact as pertains to a jury's verdict. Certainly, it should not be more immune to review than is the district judge in the trial of cases without a jury. The findings of the judge may be disturbed if they are against the clear weight of the evidence. It is not unreasonable to put the Commission's findings on the same basis for appellate review. It seems to me quite unreasonable not to do so.

### THE REVIEW OF THE COMMISSION PROCEEDING

It is true that the Federal Trade Commission Act in present form contains a provision for court review of a Commission order. That review is, however, so limited as to be of little avail in the ordinary case. The courts say that as the law now stands they cannot weigh either the force of the evidence or the propriety of the remedy.

The obstacle to court review of the facts at present is the provision that the Commission's findings of fact shall be conclusive if supported by evidence. This means that the reviewing court must take the case on what the Commission says are the facts. The Commission may pick and choose from the record as it pleases, to select evidence in support of its findings. The court cannot look beyond that to see what may be in the record in denial or explanation. On the whole record there may be a serious conflict in the evidence, or a heavy preponderance of evidence in a direction contrary to that taken by the Commission. Nevertheless, the court is bound to the Commission's view.

There is no logical reason why the Commission should be the complete arbiter of the facts. It doesn't see the witness or hear the evidence. It often knows no more of the proofs than what is disclosed by the trial examiner's report on them. When a conflict in evidence arises, the courts are the proper place to resolve it—historically, traditionally, and by practice and experience. From their very inception courts have been dealing with cases of unfair competition and commercial dishonesty. My proposal to require support of the Commission's findings by a preponderance of evidence will give the courts an opportunity to consider and evaluate testimony on both sides of the case.

Furthermore, the bill would permit the courts to resume the exercise of some discretion over restrictions laid upon a respondent by a Commission order. The act now says that the courts may modify the order, and they used to do so. In recent years, however, judicial construction has almost read the word "modify" out of the act. Courts now take the view that the Federal Trade Commission has absolute authority as to remedy, and refuse to interfere even while expressing their own opinion that the ends of justice would be served by less-drastic measures. This is illustrative of an alarming trend in the administration of justice. It represents a transfer of power from the hands of the judiciary to an administrative agency which is naturally concerned with the exercise of its authority on a broad scale.

### THE PENALTY PROVISIONS

The importance of adequate review of Commission orders is emphasized by the fact that, when such an order has become final, the respondent is subject to a severe penalty if in any respect he fails to comply with it. In other words, the cease-and-desist order which has resulted from the proceeding in which the Commission has been prosecutor and judge and which has not been subject to adequate court review is enforceable by heavy monetary penalties.

As the law now stands there is a civil penalty of not more than $5,000 for "each violation." In dealing with advertisements, for example, each single advertisement may be a separate violation, and, as the order frequently includes numerous prohibitions, each advertisement may violate several separate prohibitions in one order. Thus, the aggregate penalty may be computed by multiplying the number of violations in an advertisement by the number of publications of the advertisement in all kinds of media. Considering the wide variety of means which may be used to disseminate a single advertisement, the total penalties may run into a fantastically high figure.

The proposed amendment is for the purpose of putting a ceiling on the accumulation of penalties for a single violation. The figures I have suggested—not more than $1,000 with a top limit of $10,000—may not be the right ones and I am not particularly concerned to use these exact figures. My concern is with the principle that the penalty should be large enough to be effective

without the possibility of becoming so large as to be confiscatory.

THE PROBLEM OF DUAL JURISDICTION

The other principal feature of the bill is of primary importance only to the food, drug, and cosmetic industries, but it is especially close to my heart because of the measure of responsibility I feel for the present situation. I was on the subcommittee of the Committee on Interstate and Foreign Commerce which dealt with the food, drug, and cosmetic bill and the Wheeler-Lea bill in the period 1935-38. I felt then that no legislation was more important than that having to do with the purity and the truthful labeling and advertising of the country's food, drug, and cosmetic supplies. The years which have passed since have confirmed my estimate of its importance and have brought me a sense of pride in having had an active part in it.

When this legislation was formulated, I advocated the arrangement whereby the jurisdiction over advertising of the commodities was left with the Federal Trade Commission, the Commission's powers in that respect being substantially enlarged by the Wheeler-Lea bill. The Commission had exercised jurisdiction over the advertising of these commodities only as advertising had been construed to be a method of competition. The Commission desired to retain this jurisdiction and to have its powers enlarged in order the more adequately to cope with advertising of foods, drugs, and cosmetics. It was my thought that the Commission's position was correct and that the way we separated the jurisdiction of the Food and Drug Administration from that of the Commission represented a clear division of authority. I have been distressed, however, to find that the division was not as clear as we thought it. I have, therefore, felt out of my own responsibility an urgent desire to remedy the situation.

Overlapping of the activities of these two agencies apparently has grown out of the administration of section 15 (a) of the Federal Trade Commission Act, which contains the definition of "false advertisement," expressly excluding "labeling" from it. Now the purpose of that exclusion was to prevent dual administration, the regulation of labeling being under the Federal Food, Drug, and Cosmetic Act. However, either directly or indirectly, the Commission has undertaken to deal with the labeling. Even more often the two agencies, the Food and Drug Administration and the Commission, are found dealing with the same subject matter—the same representations. The Food and Drug Administration will deal with such representations in labeling which includes the package, the label, and circulars which accompany the goods; the Commission will deal with the same representations in advertising.

Although these two agencies desire to have a harmonious relationship, they are not under common control and it is inevitable that divergent opinions and approaches to some problems should arise. The result has been that the action of one sometimes hampers or forestalls the other, each spending great effort, time and money on subject matter that could be disposed of in one procedure.

The purpose of the bill is to correct that situation. The bill would amend the Commission Act to insert a definition of the word "labeling" in the identical language which the Food, Drug and Cosmetic Act uses to define the term. It also would alter the definition of a "false advertisement" by a change to language which more clearly expresses what section 15 (a) sought to accomplish. That was to reach advertisements which, although not false by express statement, were misleading by indirection, implication, and ambiguity. The commission has construed its present language as a requirement for advertisements to contain directions for using and various warnings with respect to contra-indications. Those matters are expressly dealt with in the Federal Food, Drug and Cosmetic Act as to labeling. They were not intended to be required as to advertising unless the affirmative and express portions of the advertisements were such as to make some additional disclosure necessary for accuracy or safety.

Certainly speaking for myself as one who took an active part in the work of the subcommittee, in the deliberations of the full committee, and in the discussions on the floor of the House in formulating the Food, Drug and Cosmetic Act and the Wheeler-Lea amendments to the Federal Trade Commission Act, I can say that it was our intention to separate the jurisdiction of the two agencies so that there would not be any duplication.

I think that purpose was clear in the report on the Wheeler-Lea Act by our committee to the House (Rept. No. 1613, Aug. 19, 1937, 75th Cong., 1st sess., p. 5):

"It will be observed that it is not mandatory on the advertiser to state anything. The only requirement is in case he does advertise, he shall not make statements that are misleading in a material respect.

"It is incumbent on the advertiser to reveal facts material in the light of representations made in the advertisement."

Also, when the bill was under discussion on the floor of the House there were several interesting and revealing colloquies. One of them appears in the CONGRESSIONAL RECORD of January 12, 1938 (vol. 83, p. 412), as follows:

"Mr. WHITE of Ohio. Let us take, for example, the manufacturer of cosmetics. If cosmetics are used for normal purposes and injury occurs, the gentleman would want to punish the man who put out the cosmetics, but on the other hand if these cosmetics are eaten by somebody or used for a purpose other than prescribed, certainly the gentleman would not want to hold the manufacturer responsible?

"Mr. LEA. No. We are shortly going to come along with a food and drug bill which is pretty well prepared for presentation to the House. The gentleman referred to cosmetics. The new food and drug bill will require a warning of what may be the deleterious effects if used under certain conditions. We are going to take care of that in the label and misbranding features."

My bill, therefore, proposes deletion of the clause in section 15 (a) which has been the basis for the Commission dealing with warnings and directions, and which has, it seems to me, been chiefly responsible for the Commission trying cases which involve protracted investigations into therapeutics. I realize that one cannot avoid the subject of therapeutics when dealing with advertisements of drug products. But one cannot deal with directions and warnings without protracted investigations into therapeutics. And we thought the Food and Drug Administration, by experience, equipment, and tradition, was better suited to deal with that subject than was the Commission; that the Administration could do that as it administered its law, which applies directly to the composition of articles, the sanitary conditions which surround their production, the packaging of them, the labeling and the formulation of the indications, and contraindications for their use.

The final provision—section 19—of the bill would seem to end conflict by providing that "food, drugs, devices, and cosmetics shall be exempt from the provisions of this act to the extent of the application or the extension thereto of the Federal Food, Drug, and Cosmetic Act, approved June 25, 1938, as amended." In framing that section, language already used by the Congress has been employed—the language used in the Federal Food, Drug, and Cosmetic Act to prevent dual jurisdiction with the Meat Inspection Act. The virtue of this language is that by express statement it gives effect to the intent of the Congress. It expresses what ought to be the situation. There ought to be a clear demarcation between the jurisdiction of these two agencies. With a law as comprehensive as the Federal Food, Drug, and Cosmetic Act there is no reason to have a second agency dealing with the labeling of these products or duplicating, under the guise of regulating advertisements, the work of another agency under another statute.

I have only this to say in conclusion. The purposes of the bill and my intentions for it are as I have stated them to you in these remarks. My brief is for these intentions and purposes—not for the bill itself. If there are better ways of accomplishing these purposes, I will accord them a cordial welcome, and in the consideration of the bill, it is not my purpose to interject any hostility with reference to the Federal Trade Commission. So far as my own relationships to the Commissio are concerned, they have been cordial. In fact, I am looked upon as one of the stanch supporters of the Federal Trade Commission on our committee and one of its advocates, and with respect to the introduction of the bill, it is not unlikely the Commission experienced some disappointment that one who had been and is such a close friend of the Commission should have introduced a bill placing limitations upon its authority and to do so was not a pleasant responsibility for me.

But, as I stated earlier in my remarks, I do not think this is an unfriendly gesture toward the Commission. It is simply an attempt to develop good procedure based upon long years of experience. I expect the hearings to be conducted in such a manner as not to give opportunity for any antagonisms or antipathies to be aroused so far as the Federal Trade Commission itself is concerned. I think every member of that fine body is a personal friend of mine, and I have a high regard for the Commission and for the individual members and its capable and experienced staff, as well as for the work of the Commission itself and certainly for the purposes for which it was organized and I would be the last person to knowingly offend its dignity or stature.

## Chronological History of the Negotiations Between the UAW and General Motors

EXTENSION OF REMARKS

OF

### HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following chronological history of the negotiations between the UAW and General Motors:

July 3, 1945: OWMR Director Fred Vinson says, of our postwar capacity to produce and consume, we "are in the pleasant predicament of having to learn to live 50 percent better than (we) have ever lived before." (See pp. 4 and 5 of UAW-CIO Economic Brief.)

August 14: VJ-day. War ends. Shutdowns, change-overs, with thousands laid off. Workweek drops to 40 hours; take-home pay falls 23 percent for those still working.

August 18: President Truman announces a reconversion wage policy providing for free collective bargaining between labor and management, with wage increases allowable up to point where price increases would be required.

August 18: General Motors department, UAW-CIO, files demand with General Motors Corp. for a 30-percent increase in wage rates without increase in prices.

August 19–September 17: Silence by the corporation. No acknowledgment of August 18 letter transmitting the union demands; no counterproposal; three verbal requests by the union that negotiations begin draw reply that the corporation is not ready.

September 18: The corporation, without making any counterproposal, offers to begin negotiations "on dates that will be mutually satisfactory."

September 19: UAW-CIO wires offer to meet at once and again asks for counterproposal. No acknowledgment.

October 2: First negotiation meeting, 6 weeks after demands were filed. Corporation representative hands union representative a letter. Same published in newspaper advertisements. Offers no counterproposal, makes no reply to our August 18 arguments and economic data in support of our wage demands, corporation gives no reasons for claiming it is unable to make any wage increases. The corporation refuses to discuss its financial position or ability to pay higher wage rates. Corporation flatly rejects our demands as "unreasonable."

October 5: Meeting. Corporation again refuses to discuss its ability to pay higher wage rates.

October 8: Same.

October 12: The union writes the corporation, reciting previous efforts to negotiate and to bargain collectively. The union renews its proposal that negotiations be public so that the public can know the economic facts and thereby expedite a fair settlement. Union again asks corporation to submit a counterproposal by October 16, and serves notice that the union will begin presentation of its economic brief October 19.

October 18: Twenty-four hours before union begins its presentation of facts, figures, and arguments in support of its wage demands, corporation mails to wage and salaried employees warning to get ready to go home for the strike, which "may be a long one." Office help were told, "Your checks will follow." Same propaganda, including Danger on the Production Front pamphlet and false news story, was mailed to Congress and governors—a plea for Congress to pass union-busting laws; for governors to be ready to call out State militia.

October 19: Corporation holds up negotiations for 90 minutes, figuring how to throw out press and radio correspondents. Says that if union insists on public sessions, union is breaking off negotiations. Reuther, to save negotiations, asks correspondents to leave. Behind closed doors, union begins presenting economic brief, showing healthy national economy depends on maintaining take-home pay during reconversion. Corporation representatives refuse to discuss facts and arguments as presented (pp. 60–61 of transcript).

October 19: At NAM press conference in Book-Cadillac Hotel, GM president, C. E. Wilson, gives union, the public, and Federal Government an "either or" ultimatum: Lower wages, or higher prices, or change the Wages and Hours Act, raising the normal workweek from 40 to 45 hours. With a longer workweek, he says, GM will raise hourly wage rates 5 to 8 percent and work 48 hours. Says "workmen of other nations will work far more than 45 hours." Calls other employers who "have stepped out and raised wages" unfair. If GM doesn't get action on prices or hours, and if labor insists on wage-rate increases, GM will push out sample cars to bait the car-hungry public and then shut down.

October 22: Following October 21 publication of Wilson's 45-hour workweek offer, Reuther wires Senator JAMES E. MURRAY, Chairman of Senate Labor Committee, quotations from Wilson's statement supporting UAW-CIO charge that "General Motors wants a strike. It is baiting labor; it is baiting the Government; it is planning to use its vast economic power to coerce Congress."

October 23: Union begins presenting part II of economic brief, proving that General Motors can pay 30 percent higher wage rates without higher prices and can do it now. corporation again refuses to discuss case point by point as presented. GM representatives read papers and magazines while brief is being presented. Although Wilson said (October 2 and October 19) that corporation cannot afford to pay higher wage rates, GM Vice President Harry Anderson says (p. 134) that GM's ability to pay is not a factor in the wage negotiations. Admits GM is preparing for strike (p. 294).

October 24: Union continues to present facts, figures, and argument showing General Motors can pay higher wage rates now without price increases. One corporation representative, objecting to union reports to press on previous meeting, compares principal union representative with a skunk. Union again challenges corporation to open the negotiations to the press and radio. "Never mind that," says the corporation (pp. 298–299).

October 24: GM workers vote 6 to 1 to authorize a strike under provisions of Smith-Connally Act. Elections in union locals by secret ballot under UAW-CIO constitution, show 9 to 1 majority for strike authorization.

October 24: In United States Senate Wilson's 45-hour work week proposal is denounced as unthinkable by Senator JAMES E. MURRAY, chairman of the Senate Education and Labor Committee. Inserting the UAW-CIO economic brief in the RECORD as a clear-cut statement of the facts Chairman MURRAY called on General Motors to make an equally clear statement of the facts. He said:

"It is vitally important that both sides to this controversy make clear to the American people without equivocation or deception the facts upon which they stand. They owe an obligation to the American people to prevent the dangerous consequences of a strike which will demoralize the country. Both sides must take the public into their full confidence and give a straightforward, honest statement of the facts so that the American people may know whether this demanded increase in wages may be made without an increase in prices." (Pp. 10092–10099, CONGRESSIONAL RECORD, Oct. 24, 1945.)

October 26: Union completes presentation of its economic brief in support of its demand that General Motors wage rates be increased 30 percent now without increasing prices. Corporation asks for 10 days in which to prepare its answer to union's brief.

October 26: That same night, on the Mutual Network, discussing the General Motors case with UAW-CIO, Vice President Reuther, General Motors vice president, Harry Anderson announces: "The unreasonable demand of UAW-CIO has been rejected by General Motors."

Referring to corporation offers to talk wage increases if the union would stop talking about costs and profits and prices, Reuther says that the General Motors workers will not accept "the wooden nickels of inflation" because "we do not propose to eat the bitter bread of a new depression."

October 27: In a letter, General Motors President C. E. Wilson formally propositions the union, urging that the corporation and the union gang up on Congress to change the Wages and Hours Act's normal workweek from 40 to 45 hours. He repeats October 19 argument that workers in other nations will be working longer hours, so should we.

October 28: Union rejects the corporation's proposal of "a conspiracy to slam the door of job opportunity in the faces of millions of returning veterans and laid-off war workers."

Wilson was reminded that 45-hour week would add 1,500,000 to 8,000,000 unemployed estimated for 1946.

Union again proposed, as more efficient, three-shift operation to insure maximum production and employment.

November 3: Union wires Secretary of Labor Schwellenbach asking conciliation commissioners to attend future meetings with the corporation.

November 7: Meeting to receive corporation's reply brief. Corporation refuses to admit United States conciliators.

Corporation brief asks union to reconsider Wilson's proposal that the union join the corporation in persuading Congress to lengthen normal workweek under Wages and Hours Act from 40 to 45 hours.

Corporation also offers 8- to 10-percent wage increases to bring classification rates up in line with cost-of-living increases, where they have not already been so adjusted.

Union asks if such wage increases would then be used to get higher prices. Corporation replies that it is its business, not the union's (pp. 507–509).

Union asks the corporation if it will offer even 1-percent wage increase without tying it to cost-of-living adjustment and OPA prices. Corporation says, "No" (p. 512).

November 8: Union charges the corporation with unfair labor practices. In complaint filed with National Labor Relations Board, union points out that the corporation, after pleading financial inability to pay (1) Refused to discuss its ability to pay; (2) refused to disclose information essential to collective bargaining within the intent of section 8, subsection 5 of the National Labor Relations Act; (3) warned in advance that it was determined not to let ability to pay become a subject of discussion in the negotiations; (4) treated the negotiating meetings with contempt; (5) prior to negotiations, wrote its employees to discredit the negotiations and to warn them that a strike (perhaps a big one) was inevitable; (6) made a fake offer in bad faith (the proposal to conspire with the corporation to force Congress to change the normal work week to 45 hours); (7) and, in violation of section 8, subsection 1, sought to and did discourage membership in the union, and activity on its behalf, "thus interfering with, restraining, and coercing its employees."

November 9: Corporation permits United States conciliators to sit in negotiations, but as obesrvers only, despite the union invitation to become full participants.

Union presents its supplemental brief in reply to the corporation brief in November 27. In addition to defending its facts against corporation criticism, the union reply cites corporation statements proving "the corporation's determination to write and enforce, for itself and all of American industry, a policy of reckless and irresponsible economic imperialism within the United States of America and throughout the world"—longer hours, lower pay, higher prices, and inflated dollar with which to carry on economic warfare in the world's markets. (Conclusions, p. 1).

The corporation's wage-price-profit policy, as stated in its brief, in negotiations, letters, and advertisements, was summed up by the union:

"High" wages, but 23 percent less than enough to maintain GM workers take-home pay equal in purchasing power to 1944; prices, as high as the traffic will bear; "reasonable profits," whatever is left after wages, materials and parts costs, and so forth; prices and profits, none of labor's business; profits and costs, nobody's business but the corporation's (conclusions, p. 3).

General Motors Vice President Harry Anderson, replying to a union plea that the corporation change its position, said "We say the ability to pay is not an economic factor in a wage negotiation" (p. 560).

November 9: In a press conference 2 hours later, General Motors Vice President Harry Anderson says, according to the New York Times (p. 1, Nov. 10), "We don't even open our books to our stockholders. Anyway, the

books reflect only past events and do not contain an index to the future."

November 11–12: UAW-CIO international executive board receives report on General Motors department's efforts to negotiate with General Motors Corp.

Board gives the strategy committee full power to act.

General Motors Department Director Reuther calls conference of delegates from General Motors locals to meet in Detroit November 19–20.

November 12: Reuther calls on consumers, auto dealers, House Small Business Committee, and OPA Administrator Bowles to block a $150,000,000 holdup of a car-hungry public by a fifth column of inflationists within OPA who have threatened to resign unless manufacturers' car prices are raised.

OPA announcement of car price increases is blocked. Union's proof that General Motors can pay 30 percent higher wage rates, cut car prices and still earn high profits gets attention. Also, fact that, if OPA raises General Motors prices without a wage increase, OPA will, in effect, be siding with the corporation against the union's contentions.

November 14: The corporation announces a 10 percent increase for salaried employees, except higher paid officials, whose salaries and bonuses are to be reviewed in the light of the corporation's ability to pay and the value of their services to the corporation.

November 15: The corporation presents a second reply brief, squawking about the rough language of the union's supplemental brief of November 9, attempting to contradict some of its arithmetic and making a new wage offer: A flat 10 percent increase in wage rates, but still tied to regulations and formulas for increasing OPA prices.

The union again asks whether the corporation will make any offer, even a 1-percent wage increase, without tying it to OPA prices. Again the corporation's answer is "No."

General Motors Vice President Anderson admitted that the consumer will pay any increases in car prices if granted by OPA.

For the union's General Motors negotiating committee, Reuther announces that the committee will report the offer, and all previous offers, to the November 19–20 conference and the strategy committee and will recommend rejection "because it is an attempt to bribe General Motors workers with the wooden nickels of inflation.

"You put a dime in one pocket and take 15 cents out of the other pocket."

November 17: Union presents its reply to the corporation's November 15 brief and points out several errors in arithmetic.

Original position is reaffirmed:

1. Take-home pay must be maintained during reconversion in order to start "to live 50 percent better than we have ever lived before."

2. General Motors Corp. can pay 30 percent higher wage rates without increasing prices and can do it now.

November 19: UAW-CIO strategy meets, 9 a. m.

General Motors department, UAW-CIO conference meets, 1 p. m., Earlum Hotel.

## OPA

EXTENSION OF REMARKS

OF

### HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. HÉBERT. Mr. Speaker, every day in every way the duplicity and perfidy of the OPA under Chester Bowles spreads its dark and ominous shadows over the American public. These observations are not exclusive to me. The eyes of the American public and the American press are being opened wider every day.

I direct your attention to the following editorial from the New Orleans Item which speaks for itself. After you read it, can you honestly say that the OPA has held down anything except jobs at the taxpayers' expense:

WEIRD BENEFACTION

Queer indeed are the evolutions by which Reconversion, OPA, and Stabilization directors have gone around Robin Hood's barn to pay some Latin-American coffee growers more than the ceiling on which the retail price of coffee in this country is based.

The Central Americans declared this price to be insufficient to make coffee production possible at a living wage for the labor producing it. Matters came to such a pass, finally, that sales to importers in the United States were drastically cut down, to say nothing of the fact that a number of devious expedients were adopted to make additional payments "under the table" by accepting short shipments without complaint, and the like.

Naturally, our importers found this situation gradually becoming intolerable, and besieged Washington with requests for relief which would permit them to compete in the world market for coffee, by paying comparable prices. The master minds who control such matters finally evolved this amazing scheme:

American importers will be permitted to pay Central American producers 3 cents a pound more than heretofore—but must not raise their price in turn to the domestic distributors. To make this possible, the Reconstruction Finance Corporation will pay the importers the 3 cents a pound from the United States Treasury.

In other words, in order to maintain the pleasant but fraudulent fiction that the price John Citizen pays for coffee at the grocery counter has not been increased, the Government is making up the difference—with John Citizen's own tax-dollars. You pay no more for coffee, but you do pay more in taxes, for no other purpose than to permit New Deal politicians falsely to proclaim that producers are getting more for their coffee but consumers are not paying any more for it. And they call that holding the price line!

Your spending-dollar is reduced by about the same amount in either case. But by the bureaucrats' roundabout path, all that is actually accomplished is to sluice a subsidy of about $24,000,000 to the coffee growers of Latin-America, without satisfying anyone; for the growers are loud in their complaints that the increase is not enough. And this is what the New Dealers call a good neighbor policy.

## General Motors Strike

EXTENSION OF REMARKS

OF

### HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD, I include an editorial by Mark Sullivan taken from today's New York Herald Tribune.

What are we waiting for? The people are enraged. Where are the freedoms that the boys fought to preserve? With such an enormous backlog for the necessities needed by all in this country and in every nation in the world, why is it possible for a minority of workers to tie up production and strangle reconversion? If our disgruntled labor would only take the time to check the disastrous results in totalitarian countries, they would appreciate what benefits they are enjoying today, far beyond anything that labor ever can hope to expect in the referred to countries. They would appreciate what free private enterprise and collective bargaining have done for them.

Since the administration has failed, it is up to Congress and I hope every Congressman gives this present situation his sincere attention. When the bills to correct the present weak legislation are brought to the floor, we must all work together to save America, and the world for that matter, as all nations look to see whether our democratic form of government can pull through on this post-war crisis.

Let us save our face.

ENTIRE RECONVERSION PROGRAM SEEN BLOCKED BY GENERAL MOTORS STRIKERS—MARK SULLIVAN SAYS ONLY 70,853 VOTED TO WALK OUT, YET WHOLE UNITED STATES PROGRAM IS HELD UP; REITERATES CONGRESS ALONE CAN PROVIDE CURE

(By Mark Sullivan)

WASHINGTON, November 25.—The deep consequences of the General Motors strike begin with, but are by no means limited to, its postponement of reconversion. For getting volume of reconversion under way, the motor industry was the country's second reliance, the only one exceeding it being housing. And here, stalled, is the company that makes just under half of all the cars and trucks normally made in the country. To measure the widespread stalling of reconversion, it is necessary to bear in mind the resulting semiparalysis of the country's other industries. Of steel products, the motor industry as a whole consumes nearly 20 percent, of rubber products 80 percent, of many other products large percentages.

In addition to the direct stalling of reconversion is a psychological effect, on all business and on the public. That there is an immense demand for new automobiles, the public knows; the average man knows it in the form of his own personal demand. Industry knows it in the form of a figure; there are in the country 5,000,000 fewer cars than when we entered the war, and of those that remain most are in serious disrepair. Both business and the average man are apt to ask, if so enormous a demand, accompanied by abundance of money to pay for new cars, does not start reconversion, what will?

A deeply disturbing condition, only sensed by the average man but expressed clearly in a startling figure, is the spectacle of reconversion held up by a very small group. In the election that brought about this strike, conducted by the National Labor Relations Board, a total of 350,000 General Motors employees were entitled to vote. Only 83,655 voted at all, only 70,853 for the strike. The power of a tiny fraction of the people to hold up a national objective so necessary and popular as reconversion is impressive in a disquieting way.

WHAT CAN THE GOVERNMENT DO?

If the average man reflects upon the helplessness of the great majority against a small group and its leaders, the reflection is deepened when he turns to consider what can be or ought to be done by his Government.

There he finds the administration partly reluctant, partly unable. Omit the reluctance, consider only the inability. For ending such a strike as this, the only statutory mechanism possessed by the Government is the Conciliation Service of the Department of Labor. (In strikes of a different kind, considered by the President to interfere with the war effort, or directly with the operation of Government, he has used seizure of plants by the Navy, a dubious remedy for any kind of strike in peacetime.)

The only power possessed by the Conciliation Service is what its name implies, conciliation. It can ask the parties to the strike to arbitrate, but if either party declines the Conciliation Service is at the end of its statutory rope. Even if both agree to arbitrate, both are free to refuse to abide by the arbitrator's judgment. This spectacle of the impotence of government in the General Motors strike, so far as any existing agency or statute goes, is made more serious by its equal impotence in strikes of a different kind, such as the telephone strike, which completely suspend public services.

EFFECT ON OTHER COUNTRIES

If the impotence of government were to be accepted by the people as an incurable condition, that would be the sign of a terrifying malady of both government and society, a malady of weakness and disunity, of inability of government to be supreme over all groups. Throughout history, and conspicuously in recent years, disease of this type has led to national calamity. It was such a malady that made France too weak to put up strong resistance against Germany, that led to the rise of Mussolini in Italy, that preceded the rise of Hitler in Germany.

Fortunately, in the United States the impotence of government is not accepted as incurable. Proposals for remedy exist in Congress, conspicuously, for example, the comprehensive labor-relations measure known as the Ball-Burton-Hatch bill. Action on some such measure has been suspended until it could be seen whether a voluntary preventive and remedy of strikes could be worked out by the labor-management conference called by President Truman for that purpose.

It is already foreseen that the labor-management conference, whatever its minor and valuable accomplishments, can hardly succeed in the central purpose of voluntary extra legal prevention of strikes. To give the idea a hopeful trial was the spirit in which Mr. Truman called the conference. Once the impossibility of cure by voluntary action becomes fully apparent, there is little doubt a vigorous Congress will act and that Mr. Truman will assent.

## Will Bureau of Medicine Be the Solution To Existing Problems Within Veterans Administration?

EXTENSION OF REMARKS
OF
**HON. ESTES KEFAUVER**
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include a statement by Joseph Leib, service officer and past vice commander of Vincent B. Costello Post of American Legion. This statement is persuasive for the early passage of H. R. 4717:

Critical analyses of our veterans hospitals has shown beyond all question of doubt the urgent necessity for revamping and modernization of these institutions. There are numerous examples of shocking deficiencies both in equipment as well as in the treatment of patients.

This writer has done a great deal of research in this connection and has consulted the most eminent authorities in the medical profession in the hope of finding the cause and cure of this unfortunate situation.

When a legal problem arises one naturally goes to a lawyer. If one has a toothache they go to a dentist. Obviously when poor and inadequate hospital care is given to veterans, the place to go is to the medical profession.

For years there has existed a Special Medical Advisory Board to assist the Administrator of Veterans Affairs. This Board has been a paper organization and for many years the Veterans' Administration has either ignored this Board entirely or else pigeon-holed its findings and reports.

Since last May I have been in touch with these authorities representing all branches of medicine. I present herewith some of their criticism and observations. Perhaps in these recommendations we may find a working solution to the vexing problems confronting the Veterans' Administration. The following speaks for itself:

From Kendall Emerson, M. D., director, National Tuberculosis Association, 1790 Broadway, New York, N. Y.:

"Tremendous advances in the care, treatment, and rehabilitation of tuberculous patients have been made during the past 25 years. No comparable improvement in the veterans facilities have taken place. The National Turberculosis Association is convinced that competent medical administration, unhampered by lay authority, should be immediately instituted to correct very obviously disabilities in the existing veterans institutions.

"There is no question of the Veterans' Administration's capacity to handle the business and insurance aspects of its work. By act of Congress, however, medical decisions are left in the hands of a nonmedical administrator. The separation of medical care from the business and insurance aspects would give an opportunity to build up a medical service which would insure for every veteran the best that medical science has to offer in the care of tuberculous patients."

From Robert U. Patterson, dean, University of Maryland School of Medicine, Baltimore, Md.:

"I have been a member of the medical council of the Veterans' Administration since 1923. There has been no full meeting of that committee for approximately 10 years. The Veterans' Administration has never in my opinion been able to attract and retain the services of physicians for the subordinate positions comparable to the other governmental medical services. The principal reason this has been is because it has not been able to offer as attractive a career to physicians as those commissioned in the Army, Navy, or public-health services. The greatest criticism from the viewpoint of the medical profession has been that in a service in which medicine is the basic and one of its principal activities, the head of the medical service (medical director) has never been accorded the dignified position and authority that he should hold under the circumstances."

From Willard C. Rappleye, dean, Columbia University, College of Physicians and Surgeons, New York, N. Y.:

"The physical plants of most of the veterans' hospitals appear to be reasonably satisfactory although their locations in many instances make it difficult or impossible to provide for adequate consulting services of outstanding medical men, a provision which is most important for the completely satisfactory care of servicemen. Many of these hospitals are in rural districts where there is beautiful scenery and quiet environment but quite inaccessible in many instances.

"Perhaps the greatest weakness of the Veterans' Administration is the lack of a staff of the highest order. For many years the proposal has been made to create a medical corps of the Veterans' Administration with opportunities for progressive advancement, for security, and for scientific and educational self-development of the members of the staff. There has been very little inducement on the part of the Veterans' Administration for competent, younger, well-trained physicians to go into this important service. At different times during the last 25 years efforts have been made to create a medical corps that has characteristics similar to that of the United States Public Health Service or the Army or Navy. These efforts have been unsuccessful with the result that the medical services are not as adequate as required by modern standards."

From Winford H. Smith, M. D., director Johns Hopkins Hospital, Baltimore, Md.:

"One of the greatest difficulties is that of attracting competent medical men to staff the veterans' hospitals. Why should competent medical men join the staff of the veterans' hospitals? The patients are for the most part chronic cases; the salaries paid are comparatively small. If the doctors were really competent, they could make, in private practice, several times the amount they receive from the Government. It is the sort of a career that I think will not appeal to well-trained medical men. I remember, twenty-odd years ago, the establishment of a veterans' medical corps was considered with the thought that the uniform or the rank would attract men. I don't think that would be the attractive feature because it would not have the glamour that service with the Army or Navy has."

From A. W. Adso, M. D., Mayo Clinic, Rochester, Minn.:

"Unfortunately, the medical and surgical services of the Veterans' Administration have been placed in a subservient position to that of the Administrator. Therefore, I believe that the medical and surgical services should be placed on an equal status with that of the other branches of the Administration, since the primary objective of all hospitals is to provide medical and surgical care.

"The present arrangement of selecting professional personnel from a civil-service list makes it difficult for the Medical Director to secure the best professional talent. Therefore, I believe that changes should be made and have suggested that a medical corps be created, similar to the corps of the Army and Navy. I further believe that graduate training should be offered to younger men and remunerative inducements made to encourage outstanding professional men to accept positions in the various veterans hospitals. I also believe that the various medical and surgical chiefs should be relieved of certain administration duties in order that they will have more time available for rendering professional services, since there will be available a large group of young officers who have been trained to do routine hospital administration."

From Benjamin Warren Black, M. D., Oakland, Calif.:

"More important is the idea that funds be sufficient to attract a permanent medical corps by offering commissions to physicians, dentists, nurses, and others with permanent rank on the same basis as is now found in the Army and Navy, and preferably to commission them in the United States Public Health Service. This is the only civilian commissioned service in the United States Government and the job of taking care of the veterans is a civilian not a military function. With such an arrangement a physician may be provided with a career and with retirement outside of civil service. It will offer

reasonable opportunity for advancement and rank, with a career service and retirement, the only way that competent, expert medical care will be continually available for the injured, disabled, and sick veteran."

From James Alexander Lyon, M. D., chairman, Wartime Graduate Medical Meetings, Washington, D. C.:

"I have suggested that after the cessation of the war, many young doctors in the United States Army and Navy, as well as the Public Health Service, who will be discharged from active service might find it very desirable to take up medical work in the veterans hospitals, providing the Bureau could conform to the same standards as those of the Army, Navy, and Public Health."

These are but a few of many expressions from medical authorities. To quote all of them would be useless. The above statements are typical of replies received.

## The Operators Go Back

EXTENSION OF REMARKS
OF
### HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of November 22, 1945:

THE OPERATORS GO BACK

With Washington's second wildcat transit strike apparently collapsing under the impact of Government seizure of the lines, some serious thought should be given to the implications of this type of union irresponsibility.

In his stinging rebuke to the strikers, President Truman described their action as "a blow at the sanctity of labor agreements," and said that "the action of this union brings discredit upon the whole body of organized labor." That is true, but it does not go far enough. Actually, the local transit strike also reflects discredit on, and reveals the serious weakness of, our whole system of collective bargaining.

The law applicable to collective bargaining lays down certain standards of conduct for employers and provides penalties for those who fail to meet the standards. But it sets out no standards of conduct applicable to unions and provides no penalties whatsoever for union activities which reduce collective bargaining to a mockery.

Until this weakness is recognized and dealt with by Congress, it is idle to hope for any peace or stability in industrial relations. And it is difficult to see why a union man, unless he is seeking some selfish or improper advantage, should object to the imposition of appropriate standards on unions.

Spurred to action by the local transit strike, the House Rules Committee yesterday reported out a bill which, with other things, would establish penalties for strikes in violation of contract. In its entirety, the bill may or may not be desirable. Certainly it needs more careful consideration than it has received. But the significant thing is that its opponents in the House sought to combat it by raising the familiar cry that its provisions would "stab labor in the back."

So far as compelling respect for contracts and imposing reasonable standards on unions are concerned, that protest is utter nonsense. If organized labor, on the whole, is not indulging in the practices at which the bill is aimed, the great majority of workers would not be affected by it at all. It would reach only the irresponsible union elements, and any man who undertakes to put the selfish interests of these groups ahead of the interests of the people of the country actually is proving himself to be an exceedingly poor "friend" of labor.

## Six-Year Agreement Has No Strike and No Lock-Outs

EXTENSION OF REMARKS
OF
### HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the St. Louis (Mo.) Labor Tribune of November 21, 1945, concerning a 6-year agreement between 42 laundry and cleaning firms in St. Louis and organized labor.

The feature of the agreement is that it forbids strikes and lock-outs and provides a three-man arbitration panel composed of a representative of the public, labor, and industry who will settle all disputes that arise in these two industries for the duration of the contract.

It is unfortunate that such unfair legislation as H. R. 3937, with its labor-baiting amendments, should rear its ugly head at a time when it is evident there is a growing desire of both labor and management everywhere to settle their labor-relations problems in the manner set forth in the following article.

Enactment of H. R. 3937 into law would only create chaos and distrust and would be a step backward in the field of labor relations—plans such as the laundry and cleaning workers have adopted would not result under such ill-advised restraint suggested in H. R. 3937.

6-YEAR AGREEMENT HAS NO STRIKES AND NO LOCK-OUTS

An intensive and determined drive launched last July under direct order of William Green, president of the American Federation of Labor, to organize the open-shop laundry and dry-cleaning industries in St. Louis, was brought to a most successful and gratifying conclusion last Monday with the announcement of the signing of a 6-year agreement between the three dominant employer organizations in these two local industries and representatives of three AFL unions.

These were the St. Louis Laundry Board of Trade, Progressive Laundry Owners Association, and the St Louis Dry Cleaners Exchange representing the employers; and the St. Louis Teamsters Joint Council and its affiliated Laundry, Linen, Cleaning and Dye House Chauffeurs Local 366, the Laundry Workers Local 108, and Cleaning and Dye House Workers Local 161 representing the employees.

This master agreement, covering over 3,000 workers, is one of the most comprehensive and progressive union contracts ever negotiated for workers in these low-paying industries. One of its most distinctive features forbids strikes and lock-outs and provides a three-man arbitration panel composed of a representative of the public, labor, and industry who will settle all disputes that arise in these two industries for the duration of the contract.

The tripartite panel will consist of the Reverand Leo C. Brown, S. J., impartial chairman; A. A. Ahner, industrial relations counselor, representing the employers; and Lawrence Camie, a business representative of the St. Louis Teamsters Joint Council, representing labor

Other features provided for in the current contract are wage increases, a 1-week paid vacation, and the reopening of the contract every 2 years for the purpose of making proper wage adjustments.

BEGINNING OF DRIVE

Last July AFL President William Green sent an AFL organizer, Harry Karsh, to St. Louis with instructions to cooperate with the three AFL unions and aggressively undertake the complete organization of the local laundry and cleaning and dying industries which heretofore had successfully resisted separate attempts by the unions to organize these workers coming under their jurisdictions.

Karsh, a militant and experienced organizer of such campaigns, joined with Ben Bishop, international representative of the laundry workers union; Richard Rochester, international representative of the cleaning and dye house workers union; and William F. Frenger, business representative of Teamsters Local 366, whose locals have jurisdiction in these industries and mapped out the successful campaign. Sam Gross, international president of the cleaners, and Sam Byers, international president of the laundry workers also assisted.

They were given strong support by the powerful teamsters district council, which assigned Lawrence Camie, an astute veteran union official of that organization to lend his prestige and assistance.

The good offices of the officials of other large and influential AFL affiliates that had cordial labor relations with the employers and employer representatives also were enlisted in the drive to organize and stabilize these industries and bring about better wage and working conditions in them.

Outstanding among local labor officials who gave their wholehearted moral support and assistance to the AFL unions in their organization drive were John J. Church, secretary of the Building and Construction Trades Council, Lloyd Weber, business representative of Machinist District No. 9, Patrick J. Burke, business representative of Teamsters Local 603, John I. Rollings, secretary of the Central Trades and Labor Union, Mary E. Ryder, of the typo union, and others. Both Church and Weber were key men in assisting in preliminary negotiations and their participation played a vital part in the successful culmination of the 6-year agreement.

EMPLOYERS' SPOKESMEN CONCILIATORY

Two of the employer representatives who played a dominant role in the long and tedious negotiations which lead to the agreement are Charles H. Spoehrer, widely known local attorney who specializes in labor relations and represents various employers' groups, and Al A. Ahner, a labor relations counselor

In a public statement Spoehrer said that the contract "would benefit the employees, the public, and the companies. It is the considered opinion of all concerned that the formula employed in this case represents an approach to practical labor relations."

Ahner stated that "to a large extent the affected plants were nonunion, and the parties take pride in accomplishing this result without any disservice to the public and without the usual attendant strife and turmoil."

GOOD CONTRACT, SAYS CAMIE

Speaking for the unions, Camie said he thought it was a good initial contract and the machinery set-up provided was flexible enough for future wage and work progress through negotiations. He added that the

employers and the public would benefit from the union standards and work qualifications demanded.

Other labor spokesmen expressed confidence in the Reverend Leo C. Brown, who was named impartial chairman. Father Brown is an authority on labor matters and is founder and head of the St. Louis University labor college. He is also assistant professor of mathematics and a director of the institute of social sciences at the university. During the war he served as a public tripartite panel member of the Seventh Regional War Labor Board.

FORTY-TWO FIRMS INVOLVED

Some forty-two laundries and dry cleaning establishments are covered by the agreement, including large firms with many branch stores who heretofore have bitterly and at great expense fought the unionization of their employees. They are:

Excelsior-Leader Laundry, Superior Laundry, Bright & Free Laundry, Selmier-Peerless Laundry, Mid-West Laundry, "The" Laundry, Anchor Laundry, Hyde Park Laundry, National Laundry, Landau Towel & Linen Co., Sunshine Family Service Laundry, Morgan's Laundry, Grand Laundry & Cleaning Co., Acme Laundry, Bass & Sons Laundry, P. J. Holloran Laundry, Broadway Laundry, Hollis E. Suits Laundry, City Towel Co., Cascade Wet Wash Laundry, Victor Linen & Towel Supply Co., Colonial Towel & Linen Co., Justin T. Flint Laundry, Home Laundry Co., St. Louis Bachelor and Family Laundry, Glick Laundry, Inc.; West End Laundry Co., White-Line Launderers, Hy-Grade Laundry and Dry Cleaners, Chenoweth Dyeing and Cleaning, Lungstras Dyeing and Cleaning, Morganthaler's Dyeing and Cleaning, Burger Cleaning Co., Enterprise Cleaning Co., Chapman Bros. Cleaning and Dyeing, Guard Cleaners, Criner-Stein Cleaning Co., Wolfram Cleaning and Dyeing Co., Banner Cleaning and Dyeing Service, Washington Cleaning and Dyeing, Crescent Cleaning and Dyeing, and Schuck's Cleaning Co.

## David Lawrence Writes on Universal Military Training

EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. VOORHIS of California. Mr. Speaker, David Lawrence has been bringing to our present crucial national and international problems a depth of understanding and a fundamentally religious interpretation which is desperately needed if we are to come through these times safely. Under unanimous consent, I include a recent column by Mr. Lawrence on the subject of universal military training, which includes a most important quotation from the Catholic bishops of the United States:

BRITAIN SEEN DELAYING WAR-TRAINING ACTION—OFFICIALS DO NOT SHARE "PANIC" OF UNITED STATES MILITARY MEN, SAYS WRITER

(By David Lawrence)

Great Britain is postponing action on the subject of universal military training. The British Government is much too busy on other matters to take the subject up at this time. When the whole question of national security is examined in the light of the United Nations Organization commitments, Great Britain will deal with military training as a part of an over-all national military program.

The foregoing is an authoritative statement of the position of Great Britain as outlined by a high source this week.

What it means is that British officials do not share the panic which has seized American military men who are demanding that the question of military training be acted on immediately by Congress even before the plans of other nations to furnish manpower to carry out United Nations Organization commitments are known.

URGENCY NOT SHARED

There is no evidence either that Canada or Australia or any other members of the British Empire have instituted plans for a universal military training program of their youth, which would indicate not only that the urgency which is expressed in Washington is not shared by other nations, but that American policy is presumably related to an effort to use military force as an instrument of immediate diplomacy rather than as a protection against some would-be aggressor in the future.

Many members of Congress feel that the United States should not be asked to furnish all the manpower to support the decrees of the United Nations Organization, but that all countries which are members of it should assume their logical share of the obligation. The theory of some military men that only by a universal military training bill passed now can other would-be aggressors be adequately impressed is not accepted by any large number of Senators or Representatives.

Public opinion, as recorded by the Gallup poll, appears to favor some form of military training, but the kind of program to be adopted or the timing of it are matters on which it is not believed that public opinion has as yet crystallized.

Certainly the resolution adopted by the Catholic bishops of the United States at their annual general meeting here this week indicates that there are grave doubts felt by the Catholic Church—doubts, indeed, shared by many Protestant churchman, too—as to how the military men have handled the 18-year-olds and other youth on the matter of morals in the camps.

NEED RECOGNIZED

The Catholic bishops say:

"We recognize the imperative need of preparedness for the adequate defense of our country in all circumstances.

"In determining what constitutes national defense in our present circumstances, our Government, we feel, should explore the possibility of having military conscription abolished in all countries, and, to that end, might well consider how our control of economic assistance to other countries may be used to lend weight to our plea for such abolition.

"If a wide extension of military training is found necessary for present adequate defense of our Nation, we feel that such training should be in keeping with American traditions, and that, specifically:

"1. Voluntary enlistments in the armed forces should be stimulated as much as possible, to provide our first line of defense;

"2. Any period of enforced training should be integrated with normal school life; and

"3. The War and Navy Departments should work with recognized moral leadership to correct certain policies and attitudes which have wrought grave moral damage to great numbers of young people in the armed services during the past 5 years."

## Chicago for the World Capital

EXTENSION OF REMARKS

OF

### HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, the United Nations Organization has wisely decided that the future world capital should be located somewhere in the United States. It is my purpose to urge that Chicago be chosen as the city and that our Government exert its influence to bring this about. Under permission granted me to extend my remarks I include an article by a well known Chicagoan with whose views I concur. The article, Chicago for the World Capital, follows:

When the United States was chosen as the seat of the new world organization, the nations recognized where the main sources of power and inspiration now lie and where they will develop in the centuries which lie ahead. Prior to 1917, the world was centered in Europe, from which radiated the movement of science, art, populations, and government. It was appropriate therefore that the capital of the League of Nations should then have been located in the beautiful city of Geneva, in the mountain republic of Switzerland.

But today the situation is far different. Europe at the moment is shattered as the result of the evil movement of nazism. We wish it well for the future and I hope and believe we shall use our best efforts to bring healing and reconstruction to that unhappy continent. But for the present, western Europe is greatly weakened and there is small prospect that it will ever again become the center of the world's life. It is westward that the star of power and of democracy now takes its way.

It is not boasting but merely recognizing the plain truth when we say that our North American Continent has now become the center of the world. Here are approximately 200,000,000 people and the richest national resources of the world. The United States and Canada are firmly based on the principles of popular government, expanding opportunities for the common man, the development and broad sharing of science, technology, the arts and education. The other countries of the continent are moving rapidly in this direction.

The United States, moreover, is both the geographical and spiritual mediator between Europe on the one hand and two other great continents, South America and Asia. In our sister republics of the Southern Hemisphere we have 90,000,000 people and as economic and political opportunities are broadened for them and as modern methods of production and farming are extended there, we may expect an increase to at least 125,000,000 by the end of the century.

Beyond the vast Pacific lies Asia with its close to one billion inhabitants. This vast continent is rapidly stirring to life and in the coming century bids fair to be one of the great centers of the world.

America is therefore not only itself the most powerful and progressive area on the globe, but it is also the center and crossroads of the world. Although out of modesty we have never urged our own case, it is true

that the United Nations have done well to recognize these facts and to choose the United States as the center for its government.

And now we come to the specific point I wish to raise at this time: Where in the United States shall this world capital be located? The four chief cities which are spoken of are San Francisco, Philadelphia, Boston, and Chicago. With full appreciation of the many splendid attractions of San Francisco, is it not apparent that this city or any other city on the Pacific coast would be regarded by Europe as too far from it and as too close to Asia? The world's center of gravity has not shifted that far. On the other hand, would not the selection of Philadelphia, Boston, or any other Atlantic-coast city be regarded by Asia as too close to Europe and too far from Asia? The only logical solution is, therefore, to locate the capital in the center of the country in the great valley of the Mississippi, which the far-seeing French writer De Tocqueville with deep insight described over a century ago as "the most magnificent dwelling place prepared by God for man's abode." Here in the valley of democracy with its wide distribution of land among the people and in the region which gave the great defenders of the common man, Lincoln, Jane Addams, Altgeld, Robert La Follette, and George Norris to the ages may the United Nations fitly settle. Here the representatives of Europe, Asia, and South America may meet on equal terms. Here may they derive renewed devotion to the principles for which our great saint of the Middle West spoke, worked, and died, namely, that government of the people should also be for and by them.

I hope that our friends of the east and west coasts will not take it amiss if I point out that from the standpoint of both geograph, and national ideals the chief future function of these seaboard strips is to furnish peripheral flanking protection for that great heart of the country between the Alleghenies and the Rockies where the main life of the Nation now resides and where in increasing measure it will develop.

And if the Middle West is the only logical general location for the future world's capital, is not its center, Chicago, marked out as the inevitable site? Indeed with the shortened aviation routes over the great northern circles, Chicago is destined to be the aviation center of the world. Chicago, moreover, is awake to its destiny and is prepared to welcome the United Nations with that same hospitality with which it has taken care of millions of servicemen during the war. At this moment, Mayor Edward J. Kelly, Corporation Counsel Hodes, and representatives of industry, labor, and education are in London extending our cordial invitation for the United Nations to abide with us. We are prepared to set aside over 2,000 acres on the lake front in the region occupied by the recent World's Fair as a home and sanctuary for the new international city. Just as Vatican City with its 109 acres on the banks of the Tiber is the physical setting for the spiritual center of a great section of the Christian faith, so may the new city on the shores of the inland sea be the center for the world's striving for political unity.

If the United Nations come to Chicago, they will find there no self-centered provincialism and no mean city. Near them on that same lake front they will find one of the best art museums of the world with perhaps the finest collection of French paintings outside of the Louvre. In the Field Museum they will find one of the best natural history and anthropological museums with its noble Hall of Man where Malvina Hoffman has sculptured marvelous specimens of the races of the world. They will find the Rosenwald Museum of Science and Technology with its demonstration of how man can master the forces of nature for the benefit of the human race, and nearby they will see the playing field where in December 1942 scientists first set up the chain explosion of the atom and loosed the modern box of Pandora. And to inculcate humility they can go to the adjoining Adler Planetarium and witness the movements of the sun and stars which God has ordained and ponder over what is man that He should be mindful of him. About them will be fitting sculpture by the Yugoslav Mestrovich, by the Czech Polachek, and by numerous American sculptors.

But perhaps they can gain most of all from the city itself and from the surrounding country. The rich yields of the farm lands do not spring from a slave or sterile society. They are produced by freemen who in the main own their own land, produce the abundant crops by the sweat of their brows but lead in the true sense educated and cultivated lives. They demonstrate that agriculture can flourish better when it is based on true democracy rather than upon a small group of masters ruling over a teeming mass of serfs. Within the city itself they will find all the races of the world living together on terms of sturdy mutual respect and relative friendship. For here in addition to the basic Anglo-Saxon stock are hundreds of thousands of Germans, Slavs, Italians, Jews, Irish, Negroes, and Scandinavians. They are not at each other's throats. They cooperate together to a degree which surprises outsiders. In this as in other ways, they demonstrate the fine genius of America. By thus dwelling together in relative harmony at close quarters they will offer a graphic proof to the representatives of the nations that under guidance the races of man can dwell together in peace on the planet Earth.

That Chicago has its faults is well known. I do not seek to palliate nor to deny them. But we are not smugly self-satisfied. We recognize our weaknesses but in true American fashion we are seeking to overcome them and to build a still finer city. But we can say with our Chicago poet, Carl Sandburg:

"Come and show me another city with lifted
head singing so proud to be alive and
coarse and strong and cunning.
Flinging magnetic curses amid the toil of
piling job on job, here is a tall bold
slugger set vivid against the little
soft cities;
Fierce as a dog with tongue lapping for
action, cunning as a savage pitted
against the wilderness,
Bareheaded, shoveling, wrecking, planning,
building, breaking, rebuilding,
Under the smoke, dust all over his mouth,
laughing with white teeth,
Under the terrible burden of destiny laughing as a young man laughs,
Laughing even as an ignorant fighter laughs
who has never lost a battle,
Bragging and laughing that under his wrist
is the pulse, and under his ribs the
heart of the people,
Laughing!
Laughing the stormy, husky, brawling
laughter of
Youth, half-naked, sweating, proud to be
Hog Butcher,
Tool Maker, Stocker of Wheat, Player with
Railroads and
Freight Handler to the Nation."

Mr. Speaker, it is for these reasons that I urge that our Government use its best offices to have the capital of the United Nations located in the heart of the valley of democracy, in that most American of cities—Chicago.

## Scientists and Scientific Organizations Endorse McDonough Bill, H. R. 2827

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. McDONOUGH. Mr. Speaker, the urgent necessity of the McDonough bill, H. R. 2827, has been recognized by thousands of individual citizens throughout the Nation who realize the importance of protecting our scientists and returning them to civilian life as quickly as possible to help in the national postwar reconversion program.

Today scientists are needed in all manufacturing and commercial operations. Without them production lags and our needed supplies are slow or not produced at all. Since the revelation of atomic energy, they are more essential than ever before to carry on experiments and future developments of this great discovery for peacetime uses.

Here is an imposing list of important and recognized scientists and scientific organizations who have endorsed the passage of H. R. 2827:

LIST OF PERSONS AND ORGANIZATIONS ENDORSING SCIENTIFIC BILL H. R. 2827

C. T. Burke, General Radio Co., 30 State Street, Cambridge 39, Mass.

Society of Economic Geologists, C. H. Behre, Jr., secretary, Johns Hopkins University, Baltimore 18, Md.

Julian Dorsky, secretary, Baton Rouge section of the American Chemical Society, Box 341, Baton Rouge 1, La.

Sterling L. Redman, secretary, California section, American Chemical Society, 585 Howard Street, San Francisco, Calif.

## The Challenge to America's Veterans

EXTENSION OF REMARKS
OF
## HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

*Tuesday, November 27 (legislative day of Monday, October 29), 1945*

Mr. WILEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio transcription entitled "The Challenge to America's Veterans," prepared by me and broadcast from Station WIND in Chicago, November 24, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE TO AMERICA'S VETERANS

It is a pleasure to greet you and have a brief chat with you on the subject of America's returning servicemen. I am grateful to Station WIND for its courtesy in allowing me to come into your home and talk over with you this matter which is so close to all our hearts.

Right off the bat, let's get some facts into the picture.

You know that we now have about 19,000,000 veterans, including 15,000,000 from World War II, 1,250,000 veterans from all our wars are drawing service or disability pensions. Over 400,000 veterans' widows and dependents are receiving allowances. Almost 75,000 of our disabled heroes are receiving hospital treatment. About 18,000,000 veterans hold National Service Life Insurance policies.

With these facts in mind, let's survey the veterans' present picture.

There is much good news these days for our gallant servicemen and their loved ones. The good news comes from three quarters.

1. Our men are coming home. They are being released into civilian life with ever-increasing speed.

Since VJ-day on September 2, 1945, well over 2,250,000 soldiers alone have been released. Almost three-fourths of a million sailors have been released. Our soldiers are now putting on their civilian clothes at the rate of about 300,000 per week, and our sailors at the rate of about 100,000 per week.

2. The next bit of good news is that Congress has kept step with the speedy demobilization.

The Senate has just acted to liberalize the GI bill of rights. It has just passed certain amendments, the effect of which is to achieve these goals.

(a) To make Government-guaranteed loans easier for the veteran who wants to buy a home, a business, or a farm.

(b) To raise the subsistence allowance of veterans who are taking advantage of the free-education provision of the GI bill.

(c) To permit veterans to get correspondence-school courses and other short-period technical courses which they were not permitted under the original GI bill of rights.

3. The next bit of good news is that the Veterans' Administration (the Federal organization which serves the veterans) is stepping up its efficiency.

The Veterans' Administration is unsnarling much of its red tape. It is decentralizing its organization instead of having all documents clear through the bottleneck of Washington, D. C.

It is my earnest hope that this decentralization is a good omen of things to come, for too long Washington, D. C., has sought to dictate long range to the grassroots of our Nation. Let's decentralize more of the bureaucrats. In fact, let's demobilize and get rid of every one of them that is unnecessary to the Federal pay roll.

When we do that—when we cut the Federal overhead—we will be helping our veterans just that much. Don't forget that our veterans are taxpayers. On them America will lean heavily in the future to maintain America American.

Now, that's not all the good news. I could add the good news of Congress' earnest consideration of the entire matter of ex-servicemen's rights and benefits. There are many bills now pending in the congressional hopper to make certain that our heroes get the fair break they deserve. You remember the way Abe Lincoln put it:

"To care for him who shall have borne the battle and for his widow and for his orphans."

One of the congressional bills is my own—Senate bill 1070. Under this bill, every United States Senator who requested it could have a trained ex-serviceman in his office. This ex-serviceman would help the Senator in all the problems which come in to the Senator from his constituents on such matters as veterans' insurance, disability claims, loans, and so on.

I have also suggested on the floor that the laws be amended so that veteran reemployment rights be protected by law in the labor mart.

Another front on which I, for one, am doing everything within my humble power is that of insuring the veteran his legal civil-service preference. One particular flagrant violation of the veterans' preference law has occurred in my own State, and I am now fighting to correct that violation.

That brings us into the not-so-good news dealing with our veterans' welfare.

One such bad piece of news deals with strikes. Another consists of Government's regimentation of private enterprise. The net effect of these is to kill the veterans' prospective jobs, to impair production, to reduce sales, to encourage inflation, to reduce the Government's taxable revenue.

You can see that these conditions—labor troubles and Federal muddling—hurt America as a whole. And they hurt the veterans in particular. The veterans are eager to fill jobs, create jobs, create wealth, and make this America secure. They are not going to allow the strike road-block and the bureaucratic road-block to hold up the Nation's and their own progress. The veterans smashed enemy road-blocks while in the service. They will smash domestic road-blocks now that interfere with reconversion and make it impossible for them to get started in life. They want wife and home and opportunities.

There is too much talking down to the veteran. There is too much nonsensical moaning about the veterans' problem. There are too many crocodile tears about the veterans' difficulties in readjustment. "The son is father of the man." He is the future builder of America.

He is our youth—courageous, indomitable, unafraid. He is the leader of tomorrow. He has already proved his patriotism by deeds of sweat and blood and tears. I repeat, he is going to prove the bulwark of our American way; of our constitutional Republic, of checks and balances.

I have faith in him. I know that his readjustment into civilian life will be comparatively quick and smooth if the rest of us just demonstrate a little horse sense and a little sympathetic understanding and demonstrate our unity on the home front in peace as he demonstrated unity of action in war.

The veteran asks only a fair break. He asks that his reemployment rights be insured. He asks that Government get its nose out of private enterprise and its weight off the back of private enterprise.

The veteran knows that he faces greater challenges now than ever before. The Nation needs him in its defense—in defense of the American way—now more than ever before.

The veteran will prove adequate, I am certain, to those challenges.

In this Thanksgiving season, we Americans raise our voice in thanksgiving to Almighty God for the valor, courage, and manhood of our veterans.

## Grants, Gifts, or Loans to Foreign Countries

EXTENSION OF REMARKS
OF

### HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

*Tuesday, November 27 (legislative day of Monday, October 29), 1945*

Mr. BROOKS. Mr. President, during the recent war the American people poured out their resources with almost complete abandon to aid all people everywhere whose resistance to the common foe would aid in ultimate victory.

Today, they face a world of chaos, with many millions facing starvation and slavery under the domination of those who were our allies in the war.

Many Americans today are truly anxious that before we add to the tremendous burden caused by the war by any additional grants, gifts, or loans to foreign countries, we should appraise carefully the purposes and possible effect of such grants, gifts, or loans.

Recently Col. Robert R. McCormick, editor and publisher of the Chicago Tribune, addressed the Foreign Policy Association on this subject, and I ask unanimous consent that this very able address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I was on a pilgrimage to the Lincoln country when I received your invitation. I had seen the grave of Ann Rutledge, marked by a simple stone picked up on the hillside with only her name chiseled on it, and a large granite footstone which has since been erected. I had been to New Salem, the city built by the State of Illinois exactly as it stood when Lincoln tended store and studied law there. I had stood in the tomb where Lincoln reposes.

I do not suppose you have ever considered that Lincoln could not have developed into the greatest statesman of all time anywhere else than in the Northwest Territory.

GREATEST POLITICAL INSTRUMENT

Every leader is representative of his environment. The Northwest Territory had been organized by the last act of the Continental Congress. Largely forgotten today, this act is the greatest political instrument ever framed. It is greater than the Declaration of Independence because in it that declaration of principles was incorporated in legislation.

It is greater than the Constitution of the United States, as it contained a bill of rights which Hamilton, mysterious man of contradictions, had kept out of the Constitution; and it forbade slavery, which the Constitution expressly permitted; and the slave trade, in which all the other States participated.

In the Northwest Territory alone was indenture forbidden.

Adopted for the Northwest Territory alone, it became the model upon which our Nation took form under Lincoln's leadership. Inevitably the Northwest Territory was to destroy slavery and hold the Union together as a republic.

A DISCIPLE BEARING MESSAGE

Therefore, I accepted your invitation in the spirit of a disciple bearing a message.

As I returned home along the route taken by the Army which conquered this Territory, under the commission of Gov. Patrick Henry, I was reminded that it was he who did more to make the United States than any other individual—for if the Northwest Territory had not been acquired, the expansion to the Pacific would not have been started and in all probability the Union of the States never would have taken place.

It was Patrick Henry who said, "I have but one lamp by which my feet are guided, and that is the lamp of experience; I know of no way of judging the future, but by the past."

It will be useful to glance briefly at past Anglo-American relations. At most it may help in planning for their future course. At worst it will show the reason for divided counsel.

TALKING PURE HISTORY

While I talk history, it will be pure history—history that was not taught in the school I attended in Massachusetts or the college I graduated from in Connecticut. When it comes to argument, you will recognize that I am voicing opinion.

There are those who say we should not mention the Revolutionary War. That is a matter of point of view. Those whose ancestors served in it honorably like to recall it with filial piety. Those whose anvestors were of another kind naturally would like to have it forgotten.

The pedagogs coming mostly from Boston have written of the war as arising from taxation without representation. That was one reason. There were others. Men of large affairs, like Washington and Franklin, resented the closing of the West to them by the royal proclamation of 1763. But the elements that furnished the rank and file of the armies and did most to win the victory had entirely different motives.

DUTCH FIGHTING FOR LIBERTY

The Dutch in New York had been conquered and oppressed. One of them, Peter Zenger, has become a national hero. They were fighting to regain their liberty.

The Scotch-Irish in Virginia had been harried from home; had not been given religious liberty in Virginia, and were even threatened that bishops would be sent to compel them to conform to the doctrines of the established church. To them the war was against the Church of England.

These two elements formed the backbone of the army Washington took to Boston, from which he drove General Howe, his army, and the Boston tories.

The Dutch troops return to New York and under their protection the Sons of Liberty forced the New York Legislature to adopt the Declaration of Independence.

The Virginians marched on to defeat before Quebec and were the chief factors in the decisive victories of Freeman's farm, King's Mountain, and Cowpens.

OTHER IMPORTANT ELEMENTS

The other important elements in the first campaign were the Vermonters, the Dutch, and Palatines who fought with Gansevoort and Herkimer at Fort Stanwix and who kept messengers from passing between Burgoyne and Clinton. A Dutchman was among those who captured the spy Andre buying the treason of Arnold.

When many of these Dutchmen sought to return home after their victory, they found their lands in the hands of Tories who had squatted on them under protection of British muskets, so they had to go west.

The Continental Congress, unable to pay its soldiers, gave them titles to land in the Northwest Territory. Many of them settled there. They and veterans of other wars furnished the point of view of later arrivals. Here also settled the patriot refugees from Canada and Nova Scotia.

TORIES PROTECTED BY HAMILTON

The Tories, who reveled in condescension from the British aristocrats and in abuse of the patriots, were protected in their pilferings by Alexander Hamilton—the same Hamilton who, when the Jay Treaty was under fire and the British minister was prepared to accept amendments, told that minister this would not be necessary. Let it be said for Hamilton, however, that when Aaron Burr wished to join New York to the New England States in seceding from the Republic, Hamilton prevented it.

In this connection it is interesting to note that when Canada obtained its first measure of self-government from Great Britain, it was an instrument copied after the one submitted by Hamilton to our Constitutional Convention.

Hamilton's action left the Tories dominant in New York. Their descendants have always remained dominant, and continue to act as their forefathers did. They dominate today. They dominate the parvenus, be these mechanics from Detroit, magazine editors from China, hams from Broadway, raucous radio commentators, or preachers who performed trial marriages.

WAR CONTINUED IN WEST

The war ended in the East with the treaty of peace and a profitable trade sprang up between the seaboard States and their former masters. In the West, the war continued the full length of the frontier, where for 30 years the settlers were raided by Indian war parties who sold their scalps to the British general in Canada.

There were a number of full-scale campaigns fought by the western settlers. The first resulted in the defeat of St. Clair, which was followed by the victories of Fallen Timbers, Tippecanoe, and Horseshoe Bend, and the occupation of Florida.

Even these measures did not bring quiet, and the westerners insisted upon the War of 1812.

This war opened with the massacre of Fort Dearborn, now known as Chicago, instigated by the British. Medals were given to its perpetrators. In this war, the Indian and British power west of New York was broken at the Battle of the Thames, though it was not until 1820 that the British flag was finally hauled down in Michigan by General Cass.

EFFECT OF JACKSON'S VICTORY

Some historians emphasize that Jackson's great victory at New Orleans came after peace had been signed, in which the plan to take Louisiana from us had been abandoned, and therefore had no effect on the course of the war. That is true, but it had a much greater effect than anything that happened in the war.

New England opposed the war. It did not allow its large and well-trained militia to be used. It refused to buy American bonds and bought British bonds. It furnished the supplies which made possible the existence of the British armies.

According to the monumental history edited by the Harvard professor, Albert Bushnell

Hart, its leaders resolved to secede from the Union and form an alliance with Great Britain. They were in Washington, resolved to separate "peaceably if they might, but forcibly if they must" when the news of Jackson's victory reached Washington. They sneaked out of town and secession was never heard of again from that quarter. The language is from Hart's history.

BRITISH DOMINATION HALTED

Britain resisted by means short of war the annexation of Texas, the annexation of California, and the annexation of Oregon. She joined in the invasion of Mexico in 1861; threatened war over Venezuela in 1826; joined in the concert of Europe to prevent the freedom of Cuba in 1898; and with her allies, Germany and Italy, blockaded Venezuela in 1902 and desisted only when Admiral Dewey was ordered to break the blockade by force.

She resisted the birth of the nation and its expansion to the Pacific from start to finish. When it had been accomplished she participated in its success by investments made mostly through Boston, New York, and Philadelphia banks.

So you will note that while in the east your relations have been those of profitable trade, or as broker between Europe and America, in the West they have been continual struggle. We consider also that we won Britain's last two wars for her.

There are those among us, of course—I am not one of them—who think that easterners look up to the English and profess to despise Americans west of the Hudson.

PURELY NATIONALISTIC VIEW

Our view is purely nationalistic. I remember a gentleman who called it narrowly nationalistic. So when the proposal is made to give Great Britain $5,000,000,000 more, we are inclined to scrutinize the request carefully. This is what we find:

The standard of living of the average American before the war was twice as high as that of the average Englishman. This was discovered by Dr. Leon Rostas in a study for the National Institute of Economic and Social Research, a British scientific organization, and has been confirmed by other investigations.

The London Economist, in a series of articles published last year, sought to determine the reason for the inferior status of the ordinary citizen of Britain. For just as living standards, in Britain and America are as one is to two, so production per worker in the countries is in similar proportion.

RESULT OF EQUIPMENT

American superiority is the result of equipment. According to Carl Snyder, a noted statistician, the industries have been thus supplied by devoting between 5 and 6 percent of the national income each year to this purpose. The use of so small a part of our total income has made possible a persistent rise, averaging 3 percent per annum, in our product per capita.

In England only 3 percent of the national income per year has been invested in new capital assets. The advance in production per worker has averaged no more than 1½ percent a year. The increase in the size of each worker's income has been at a correspondingly slower rate.

It is obvious that if we dissipate our national income, by whatever means, our productivity and living standards must suffer.

Last fall a committee of Lancashire textile men came to America to see if they could learn anything about how their line of business was conducted here, feeling certain that they could not. They were shocked.

EXCEED BRITISH PRODUCTION

According to the report issued after their return home, output here in this—the leading British industry—far exceeds their standards. Production per worker, they found, was from 1¼ to 10 times as great as in Britain.

The main reasons for American superiority were given in the report as follows: "The use of high-speed and automatic machinery wherever possible; the use of up-to-date plants; the application of scientific methods to the utilization of labor, which permits a relatively large number of units or machines to be supervised by the machine operatives; the policy of concentrating on machines in terms of output."

Coal is Britain's second greatest industry and in 1938 gave employment to 780,000 men. Output here also lags far behind American standards. The Reid report issued in London in April told of this. British mines are undermechanized and have especially antiquated underground haulage systems. There is one underground haulage worker for each 5 tons of coal produced in England and one for each 50 tons in America.

COAL IN UNITED STATES AND BRITAIN

Two high ranking authorities last week told about the coal industry in Britain today. Dr. Charles J. Potter, Solid Fuels Administrator of the Department of the Interior, stated in an address before the Academy of Political Science in New York: "Europe's desperate need for warmth, production, transportation, and employment hinges upon the supply of coal. * * * Britain is able to keep her industrial machine operating at a prewar level only by severely rationing fuel. She has no coal for export. She has not kept pace with technological advances in mining, and has increased miners' wages from an average of $11 per week before the war to $25 per week. Thus Britain's coal has become the most costly to mine in the world."

And the other high authority, John L. Lewis, told the labor-management conference in Washington: "American miners produce 6 tons of coal a man to 1 ton a man in Britain. While American miners' wages are three times as high as those of the British, prices to the consumer were less than one-third those charged for British coal. The reason lies in Britain's failure to modernize. That has placed the British Empire at an economic disadvantage in the postwar world."

HELP FROM UNITED STATES

Because Britain's coal-mining methods are so bad, and return of the Ruhr to full output is going so slowly, suffering in Europe will be no worse than it is going to be because the United States is now shipping 2,000,000 tons a month all the way across the ocean. The 2,000,000 tons constitute the top capacity of American ports to load coal.

In steel—another high ranking industry—it is the same story. Rostas found production per worker here to be twice what it is in Britain.

Alfred Landon says that whereas American labor has always been willing to accept improved machinery, demanding an increased share of the increased profits resulting, British labor has always resisted technological progress.

The British Government has insisted upon such low depreciation rates as to keep obsolete machinery in use. The owners have sought to overcome these handicaps by agreements in restraint of trade. From these conditions, British industry is in a vicious downward spiral.

This is not a condition that we can remedy.

WHAT LABOR PARTY CAN DO

The Labor Party has been put in charge of the Government because the common man there believes that it will help to lift his standard of living.

If we can accept the thesis of the Economist, that the amount of capital applied to an industry determines the productivity and living standards, then the Labor Party can deliver only by adding to the supply of capital equipment of its industries. How can the new rulers of Britain bring this result about?

Either by borrowing or by saving. Canada used the first and has welcomed the investment of large amounts of American and British capital there, raising productivity and living standards to a high level. That method is not available to Britain while the Labor Party threatens to take over, first, the Bank of England, then the mines, electric power, iron and steel, and transport. New capital will not flow to a country which has confiscation as a national policy, and exchange control which may act as a bar to the recovery of the principal.

SAVING IS OTHER METHOD

The other means of adding to capital equipment is saving. This means that the country consumes less than it produces, using the surplus to invest in capital goods. Russia followed this policy under Stalin. Industries largely useful in war were developed by maintaining a standard of living below that under the czars.

If the British were willing to keep consumption at a low level, work hard, and be content to wait some years for the reconstruction of their homes and public buildings, they could modernize their factories and mines in a fairly short time. Only the event will tell how British labor will react to its new status.

England has always been divided into classes—called upper class, upper middle class, lower middle class, and the lower class. The upper class and the upper middle class also have been the ruling classes and the leisure classes. Work and industrial achievement have never ranked in Britain as with us. Even the great industrialist was not highly thought of and had to convert a part of his accumulations into a title and a landed estate and join the leisure class before his success was acknowledged.

NO INCENTIVE TO WORK

With leisure the ideal of the nation, there has been no incentive for the lower class to work hard, and it has not.

It would help England for us to send a delegation of energetic Americans to teach the English workmen how to work. That would be better than to strain our own workmen to still greater efforts to keep English workmen in semi-idleness.

Great Britain has certain economic policies injurious to us, but quite within her rights, however much they violate the doctrine of United Nations.

There is the pound bloc—an arrangement among the members of the Empire (except Canada) and Sweden, Norway, Denmark, Holland, France, Portugal, and Egypt, to trade with each other only in pounds; to deposit any other currencies they receive in the Bank of England and to discourage trade outside of their number.

In this arrangement, of course, India and Egypt are not free contracting parties, but are under complete military coercion.

NOT A FREE AGENT

Again there is the Empire preference in which the constituent members of the Empire give tariff preference to each other. Again India is not a free agent.

On top of this the totalitarian government of New Zealand denies import licenses to Americans while granting them to British exporters.

As I say, these arrangements are entirely within the rights of the contracting parties, but they are disadvantageous to us and we have a perfectly good right to require their abolishment or modification in consideration of any gifts or loans to the Empire.

We believe there should be other conditions imposed in consideration of gifts or loans.

The people of the Northwest Territory, followers of Lincoln, cannot support slavery in any form. The British are in India, Burma, Malaya, and Java only because the Americans defeated the Japanese, who had defeated all their other enemies.

WE HAVE RESPONSIBILITY

We cannot escape responsibility for evils being perpetrated on helpless people by the British and Dutch and French using American lend-lease weapons to force natives to work in the rubber plantations for $3.29 a month * * * 11 cents a day. We must insist that these outrages stop at once.

We have still another demand to make upon Great Britain, both in the name of humanity and of national security. It is to evacuate all of her possessions in this hemisphere.

Canada has finally achieved her independence. The small colonies in and near the Caribbean Sea are not strong enough to do so. They are of no economic value to the Empire, although politically they support a number of place holders.

They should be set free just as Cuba was set free. They have been used in the past as bases to attack us, and upon occasion, at need, could so be used again perhaps to launch atom bombs.

There are people here, no doubt, who will be indignant at such a suggestion, but I have not forgotten the Fort Dearborn massacre and I have learned of the massacres in Java.

Have lend-gift if you will, but get quid pro quo for America.

## Discharge of Men From Civilian Public Service

EXTENSION OF REMARKS
OF
### HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Tuesday, November 27 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter regarding the discharge of men in civilian public service, from Rev. Paul G. Hayes, pastor of the McCabe Methodist Church, of Bismarck, N. Dak.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

McCABE METHODIST CHURCH,
*Bismarck, N. Dak., November 21, 1945.*
Senator WILLIAM LANGER,
*Washington, D. C.*

DEAR MR. LANGER: May I call your attention to what seems to be an oversight in the administration of the Selective Service Act.

I refer to the fact that the men in civilian public service are not being discharged from that service in the same proportion as men in the Army and Navy.

Figures recently released in Washington indicate that by the end of the year the Army expects to discharge 37 percent of its VE-day strength, the Navy 32 percent, but that Selective Service plans to discharge only about 15 percent. What grounds can there be for this discrimination? These men are in civilian service of national importance under the same act that sent the others into armed services. They have done what was required of them. They should be discharged in the same ratio.

Would you be willing to phone to General Hershey, the Director of Selective Service, and ask him for a fairer rate of discharge for these men? I have quite a number of personal friends in various CPS units, and feel quite strongly that they should have a fairer deal.

Then, too, there are some 3,000 men in prison for violating the selective-service law on grounds of conscience. I do not know if you and I would have the strength of character to go to prison for conscience' sake. But I admire the men who sincerely did so. May I suggest that you ask President Truman to follow the precedent set by President Wilson, who proclaimed a general amnesty for the CO's in prison. Effective Christmas, 1945, would be a good date to suggest for such amnesty. Nothing can be gained by keeping these men in prison. An amnesty would show that the old-fashioned American way of life is still working among us.

Sincerely yours,

PAUL G. HAYES.

## The City and Uncle Sam

EXTENSION OF REMARKS
OF
### HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. MILLER of California. Mr. Speaker, Gen. Philip B. Fleming, Administrator, Federal Works Agency, delivered a timely address at the recent meeting of the American Municipal Association in Chicago on November 17, 1945. Under unanimous consent, I insert it at this point in the RECORD:

The rise of the city to a fairly dominant place in American life has taken place within the lifetime of most of us in this room.

A few comparisons illustrate some of the reasons for this dominance. New York City has a larger population than any State in the Union except four—one of the four, of course, being New York State. Only 13 States have a larger population than Chicago. St. Louis, although eighth among American cities, has a greater population than any one of a dozen States. Most of these great population centers have sprung up within the last half century.

When the founding fathers met to draft the Constitution, Philadelphia was about the size of the present Massillon, Ohio. New York was about the size Watertown is today. Milton, Mass., is about the size Boston was in 1790, while Baltimore was in a population class with the present Emporia, Kans.

Since the city was a negligible factor in the life of the young Republic, it is understandable that the new Constitution made no mention of it. We were a nation of farmers and there was no reason to suppose that we would not always continue to be a nation of farmers. Moreover the outstanding statesmen and philosophers of the time held the city in rather low esteem. They believed that the virtues of honesty, industry, and thrift sprang directly from the soil, and that the city was the seat of extravagance and corruption. This opinion persists in some quarters even today.

In any event, the Constitution is silent so far as the city is concerned. The States only are recognized, and powers not delegated remained with the States. Thus, the city, even though it came in time to be the metropolitan tail that wagged the State dog—even though it may have come to contain most of the population of the State and the greater part of its wealth—was subject to the State which could closely regulate its affairs, prescribe its borrowing authority, and limit its tax revenues. As between the Federal Government and the city, no provision was made for a point of direct contact.

Even the States were pretty much on their own. The doctrine of States' rights seemed to square with the realities of American life. Men lived out their lives and died without once leaving the counties in which they were born. The Nation's capital was anywhere from a week to a month away in travel time from the bulk of the population. What could the Federal Government know about the needs and desires of the people in such remote places? If the western pioneers needed a road through the clearing, they built it themselves and asked no favors from the Federal Government. If they needed a school, the men of the community cut down and hewed the logs and put them together, and the roof-raising was a social function at which the women and girls served food and coffee, perhaps with a barn dance in the evening to conclude the festivities.

But even in the early days there was considerable agitation for what were called internal improvements but which today we would call public works. George Washington was an enthusiastic supporter of the Chesapeake and Ohio Canal. Others urged the building of national roads to the western settlements. Few of these projects were realized, however. Conservatives and strict constructionists argued that the expenditure of Federal funds on such projects within the States was clearly unconstitutional, or at least that they were not expressly authorized by that great charter.

For the first time in American history, a Treasury surplus had accumulated during the administration of Andrew Jackson. Many urged that this money be used for internal improvements. The constitutional argument prevailed, however, and a formula of subterfuge was evolved. The legislation finally approved provided for the deposit of the surplus in the State treasuries without interest, to be repaid upon demand. Of course, nobody at the time believed the money would ever be repaid and it never was repaid. It was assumed that the States would use the funds for internal improvements. What actually happened to them does not make a pretty chapter in our history, but at any rate the procedure was a roundabout way of trying to get legally, at the expense of the Federal Government, improvements which everybody recognized to be necessary.

The position of the strict constructionists was that the Federal Government ought not to make improvements within the States because the burdens would be general while the benefits would be local and partial, "involving an obnoxious inequality," to use President Polk's expression. Abraham Lincoln, while a Member of Congress, made a speech in 1848 in refutation of that argument.

Admitting some truth in Polk's contention, he urged that "the converse is also true. Nothing is so local as not to be of some general benefit." He continued:

"Take, for instance, the Illinois and Michigan Canal. Considered apart from its effects, it is perfectly local. Every inch of it is within the State of Illinois. That canal was first opened for business last April. In a very few days we were gratified to learn, among other things, that sugar had been carried from New Orleans through this canal to Buffalo, in New York. This sugar took this route, doubtless,

because it was cheaper than the old route. Supposing benefit of the reduction in cost of carriage to be shared between seller and buyer, the result is that the New Orleans merchant sold his sugar a little dearer, and the people of Buffalo sweetened their coffee a little cheaper than before—a benefit resulting from the canal, not to Illinois, where the canal is, but to Louisiana and New York where it is not. In other transactions Illinois will, of course, have her share, and perhaps the larger share, too, of the benefits of the canal; but this instance of the sugar clearly shows that the benefits of an improvement are by no means confined to the particular locality of the improvement itself.

"A State may well say to the Nation, 'If you will do nothing for me, I will do nothing for you.' Thus it is seen that if their argument of 'inequality' is sufficient anywhere, it is sufficient everywhere, and puts an end to improvements altogether."

A form of indirect Federal aid to the cities began in the nineteenth century when the War Department, under the guise of military necessity, began a program of river and harbor improvement. These aids to navigation were unquestionably of assistance to the whole economy, yet the cities situated on harbors that were improved experienced direct benefits, as did cities on river channels that were deepened and cleared of obstructions.

In the nineties an Office of Road Inquiry was established in the Department of Agriculture. For many years, however, it functioned only as an agency of research and advice, and it was not until 1916 that Federal legislation first authorized direct assistance in highway construction. The assistance, however, was to the States direct with no provision for assistance to the cities. It was not until the enactment of the Federal Aid Highway Act of 1944 that the cities were admitted to the benefits of Federal assistance in provisions which made possible the expenditure of some Federal funds on city streets—but only on those streets which are integral parts of the Federal-aid highway network.

Until the depression Federal aid to cities was channeled through the States. This still is the pattern with respect to funds of the Public Health Service, aid to highway improvement, and aids to vocational education. The pending Federal-aid airport bill follows the same pattern as it passed the Senate. Although the airports will be built in cities and must be maintained by the cities, the States, through their aeronautical commissions or similar authorities, would, under the Senate version, parcel out the Federal money and determine where and how the airports would be built.

In the depression, the Work Projects Administration and the Public Works Administration dealt directly with the cities. This was at least logical because mass unemployment, in the large, was an urban problem, and because the need was for greater speed than might have been expected if funds had been channeled through some State agency and thereafter doled out among the cities from the State capital.

Similarly, Federal aid for the construction, maintenance, and operation of public works in war-congested areas under title II of the Lanham Act was channeled directly to the cities. The appropriate State agencies were consulted with regard to health and educational projects, as were the United States Public Health Service and the United States Office of Education, but the final decision remained with the Federal Works Administrator under the law. Federal participation in the actual operation of either schools or hospitals was forbidden.

In administering the Lanham Act, as a matter of fact, we did not find that the States themselves were overly anxious to have any part in the program. Twice I appealed to the governors to take action looking toward the assumption of some State responsibility for certain wartime services, especially aid to child care and regular school assistance, and found them disinterested. Generally, they took the position that they would be willing, if necessary, to provide additional State assistance to all the schools of the State, but that they could not be expected to discriminate between schools in war-congested districts and schools in areas which had felt no impact from the war in the form of increased attendance. In short, the war was a Federal enterprise, and the Federal Government alone should assume all responsibility for its domestic consequences. It may be asked, incidentally, if some of the problems of postwar readjustment may not also be similarly localized.

In the administration of Federal advance assistance to public-works planning, as authorized in the War Mobilization and Reconversion Act of 1944, we are also dealing direct with the cities and other public agencies. While the allocation of funds are made, in accordance with the law, on a State basis, the division of the funds within each State, as among cities, counties, and other taxing authorities, are made by the Federal Works Agency. Indeed, we have taken the position that the States, which generally are in a stronger financial position than the cities, shou'd be excluded from the benefits in favor of municipalities, counties, boards of education, and special districts which are less well situated.

The doctrine of States' rights, however, will not down. Perhaps a representative comment of its adherents was that made on the floor of the House during debate on the Federal-aid airport bill.

"There are some things that we do here that are not healthy for democracy," one representative said. "We are just beginning to realize that we have been sleeping at the switch. We have allowed part of our form of government to slip away from us. We have accepted Federal domination and regimentation. In the past we asked our Uncle Sam for donations, relief, and aid for all kinds of projects. These he has given us, but the price he exacted—government by bureaucracy—has come too high. In our desire to get something for nothing we sometimes forget that the price of liberty is eternal vigilance. * * *

"It has been suggested that there may be State politics in this if the funds are channeled through the States. I would just as soon have State politics in it as Federal politics. If you accept this amendment (which would have prohibited the Federal Aeronautics Administrator to deal directly with the cities), there will be State and Federal supervision, and one will check the politics of the other. * * * Anyway, I believe that the Federal politics is more pernicious; it is further away, the people cannot see it as easily as they can local politics. I still have confidence in the Government, but I have just as much confidence in the government of my State as I have in the Federal Government. * * *

"The question is very simple. We are one Nation, and we have 48 sovereign States. If this bill is passed you will create sovereignty in municipalities. You will create friction between State and municipalities. * * * The big cities want to run the States. They forget that they are but a part of the States."

Well, that is one point of view. From another standpoint it is a fact that we have become far more citizens of the United States than we are citizens of any one State. A hundred years ago we tended to think of ourselves primarily as Virginians, or Carolinians, or Ohioans. Today the State as such commands somewhat less of our loyalties. Recently, among a group of my friends, I discovered that not one of them could tell me the motto of the State in which he was born, or the State flower. Indeed, we are far less attached to any one geographical location than we used to be. I was born in Iowa. I went to school in Wisconsin, also at West Point. I have lived and worked in the Philippines, the Canal Zone, in Maine, in Minnesota, and in Washington, among other places. I have a home in New Hampshire. And my case is not at all exceptional.

Out of curiosity I recently leafed through the Congressional Directory and noted that of 88 United States Senators whose place of birth was noted, 32, or more than a third, represent some other State than the one in which they were born. I didn't have time to examine the data for the Members of the House, but I have no doubt the same situation would be found to prevail. I am reminded of the story of the little Ohio girl who, learning that her father was born in California and her mother in Maine, exclaimed, "How in the world did we all happen to get together?"

The American people are on the move. Their mobility was greatly accentuated by the war when millions of men left their native States and migrated to distant parts of the country to work in war production. The forty-niners spent months in their painful trek to California. The trip can be made in comfort today from the Atlantic seaboard in as many hours. The radio, the moving picture, the automobile, and the airplane have obliterated differences of customs, of manners, and of speech, and attenuated local loyalties.

American industry has become national in scope and our large corporations do business in every State in the Union. Our more pressing problems are national rather than State problems. In a highly integrated economy, new questions press for answer.

Lincoln remarked that "nothing is so local as not to be of some general benefit." It may also be said, conversely, that there is nothing of general benefit that does not produce some local benefits.

Take public health. If your city is still dumping raw sewage into the river, that fact has consequences to public health for a hundred miles down stream. Disease germs are notoriously indifferent to State boundaries. A disease epidemic starting in one State can very quickly spread, by the help of the railroad, the auto and the airplane, to adjoining States. Or take education. Hundreds of thousands of American children are still going to school in unsanitary, ramshackle school houses. Selective Service rejected a million men for illiteracy—which meant, of course, that other men from some other part of the country, had to take the place on the firing line of those who were rejected. Is education of local concern, only? If so, how can we prevent illiterates from one State migrating into another State and infecting it with Ku Klux Klanism and thus impose additional burdens on the educators, the police, the courts, and people of good will, in the second State?

Is unemployment a matter purely of local concern or should the Federal Government attempt to do something about it? If the automobile industry falters the effects are not limited to Detroit or even to Michigan. Steel workers in Pittsburgh, miners in Minnesota, glass workers in Ohio, leather workers in Illinois, are soon affected. Can the resulting depression satisfactorily be dealt with on a State basis?

In passing, I might observe that even when the Federal Government tries to assist either the States, the local communities, or the people as a whole, it finds itself seriously handicapped by the present diffusion of its authority through numerous departments, agencies, and establishments. These establishments have grown in size and increased in number with little thought to their coordination.

For example, construction activities of the Government are scattered hither and yon through half a dozen or more agencies—in-

cluding Federal Works, the Corps of Engineers, the National Housing Agency, the Veterans' Bureau, the Civil Aeronautics Administration, the Bureau of Reclamation, and the Rural Electrification Administration. Duplication of like functions, or at least overlapping, exists not only in Washington but throughout the field service. Thus a dozen regional directors grow where there was only one before.

A municipality looking to the Federal Government for help in housing construction would have to go to the National Housing Agency. For assistance in providing sewer and water connections for the housing, it would come to Federal Works. For flood control to keep the houses from washing away, it would go to the Corps of Engineers. In providing light for rural houses, the Rural Electrification Administration comes into the picture.

The techniques used in building an airport are largely the same as those used in building highways; in fact, the Public Roads Administration of FWA built a considerable number of flight strips for the Army during the war—and a flight strip is nothing but an airport in miniature. An airport is useless until highway access is provided, yet the building of airports is under the jurisdiction of the Civil Aeronautics Administration and highways under the jurisdiction of Federal Works.

The need for reorganizing the Federal establishment has been recognized for almost 150 years. Jefferson, Jackson, Lincoln, Cleveland, McKinley, Theodore Roosevelt, Wilson, Harding, Hoover, and Franklin D. Roosevelt were among the Presidents who tried to bring it about. Congress either refused to confer the necessary authority, or it did it so grudgingly that little could be accomplished. Now President Truman once more is seeking power to act. A bill to give him that power is pending in Congress. The danger is that it will emerge so loaded down with exceptions and exemptions, and contain such stringent requirements as to congressional approval for every step taken, however minute, as to tie the President's hands in advance.

Certainly it is obvious enough by this time that efficiency is a managerial problem, and not one for the board of directors. Unless reorganization is done by the President it isn't going to be done at all.

The problem is one which ought to interest every citizen who wants from his Government the best possible service at the least possible cost.

But to return to my main theme.

If Federal funds are to be appropriated hereafter in aid to local public-works construction as a partial answer to mass unemployment, how shall those funds be administered? Should they be channeled through the State governments and thence to the counties and municipalities, or should they be allotted directly to the cities and counties as in the old PWA program? What should be the role of the Federal Administrator? Should he be a person who simply writes 48 checks, one for each State, and then steps out of the picture, leaving the States themselves to prescribe rules, regulations, and standards for the expenditure of the funds? Or should he deal with the cities directly, at the same time prescribing regulations to insure that the resulting public works will fit together into a consistent, over-all national pattern?

You see, I do not have all the answers. But these are questions that have troubled us for a good many years, and will continue increasingly to trouble us unless we can come to some agreement as to how they should be answered. It is time to clarify our thinking.

I pass the problem along to you in the belief that the municipal officials of the country, who have much at stake, may, better than anyone else, chart the course we ought to pursue.

## Federal Aid for Education

EXTENSION OF REMARKS
OF
## HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an article written by me and published in the November 1945 issue of the Tennessee Teacher. Federal aid for education is essential to an equitable distribution of the blessings of education among children of this country. I hope the bill now pending before the Committee on Education may be reported at an early date.

The article is as follows:

FEDERAL AID FOR EDUCATION

(Hon. ESTES KEFAUVER, Representative in Congress, Third Tennessee District)

To people who do not believe that education is essential to the creation and maintenance of a high economic and social status for the people of America there is no need to discuss Federal aid or even State aid for education. To those who do not believe that the opportunity to attend a good school throughout childhood and youth is a right that should be enjoyed by all there is not much point to the discussion of devising methods of school finance to place a floor under a desirable minimum of educational opportunity all for American children and youth. To such persons it seems all right that educational opportunity should be left to the chance of being a member of a family or the resident of a community that possesses the financial means to pay for education. To them it seems all right that the children of the masses of the people regardless of talent, ability, and character should become the hewers of wood and drawers of water for privileged persons.

Fortunately a very large majority of American people accept equality of opportunity, especially equality of educational opportunity, as the birthright of every American child and agree that a legitimate function of democratic government is to sustain and make a reality of that birthright. The American people, by and large, believe that the kind, quality, and amount of education received by our people is a primary factor in their economic, political, and social welfare.

We know that there is a direct relationship between the educational attainments of the people and a nation's wealth. Recently the Chamber of Commerce of the United States published a bulletin, Education Steps Up Living Standards, that reveals that the level of understanding and technical knowledge of all the people of a nation is an indispensable factor in national economic well-being. By comparison it is shown that some countries have great resources such as rich land, oil, minerals, low-cost electric power, and good climate, while at the same time they tolerate low standards of education and technical training and extremely high rates of illiteracy. Such countries, lacking the knowledge necessary to use these resources properly, have low income and extremely low standards of living. Other countries have poor soil, few minerals, no oil, inclement climate, short growing season, and poor sources of power, but high standards of education and technical training and illiteracy is practically nonexistent. Such countries have high incomes and high standards of living for practically everyone. "The lack of resources did not prevent the development of a high standard of living when the people had sufficient skill."

Within the United States the evidence is replete that high education and high income and high standards of living go hand in hand. Average public-school expenditures in Nevada for 1910, 1920, and 1930 were $102 per pupil; in New York, $83; in Tennessee, $24; in Mississippi, $21. Retail sales per capita in 1940 in Nevada were $564; in New York, $414; in Tennessee, $208; in Mississippi $129. The number of telephones per 1,000 population in Nevada is 175; in New York, 206; in Tennessee, 79; in Mississippi, 36. The circulation of 18 nationally known magazines per 1,000 population in Nevada is 509; in New York, 300; in Tennessee, 151; in Mississippi, 104. During the present war the rejection of draftees because of lack of education per 100 men examined in Nevada was 1.3; in New York, 1.4; in Tennessee, 9.1; in Mississippi, 12.4.

Evidently education is an investment in people that pays enormous dividends in dollars and cents, to say nothing of the cultural advantages of an eduacted people as contrasted with an uneducated people.

Granting that education is essential to our national well-being, is Federal assistance in financing schools a necessity? This question has too often been answered by merely citing the tradition that the support of public schools is a State responsibility. It is a fact that under the tenth amendment of the Constitution of the United States the control of education is a power reserved to the States or to the people. But from the earliest days of the Republic the Congress has been upheld by the courts in exercising the right to grant financial assistance to the States to promote the general welfare. In so doing the Congress does not gain the right or power to take from the States the control of the activity or agency aided.

Merely citing the doctrine of States' rights and responsibilities does not remove the economic necessity for Federal participation in the support of public education. The economic necessity for Federal aid has been so thoroughly established and should now be so well known as to require no further discussion. In a nutshell it is this: There are great inequalities in the economic ability of the States to pay for education. These inequalities have been relatively constant for many decades. Furthermore, the States with the least economic ability to raise public revenues have many more children in proportion to adult population than the richer States. A few pertinent facts will illustrate the point.

In 1943 the per capita income in California was $1,429; in Tennessee, $649; in West Virginia, $688. The number of children 5 to 17 years old per 1,000 population in 1943 in California was 172; in Tennessee, 249; in West Virginia, 281 (the highest in the Nation).

These facts mean that in order to raise the same amount of money per child of school age in 1943, West Virginia would have had to make about three and one-half times as much effort, and Tennessee about three times as much effort as would California. In order to raise $105 per school-age child in 1942-43 (which was the average amount actually spent per pupil in average daily attendance in the Nation as a whole that year) West Virginia and Tennessee would have had to make two and eight-tenths and two and six-tenths times the actual national effort, while California could have raised the same amount per child with only eight-tenths times the national effort.

The inequalities of educational opportunity resulting from the unequal educational burdens and the unequal ability to pay for schools have for a long time been well known. The average expenditure per pupil in average daily attendance ranges from $35 in Mississippi to $179 in New York (Tennessee, $55). The average salary of teachers (1942-43) ranges from $654 in Mississippi to $2,697 in New York (Tennessee, $963). The

average salary of a rural teacher in the United States is only $959 as compared to $1,955 per urban teacher. The percent of youth of high-school age actually in school ranges from 40 percent in Mississippi to 95 percent in Washington (Tennessee, 45.6 percent). These inequalities of opportunity constitute an intolerable situation in a democratic Nation.

There is now pending in Congress legislation calculated to remedy the situation, the Thomas-Hill-Ramspeck bill (S. 181 and H. R. 2839). Hearings have been held and the Senate and House committees should lose little time in reporting them to the Senate and House for a vote. Without doubt a majority of both Houses is favorable to such legislation.

The bugaboo of Federal control of schools should not be permitted longer to deny adequate educational opportunity to several million of our Nation's children. We can have Federal aid without Federal control. To deny that we can is to deny the successful operation of our form of government.

I believe that if the Federal Government has the right to reach into the most remote corners of the Nation and call youth to the defense of the country that same Government has the obligation to support a program of education that will enable them to perform such a duty well.

The heaviest burden for paying for this war will be laid upon those who are now the Nation's youth. I believe it will strengthen the faith of youth in their country's future if the National Government will guarantee the financial support of a program of education which will enable them to pay this debt.

I for one believe that the school teachers of America are the first and chiefest servants of the Nation, and that the laborer is worthy of his hire. Federal aid is necessary to adequate remuneration of our teachers.

Public education is a public necessity. Federal aid for public education is essential to an equitable distribution of the blessings of education among the children and youth of America.

## The Dies Committee Again

EXTENSION OF REMARKS
OF

### HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. PATTERSON. Mr. Speaker, I want Congress to read an article from the independent Methodist weekly, Zion's Herald, of October 24, 1945:

THE DIES COMMITTEE AGAIN

(By Richard Morford)

The American people endured the Dies Committee to Investigate Un-American Activities more than 6 years. We say endured because its publicity-mad chairman, Martin Dies, provided us with overwhelming evidence week by week that the committee which he ran was engaged in a witch hunt first, last, and all the time. Liberal Congressmen attempted to get rid of the malicious committee each time a renewal of the committee's life and appropriation was asked. Those willing to stand up in Congress and be counted against the inquisitorial Dies grew from year to year, but at most fell far short of the necessary number to retire the committee. Finally the American people took the business in hand in democratic fashion. They mobilized the voters to defeat the unsatisfactory members of the committee when they came up for reelection in Congress in 1944, beginning with Mr. Dies. Mr. Dies saw the handwriting on the wall and quit the race. Three others were counted out at the polls. When still another member resigned in protest against the undemocratic procedure, it appeared that the committee would pass into limbo.

But today the American people are faced with a repetition of the same ugly conspiracy against all that is decent and democratic. The Dies committee is back again. Only this time it is the Rankin committee, which is an accurate title, we insist, for while the full title is "House Committee on Un-American Activities," and its chairman is Congressman JOHN S. WOOD, Democrat, of Georgia, Congressman JOHN E. RANKIN, Democrat, of Mississippi, has long since proved himself to be the committee's master schemer and the director of its operations.

Mr. RANKIN made his own bid for the mantle of Martin Dies and was rewarded. By a surprise legislative coup in the opening hour of the first day of the present session of the Congress, January 3, 1945, Mr. RANKIN jammed through the reestablishment of the Committee on Un-American Activities. More than that, by an amendment of the House rules, it was made a permanent standing committee. The vote was 207-186. There was no time for new Congressmen to get their guard up for one such as RANKIN, who took advantage of the day's confusion. All too many of the rest could discern precisely what was being put over and helped it along by their vote. This produced the first victory in this session of Congress for a reactionary coalition that still rides with ominous power. The 207 who voted for the committee included 137 Republicans and 70 Democrats; 63 of the latter were southern.

Members appointed to the committee besides Mr. RANKIN, were EDWARD J. HART, Democrat, New Jersey; J. HARDIN PETERSON, Democrat, Florida; J. W. ROBINSON, Democrat, Utah; JOHN R. MURDOCK, Democrat, Arizona; HERBERT C. BONNER, Democrat, North Carolina; J. PARNELL THOMAS, Republican, New Jersey; KARL E. MUNDT, Republican, South Dakota; GERALD W. LANDIS, Republican, Indiana; Mr. THOMAS, ranking Republican member of the present committee, was also a member of the Dies committee, as was Mr. MUNDT.

ITS PURPOSE

For the first 6 months of this year the committee undertook no startling campaigns, although Mr. RANKIN, in Mr. HART'S absence, directed an abortive attempt to smear OPA. At least the press dropped the headlines which had been the means earlier of arousing the people to action in the November elections. Some entertained hopes the committee might do the right thing when it got organized: others thought it might fade out. That there was little committee action in this period is partly explained by the persistent report that Congressman EDWARD J. HART, the committee's first chairman, did not go along peaceably with RANKIN'S dictates, and that the committee vote on many proposals stood at 5 to 4, with Mr. HART in the minority, and Mr. RANKIN barely able to keep control. HART moved out on July 2. JOHN S. WOOD came in as chairman. It is significant that Mr. WOOD resigned the highly desirable position he held as a member of the top-ranking Foreign Affairs Committee in order to take the chairmanship of the Un-American Committee. Yet no one, certainly not Mr. RANKIN'S southern colleague, Mr. WOOD, seems concerned to challenge the current Washington belief that RANKIN continues to dominate the scene. It appears that there are not more than three members out of the nine now who will lift a voice against RANKIN.

Who's the committee out to knife this time? The answer: Everybody the Dies committee sought to undermine—the Jew and the Negro, the labor union leader, the Communist and the New Dealer, the foreign born and every friend of the Soviet Union, every liberal and democratic fighter for the people's cause. Given time enough, the only people that RANKIN intends shall be left out are the America Firsters, the isolationists, the seditionists, labor's enemies, Jew and Negro haters, Red-baiters, and certainly Mr. Hearst and the rest of the Axis-press crowd.

THE WITCH HUNT

That's putting the matter extremely! Examine the record. The new committee possesses the million-name blacklist of anti-Fascists collected by Martin Dies and already has started to enlarge it. They have asked President Truman for the personnel and social-security records of all temporary Government war agencies. This will give them data on thousands of persons employed, or rejected for employment, by these agencies. With jaundiced eye the committee's snoopers will hunt particularly for persons upon whose organizational affiliations they can hang the label "Communist" or "subversive." The committee may get these records unless many of us insist to President Truman that he refuse the request.

Yes, the committee is getting set for wholesale operations. Do you remember how on October 19, 1941, Dies sent to the Attorney General a list of 1,124 persons employed by the Government whom he alleges were Communists or affiliates of Communist-front organizations? It is noteworthy that in submitting these names, and in releasing to the press the list of Government employees allegedly belonging to the Washington chapter of the American League for Peace and Democracy, the committee never produced a bit of evidence to show that individually the persons on the list were Communist sympathizers. While Dies continued a public persecution of honorable and efficient public servants, the Attorney General did his best over 10 months, with the aid of FBI investigators, to gather incriminating evidence against the 1,124. What was the result? On September 3, 1942, Attorney General Francis Biddle sent a letter to Congress reporting that the Justice Department had fired two men as the result of the FBI investigations. Out of 1,124 that's all who proved liable. On his record you may be certain that J. Edgar Hoover of the FBI had not participated in any whitewashing operation. Said Mr. Biddle: "As regards a large proportion of the complaints, it is now evident that they were clearly unfounded and that they should never have been submitted for investigation in the first instance."

But the principal point at the moment is not the failure to produce indictments, but rather an indication that the Rankin committee is following the Dies committee pattern. It is a witch hunt aimed at thousands of ordinary American citizens, as well as their leaders. To disrupt the normal activities of Government employees by an overhanging Damoclean sword; to drive out from Government service as many New Dealers and other progressives as possible; to spread fear not only among Government employees but among liberals everywhere; to intimidate progressive organizations. These are the purposes of the hunt.

With a campaign under way to put Government employees on the fire, whom else does the Rankin committee intend to burn? In early July, while RANKIN was looking for a suitable chairman after Mr. HART had resigned, he joined Gerald L. K. Smith in denouncing the Red propaganda of Hollywood. The committee forthwith dispatched two investigators to the movie capital, which RANKIN declared was the new hotbed of communism. The purpose of the investigation, said Mr. RANKIN, was to probe one of the most dangerous plots ever instigated for overthrow of this Government. Before the investigators presented their report to the committee the Hearst press presented an exclusive story purported to be based upon the findings of the would-be investigators.

indeed, at this writing the Hearst press insists upon sharing honors with Mr. RANKIN for the committee's plan and progress. There can be little doubt that the Hearst press enjoys an "open door" into the inner sanctum of Mr. RANKIN's committee.

THE PROSPECTS

The pillorying of Communists has always been counted an easy way to get popular approval. It was a "natural" for the committee's fall program announced suddenly by the Hearst press on September 19 and confirmed by the committee's chairman next day. For at this particular time an investigation of Communists could be fitted nicely into a grand strategy which, in this writer's opinion, is nothing short of Fascist.

Subpena Benjamin J. Davis, Jr., national officer of the Communist Party, a Negro and a candidate for reelection as councilman in the City of New York. He can be victim of a three-way smear. Mr. RANKIN never passes up the chance for an attack on the Negro as well as the Communist. As for interfering in local elections, that's an old Dies tactic. It is recalled that Dies in 1938 used his committee to smear three progressive gubernatorial candidates in the pending elections: Benson in Minnesota, Murphy in Michigan, and Olson in California. The tactics used in attempting to link Mr. Murphy, now associate justice of the United States Supreme Court, with the Communists, were so reprehensible that President Roosevelt branded the action "a flagrantly unfair and un-American attempt to influence an election," and indicted the committee for making "no effort to get at the truth, either by calling for facts or by allowing facts and personal opinion on the other side."

Earlier the committee announced that it would investigate labor troubles over the Nation, particularly in Detroit, to discover whether they were Communist fomented. It's election time in Detroit, too, with labor and progressive forces rallying around a people's man, Richard Frankensteen, United Automobile Workers' vice president, whom they intend to make their mayor. A number of men, in and out of Congress, are glad to have RANKIN serve their interests by attacking labor, as he has been accustomed to do, with the backing now of a Government committee. Especially are they happy to see Mr. RANKIN sowing disruption that might split labor off from its progressive friends in other groups.

It must be recognized that the result of the committee's operations, if successful, will be to destroy American unity. Our united effort proved effective in winning the war. All forces in the Nation must pull together in democratic fashion to meet the problems of reconversion and to win the peace at home. RANKIN and his colleagues know that if America is to be saved for a return to Hoover normalcy, in which a small clique of native fuehrers dictate the life and destiny of the American people, their game must be to divide the people. That's the only way to conquer them.

Subpena Mr. Earl Browder, recently ousted from the leadership of the American Communist movement, secure a public rehearsal of its recent internal fight, and so discredit the Communist Party before the American people. If Mr. Browder could be made to spill the beans and tell the committee that there is a direct link today between Moscow and the American Communist Party, that would help. Or possibly a confession could be wrangled from Mr. William Z. Foster, present party chief, about Moscow connections. In any case, surely enough would be said so that the Hearst press could work up a rousing story about an international plot to overthrow the Government of the United States. Subpena Sam Carp, of Bridgeport, Conn., brother-in-law of the Soviet Union's Commissar for Foreign Affairs, Mr. Molotov. To tie the American Communists and Mr. Molotov together in some way would add to the anti-Russian ferment in this country. This committee's activities are not the only threat to friendly relations with Russia, we grant, but they could be as dangerous as any. If we would save the peace, we should rise from every corner of the Nation and in one voice repudiate this committee and all its works.

ABOLISH THE COMMITTEE

Can we not force this committee to do the job that needs doing and do it in the proper way? The answer is "No." If RANKIN has his way, and he has, there never will be a thorough investigation of the truly un-American activities which flourish in every section of the country. Last month the dean of the House of Representatives, Congressman ADOLPH J. SABATH, Democrat, Illinois, rose in the Chamber to submit the names of 24 persons and organizations which, in his judgment, are guilty of subversive activities and should be investigated. Among others were included Gerald L. K. Smith, Joe E. McWilliams, E. A. Rumley, Gerald B. Winrod, Edmund James Smythe, Col. Eugene N. Sanctuary, Merwin K. Hart, Joseph P. Kamp. He offered to submit a list of many others to Mr. RANKIN. Mr. SABATH might well have included JOHN E. RANKIN in his list. In a reference to the fears of communism to which Mr. RANKIN and others continuously give vent on the floor of the House, Mr. SABATH said: "Personally I think their statements are far-fetched and invariably are made to detract the attention of the American people from the real danger to our country, namely, the Fascist activities. What I would advise these gentlemen to investigate is some of the Fascist groups in this country who I think are going much further in disrupting conditions in the United States than the much abused so-called Communists."

In its latest publicity the committee suggests that it may investigate Gerald L. K. Smith. RANKIN's handling of Gerald L. K. Smith would probably turn out like the whitewashing that Dies provided for another domestic Fascist, William Dudley Pelley, the Silver Shirt leader and professed anti-Semite, when he appeared before the Dies committee in 1940. Mr. Pelley declared: "I subscribe to that (Dies committee) so completely * * * with the work which has been done by the Dies committee * * * and I have expressed it outside in publications * * * that if its work continues and goes on, the Silver Shirt Legion stops. We have no more use for it."

Would it be enough to rid the committee of Mr. RANKIN. No. Were Mr. RANKIN to give way, Mr. THOMAS would step in. There is little to choose between them. Mr. THOMAS has relished and upheld his share of the inquisition from the early days in partnership with Mr. Dies to the present. The majority of the committee will follow either RANKIN or THOMAS. The clique behind the committee has no intentions of reforming the undemocratic procedures or objectives of this committee. On a straight vote in the House to abolish the committee, the forces of decency and democracy could win, we believe. That vote should be forced by the American people.

---

## The Nation's Chief Concern

EXTENSION OF REMARKS

OF

## HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. GAMBLE. Mr. Speaker, under unanimous consent of the House to extend my remarks, I insert in the CONGRESSIONAL RECORD an editorial published in the Standard Star of New Rochelle, N. Y., entitled "The Nation's Chief Concern."

THE NATION'S CHIEF CONCERN

This is more than a strike for higher wages. It is more than a demand for 52 hours' pay for 40 hours' work. It is more than a fight between the biggest, richest labor union against the biggest, richest employer. It is more, far more, than the battle of Detroit.

It is, in effect, the culmination of labor's unrest and of political manipulation of labor's problems that began with the inauguration of Franklin D. Roosevelt. It is the chicken which has at last come home to roost.

This is a struggle to determine whether organized labor leaders shall sit on both sides of the conference table, as representing not only employee but employer. It is the longest step yet taken toward the real goal of organized labor, access to full, intimate knowledge of the employer's earnings and the right to participate in determination of the price which the employer shall ask for his product.

Organized labor wants to maintain the high plane of earnings which is attained during the war years of abnormally great productivity. It bases this desire upon its economic concept that high purchasing power always creates production, choosing to ignore the contrary orthodox philosophy that this condition invites inflation.

But organized labor wants more than high wages, much more. It wants fortification in its war-gained status, it wants absolute assurance that no interference by any employer shall ever be permitted to seek to undermine unionism. It wants a Federal underwriting of not only collective-bargaining rights but also of the privilege to sit with management while it bargains for labor.

The employer, on his part, asks wherein is the logic that a prosecuting attorney shall also be the judge.

He, too, wants security, and in view of repeated violations of the wartime no-strike pledge of labor and the frequent repudiation of contracts containing no-strike clauses, he asks what labor is prepared to offer in return for its own demands.

Young Henry Ford outlined this viewpoint of business when he related that under the enforced check-off system his company has collected for the union in dues, initiation fees, and special assessments a total of $7,799,924.

"The result has been," advised Mr. Ford, "that the union has had membership and financial security, but the company has had no compensating security * * * peaceful relations have not materialized. The experiment has been an unhappy one * * * we must insist upon guaranties by the union against work stoppages and losses in productivity."

Further, as to opening his books to the union leaders, the employer wants to know what is his assurance that this vital information will not reach his competitor. Along the same line, he asks why a prosperous, efficient concern should be called upon to pay more for commodities and labor than a company less intelligently guided.

Should a man with a bank account who enters a haberdashery be charged more for a hat than the customer who has only a few dollars in his pocket?

No; this is far more than an ordinary strike for more pay. It is a signpost of the times which will show where we are to go and how far we are to stray from the economic principles which made this Nation the most prosperous, with the highest living standards, in the entire history of civilization.

## Immigration, Naturalization, and Deportation

EXTENSION OF REMARKS
OF
### HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. REES of Kansas. Mr. Speaker, the American Legion, last week at its annual national convention, adopted an important resolution with respect to immigration, naturalization, and deportation. The Legion and other ex-servicemen's organizations have at all times shown a deep interest in this problem.

I am including herewith, as a part of my statement, a copy of the resolution and invite the attention of the Members of the House to its careful consideration.

The question of immigration, naturalization, and deportation is going to be one of the most important problems to be considered by this country in the postwar period. I call particular attention to that portion of the resolution that provides:

That immigration should be made truly selective and confined to the present quota or such reduced quotas as may herafter be established and that only such persons shall be admitted from any country who may be found to be assimilable and well disposed to the basic principles of our American form of government and way of life.

The resolution follows:

IMMIGRATION, NATURALIZATION, AND DEPORTATION

Resolution unanimously adopted by the American Legion, Monday, November 19, at its annual national convention

Whereas certain foreign countries refuse to receive their nationals found to be deportable under our laws; and

Whereas remedial legislation appears to be impractical, we strongly urge that an international conference, or convention, be held for the purpose of giving full faith and credit to the decrees of the United States Government ordering the deportation of aliens, particularly those convicted of criminal deportable offenses.

Whereas the present administrative practice of granting lawful entry through the process of pre-examination to aliens who have entered illegally or otherwise have not qualified for admission for permanent residence affords to such aliens an unwarranted preference over those who, in good faith and reliance upon the fair administration of our quota laws, are awaiting their turn under the quota of their respective quota; and

Whereas this process of reexamination is not in accord with the principle of the examination at the source; be it

*Resolved*, That this administrative practice be discontinued and if, in the opinion of the administrative authorities, this extra legal practice is in the best interests of the Nation, legislative authority should be obtained and in that event, we recommend that a minimum period of residence of 5 years be established as a prerequisite for this extraordinary privilege, and that no alien who claimed exemption from military service should ever receive this extraordinary privilege; and

Whereas, naturalization is a privilege extended to aliens seeking the status of citizenship and contemplates that their admission should be mutually beneficial to the government and themselves, and that the applicants upon admission should be citizens in fact as well as in name, we recommend the adoption of legislation that will provide as additional requisites for naturalization:

(a) Ability to read English understandingly.

(b) A uniform period of residence in the United States which in no case should be less than 3 years.

(c) An unequivocal obligation to bear arms.

*Resolved*, That immigration should be made truly selective and confined to the present quota or such reduced quotas as may hereafter be established and that only such persons shall be admitted from any country who may be found to be assimilable and well disposed to the basic principles of our American form of government and way of life.

*Resolved*, That we support legislation designed to facilitate the admission to this country of such nationals of other countries, racially eligible to citizenship, married abroad to members of our armed forces, upon application of the citizen's spouse: *Provided*, That whenever it is found any such immigrants may be afflicted with excludable diseases or defects that are not quarantinable, notice of such immigrant's destination to any community shall be promptly delivered to the appropriate health authorities: *And provided further*, That such aliens spouses are otherwise qualified for admission.

*Resolved*, That all war refugees who have been enjoying our sanctuary, haven and hospitality shall be returned promptly to the countries from whence they came.

Since H. R. 3663 introduced by Representative GOSSETT, of Texas, now pending in the Congress, is so embracive of the Legion's long-established policy restricting immigration and its attitude toward the war criminal classes: Be it

*Resolved*, That we pledge our support for the enactment of this legislation.

*Resolved*, That article 75 of the Geneva Convention which calls for the return of prisoners of war to their own countries be strictly enforced and that no exceptions be made by permitting them to remain in the United States or otherwise facilitating their readmission.

Post-war immigration will receive the very earnest attention of the Congress during the current session; in fact a special subcommittee of the Congress has been engaged since early summer in a survey, not only on the broad subject of immigration, but also on deportation and naturalization legislation. Already available reports of their meetings indicate a coalition of various types of organizations and minority groups whose particular functions appear to be the allevation of the conditions of alleged oppressed persons and groups, and of assisting the aliens within the deportable classes to avoid deportation, and in aiding and abetting the naturalization of aliens generally. Their primary interest is in the alien rather than the general welfare of their country.

Some of the legislative proposals of these groups would increase immigration; grant lawful entry to aliens now here in violation of our laws; confer citizenship on certain persons lacking the ordinary educational requirements; confer upon alien merchant seaman the same naturalization privileges now temporarily accorded our combat men in the armed forces and relax existing deportation laws. Previous convention mandates, together with mandates of this convention, present basic ideals that would be contravened by proposed legislation already submitted to the subcommittee of the Congress. Having in mind the extreme importance of this subject matter; be it

*Resolved*, That convention mandates on immigration, naturalization, and deportation be placed in the category of major legislation.

## Pioneer Women

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from yesterday's Boston Daily Globe:

PIONEER WOMEN

The section of the paper headed "GI Gangplank" has a tremendous number of women readers, especially among the young married and the long engaged. Husbands and fiancés are coming back and the women whose lives are bound up with theirs are eager to welcome their particular veterans.

As one young wife and mother, who went through the experience a few weeks ago, expressed it, "In the last 2 minutes before the train comes in you think you are going to die." No doubt others feel the same way. These reunions, mostly after years of separation, are an ordeal.

The atmosphere surcharged with happiness, often attested by sobs of delight and tears of joy, is also diluted by something else. The wife or sweetheart has almost certainly been looking ahead to the months and years to come. Perhaps the soldier or sailor headed for the separation center is not yet attempting to set his face to the future, but the woman has had a great deal of time to spend on such considerations. The men of other families in the neighborhood have returned, become settled or unsettled, and she wonders about the one who means so much to her.

If the job he left still exists he has a legal right to return to it. But in many cases this is not the situation. There is the young man who found the prewar employment very trying because he could not sympathize either with its method or its purposes. Another man, whose education was interrupted, has been thinking about a return to learning. There are other men who dream of going on the land trying subsistence farming. If a large proportion of the men have in mind making their future very different from their past it is not strange. They are young, have traveled far, seen much of their own country and some of the world. If they return with new ideas no one need be surprised.

For countless women, perhaps rather more than a million of them, the situation is a test of mental and emotional stamina. But that is nothing new in this part of America. The migration to the Atlantic seaboard was somewhat different from that which brought white settlers to other portions of the New World. When Spaniards set out to see what treasure they could bring back it was an expedition for men only. Their women stayed at home. To the north were French adventurers bent on killing and skinning wild beasts and sending the fur to Europe. But in the part of the country where the Thirteen Colonies were organized, the migration was to a great extent a family affair. On the incoming ships there were more men than women, but always there were women along.

And when the urge to press on into the interior took hold of the New England mind the covered wagon carried wives, daughters, and small children. In later years the streams of settlers from several European countries were never masculine, although the males were in the majority. The object was homemaking. That needs experience at the fire and the mending basket.

The pioneer woman has been one of the most significant symbols of American life. In the outlying districts of New England she fought off Indian raids. Her hands were the forerunners of factories producing household goods. She spun yarn, wove cloth, and took on a thousand duties of which her great-great-grandchildren do not even know the names.

She was, with all the drudgery, something more than a drudge. She was a helpmate, instilling spirit into her husband and her sons; comforting them in disappointments and searching the possibilities to decide what would be best to do next.

And today there are thousands upon thousands of young American women, most of them married and the rest expecting to be soon, whose immediate office in their families is to be pioneer women. It may look like the prewar America, but it simply cannot be quite that. To find a satisfactory part in it requires adjustment by the young veteran and also by his wife. She may realize this before he does, and she must comprehend that she is important. The pioneer woman of today is the cocaptain of the future.

UNCLE DUDLEY.

## Time To Throw Off Our Fears

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a well-considered and forward-looking article, Time To Throw Off Our Fears, written by Charles A. Merrill and appearing in the Boston Globe of November 25, 1945:

TIME TO THROW OFF OUR FEARS—SUSPICION OF OTHERS AND MISTRUST OF OURSELVES WILL HARDLY AVAIL TO SOLVE THE PROBLEMS NOW CONFRONTING THIS NATION AND THE WORLD

(By Charles A. Merrill)

We are indeed living in a weird atmosphere, and we are a strange people. Reading the current headlines, a visitor from Mars, if he could drop in on us, would doubtless conclude that by scandalous corruption and inefficiency we had just lost a war instead of having emerged victorious from the best-managed war in our history. We are really desperate. To satisfy our craving for a scandal and a scapegoat or scapegoats, we actually have to go back to the first day of the conflict. We cannot find anything to complain about after December 7, 1941.

Nor is this the whole story. The psychologists will find our case history extremely interesting. The excuse for this fact-finding orgy now underway in Washington, in which observers are beginning to detect strong political overtones, was to place the blame for the tragedy at Pearl Harbor. But, lo and behold, the inquiry has taken a new turn. We are now trying to ascertain whether the Japanese war lords or our own public servants started the shooting. Perhaps we had better call off the trials of the German and Japanese war criminals.

From the Pearl Harbor inquiry will doubtless come evidence of which historians will make good use in recording the story of the irrepressible conflict between fascism and democracy. But historians, we may be sure, will require a decade or two to weigh the evidence. For the sake of our own peace of mind, we had better stop asking ourselves whether we deliberately entered the war or were, like Russia, a victim of aggression, and reflect upon what our situation would be today if we had remained isolated and aloof and had permitted the Fascist aggressors in Europe and Asia to liquidate all resistance in their respective continents and then put the squeeze on the United States.

A SHELL-SHOCKED NATION

The American people hate war, and well they may. After two bitter experiences in a quarter of a century, Old World quarrels about which we were not consulted until our weight was needed to tip the scales in favor of justice and decency, we are probably a shell-shocked nation. Perhaps this is the meaning of the Pearl Harbor investigation. The agony of World War II has seared our souls, and we cry out: "Who did this to us?"

The sooner we throw off this mood the better it will be for ourselves and those who come after us. Crying over spilled milk will get us exactly nowhere. If we really hate war as much as we say we do and wish to avoid another one, the time to prepare for peace is now.

In one respect, our mood today is the same as it was 25 years ago. The war has left us nervous and depressed. Postwar complications sicken us. We would like to place the blame somewhere, liquidate the whole business, and forget it. But we are wiser now than we were then. We know very well that there is no such easy way out. We have learned the hard way, and we are keenly aware that this time we cannot return to normalcy. We are no longer a nation of ostriches.

Frankly, our state of mind today is one of confusion and fear. What a paradox this is, that, after having demonstrated our unrivaled power, we are afraid. Afraid of what? Afraid of the power which we have just exhibited? We have assisted in knocking out the two great aggressor nations left in the world. In the process, we have seen one of our allies, Great Britain, reduced in strength to a position where she is no longer a dominating force in international affairs. There is today only one nation in the world capable of challenging us, Soviet Russia, and Russia has no navy, no air force that could compete with ours, no such industrial strength as we have and she has suffered so grievously in her hand-to-hand encounter with nazism that she will need a quarter of a century to bind up her wounds. Ideologically, she differs from us. But she inherits such a large portion of the earth that she will be fully occupied for a century exploiting it. At the present time it would be difficult to find any really worth-while, full-time conflict of interests between Soviet Russia and the United States of America.

PERHAPS WE LACK CONFIDENCE

Are we then afraid of our own strength? Perhaps what we really lack is confidence in ourselves. We have a secret weapon and the secret is too much for us. Why? Because the scientists tell us that the secret cannot be kept.

What, then, can we do to snap out of this negative mood in which we find ourselves enmeshed? Instead of wasting our substance on a witch hunt, we might tackle some of the problems that are awaiting solution. There happen to be quite a few of them.

After all is said and done, General MacArthur is carrying out his orders in Japan. He has liquidated the big business combines that sinewed the Japanese war potential. Just now he is revising the feudal system of land tenure that kept the Japanese a backward people of tenant farmers. It will be no surprise to some observers if the Japanese turn out to be the No. 1 converts to democracy.

Strangely enough, progress is slower in Germany. To be sure, the question of dealing with one of the great industrial nations which we always considered an essential part of our economy is a bigger problem than emasculating Japan. But why not make up our minds? We must decide what level of economic activity is required in Germany in order to keep that country self-sufficient, and what degree of industrialization might make her a menace to the peace of the world. The chances are that she will never again be an offender.

Soon, carrying out the terms of the Potsdam Declaration, we must supplant military rule in Germany with a civilian administration. Is it a fact that we cannot find in this country competent, public-spirited administrators to take over and complete the job that our military experts so courageously tackled?

There are thousands of homesick boys pining away in Europe. They have a right to come home. Well, let's bring them home. Is it not reasonable to assume that, if we make Army careers attractive, we can, from our vast population, attract to this job which has to be done thousands of American boys who have not been called upon to fight the recent war and who may not be immediately committed to careers in civilian life? Evidently Lt. Gen. Lucius D. Clay, General Eisenhower's deputy in Europe, thinks this is possible. "The sooner we get out the I-want-to-go-homes," says General Clay, "and replace them with personnel who want to stay, the better off we shall be. We want people who will stay and make a serious career of this job." Thank heaven for such American common sense.

ABOUT THAT SECRET WEAPON

If Congress is itching to assert itself, let it cease worrying about how the last war started and appropriate the money needed by UNRRA to prevent starvation and anarchy from sweeping around the earth. Our representatives in Washington might also see what they can do about supplying housing accommodations for returning veterans who find themselves with no place to park their families.

And, oh, yes, about the secret weapon. Has it occurred to our agents in Washington that this time the American people have not turned their backs upon the ideal of international cooperation, but have decided that the only way to stop war is to gang up against it?

The world happens to be in a desperate situation. This calls for drastic measures. Suppose we take the risks, set up the United Nations Organization as speedily as may be, and entrust to it control of the atomic bomb. It is quite possible that, having done this, we shall breathe easier.

As our late President Franklin D. Roosevelt asserted some years ago in the midst of a domestic crisis, perhaps "we have nothing to fear save fear itself."

## Commendation of Cordell Hull's Testimony Before Pearl Harbor Committee

EXTENSION OF REMARKS
OF
### HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. LUTHER A. JOHNSON. Mr. Speaker, it is fortunate that ex-Secretary of State, the Honorable Cordell Hull, is still living so that he can refute some of the unjust and untrue charges made against him and President Roosevelt with reference to the attack by the Japanese at Pearl Harbor.

Death has removed President Roosevelt and he is not here to answer these charges, but ex-Secretary Hull is familiar with the facts relating to our foreign policy, and his testimony before the Congressional Pearl Harbor Committee was a complete answer to many of these vicious and unjustified attacks.

The New York Times of November 24 has an editorial reviewing and commending Mr. Hull's testimony before this committee under the heading "Mr. Hull's Testimony," and immediately following this editorial the Times has another entitled "The Narrow Margin." Both of these editorials are of interest and should be preserved, and under leave granted, same are submitted herewith:

MR. HULL S TESTIMONY

In his testimony before the Congfessional Pearl Harbor Committee former Secretary Hull has performed still another distinguished service, both to his country and to history. He has swept away the accusations and distortions of political partisanship, and in a detailed and unchallengeable presentation of America's policy toward Japan has not only set the record straight, but has also squarely put the blame for the Pacific war where it belongs—where the Japanese themselves now acknowledge that it belongs—on the mad Japanese policy of expansion and world conquest in collaboration with Nazi Germany. In so doing he has not only answered the critics of America's diplomacy who through him would strike at President Roosevelt's whole foreign policy, but has also cleared the way for the committee itself to get down to the business for which it was appointed—the investigation of the Pearl Harbor disaster and the military reasons for it.

Mr Hull makes it plain that the Japanese war lords had confronted the United States with the alternative of either bowing to their very real ultimatum of November 20, 1941, which would have made the United States an ally of Japan at the price of a surrender of American principles as abject as Munich, or facing the risk of a Japanese attack. In that situation the American Government, far from provoking a Japanese attack, or holding out the Pacific Fleet as bait for it, not only played for time to permit the armed forces to prepare but also presented a counter proposal in line with the basic American principles of peaceful cooperation and nonaggression, which, even if the Japanese failed to accept it, would have produced a diplomatic stalemate that did not necessarily involve war. Yet it is this counter proposal which Japanese propaganda has distorted into an ultimatum, and it is no credit to President Roosevelt's opponents that they had to stoop to Japanese propaganda to find their material.

The correctness of Mr. Hull's presentation is evident from the two decisive notes themselves. In their note of November 20 the Japanese demanded that in return for a partial withdrawal of their troops in Indo-China the United States should give Japan a free hand in "restoring general peace between Japan and China," which meant a Japanese conquest of that country, and that for this purpose the United States should supply Japan with all necessary materials, especially oil, and induce the Netherlands East Indies to do likewise. Mr. Hull's note of November 26, on the other hand, proposed a broad and straightforward settlement on the basis of the territorial integrity and sovereignty of all nations and noninterference in their internal affairs, to be accompanied by a complete restoration of trade relations and the greatest possible economic cooperation.

That Mr. Hull had little hope of a Japanese acceptance does not detract from the merit of his proposal, which was the only one that could have been made in the circumstances. In point of fact, as was evident at the time, the Japanese had already gone too far in their career of conquest to stop, and Mr. Hull is quite right in his statement that not even a surrender to the Japanese ultimatum would have averted the Japanese sneak attack; it would have merely postponed that attack until Japan had consolidated her gains and could strike with all the greater force. For that reason Mr. Hull warned repeatedly that Japan could be expected to strike "anywhere, any time." If there was any mistake made by our Government it was its assumption that the Japanese would strike primarily at the Kra peninsula and the Netherlands East Indies rather than at Pearl Harbor.

But the direction from which a Japanese blow could be expected was a military and strategic, not a political, calculation. It will be up to the committee to find out whether, in view of the steadily worsening international situation during the years preceding the war, America had been properly armed to meet the foes closing in upon it, and how in the face of all the many warnings it was still possible for the Japanese to surprise the American Fleet at Pearl Harbor set up for a killing.

THE NARROW MARGIN

One section of Mr. Hull's statement yesterday dealt with the evidence by which Japan gave unmistakable notice of her aggressive purposes in the months shortly before Pearl Harbor. The sequence of events—all in the summer of 1941—ran as follows:

On June 22 Germany attacked Russia, thus tying up the Russian armies and freeing Japan's western flank from the danger of a Russian attack in the event that Japan's own armies embarked upon a new adventure.

On July 2 a hastily assembled Imperial conference in Tokyo reached decisions "on important national policies to meet the current situation."

On July 24 the character of these important decisions was revealed when a Japanese fleet appeared off Indochina and a Japanese Army proceeeded to occupy that country in a maneuver which plainly flanked the Philippines and exposed those islands to attack.

All of these events were matters of public knowledge. There was no secrecy about any of them. All of them were spread all over the front pages of the newspapers. All of them were talked about everywhere.

Yet the astonishing fact remains that in the face of these clear and explicit warnings of danger the House of Representatives of the United States voted 3 weeks later—on August 12—to continue the Selective Service System only by the razor-edged vote of 203 to 202. On that decision the House Democrats voted 182 to 65 to continue Selective Service. The House Republicans voted 133 to 21 to end it.

That was the narrow margin by which the American Army was kept from almost complete dissolution on the eve of Pearl Harbor.

## Relationship of Management and Labor

EXTENSION OF REMARKS

OF

## HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an interesting interview by Eleanor Roberts of Rev. Father Thomas E. Shortell, S. J., of the College of the Holy Cross, Worcester, Mass., on the relationship of management and labor appearing in the Boston Post of November 25, 1945.

Father Shortell is one of the country's most eminent authorities on labor problems and is director of the famous Institute of Industrial Relations at Holy Cross College. His views, as expressed in the interview, are worthy of deep consideration by all fair-minded persons.

SEES BASIS FOR LABOR-MANAGEMENT PEACE—FATHER SHORTELL, OF HOLY CROSS INSTITUTE OF INDUSTRIAL RELATIONS, POINTS OUT PUBLIC KNOWS ONLY SENSATIONAL SIDE OF SUBJECT

(By Eleanor Roberts)

Although the labor picture looked pretty dark last week with President Truman's labor-management conference hopelessly deadlocked over collective bargaining and the Nation's idle topping the 500,000 mark as over 200,000 General Motors employees struck, one of the country's most eminent authorities on labor problems, the Reverend Thomas E. Shortell, S. J., newly returned from the Washington parley, declared in an exclusive interview that with this conference we have reached one of the most important milestones in the social and economic progress of the United States.

"The very fact that we have been able to get labor and capital together under one roof is of great significance," Father Shortell, who is director of the famous Institute of Industrial Relations at Holy Cross College in Worcester, pointed out.

"The trouble with the American public and the way they feel about strikes is that they see only the sensational part of them."

A DISTORTED PICTURE

"But they hear very little about the good, constructive work between labor and management that has been accomplished."

Frowning upon the people who censor strikes simply because they are strikes—without knowing all the details—Father Shortell declared: "After all, there were 50,000,000 workers in this country during the war, and only a very small portion, about 250,000, went out on strike.

"It is like picking up the paper and counting off the divorce cases. There are thousands of happy, peaceful homes blessed with love and devotion that you never hear anything about. That's because they're normal. It's the abnormalities in marriage that capture the news.

"The same is true of labor. There are 50,000 contracts in the United States today, yet only the dissensions come to the attention of the public. Actually 90 percent of the labor disputes are settled quietly. You don't hear about them because they are the normal procedures in labor conciliation.

"The public expects too much of a conference. They think that with one meeting of labor and management the industrial relations picture will be rosy.

"What can we hope for out of this conference? We can hope to minimize strikes—bring them down to the least possible number. And how can we do that? A strike, to be justified, must have a just cause. It should be carried on by legitimate means. It should also have a reasonable hope of accomplishing more good than the harm it causes."

MANY UNIONS ARE YOUNG

"Strikes should be used only as a last resort. The real job of the conference was to put so many resorts in between a conflict and a strike that a strike won't be necessary."

Father Shortell, who has always been considered something of a prophet in the labor-management field, has the patience of a

pediatrician with small children, in his viewpoint on unions.

"Did a thinking person ever say 'Why aren't unions 50 years old or even older?'

"Why aren't they? Because they were smashed! They were born in an era when they had to fight their way up. They have all the resentment of 50 years of fighting against spies, detective agencies, and yellow-dog contracts behind them.

"How long have the automobile workers had a union? They're practically infants—born in 1936. Yet their critics ask why they are not more disciplined. Are children that age as well-disciplined as adults with years of experience behind them?

"You seldom see strikes in the railroad workers union which was organized about 1880. Because they were allowed to organize they have tradition, experience behind them. For instance, if there are any difficulties between labor and management in this industry the mediation board first takes up the dispute.

"There is a cooling-off period of 30 days where a strike or lock-out cannot take place. Secondly, there is company investigation and fact-finding and the union can study the ability of the company to pay or the necessity for making wage cuts.

"Thirdly, they have the authority to publicize these findings, and fourth, to make a decision."

NEED FOR TEAMWORK

"With voluntary award arbitration that decision can be accepted or rejected. Every industry could have the same thing. But many don't want it chiefly because the fact-finding and investigating period could be used as a stalling period.

"A strike is like a football play. It has to be pulled suddenly. If there's a 30-day wait the company is prepared."

Firm in his belief that once the union gets fuller recognition by management it ceases to be a militant, fighting group and becomes cooperative, Father Shortell feels that it is a natural right to associate and to bargain with one's fellowmen.

A close friend of both industrial tycoons and labor leaders, this quiet, soft-speaking priest who is regarded as such a power in the industrial relations field, maintained that the saddest thing about the Washington labor-management parley was the dispute between CIO chief Philip Murray and United Mine Workers' John L. Lewis that keeps them both separated.

"If they were on the same side, they would make a perfect team," he bemoaned. "The tremendous power and resourcefulness of Lewis coupled with the smoothness of Murray as a negotiator would make a terrific impact.

"There is no question but that the bad split between CIO and the A. F. of L. has had a retarding effect on the progress of the conference. Wage increase is the foremost concern of the CIO, while the A. F. of L. considers the industrial peace formula most important. On the other hand, the A. F. of L. and the United Mine Workers were unwilling to risk a split in the conference on the issue of wage increase. They wanted to talk on a formula for collective bargaining and let the wage situation be settled by collective bargaining between management and labor."

COLLECTIVE BARGAINING

The forward strides that have been made in collective bargaining during the last few years have, to Father Shortell's mind, been responsible for the greatest advancements in industrial relations.

"When we recognize that labor-management conferences in the past have broken up over the right and the desirability of collective bargaining, it is worthy to note that great progress has been made.

"I cannot lay enough stress upon the importance of the statement made by one of the two main speakers for management at the conference, Eric Johnston, the president of the United States Chamber of Commerce. He said: 'Labor unions are now woven into our economic fabric, and collective bargaining is an essential part of the democratic process. The Nation must accept this as a fact. I mean accept it, not from the lips, but from the heart.'

"Isn't it true," demanded Father Shortell, "that people haven't accepted unionism as a part and parcel of American life? Why do men organize into unions? Because only through organization can they maintain their livelihood when conflict starts.

"In collective bargaining and unionism the bargainer and native worker is no longer satisfied to be a mere material cog in the machinery of production. He knows he is important. He realizes his dignity and personality and he feels a fulfillment of that in the fact that he elects representatives of his own choosing who stand face to face with management with equal knowledge of the conditions in industry and who can take an active part in determining wages, hours, and working conditions."

RIGHT TO ORGANIZE

"Besides that he elects his own shop steward and agreements—men who see that the contract is applied in everyday working conditions on the floor of the factory and who bring his grievances to the management for orderly discussion and settlement.

"In the old days the manager's door was always open so the employee could take his differences to him for personal settlement. Today, all that is changed. Can you imagine a steel worker marching up to the office of Benjamin Fairless, president of the United States Steel Corp.? Can you see how far he'd get?

"The head of the Nunn-Busch Corp. in Milwaukee once declared that as long as he knew the men personally they could get along fine through personal relationships. But the minute the company got so big that labor relations had to be carried on by a hired foreman, that was the time they needed a union.

"What is the right these men have to organize? The National Association of Manufacturers composed of 13,000 different companies organized. What for? For self protection, to exchange trade information and unfortunately, during 1902 to 1936, for the purpose of smashing unions. The unions never came back till 1936 when the CIO organized them in a resurgence of the democratic way of life."

In a plea to keep labor unions as well as management and economy free in this country, Father Shortell revealed that during the war, there was a tendency in the United States for unions to lean on the Government for decisions.

"We must insist upon free collective bargaining without undue Government restraints. The Government has a place, of course. It comes in legitimately, for instance, when it passes a minimum wage law. During the war, however, there was no collective bargaining except with the United Mine Workers. It was WLB dictatorship during the war."

THE GRIEVANCE CLINIC

As head of the Institute of Industrial Relations at Holy Cross College, Father Shortell has created his own little labor-management utopia where weighty problems are settled in a Friday evening grievance clinic, and where workingmen in overalls sit next to their bosses in a mutual desire to learn all they can about the intelligent settlement of their differences.

In much the same manner that pseudo-disputes are settled in this grievance clinic, real difficulties in the labor-management field can be taken care of, according to Father Shortell.

"Cooperation between labor and management is the order of the day. I also maintain that the application of intelligence and good will can solve most labor-management problems, that our American methods outdistance any system based on class hatred, suspicion, or dictatorship and that union recognition, collective bargaining, and intelligent union-management dealings have come to stay. This requires informed citizens to make them serviceable adjuncts of our social scheme.

"The labor-management conference will prove an imporatnt milestone in the social and economic progress of the United States.

"Its purpose, namely to lay the ground work for peace with justice on the home front, is agreed upon by all parties. There is a common interest in substituting industrial peace for industrial warfare. In this fundamental choice which confronted the conference a decision was being made between fateful alternatives—peace or war, cooperation or violence, self-regulation or coercion by law," declared Father Shortell.

A BETTER TOMORROW

"People should not expect sudden results nor miracles. One of the real purposes of this conference was to define the area of agreement and disagreement between labor and management.

"There is one important point which should be made clear to everyone—that the delegate to the labor-management conference had no power to make agreements which are binding on the group or industry that he represented. This was not a national collective-bargaining conference. The function of the conference was to simply recommend those procedures by which industrial relations could be conducted more effectively.

"And while the function of the conference was purely advisory and inspirational, the conclusions arrived at should have a considerable influence in shaping a better tomorrow for all our fellow citizens and they should chart the road to productive peace instead of disruptive war on the industrial front. Such are the principles and aims with which management entered the conference."

## Bring the Service Men and Women Home

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. REED of New York. Mr. Speaker, the Christmas season is fast approaching; a sacred time in the lives of men, women, and children. Mothers, fathers, wives, sisters, and sweethearts are praying for the return of their loved ones for the day of days. Our service men and women now widely scattered over the earth; some on remote islands of the Pacific, others in India, in China, Alaska, Iceland and in other far away places feel and rightly so that they have earned the right to spend Christmas with their loved ones at home.

The President and the Congress have turned a deaf ear to the appeals of those who fought and won a great victory. Those individual Members of Congress who refuse to sign a petition to make it possible for the service men and women and their families to be reunited on Christmas Day are looking forward to the joy of their own home on the sacred day

of Christmas. Lip service is not what the service people want; they want congressional action.

I urge my colleagues who are sincere in their interest in soldiers to sign petition No. 8 now on the Speaker's desk to hasten the return of our soldiers and sailors to their homes.

Under leave to extend, I insert the following letters:

From Lodi, Miss., comes the following letter:

NOVEMBER 24, 1945.

DEAR CONGRESSMAN REED: God bless you for your stand to get the students out of the Army soon. My son, 19 years old, was in the study of medicine at the time he went into the Army. He ought to be discharged in order that he might reenter the study of medicine. These United States need doctors, and you know they do. In a few years we will be without any doctors at all; it looks like.

Please let me know when do you think this will be passed. Surely, surely, for God's sake, you won't let Congress leave Washington for Christmas until you get the law passed to put these students out in order that they might reenter school in January of 1946. Go to it. You are a good one, and RANKIN, and several more can pass this and we are depending upon you all to do so.

God bless you.

Yours truly.

This next letter was written by a corporal at the Amarillo Army Air Field in Texas:

DEAR CONGRESSMAN: This letter is being written to convey to you the thoughts and feelings of a large group of men, and in an effort to enlist your power and aid to adjust an unfair situation which now exists in the Army Air Forces.

This group of men have all served on honorable active duty for a period of from 3 to 4 years.

By a policy recently adopted by the Army Air Forces, men who have served 42 months by the 15th of December 1945, will be eligible for discharge and are to start processing immediately.

Effective yesterday, a wire was received from the headquarters of this command, St. Louis, Mo., stating that all men with classification numbers such as we all have, namely, finance clerk among others, have been declared ineligible for discharge, regardless of the amount of service or points a man may have.

The Army says we are essential. We are, for the most part, men who are engaged in finance, personnel, and administrative work.

Since the 1st of November, we finance personnel have discharged 283 officers, with a staff of 16 enlisted men and 3 officers. The same amount of work could have been accomplished with a staff of, at the most, half that large, yet all of us have been declared essential—essential for what; that is the mystery. The number of enlisted men discharged from this station for the same period is equally proportionally small with even a larger staff. It is known that this situation exists at other stations in this command, and that the separation centers at Keesler Field, Miss., and Gulfport, Miss., have closed down completely for lack of men to separate, and not for lack of men to operate them.

The Army Air Forces is now conducting a finance school at Maxwell Field, Ala., to train newly inducted men to work in finance offices of separation centers with the primary purpose of being replacements for men who are now, or soon will be eligible for discharge. We have in the finance office at this station a sufficient number of these graduates who are capable of taking over the entire functions of this office. Since this school at Maxwell Field, Ala., is turning out approximately 100 men a week, certainly there can be no shortage of finance personnel, and more replacements are available upon request. Therefore we cannot see how we can be called, or classified as essential.

Since the Army Air Forces has adopted the policy of discharging men on the basis of service, we strongly feel that we men who now have, or soon will have, the required amount of service should be released immediately, or as soon as we become eligible, without any discrimination shown. At the present time there are finance clerks at this station, MOS 622, who are eligible for discharge under the above-mentioned plan, and they are being held as essential. In addition, there are many more finance men who have 3 years service and who will become eligible for discharge shortly, and they too will be held, unless some action is taken. It is utterly ridiculous to declare finance personnel ineligible for discharge when replacements are available.

It is with you men in whom we have placed our confidence to represent us as civilians, and to protect us as soldiers that we write, with the hopes that you will see that immediate action is taken, so that we too may spend Christmas at home.

Sincerely yours.

---

## American Legion National Convention Asks Elimination of Fauper Oath—Adopts Costello Post Resolution

EXTENSION OF REMARKS

OF

### HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. BATES of Kentucky. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Joseph Leib, service officer of Vincent B. Costello Post No. 15 of the American Legion:

AMERICAN LEGION NATIONAL CONVENTION ASKS ELIMINATION OF PAUPER OATH—ADOPTS COSTELLO POST RESOLUTION

(By Joseph Leib, service officer, past vice commander)

At the national convention held in Chicago, Ill., November 22, 1945, the American Legion unanimously adopted a resolution (No. 39) scoring the Veterans' Administration use of a pauper oath prior to the granting of Government hospitalization.

The oath, which appears on form P–10, Application for Hospitalization and Domiciliary Care, became the subject of bitter criticism by veterans' organizations throughout the Nation after Costello Post of the American Legion launched a drive to discontinue the obnoxious and bureaucratic edict.

In the Congress today there are six individual bills calling for the elimination of this disgraceful and un-American procedure, as follows:

H. R. 599, Representative SPRINGER.

H. R. 1923, Representative MORRISON.

H. R. 2413, Representative WICKERSHAM.

H. R. 2587, Representative MARTIN of Massachusetts.

H. R. 2717, Representative SASSCER.

H. R. 3332, Representative BARRY.

The power to remove this oath lies only with the Congress. It was prescribed by law at the urgent request of the Veterans' Administration when the economy bill was debated by the Congress in 1933. It has never been repealed.

Veterans were sent off to war with a promise in their ears that nothing would be too good for them upon their return. They resent in no uncertain terms the existing requirement that they affix their signatures to any paper which says, "I cannot afford to pay," for medical care, and this oath is flanked by threats of penal punishment and high fines. Those who have sacrificed months of their lives and years of their earning power are asking that this oath be abandoned, once and for all time.

General Bradley, in an article appearing in the Philadelphia Inquirer of September 23, 1945, said, "In no sense of the word can a benefit of any nature to a war veteran be considered as charity." This is a clear-cut statement.

However, General Bradley has not as yet taken a stand on the pauper oath required by the Veterans' Administration, although veterans from coast to coast have pleaded that this bureaucratic whim be stopped.

Now it is up to General Bradley to make it indelibly clear whether or not he included hospitalization in his statement to the Philadelphia newspaper—or whether he regards medical care to a veteran as charity.

The history of the pauper oath is that it not only breeds deceit, but that it also destroys dignity, confidence, and morale. If the time ever was that it was the fault of any veteran that he could not afford to pay for necessary medical care, then the social and economic evolutions of this generation have eradicated such conceptions of a nation's obligation and responsibility to a needy veteran.

In additin, the pauper oath question, "Are you financially able to pay the necessary expenses of hospital or domiciliary care? Yes or no," calls for an answer of opinion and interpretation of the veteran's ability. It asks for his opinion of whether or not he is financially able to bear the expense. If the veteran honestly answers that question as "No" he may be giving the Government a sincere and frank answer as to his financial ability and for which statement he later may be punished under the penalty clause, section 15, to have knowingly made a false affidavit in order to obtain hospitalization. On the other hand should he answer "Yes" he, of course, would be refused hospital care. So, what is the veteran to do? One naturally asks what is the purpose of this horrible pauper oath? What are the reasons for its retention on the statute books?

Again I repeat, that it appears to me, that the one basic reason for this oath is to threaten and to discourage veterans from applying for Government hospitalization and to encourage former soldiers to give their business to private hospitals or to civilian doctors. If this is not a logical conclusion, then what is the reason behind the insistence of this oath?

When a veteran reaches a point where he must go to a Government hospital, I contend that there should be no conditional admission To force a veteran to swear under oath that he is a pauper is unfair and disgraceful. As it stands now, a veteran to be admitted to a bed must declare himself either a pauper or make of himself a deliberate liar. Certainly, Congress never intended such a requirement.

Here is a copy of the American Legion resolution as passed by the national convention held in Chicago, Ill., last week; and a copy of VA Form P–10 bearing the pauper oath:

"Whereas it is deemed that certain information requested on VA Form P–10 is unnecessary and whereas in replying to certain questions the applicant may subject himself to unwarranted criticisms and possible prosecution: Therefore be it

"*Resolved*, That the American Legion recommend a change on Form VA P–10, revised in May 1945, under question 4, as follows:

"Where application is for condition for which applicant was discharged for disability in line of duty, or held service-connected by Veterans' Administration questions 5 and 7 need not be answered; be it further

*"Resolved, in this connection,* That question 6, which reads 'Are you financially able to pay the necessary expenses of hospital or domiciliary care?' be entirely eliminated; be it further

"*Resolved,* That question 7 be changed to read 'Are you able to pay transportation to and from a Veterans' Administration facility without causing undue hardship?' "

Veterans' Administration
Form P-10

APPLICATION FOR HOSPITAL TREATMENT OR DOMICILIARY CARE

The applicant should forward this form, when fully executed, with the original or a certified copy of his discharge or release from last period of service, to the Veterans' Administration facility nearest his home, which is located at .....
(Location of facility)

1. I ..... C-No. ..... Social Security No. .....
(Print) (Last name) (First name) (Middle name)
hereby apply for admission to a Veterans' Administration facility for *(hospital treatment) (domiciliary care) .....
(Date of birth) (Color) (Sex) (Place of birth) (Present place of residence)

2. My entire service in the active military or naval service of the United States has been as follows:

| Enlisted | | Serial No. | Discharged | | Rank and organization | Character of discharge |
|---|---|---|---|---|---|---|
| Date | Place | | Date | Place | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

NOTE.—If you served under a name other than the one used in this application, indicate the name under which you served and the period of service.

3. Have you filed claim for pension, compensation, or retirement pay? .....
(Yes or no)
What office has your case file? .....
(Location)

4. Give the name and address of your wife, or nearest relative, or guardian, or other person to notify in event of emergency.
..... (Name) ..... (Relationship) ..... (Address)

NOTE.—Where application is for condition for which applicant was discharged for disability in line of duty, or held service connected by Veterans' Administration, questions 5, 6, and 7 need not be answered.

5. Are you entitled to hospital care by membership in a lodge, society, community group treatment plan, etc., or as a beneficiary of an insurance company, workmen's compensation commission, industrial accident board, etc.? ..... If "Yes," give name of agency or organization .....
(Yes or no)

6. Are you financially able to pay the necessary expenses of hospital or domiciliary care? .....
(Yes or no)

7. Are you able to pay transportation to and from a Veterans' Administration facility? .....
(Yes or no)

8. Have you received hospital or domiciliary care from the Veterans' Administration? .....
(Yes or no)
If "Yes," state when ..... and where .....
(Give most recent dates) (Name of facility, home, or hospital)

9a. If discharged against medical advice, absence without official leave, for disciplinary reasons, or given an enforced furlough, underline applicable term.

I * { have read / have had read to me } and understand all questions and answers on this form, and the printed provisions on the reverse hereof.

The answers to all questions are true and complete to the best of my knowledge and belief. The foregoing questions and answers are made a part hereof with full knowledge of the penalty provided for making a false statement as to material fact in this application.

PENAL PROVISIONS APPLICABLE TO TITLE I, PUBLIC, NO. 2, 73D CONGRESS

SECTION 15. Any person who shall knowingly make or cause to be made, or conspire, combine, aid or assist in, agree to, arrange for, or in anywise procure the making or presentation of a false or fraudulent affidavit, declaration certificate, statement, voucher, or paper, or writing purporting to be such, concerning any claim for benefits under this title, shall forfeit all rights, claims, and benefits under this title, and, in addition to any and all other penalties imposed by law, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than $1,000 or imprisonment for not more than 1 year, or both.

REDUCTION OF PENSION, COMPENSATION, OR EMERGENCY OFFICERS' RETIREMENT PAY WHILE RECEIVING HOSPITAL OR DOMICILIARY CARE

Where any disabled veteran having neither wife, child, nor dependent parent is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof, the pension, compensation, or emergency officers' retirement pay shall not exceed $20 per month, provided that the amount payable for such disabled veteran entitled to pension under Part III, Veterans Regulation No. 1 (a), as amended, for nonservice connected disability shall not exceed $8 per month, and provided further, that where any disabled veteran who is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof, has a wife, child, or dependent parent the pension, compensation, or emergency officers' retirement pay may, in the discretion of the Administrator, be apportioned on behalf of such wife, child, or dependent parent, in accordance with instructions issued by the Administrator

NOTE

This application is made with notice of Public Law No. 382 approved December 26, 1941 (38 U. S. Code 17-17j) which in effect provides that upon the death of any veteran receiving care or treatment by the Veterans' Administration in any institution leaving no widow (widower), next of kin or heir entitled to inherit, all personal property, including money or balances in bank, and all claims and choses in action, owned by such veteran, and not disposed of by will or otherwise, will become the property of the United States as trustee for the Post Fund.

MEDICAL CERTIFICATE

A careful physical (including mental) examination of the applicant discloses these findings and diagnosis:

(1) Brief history:
(2) Symptoms:
(3) Physical findings:
(4) Diagnosis:
(5) Strike out the clauses not applicable: The applicant (is) (is not) ambulant. He (is) (is not) mentally competent. He (will) (will not) need an attendant during his travel. The proposed attendant's name is ..... address ..... The attendant (is) (is not) a relative of the patient. It is proposed that travel, to the hospital will be made by (train), (bus), (automobile).

(Date) (Signature of examining physician) (Street) (City) (State)

## Saratoga Springs, N. Y., for World Capitol

EXTENSION OF REMARKS
OF
### HON. DEAN P. TAYLOR
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. TAYLOR. Mr. Speaker, it is my fervent hope that the United Nations Organization will select some place in the United States for its permanent headquarters. It is my purpose to urge that Saratoga Springs, N. Y., be chosen as the city, and that our Government exert every influence to bring this about. Under permission granted to extend my remarks, I include copy of an invitation to the United Nations Organization from Saratoga Springs, N. Y., United States of America:

AN INVITATION TO THE UNITED NATIONS ORGANIZATION FROM SARATOGA SPRINGS, N. Y., U. S. A.

To Mr. Cladwyn Jebb, Executive Secretary of the Preparatory Commission of the United Nations Organization, Church House, Dean's Yard, London.

From: William E. Benton, Chairman, Committee on Advocation of Saratoga Springs for the Permanent Headquarters of the United Nations Organization.

NOVEMBER 8, 1945.

Nothing in technicolor, no elaborate brochures, no fanfare of publicity accompanies Saratoga Springs' (New York, U. S. A.) invitation to the United Nations Organization to locate its permanent headquarters in its vicinity. Our simple facts, stated briefly, need only the vertification of personal observation by those of the United Nations Organization to ascertain the validity which we claim for them.

Our invitation represents an even balancing of the two fundamental requisites for the location of the Permanent United Nations Organization headquarters—a balance between the significance in an historical sense of Saratoga on the one hand, and the practicability of Saratoga's location on the other.

Saratoga was the scene of one of the world's most decisive battles, an occasion remembered as "The Birthplace of Freedom." The United Nations Organization is certainly an institution founded upon Democratic principles, and thus shares the symbolic tradition that surrounds the site of the Battle of Saratoga, the birthplace of freedom. The significance of Saratoga lies in the fact of its appropriateness as the home of the United Nations Organization.

Historians have long written about Saratoga; the United States Government has created extensive park lands monumentalizing the battlefield. The destiny of the shrine would be justly that of serving the world with its symbolic reverance for everlasting hope, courage, and faith in the principles of freedom.

From the point of view of being a practical location for the headquarters of the United Nations Organization, Saratoga offers many unexcelled advantages. Stated briefly, they include:

1. Convenience to European and North American cities, yet apart from them in the foothills of the Adirondack Mountains of northern New York State, where the congestion and confusions of large populated centers would not be a distracting factor.

2. Accessibility by air, rail, and highway from all points of the compass. Map inspection will bear out this important fact.

3. Federally owned land offers a number of beautiful sites. Rolling hills with distant views of mountain ranges comprise the advantages of site location that would be difficult to equal on the eastern seaboard of America.

4. Healthful climate comparable with few other localities in the Western Hemisphere is to be found in the vicinity of Saratoga Springs, the home of one of the world's largest spas—the New York State-owned Saratoga Springs Authority. Millions share the pride of Saratogians in this wonderful $10,000,000 institution that has built for itself an enviable record. The treatment of a large number of Army personnel at this cure center has heightened interest in its great potentialities.

The offering of this brief statement is predicated by the belief that the United Nations Organization will not make a final selection of any site for its headquarters without investigating first-hand the various possibilities in the United States and other countries. Also, we in Saratoga are convinced that a voluminous report at this time would not do justice to our community with all its advantages, or would such a voluminous report form a suitable case to be considered at this stage of the decision-making process. Localities should be judged from definite and uniform standards set by the committee. These standards, once defined, should be made known to all who desire the opportunity of inviting the United Nations Organization to consider their respective sites as suitable for the Organization's headquarters.

Saratogians are joined by millions who share the breadth and depth of tremendous responsibility that is yours in deciding upon the location of the United Nations Organization headquarters. Our wishes and hopes are with you, who have been entrusted with the perpetuation of a lasting peace.

This invitation is extended by William E. Benton, chairman, Committee on Advocation of Saratoga Springs for the Permanent Headquarters of the United Nations Organization.

Submitted by:

STEWART H. JOHNSON,
*Executive Secretary,*
*Saratoga Springs Chamber of Commerce.*

## Civilian Specialists Praise Army's Handling of Amputees

EXTENSION OF REMARKS
OF
### HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I wish to include an article from an Atlanta, Ga., newspaper praising the Army's handling of amputee cases:

WASHINGTON, November 18.—Three civilian orthopedic specialists reported tonight that the Army's 14,000 amputees have received the best surgery and treatment possible and generally are satisfied with their GI artificial limbs.

They ridiculed charges made in and out of Congress that the Army has supplied amputees with limbs of the cheapest possible construction and countered that the patients are provided equipment of the most costly type obtained from civilian shops.

The specialists are Dr. Harold Conn, Akron, Ohio. Dr. Paul B. Magnuson, associate professor of surgery at the Northwestern University Medical School, and Dr. Philip D. Wilson, clinical professor of orthopedic surgery at Columbia University's College of Physicians and Surgeons. They comprised a civilian consultant committee which studied Army techniques at first hand during an inspection tour of six amputation centers.

FINDINGS LISTED

In a report made public by the War Department, they listed these findings:

1. The Army's standardization of front-line amputation procedures saved countless lives and provided the best amputation stumps ever obtained.

2. Its program for training amputees after fitting of their artificial limbs is well considered and planned.

3. Army limb shops are adequately housed and well equipped and compare favorably with the best civilian shops.

KEYMEN UNREWARDED

The committee reported, however, that morale among Army shop personnel is poor and that steps should be taken immediately to correct it. Many workers who have become keymen have not been rewarded with adequate promotions and many believe they are being kept in the Army longer than necessary, it said.

But in general, the program has been administered in a more efficient manner than could have been possible had these unfortunate war victims been referred to civilian fitters.

Fortunately the war ended before their number exceeded 14,000, but if it had been two or three times as many, the services were such that all could have been handled with the same good care, expedition, and good results, it said. We feel that exceptional commendation is due the Surgeon General and the Medical Department of the Army for having successfully handled an emergency problem the like of which had never previously been encountered in modern times.

## August Charles Backus

EXTENSION OF REMARKS
OF
### HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. WASIELEWSKI. Mr. Speaker, the State of Wisconsin has given the Nation many outstanding statesmen. One of the outstanding contemporary contributions to our national life is a lawyer, jurist, publisher, civic leader and public benefactor. He was my professor in criminal law at the Marquette University Law School.

The story of the life and achievement of this man is so American that I believe it will prove to be an inspiration to all. Under unanimous consent, I incorporate in my remarks at this time a biographical sketch of a man who helped make Wisconsin, the Honorable August Charles Backus, as prepared by Oliver E. Remey in his series, Men Who Have Made Wisconsin.

MEN WHO HAVE MADE WISCONSIN: AUGUST CHARLES BACKUS

(By Oliver E. Remey)

August Charles Backus, of the law firm of Backus & Parson, of Milwaukee, a leading member of the Wisconsin bar for many years, is notable for the many honors he has declined as well as for his exceptional attainments in the public life of Milwaukee and the Badger State. Since the beginning of the present century, he has been active in a wide range of civic projects, important war work, enforcement of law, and establishment of provisions to improve the status of first offenders against the law. As a legal adviser,

he includes among his clients executives of great industries of Milwaukee and leaders of that city's commercial and professional life. In the field of public service he has been assistant prosecuting attorney, district attorney, and municipal judge of Milwaukee County. In the educational field he has been regent of the University of Wisconsin and professor of criminal law at Marquette University, where he serves at present as chairman of the advisory board and as trustee of the Marquette Medical School. From 1924 to 1930 he was president and publisher of the Milwaukee Sentinel. Since that time he has practiced law with his sons.

It was during his term of office as municipal judge of Milwaukee County, from 1910 to 1924, that he originated and subsequently developed the present adult probation system. By this means he has given thousands of young men and women first offenders an opportunity to make something of their lives, and, with his probation officers, has rehabilitated and reclaimed them as useful citizens. Forty-two States have followed his original idea in establishing the same system within their own jurisdictions.

In an address before the American Crime Commission in Chicago on May 30, 1927, Judge Backus stressed the need for understanding the first offender and justified his probation methods, which should be understood not as a species of leniency, as some seem to believe, nor a license for first offenders to commit a crime, but a scientific method of treating offenders who are relatively socialized and who are in good environment. "It is the showing of the way, it is to protect the offender against himself, to aid him and reclaim him, not to crush him. The home, the church, and the school must be called upon to aid in this important work of rehabilitation. I know they will respond."

The judge's address won the approval of the convention, which adopted all of his suggestions and elected him president of the organization. His treatment of the first offender was the result of an exhaustive study made during his long experience on the bench and as prosecuting attorney; for the hardened criminal he advised segregation from society. Milwaukee had the lowest crime rate of any city in the world.

At the conclusion of this address Governor Whitman, of New York, president of the American Bar Association and president of the Crime Commission, said, addressing Judge Backus:

"I know I speak the sentiments of everybody here when I tell you we have enjoyed your wonderful address. It is just what we need. I wish the public had it as we have had it. Judge Backus' address is vital at this time. He has absolutely proven from the experience of Milwaukee that severity in punishment is not a remedy for crime. He has outlined clearly what we should do with them, and the first offenders. I have never heard an abler argument in my life than the one he has just given us."

Another of the outstanding judicial accomplishments of Judge Backus was to effect a change in existing laws promulgating a procedure which substituted a board of alienists in trying insanity cases, for the old method of tedious and protracted trials before a jury. A dramatic example of this was the case of the State of Wisconsin vs. John Flammang Schrank, at which Judge Backus presided. Schrank was on trial on October 14, 1912, for the attempted assassination of ex-President Theodore Roosevelt in Milwaukee on October 12, 1912, just 2 days before. Instead of permitting the confusion of testimony by partisan alienists, Judge Backus appointed an impartial commission of five outstanding alienists to examine Schrank's mental condition. The commission unanimously reported to the court that in their opinion Schrank was insane. On November 22, 1912, Judge Backus committed Schrank to the Central Hospital for the Insane at Waupun, Wis., with the provision that in the event of Schrank's return to sanity, the man must stand trial for his attempt on the life of Theodore Roosevelt. Schrank died on September 16, 1943, without having regained sanity.

These two leading paragraphs from an editorial presented by the Chicago Record-Herald, in which they commented upon Judge Backus' appointment of the sanity commission which passed upon Schrank's mental condition represent the concensus of world-wide newspaper editorial opinion of a method that freed the court once and for all from the babble of testimony of interested alienists:

"It is notorious that 'expert testimony' is too often confusing testimony which judges and juries feel themselves bound to disregard in favor of mere horse sense. The State's experts are matched or overmatched by the experts for the defense, and the conflict of scientific testimony assumes in many cases the proportion of public scandal.

"Hence the 'Wisconsin idea,' as introduced by Judge Backus, of Milwaukee, who is presiding over the trial of John Schrank, is an admirable one. Under the statute of Wisconsin a Wisconsin judge may summon a certain number of experts and make them officers of the court. They testify as such officers, and presumably the State pays them reasonable fees. Under such a plan as this there is no temptation to strain science in the interest of a long purse, and impartial opinion is likely to be the rule."

President Herbert Hoover offered Judge Backus several judicial appointments, among them one to the Federal court, but all were declined. A letter from President Hoover to Judge Backus sets forth this information as follows:

THE WHITE HOUSE,
*Washington, December 21, 1932.*

Judge A. C. BACKUS,
*Milwaukee, Wis.*

MY DEAR JUDGE BACKUS: As I shall be leaving public office in a few months it occurs to me that it might be of interest to your family at some time if I make a record of the fact that I suggested to you over a year ago that I would like to nominate you for a position on the Federal bench; that you informed me your private affairs were such that you could not at that time accept such an appointment; that I have renewed the suggestion from time to time since, and being convinced that you would render valuable service, that I had fully intended to press this matter upon you if the Republican Party had been returned to power.

While many years of friendship might enter into such relations, in making judicial suggestions I think you will find that I have disregarded all questions of friendship and based my views solely upon merit and fitness.

With kind regards, I am

Yours faithfully,

HERBERT HOOVER.

August C. Backus was born at Kewaskum, Wis., on April 24, 1877. His father, August F. Backus, was a friend of President Lincoln and had served with Wisconsin troops in the Civil War.

After receiving a first-grade teachers' certificate, he taught school for a period before entering upon the study of law. Later he attended the University of Wisconsin, from which he was graduated in 1900 with a degree of bachelor of law. In 1918 Marquette University gave him an honorary doctor of law. Admitted to the bar in 1900, he became in 1905 an assistant district attorney of Milwaukee County. In 1909 he was elected by the people district attorney and served in that capacity until his appointment as municipal judge in 1910.

From 1901 to 1904, Judge Backus served as chairman of the International Child Labor Committee, having been appointed to that position at the World's Fair convention at St. Louis, Mo. The activities of the committee were sponsored by the United States, England and Canada. During the first year of his chairmanship, he took 4600 children from industries and sweatshops and put them in school. All were under 14 years of age.

His interest in child welfare has continued to the present day, and for more than 25 years he has been actively interested in the Boy Scout movement. For his quarter of a century in their interests, he was recently awarded the highest honor that organization bestows. For more than 30 years the Boy Scouts have had use of a camp site at Fox Point that was donated by Judge Backus.

At the conclusion of World War I, Judge Backus was awarded a gold medal by the American Legion for his patriotic service during that war in aiding the activities of the following organizations: American Defense Society; American Red Cross; American Relief Association; Council of National Defense; Salvation Army; United States Food Administration; United States Liberty Loan Committee; United States War Savings Committee; War Camp Community Service; YMCA; as city chairman of the American Legion Endowment Fund Committee of Milwaukee which raised a quota, and another large amount for the Boy Scouts of America.

Judge Backus was also chairman of committees which raised more than a million dollars each for the Milwaukee Children's Hospital and for a recreational center for the Boys of the American Luther Association of Milwaukee. He was chairman of a committee which raised more than $2,000,000 for Marquette University and the Marquette Medical School, and has served in similar capacities in the interests of the blind, many other hospitals, community and civic drives.

In 1923 Judge Backus was elected president of the National Probation Association and through the efforts of President Coolidge and the organization, an act was passed on March 4, 1925, giving the Federal Judges the power to put first offenders on probation.

In 1922 the Wisconsin Supreme Court paid tribute to Judge Backus in an opinion (178 Wis. 202) rendered by Chief Justice Aad J. Vinge:

"Judge Backus has had a long experience as judge of a court that hears nothing but criminal cases and is kept busy all the time. He has besides, by his interest in a rational treatment of criminals, earned a reputation for fairness and insight that is enviable."

During the Second World War Judge Backus has been very active in the national war interest. For "uncompensated services patriotically rendered his country in the administration of the Selective Service System for a period of 3 years", he was awarded in September 1943 a certificate of appreciation signed by President Franklin D. Roosevelt and Gov. Walter S. Goodland of Wisconsin.

For his service in helping to raise part of $5,000,000 in the nation last year (1942) for immediate relief for wounded soldiers and widows and children of men who lost their lives at Pearl Harbor, Judge Backus received an acknowledgment of that patriotic service from the United States Navy Relief Society, signed by Admiral Ernest J. King, commanding the United States Navy. Judge Backus is Milwaukee chairman of the Board of Appeals for Selective Draft of the Fifth Congressional District.

Judge Backus married Elizabeth Housman on August 27, 1962. They have two daughters and two sons. The daughters are the wives, respectively, of Dr. Claus Jordan, of Stroudsburg, Pa., and Dr. Alvah Newcomb, of Wilmette, Ill., now in war service as lieutenant commanders, Medical Corps of the Navy. The sons, August C., Jr., and Walter A., are Milwaukee attorneys, associated with their father in the practice of law. The Backus

residence is at 722 East Lakeview Avenue, Milwaukee, Wis.

The story of August Backus cannot be told merely in a cold, printed list of achievements. It cannot be written solely by recording the honors and the recognitions which have come to him. The achievements and the recognitions are but the lengthening shadow of a man whose warm human traits have endeared him to his friends fully as much as to his accomplishments.

The printed record does not tell of that humble background from which he has drawn the fundamental simplicity, innate dignity, and rugged honesty of God-loving parents. The printed record tells of his outstanding contributions in initiating a model program of probation, but it does not tell of the deep, kindly, personal interest and the hours of Christian, character-building counsel he gave to those who sought rehabilitation. The records of a distinguished career as a jurist and civic leader do not show the indulgent grandfather with 14 adored grandchildren gathered about him.

Today, with the sturdy vigor of his 6-foot-1 frame unimpaired, and with a mind mellowed by the rich experiences of crowded years, Judge Backus is a valued elder counselor whose life accomplishments as a jurist, humanitarian, and civic leader over the decades are a very real part of the historic legend of Wisconsin leadership.

## Surplus Goods Gag America

EXTENSION OF REMARKS

OF

### HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. JENKINS. Mr. Speaker, I am glad to have printed in the CONGRESSIONAL RECORD a very well written editorial by Mr. Gordon Bush, the editor of the Athens Messenger of Athens, Ohio.

Mr. Bush has discussed a timely subject with clarity and conviction. The editorial is as follows:

SURPLUS GOODS GAG AMERICA

Think of anything you want to buy, and the Government has it to sell. The list of war surplus goods includes 150,000 kinds of consumer goods.

They are supposed to be for sale, yet few of them have been offered through the confused, red-tape channels for disposal of surplus property; and few people have been allowed to get at them.

The story is a long one. It varies with almost each classification of goods. But the fact remains that billions of dollars' worth of usable goods and supplies, articles and equipment, machines and raw stock are lying around right in this country with the problem yet unsolved as to what to do with the stuff.

These goods were paid for with the taxpayers' dollars. They represent much of what war-bond funds went to buy. They may or may not represent overbuying by the military authorities, but the fact remains they have not been used, will not be used by the armed forces, and millions of dollars' worth of them are rotting, rusting, weathering away. While it is true that some disposition has been and is being made, the accomplishments are not a drop in the bucket to the total physical stock pile nor to the total first cost.

Because industry is not able to reconvert and produce as rapidly as pent-up demand wants the products of industry, is one reason why these surpluses should be made available to anyone who can put up a fair price and take the goods away to places where they will be serviceable.

Another reason is that many potential users of much materials would never be able to buy these things in the open market at standard prices.

Another reason is that the public welfare—education and governmental institutions, political subdivisions, and public works—have a crying need for these goods and an ability to use them in the broadest sense of the general good.

Another reason for disposing of them widely and quickly is that many of these goods are, by postwar standards, obsolete, yet perfectly useful and usable. On top of it all is the weakest reason, that any money derived from distribution of war surpluses to the public will lessen the public debt created by their original purchase.

Against these reasons for distribution is the old saw about interfering with production and employment in the next few years to come. Yet the best arguments for distribution hit that one right in the head. Nor has it ever proven true that waste is justified anywhere for any reason.

Warehouses are full of these thousands of articles. Army depots are crammed with stuff civilians could use. Most pressing, probably, is the serious shortage of building materials, supplies, and home equipment. The manufacturers see no chance to meet the demands for postwar building for 2 years. Returning veterans are walking the streets, looking for shelter for themselves and their new young families.

At the same time demountable housing stands crated and useless; prefabricated houses by the thousands clutter the landscape, empty, around shut-down war plants. Critical parts of homes are stored in unbelievable quantities and are staying stored—becoming less useful every season and virtually impossible to get hold of.

But under the present law managing this great wealth of wasted American work, nothing can be done except what is being done. The law is a strait-jacket. The people are impatient and angry. The heads of Government are afraid to act for fear they will make a mistake that would anger the United States Chamber of Commerce, or somebody. The Army is reluctant to give up anything it has acquired. No one knows just what is where, nor what discretion might be exercised in making it available. It is the scandal of our postwar home economy.

## Committee on Un-American Activities

EXTENSION OF REMARKS

OF

### HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. PATTERSON. Mr. Speaker, I believe the attention of the House should be called to the following telegram which I received from the American Federation of Radio Artists, comprising over 19,000 members, in regard to the abolition of the Committee on Un-American Activities. This telegram represents the thought not only of persons connected with radio but all those people who value the basic right of free speech guaranteed by our Constitution:

Representative ELLIS E. PATTERSON,
*House of Representatives Office Building:*

The American Federation of Radio Artists has sent the following telegram to Representative JOHN S. WOOD and members of House Committee on Un-American Activities:

"The American Federation of Radio Artists, the union of all actors, singers, and announcers, and persons who speak or sing over the microphone in the United States of America, comprising over 19,000 members and affiliated with the American Federation of Labor, is shocked at the violation of the right of free speech and the unconstitutional exercise of censorship by the majority action of your committee in demanding certain radio scripts from designated radio artists who have exercised their legitimate right of employment in broadcasting over stations and networks in this country. The demand of your committee under cloak of congressional privilege, freely publicized in the press, is tantamount to the star-chamber proceedings which were outlawed by the Bill of Rights. In certain instances your action has even threatened the livelihood of American citizens who are privileged to speak as all citizens are in open meeting, on the air, or in the press, without fear or favor of censorship. In our opinion your action transgresses the boundaries of congressional privileges and by selecting a few named individuals out of the many artists who broadcast news, commentation, and analyses to the American public. You editorialize the entire field and by your action you stigmatize those few whose scripts you demand. The very name of your committee calls for the highest degree of integrity in investigation and we earnestly submit that in this instance you have fallen short as committee members of that degree of integrity and we protest that action and any continuation of such tactics."

So grievous do we regard the injury done to our members, to the public, and over all to the principles of free speech in this country that we desire to go on record on behalf of the entire membership as seeking the dissolution of the House Committee on Un-American Activities.

Sincerely yours,

NATIONAL BOARD, AMERICAN FEDERATION OF RADIO ARTISTS,
By EMILY HOLT,
*National Executive Secretary,*
GEORGE HELLER,
*Associate Secretary and Treasurer.*

## An Invitation to the United Nations

EXTENSION OF REMARKS

OF

### HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. CASE of South Dakota. Mr. Speaker, the Governors of South Dakota, Nebraska, and Wyoming have joined in submitting an invitation to the United Nations Organization to establish the site of the permanent United Nations capital in the Black Hills.

To accompany the official invitation an illustrated brochure has been prepared. This brochure, along with pictures of the Black Hills area, carries the

facsimile of the official invitation signed by the Governors and a facsimile of the letter which the late President, Franklin D. Rosevelt, wrote April 7, 1945, only 4 days before his death, expressing his interest in the invitation.

Because of the great importance to this Nation and to the world of a proper location for the capital of the United Nations Organization, I place in the RECORD, with the permission of the House, the text of this brochure entitled:

AN INVITATION DEDICATED TO THE PURPOSE OF THE UNITED NATIONS FOR THEIR PERMANENT CAPITAL IN THE BLACK HILLS COUNTRY

(From Gov. Dwight Griswold, Nebraska; Gov. M. Q. Sharpe, South Dakota; Gov. Lester C. Hunt, Wyoming)

AN INVITATION

*To the United Nations:*

We, the Governors of the sovereign States of Nebraska, South Dakota, and Wyoming, cordially invite you to select within our beautiful and interesting Black Hills country a site for the permanent capital of the United Nations.

This booklet gives you a general idea of the Black Hills country. We invite your representatives to visit it, experience its delightful climate, variety of altitudes, valleys, plateaus, forests, lakes, and streams. Soon you would be conscious of its adaptability for the majestic purpose to which we wish to dedicate it.

Equally important with its natural environment are some facts of its history and location, as follows:

1. The most equally convenient by air travel to all the nations of the world of any place on earth. (See map enclosed.)

2. At the junction of three sovereign States in the center of the North American Continent.

3. The States which invite you are a part of the United States, which has been able to maintain peace among sovereign States as the United Nations may do among sovereign nations.

4. No large city will absorb your capital's identity. Build your own capital on natural location with its own individuality, in your own time, in your own way, adaptable to your own purposes.

5. No racial, religious, or nationalistic controversies exist. Complete freedom of religion and equality of persons before the law have always existed here.

Most cordially and earnestly do we invite you to come and see, to investigate and analyze, and then to make this Black Hills country, these mountains of the prairies, the permanent peace capital of the world.

DWIGHT GRISWOLD,
*Governor, State of Nebraska.*
M. Q. SHARPE,
*Governor, State of South Dakota.*
LESTER C. HUNT,
*Governor, State of Wyoming.*

TO FORM A MORE PERFECT UNION

The invitation to the United Nations is not a one-State or one-region invitation. Gov. Dwight Griswold, of Nebraska, and Gov. Lester C. Hunt, of Wyoming, join Gov. M. Q. Sharpe in suggesting the Black Hills country as an ideal permanent capital.

THE WHITE HOUSE COMMENTS

THE WHITE HOUSE,
*Washington, April 7, 1945.*

MY DEAR MR. CASE: I have before me your letter of March 15, 1945, suggesting the suitability of the Black Hills as a permanent headquarters for the proposed organization of the United Nations.

In thanking you for your interesting suggestion, I assure you that it will receive full consideration whenever the question of the location of the permanent seat of the proposed organization is under discussion.

Very sincerely yours,
FRANKLIN D. ROOSEVELT.

The Hon. FRANCIS CASE,
*House of Representatives.*

(The above letter was signed at Warm Springs, Ga., 4 days before the death of President Franklin D. Roosevelt. In conversation, too, President Roosevelt expressed his keen interest in the Black Hills country as a permanent capital.)

PRESIDENT FRANKLIN D. ROOSEVELT AT MOUNT RUSHMORE IN THE BLACK HILLS, WHEN HE DEDICATED THE LIKENESS OF THOMAS JEFFERSON

Sculptor Gutzon Borglum has his hand raised toward the great memorial while former Gov. Tom Berry, of South Dakota; is at Roosevelt's side.

Roosevelt proclaimed: "I am very happy to congratulate all of you, not only on what we see today but on what is going to happen in the future at Mount Rushmore. Mr. Borglum has well said that this can be a monument and an inspiration for the continuance of the democratic republican form of government, not only in our own beloved country, but, we hope, throughout the world."

PRESIDENT CALVIN COOLIDGE IN FRONT OF STATE GAME LODGE IN BLACK HILLS—SUMMER WHITE HOUSE FOR 3 MONTHS IN 1927

On August 2, 1927, President Coolidge made his famous statement from Rapid City: "I do not choose to run for President in 1928." Handed to newsmen on small typewritten slips of paper, it electrified the Nation.

It was also in the Black Hills that Coolidge made one of his first informal speeches after being in the White House. He said:

"I doubt if anyone went to any part of the country that he would find it more interesting and more inspiring than this locality.

"I am glad to be in this beautiful country. I have never seen anything which excels it.

"I am 1,800 miles from Washington but I am in just as intimate touch as if I were in Baltimore, Philadelphia, or Cleveland."

When he left in September, Coolidge said: "I want to express my very deep appreciation of your fine hospitality and it is my hope that in the future I may make many visits to this pleasant and restful country of yours."

WENDELL L. WILLKIE AT MOUNT RUSHMORE REPORTS TO THE NATION

Wendell L. Willkie stressed his dominant love for freedom, patriotism, and better understanding among nations while standing at the base of Rushmore Memorial in the Black Hills. This was shortly after he returned from Russia.

Pointing to the great growth of Russia he emphasized the importance of the American people having a better understanding of that great Nation. His book, One World had been released to the public but a short time before that.

He praised the Black Hills for the beauty Nature had bestowed upon it.

Shown with him in the picture above are Gov. M. Q. Sharpe, left of microphone, and Congressman FRANCIS CASE.

THE BLACK HILLS AREA IS THE OLDEST KNOWN BY MAN

The rocky and mountainous region of the Black Hills has been traced from the beginning of time by geologists. This "oldest region known to man" is recognized for its spirit of friendliness and fair play. Racial discriminations are unknown in the Black Hills and our Constitution guarantees complete religious freedom.

*Location*

The Black Hills is in the center of the North American Continent, at the apex of South Dakota, Wyoming, and Nebraska. It is an area 50 miles wide and 100 miles long. Vast amounts of gold have been found in the hills—it has been mined there since 1876.

*Climate and health*

The ideal all-year-round climate is conducive to excellent health and invigorating living. Elevations range from 3,200 to 7,242 feet. There is freedom from stifling humidity and mosquitos and other insects, making a veritable paradise in which to live. It is nonvolcanic and free from earthquakes. South Dakota ranks as the first State in the Nation in health among the American armed forces.

*Transportation*

The Rapid City Army Air Base, a training base for B-17's, at the edge of the Black Hills, ranks first in the Second Air Force for hours of flying time. It is an excellent post, with full concrete runways, and accommodates the largest land planes used by the Air Force.

Air lines operate passenger service with connections for all points in the Nation. They place the Black Hills within 24 hours of the most distant places in the world.

Three railways serve the region—the Chicago & North Western, the Milwaukee road, and the Burlington route—providing rail transportation from all principal cities of the Nation.

*Tourist facilities*

In 1941, the last normal tourist year, more than 1,000,000 vacationists visited this beautiful and mountainous Switzerland of America. Ample accommodations are provided in the cities, the national forests, Custer State Park, and on the lakes.

*A significant name—Dakota*

The Sioux Indians, first to inhabit this land, sacred to them, named the region "Dakota." In their language, this means "An alliance of friends."

*United Nations capital location*

Wide plateaus amid towering peaks provide ample space to build a city for an alliance of nations. This would be a permanent home, free from outside influences, and which would be declared an international area. Not only would it be erected to suit the purpose, but it would be easily accessible from anywhere in the world.

AN ATMOSPHERE OF PEACE

Abundant broad valleys amongst the wooded mountains suggest a lasting peace and tranquillity. Clear, quiet, spring-fed streams run through the mountains and jewel-like lakes dot the Black Hills region. Wild deer, elk, buffalo, and mountain goats graze in the forests.

NOTED PEOPLE KNOW THE BLACK HILLS COUNTRY

The Black Hills region has entertained an increasing number of noted people from this country and abroad following President Coolidge's visit in 1927. There have been many nationally important events take place in the region in the past 25 years.

President Theodore "Teddy" Roosevelt was probably the first famous visitor following, of course, Gen. George A. Custer and other prominent soldiers of the early pioneer days. Historic Deadwood has a monument honoring President "Teddy" Roosevelt.

Gen. H. H. "Hap" Arnold was in charge of airplane activities and air mail during President Coolidge's visit. Other famous visitors were Gen. John J. Pershing, former Presidents W. H. Taft, Herbert Hoover, Calvin Coolidge, and Franklin D. Roosevelt; James R. Sheffield, former Ambassador to Mexico; Secretary of the Interior Curtis Wilbur, Maj. Gen. Frank T. Hines, Gen. Hanford MacNider, Senator Arthur Capper, Gov. Gen. Leonard Wood, Secretary of the Interior Hubert Work, Secretary of Labor John T. Davis, Senator Smoot, Senator Fess, and many other Cabinet members, Congressmen, Senators, and Governors.

Gen. Patrick J. Hurley, former Secretary of War, and Frank Knox, former Secretary of the Navy, were notable visitors within recent years.

Theodore Roosevelt, Jr., visited Mount Rushmore to see his father's likeness on the mountain. Hollywood too has sent famous people to visit the hills, including Clark Gable, Elsie Janis, Carole Lombard, Elyse Knox, Mary Garden, George Raft and Jack Benny, as well as many of the outstanding producers.

John W. Bricker, of Ohio, Vice Presidential candidate in 1944, former Gov. Frank Lowden, of Illinois, Gen. Lewis B. Hershey, Frank Lloyd Wright, the noted architect, Cornelius Vanderbilt, Amelia Earhart, Charles A. Lindbergh, Mackenzie King, Julius Rosenwald, Sir Gerald Campbell, British Minister, are but some of the others who have visited and praised the Black Hills region.

One of the notable events to take place in the Black Hills was the record-breaking stratosphere flight. Two such flights were sponsored by the National Geographic Society and the Army Air Corps in 1934 and 1935. The second flight attained the world's altitude record of 73,000 feet, or 14 miles. Gen. William Kepner and Gen. Orville A. Anderson, presently with the Air Force, were pilot and observer. Col. Albert W. Stevens was photographic scientist developing much of the high altitude photography now being used so successfully in this war.

The Black Hills region was a mecca for world-known scientists and Army Air Corps officials for weeks before the flights took place. Dr. Gilbert Grosvenor, president of the National Geographic Society, and Dr. Lyman J. Briggs, Director of National Bureau of Standards, were among the many.

HARNEY PEAK

Harney Peak, near the center of the Black Hills, rising to 7,242 feet from the broad plains and spacious plateaus, acts as a sentinel for this 35-by-110-mile area. It is the highest mountain peak east of the Rocky Mountains in the United States.

Mountain streams and lakes provide plenty of water and are responsible for the lush vegetation in valleys and fields.

Three national forests, Government-owned, cover 5,000 square miles.

Custer State Park is the largest State-owned park in America, covering 130,000 acres.

Many beautiful lakes, nestled in mountain pine, birch, and spruce provide cool and comfortable recreation centers. There are four State-owned lodges.

YEAR-ROUND ACTIVITIES

Lakes and streams offer opportunities to fish, boat, and swim in the summer, and to skate, coast, and ski in the winter. Cities and groups in the hills provide a year-round program of activities, educational and historical, as well as entertaining. From any of the several sites that might be selected as permanent headquarters, opportunities abound for hiking, horseback riding, golfing, and other outdoor sports.

CATHEDRAL SPIRES

Nature's own work of awe-inspiring beauty—a place where travelers stop by the road to meditate on its greatness. Like the flutes of a majestic organ, the Cathedral Spires greet sun and stars.

RESTFUL LAKES

Sylvan Lake, shown above, is but one of many in the Black Hills region. It is the highest in the hills—more than 1 mile above sea level and is walled by granite pinnacles. The new lodge is atop the pine-clad mountain at left, center.

Build in the Black Hills country a United Nations capital for world peace, where the last frontier of the world still remains in natural condition, free from embarrassing historical influences, awaiting the United Nations Charter to free the world of war.

## Whence Comes the Explosive Atom

EXTENSION OF REMARKS
OF
## HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. WHITE. Mr. Speaker, to those who have followed the record of mineral discoveries throughout the world as reported in the mining journals published in this country, the discovery and utilization of the rare minerals have been most interesting. First, the discovery of radium and then its gradual application to medicine and science with a new source of supply found in the heart of Africa followed by a discovery in the frozen fastness of the Arctic where it was found associated with another rare element, uranium, the heaviest of minerals.

Little did the world realize the significance and import to humanity of the discovery of these rare elements in the Arctic fastness of northern Canada reported in mining journals of a few years ago, a mining development which is reviewed in an illuminating article entitled "Arctic Cradle of the Atom," by Richard L. Neuberger, and which I have taken the liberty of condensing and rearranging for presentation herewith:

ARCTIC CRADLE OF THE ATOM

(By Richard L. Neuberger)

With numb fingers a hungry and half-frozen Canadian geologist, engaged in a pioneer exploration of a vast lake on the Arctic Circle, scribbled a few words as he looked up at cliffs tinted with strange pinkish seams. Then he and his guide hurried south to beat the winter that was closing down on the barren lands. In his wildest fantasies the geologist could never know that the single sentence he had written would help make possible, nearly half a century later, a pair of frightful explosions which would end the most devastating war in history.

Uranium atoms, disintegrating with force beyond human understanding blew apart over two Japanese cities and the Imperial Government at Tokyo surrendered. Uranium was the tragic ingredient in this incredible conclusion to the Second World War. Of the 92 different kinds of atoms, the uranium atom is the heaviest and has properties that no other element has. A uranium atom with 143 neutrons is known to science as U-235. Working in secrecy and haste, scientists discovered that U-235 could be split.

Thus was the atomic bomb born. It is the product of uranium atoms as they disintegrate and explode.

Uranium comes from the bleak spot in the Canadian Arctic where, in the autumn of 1900, Dr. James Mackintosh Bell, of the Canadian Geological Survey, scrawled this obscure sentence in his notebook:

"In the greenstones east of McTavish Arm the steep rock shores, which here present themselves to the lake, are often stained with cobalt bloom and copper green."

One afternoon in 1930, a prospector named Gilbert La Bine was rummaging through the reports of the Geological Survey. He was looking for likely sources of copper. Suddenly he jumped excitedly to his feet. He had read the sentence describing the rocks stained with cobalt bloom.

Where was McTavish Arm? Camsell turned to a map of Canada and pointed to Great Bear Lake. At the east end of the lake is an inlet almost on the Arctic Circle. "This is Echo Bay," Camsell told La Bine. "Right here is McTavish Arm. At this spot you will find the rocks with the pink stains."

La Bine rose to go. "It is a big, tough country," said the commissioner. Good luck.

It was tough indeed. Winter temperatures crowded 80 degrees below.

On a long, treeless point extending into Great Bear Lake, his search ended. He scraped at a black substance like hard dried-up tar. He examined it in the sunlight. He tapped it with his hammer. He turned to St. Paul tensely, for in his gloved hand was one of the rare substances of the earth, pitchblende, source of radium.

It proved to be the greatest pitchblende strike ever found. Only one other substantial deposit was known to exist in the Katanga district of the Belgian Congo in Africa. There is a supply of pitchblende in Czechoslovakia, where the Curies obtained the radium for their experiments. However, this supply is relatively submarginal and ceased to be used when the Congo deposit was discovered.

Between the Canadian and Congo deposits there was no comparison. The Congo pitchblende yielded 20 milligrams of radium to the ton. The pitchblende discovered by La Bine yielded 120 milligrams. When La Bine set out for Great Bear Lake, the price of radium was $80,000 a gram. After he revealed his discovery, the price dropped to $25,000.

For almost 10 years La Bine and his associates paid little attention to the fact that one of the byproducts of the Port Radium deposits was a substance called uranium oxide. The byproduct was useful in glass pigments and porcelain manufacture and brought a good return. In fact, in a year when 23 grams of radium sold for approximately $576,000, the resulting byproduct of 211,857 pounds of uranium salts returned a respectable $271,100. La Bine's Arctic find not only sliced two-thirds off the price of radium, but also cut 38 percent off the cost of uranium byproducts.

In 1941 two scientists, Jack DeMent and H. C. Drake, published a book called uranium and atomic power. As the major source of uranium they looked to Port Radium on Great Bear Lake. The deposits of pitchblende in the Canadian Arctic, said these prophetic scientists, were the most extensive on earth, from both the standpoint of quality and that of quantity.

In laboratories in the United States, scientists were experimenting with uranium. They studied all the 92 elements thus far isolated by man. But always they returned to uranium. And invariably the uranium that was the object of their studies came from Gilbert La Bine's pitchblende deposits, 26 miles south of the Arctic Circle.

Great Bear Lake is 12,000 square miles in area, far larger, for example, than the State of Maryland. Storms toss it in summer. Ice 8 feet thick sheathes it in the 10-month-long winter. "There are two seasons up here," joked an American mining engineer working at the La Bine Point pitchblende deposits. "One is the Fourth of July, the other is winter."

On January 28, 1944, Gilbert La Bine's Eldorado Mining & Refining Co., Ltd., was expropriated by the Canadian Government. It was not a wartime lease or rental. It was done in perpetuity—forever. La Bine and his staff were retained to operate the Port Radium deposits and the refining plant at Port Hope in Ontario, but the shareholders in the company were paid at $1.35 a share. The purchase cost the Government of Canada $5,000,000. When indignant and mystified stockholders wrote protesting letters, military security agencies advised them not to ask questions.

Nor was there an explanation until the first atomic bomb exploded over Hiroshima on August 5, 1945, a year and a half after the Port Radium deposits had been made the property of the Dominion Government.

Sixty tons of chemicals are required to reduce 10 tons of pitchblende to the radium and uranium concentrates and it was easier to transport the pitchblende to the refinery than to assemble a refinery on Great Bear Lake. Thus aerial augmenting of the summer barge shipments was essential to the atomic-bomb experiments.

Using two of the Mackenzie's tributaries, the Slave and Athabaska Rivers, barges, and sternwheelers finally brought it (pitchblende) to waterways in the Province of Alberta, 1,400 miles from Port Radium.

But this wilderness waterway could be used only 3 months of the year. The rest of the time it was locked in a barricade of ice.

If it had not been for the airplane, transportation of ore from Port Radium would have been confined to the short period of the midnight sun, from July until mid-September.

Pitchblende is still being chopped from the veins and seams on Great Bear Lake to be reduced to radium for the treatment of cancer, and to its byproduct uranium for purposes which only the future can tell.

## Iowa, the Great State With Unlimited Opportunities

EXTENSION OF REMARKS
OF
### HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. LECOMPTE. Mr. Speaker, "Iowa, the great State with unlimited opportunities" is the caption of an interesting and instructive statement published in the Oskaloosa (Iowa) Daily Herald of November 22. It gives a number of pertinent facts about Iowa and its opportunities that I am certain will be of interest to every Member of Congress. Under leave to extend my remarks in the RECORD, I desire to include a portion of the story of Iowa, probably the greatest agricultural area on the face of the globe:

IOWA, THE GREAT STATE WITH UNLIMITED OPPORTUNITIES

The surface is a rolling prairie. No civilized area in the world of equal size has such consistently fertile soil. Altitudes range from 477 feet above sea level to 1,670 feet at the highest point.

The proportion of area actually under cultivation is larger than any other State. The diversity of its crops is unexcelled anywhere in the world.

The Iowa farm census showed that there were (January 1, 1940) on Iowa farms 117,838 tractors, an average of 1 tractor for each farm and one-half.—Taken from the 1945 World Almanac.

IOWA FACTS

Iowa produces more corn than any other State or foreign country.

Iowa produces and markets more hogs than any other two States in the Union.

Iowa in 1944 marketed 15,800,000 head of hogs, over half which were slaughtered by packing plants within the State.

Iowa is the leading poultry State in the Nation and in 1944, Iowa hens produeed over 4,000,000 eggs.

Iowa supplies the consumer of the Nation with more corn-fattened beef than any other State.

Iowa in 1944 produced 213,000,000 pounds of creamery butter.

Iowa produces more popcorn and is the world center for this industry.

Iowa produces more oats than any other State.

Iowa produces one-half of the timothy seed raised in the United States.

Iowa's soil produces more wealth each year than all the gold mines of the world.

Iowa has 43 daily and 441 weekly newspapers.

Iowa has 25 radio broadcasting stations located in 18 different cities.

IOWA INDUSTRY

Over 4,000,000 tons of coal is mined annually and great quantities of gypsum plaster, building stone, clay products, cement, sand, and gravel are produced.

Iowa ranks high as a manufacturing State. There are 2,760 manufacturing establishments located throughout the State, and in 1941, the value of their output was more than $800,000,000 as compared to its cash farm income of $919,515,000. Important industries are the processing of its agricultural products and the handling of grain and livestock. Farm implements, washing machines, fountain pens, cosmetics, buttons, railroad equipment, furnaces of all types, lawn mowers, calendars, batteries, auto accessories, and office equipment are among the items manufactured.

IOWA EDUCATION

In Iowa there are 912 high schools, with an enrollment of 72,000 students. Iowa has 25 institutions of higher learning, including the University of Iowa and the State College of Agriculture. In addition, there is a teachers college, two professional and technical schools, and 34 junior colleges. Iowa has 299 public libraries. As has been said, "Of all that is good, Iowa affords the best."

* * * * *

IOWA TALKS

Iowa stands first, of all the States in the Nation, in rural telephone development. This is consistent with the fact that a larger percent of Iowa's land is under cultivation than any other State. About 80 percent of the farms in the State are served by telephone. In urban residential telephone development, Iowa ranks third, with a telephone for every five persons. When business installations, including hotels and offices, are considered, only seven States outrank Iowa. Hotel and extensive business installations in large cities are mostly responsible for this standing.

There are 610,000 telephones in Iowa, of which 54 percent are owned and operated by the Northwestern Bell Telephone Co. and 46 percent by the 767 independent companies. The lines of the independent companies interconnect with the long-distance lines of the Bell company in providing long-distance service throughout the State and to points over the Nation. Iowa is well served by transcontinental trunk lines, both east-west and north-south. Iowa telephone users made over 22,000,000 long-distance calls during 1944.

The Bell company's construction program in Iowa for the 5 postwar years calls for an annual expenditure of $5,500,000. This will be spent for replacements deferred during the war and for service improvements and extensions. One of the most important aims of this program is to make telephone service available to every farm in the territory served by the company which may require an expenditure of around $1,000,000.

IOWA SEES AND LISTENS

Here is another big and interesting first for Iowa. It is of striking importance to note that today 99.9 percent of the urban population of Iowa has electrical service available. Of the 700,000 Iowa families, 557,343 dwelling units have electrical lighting. There just isn't a location in Iowa which any manufacturer would select for his plant where he wouldn't find electrical service awaiting for him. The Rural Electrical News, prepared by the United States Department of Agriculture, taken from the 1940 census, shows that 61.4 percent of Iowa farms have electrical service available. With the war ended and materials fast becoming available, this percentage will show a tremendous increase in the next 2 years. * * *

Ninety-nine percent of Iowa families enjoy radio reception in their homes. There are 25 radio stations ranging from 250 watts to 50,000 watts power to service them. These radio broadcasting stations are located in 18 Iowa cities. According to the Iowa poll of September 1945, Iowans in 238,000 homes are ready to purchase new radios to the tune of $12,000,000.

## Resolutions of Marshall County (Iowa) Farm Bureau

EXTENSION OF REMARKS
OF
### HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. GWYNNE of Iowa. Mr. Speaker, as part of these remarks I include resolutions adopted recently by the Marshall County (Iowa) Farm Bureau. This organization has a membership of 1,221 families, living in one of the best farming communities of the United States. The resolutions which were adopted unanimously are a very sensible statement on some of the great problems concerning the country.

The resolutions are as follows:

PAID PERSONNEL

We view with great satisfaction the progress of the Marshall County Farm Bureau during the past year, and wish to compliment the entire salaried group of officers and helpers for their loyal service and notable achievements. Good gains have been made in membership. The Farm Service Co. has had a liberal increase in volume of business. The gains in the insurance department have been remarkable. The serum business has had a wonderful growth.

The REA is giving satisfactory service. Club work has gone forward and is in a healthy condition. In spite of many handicaps it has been a good year in Marshall County.

4-H CLUBS

We believe that in the membership of the 4-H clubs will be found our farm leaders of the future. We therefore urge every possible assistance in furthering and improving the organization with a challenge to higher standards.

GOVERNMENT FISCAL POLICY

Deep concern is in the heart of every American in contemplating the size of our national debt, and the dangers attendant therein. While we urge individual citizens to avoid inflationary practices we believe that needless governmental expense is the most inflationary factor. For this reason we urge our Representatives in Congress to use their influence and vote in eliminating useless governmental agencies and duplication of governmental functions. We believe that the Federal Budget should be brought into balance and deficit financing stopped.

CROP LOANS

The question of crop surpluses may again soon confront us and, remembering the sad experiences of the past through forced marketings, we urge a continuance through private or public sources of commodity loans in

order that marketings may be orderly and surplus feed supplies be carried over against a later possible shortage.

DEPARTMENT OF PEACE

We favor the immediate creation of a department of peace with a secretary holding full Cabinet position.

CONSCRIPTION

We believe the energies of all Americans through their Government should be concentrated on the solution of the economic and social problems which produce war and not on the development and acceptance of a policy of militarization which defies the ideals for which we so recently have been fighting. We cannot have both collective security and overwhelming national armament.

LABOR-MANAGEMENT

We believe the prosperity of agriculture to be dependent on full employment at wages in keeping with the cost of living. We believe in the principle of collective bargaining and the right of workers to organize, but we believe that labor and management, in the public interest, should submit their differences to an impartial board representing labor, management, and the public, clothed with authority to adjudicate differences with penalties for violation to be applied against labor and management alike.

UNEMPLOYMENT INSURANCE

We approve of unemployment insurance. Unemployment is a social loss. But losses must be paid from Government funds with the same care and scrutiny as used in paying a fire loss. We condemn subsidized loafing under the name of unemployment compensation.

SUBSIDIES

Bureaucratic control of the price of farm products has proved unsatisfactory. We approve the removal of food subsidies, but demand that with their removal the law of supply and demand be again allowed to function in the market place.

PARITY

The price relationship between industry, labor, and agriculture is of paramount importance in the Nation's economic future. We reaffirm our belief in 100-percent parity, and we urge upon our leaders in the American Farm Bureau and our representatives in Congress the importance of eternal vigilance that this relationship be maintained. We condemn the brazen attempt of certain labor groups to break this parity formula and remind such groups that the price of farm products is the farmers' wage, a wage that has not been allowed to rise during the entire war period.

INFLATION

Inflation is increasingly here. We would suggest to our membership that inflation brings few headaches to the farmer who keeps his investment almost wholly in his farm plant, and deflation has few terrors to the farmer who is debt free.

We believe that only by the continuance of a high price and wage level can national solvency be maintained under our enormous load of national debt.

## Full Employment Bills

EXTENSION OF REMARKS
OF
### HON. DUDLEY G. ROE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. ROE of Maryland. Mr. Speaker, under unanimous consent to extend my remarks, I include an editorial from the Baltimore Sun on so-called full employment.

Mr. Speaker, every Member in this House wants to see every American employed gainfully, healthily, and usefully. Every Member of this body wants to see every American receive an adequate wage so that he can live in accordance with the American standards of life. However, I am one who believes in the theory that our Government is a servant of the people; that we should pass the kind of legislation that the people ask us to pass; that we should see to it that all legislation results in full justice to all and special privileges to none.

The so-called full employment bill, which would create the greatest unemployment America has ever had, would make our people the slaves of the Government and would give us the same sort of despotism that we have just defeated in Germany and Japan. We had all kinds of dire predictions about 5,000,000 unemployed by such and such a date and 8,000,000 unemployed by such and such a date. As a matter of fact, the number of unemployed, according to the Census Bureau, is less than 20 percent of the wild guesses we were given—this in spite of the strikes and in spite of the hindrance caused by the OPA. If our people would just go to work and produce the things which the masses of the people so badly need, we would have the greatest era of prosperity for years to come that this Nation has ever witnessed.

I believe the so-called national vacation bill—$25 for loafing for 26 weeks—and the so-called full employment bill, have had their part in causing our present epidemic of strikes. The sooner we defeat these two bills and the sooner the workers of America return to their jobs, the sooner we will have peace, plenty and prosperity for all.

The editorial follows:

FULL EMPLOYMENT BILLS AND THE FACTS OF ECONOMIC LIFE

On the third day of the General Motors strike, a House subcommittee member lets the public have a peek at the full employment bill as it now stands in his committee. The third day of the General Motors strike is a wryly appropriate time to discuss the plans of the full employment people.

But before getting to that point, let's take a look at some of the provisions of the House bill as it is said now to stand. The first thing that will strike the eye is that the annual production and employment budget which the original bill provided for is at present out of the House version.

Can it be that the House committee's tentative decision to drop this part of the bill is related to the rather spectacularly cockeyed unemployment predictions laid down by the Government agencies for the period following VJ-day? For instance, on August 15, Stabilization Director Snyder said, "It is expected there will be 5,000,000 or more unemployed in 3 months"—that is, by November 15. Pulling the corners of his mouth even further down, Mr. Snyder was willing to believe that "by spring, unemployment may reach about 8,000,000." Mr. Snyder seems to have taken his figures from the War Manpower Commission, because the WMC prediction was for 5,000,000 unemployed in the last quarter of 1945. The Social Security Board guessed the figure might go as high as 7,500,000.

What has actually happened? The Census Bureau found that the unemployed in October numbered 1,520,000, which was a decrease of 130,000 from September. The Bureau of Labor Statistics has reported that layoffs were dropping away even in September. And in a recent issue of the Christian Science Monitor, Dr. Sumner H. Slichter, of Harvard University, one of the country's leading economists, says flatly, "Conversion unemployment has passed its peak and employment is now rising."

So much for the Government predictions of unemployment against what actually has happened. The figures show that the Government planners, the logarithm boys in the agencies, the slide-rule jockeys and lightning calculators who say they know more about business than business—all these groups were spectacularly wrong.

They were wrong, that is, up to the minute of the General Motors strike. The unemployment that the strike causes and will cause has yet to be measured, but it may be general and distressing. However, the point is that just as the planners couldn't guess unemployment accurately, neither could they foretell this strike. Yet even had their employment guesses aligned with the facts, the strike would have thrown them off the track.

In other words, strikes are incompatible with the kind of Government planning which the full employment people want to do. That means the wholesome American institution of independent unionism is incompatible with their schemes. But no group is more in favor of independent unionism than they. Their calculations on this larger problem are as screwy as their guesses about postwar unemployment.

## To Make the Charter Work

EXTENSION OF REMARKS
OF
### HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Times of November 27, 1945:

TO MAKE THE CHARTER WORK

Nearly 4 months have passed since the United States Senate ratified the Charter of the United Nations Organization, and a little over a month since, by a prescribed number of ratifications by other nations, the Charter became operative. This week the second step is being undertaken, the passage in the Senate of the United Nations Participation Act by which we will begin to carry out the obligations assumed in the Charter. This bill, introduced by Senator CONNALLY with the warm backing of Senator VANDENBERG, will become law when approved by a simple majority in both Houses and signed by the President.

The Connally bill contains five major provisions. First, it establishes an American representative at the seat of the UNO, with ambassadorial rank and a salary of $20,000 a year, and a deputy representative, with a salary of $12,000 a year. The President may also appoint American representatives to the General Assembly and to other UNO organs and agencies. Except for the Assembly delegates, and excepting also cases in which appointees already hold Federal offices by senatorial confirmation, the consent of the Senate will be required.

Second, the President is to report to Congress at least once a year on American activities under UNO, with special reports on enforcement measures taken by the Security Council and our participation in them.

Third, he is empowered to commit the country to measures short of war without first consulting Congress. Fourth, he is authorized to negotiate agreements with the Security Council to make available specified "numbers and types of armed forces" when the armed enforcement of a Council decision is undertaken. Such agreements are to be approved by act of Congress or joint resolution, which means by majority vote in each House. The President may then commit the agreed contingents in an emergency without resorting to Congress for specific approval. He may not, however, enlarge the contingents without going to Congress. Finally, authority is given for the annual appropriation of such sums as are necessary to pay for our participation in UNO.

The items in this bill which stand out in letters of fire are, of course, those which authorize the President to act in emergencies on a general delegation of power from Congress without waiting specific consent. He can, in fact, on his own initiative, as the isolationists will be saying, "send our boys overseas to fight." But the "boys" will presumably be professional soldiers, who have enlisted on this understanding, and their function will be to join with other UNO fighters in extinguishing wars before they get well started. If the President doesn't have this power, UNO will be a research institution and a debating society, but it will not preserve the peace.

The forthcoming debates will smoke out the isolationists, including some who voted for the Charter last July. For now we approach a critical point. Either we want peace encugh to take risks and make sacrifices or we do not. The indications are that the Connally bill will pass Congress though perhaps not by last July's Senate ratio of 89 to 2. It must, for we are committed to its principles both by self-interest and by honor.

## Increasing Wages Without Increasing Prices

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. HOFFMAN. Mr. Speaker, the CIO and affiliated organizations, such as UAW-CIO and CIO's unions in the steel industry, insist that wages can be increased 30 percent without an increase in prices.

In his book, Walter Reuther says that the increase can be taken out of profits. Perhaps you have your own opinion on that subject. In any event, here is one reply of the steel industry:

THERE ARE NO HIDDEN STEEL PROFITS

United Steelworkers of America-CIO charges that steel companies piled up huge hidden profits during the war. It insists that the steel companies now can use their swollen wartime profits in order to pay a $225,000,000-a-year wage increase.

The union's charge of hidden profits during the war is false. That was shown conclusively by the fact-finding panel of the National War Labor Board. In September 1944 that Government agency declared in an official report that what the union calls hidden profits are necessary reserves, and that such reserves "are proper and cannot be considered as steel profits."

The truth about profits in the steel industry during the war is that they were not swollen. They were less than in any good peacetime year. After all bills were paid, net earnings after taxes during the three war years, 1942 to 1944, represented an average return of 5 percent on the money invested. That was a lower return on investment than in any peacetime year of high steel production.

There is no mystery about reserves in the steel industry. Workers as well as stockholders are protected by these reserves. Machines wear out and must be replaced. During the war the wear and tear under capacity operations was without precedent. When necessary reserves are not provided, any company will run down. Then there are fewer jobs, smaller pay checks. These principles of sound management apply to a one-man garage or any small business as well as to a million-dollar corporation.

Every cent that steel companies set aside for future needs is checked by your Government. Nothing can be hidden. The tax collectors, renegotiation boards, and many other Government agencies have reviewed the figures year after year. They recognize reserves as an essential part of the cost of doing business.

Reserves set aside for wear and tear of factilities and for contingencies do not constitute a fund out of which wages can be paid. To do so would quickly exhaust the reservoir on which the steel companies depend for their future lives.

Any solution of the present wage-price issue in the steel industry must take into consideration these clearly established facts.

AMERICAN IRON AND STEEL INSTITUTE,
*New York, N. Y.*

Our company members employ 95 percent of the workers in the steel industry.

## Control of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution submitted to the Honorable ALBERT M. COLE, Representative from the First Congressional District of Kansas, November 20, 1945

We, the undersigned members of the staff of Washburn Municipal University of Topeka, aware of the tremendous import of atomic energy and atomic weapons to all mankind, believe that the security of the United States can be achieved ultimately only through international cooperation for the joint control of these new forces. We believe that a permanent policy of secret fundamental research and exclusive national control on the part of any nation can only result in a ruinous competitive armaments race in which all the nations of the world will join, leading to a new and catastrophic world war. From such a war no people will emerge free, if indeed they survive at all.

We believe that, while secrecy regarding the release of atomic energy may be the safest policy under present conditions, such secrecy can keep the basic knowledge the property of the United States only very temporarily, and that permanent policies of secrecy in such matters will in the long run produce international distrust and fear, creating a world atmosphere which will render the permanent preservation of peace impossible. We believe that the mutual confidence and good will among nations which is necessary for permanent peace can only be fostered by a world-wide policy of open and uncensored interchange of ideas and information between all nations.

We therefore resolve and urge:

1. That the United States, as the country that has opened the way for the development of atomic energy, should immediately invite the Governments of Great Britain and the Soviet Union to a conference to prevent competitive armaments and consider the problems arising from this overwhelming development.

2. That the United States champion the need for international development with the broadest utilization of all resources and the widest freedom of research and interchange of ideas.

We believe furthermore that any legislative effort which stifles free and open scientific investigation, which seeks to prevent public surveillance and criticism of the applications of atomic energy, will stifle scientific progress, undermine peace and is therefore harmful to the national interest.

We therefore urge the Congress:

1. That legislative action for the control of atomic energy be preceded by full, free, and public discussion.

2. That the authority for the guidance of the development of atomic energy shall consist of men of scientific competence, fully compensated for their services, and able to work towards the maximum utilization of atomic energy for the welfare of the public and not for the interests of any special group.

3. That the administration chosen to direct the work of such an authority be civilian.

4. That security regulations be limited to direct military application of atomic power and that free research and right of publication be immediately resumed in the field of atomic physics.

Bryan S. Stopfer, Hugh T. Wale, Arthur G. Sellen, Gladys Phinney, T. L. Callens, Philip S. Riggs, Esther M. Bauman, Amanda Lee Bauer, Richard G. Vogel, Clara E. Elledge, Ira Pratt, Mrs. Paul M. Hansen, L. B. Fulbright, Faye H. Beard, Chas. D. Erickson, Faye Waddle, Catherine Conard, Burleigh Reed, Edith E. Larson, Robert H. Kingman, Elizabeth Ebright, Marjorie Clinton, Helen T. Fisher, Elisabeth D. Van Schaack, J. F. Zimmerman, E. Ruth van Appledoun, Mrs. Charles L. Lyman, Ruth Parker, John D. Bright, Dorothy L. Porter, Kathleen Martin Rewe, Bernice M. Burbank, Dorothy M. Porterfield, Hazel J. Nitcher, Barbara L. Neff, N. E. Saxe, Janet L. Mack, Alexander Tillotson, Donald H. Webb, R. H. Alexander, Joseph M. Free, Mrs. N. E. Saxe, J. H. Froth, Paul Eberhart, Esther H. Vanderlas, Wm. J. Morgan, Mrs. H. M. Callaway, Jean A. Smith, Christine A. Johnson, Harold E. Conrad, J. E. Gardner, David E. Beck, Oscar P. Moyer, H. P. German, and E. L. Burke.

## Apprenticeship Training

EXTENSION OF REMARKS
OF
### HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. DE LACY. Mr. Speaker, under the privilege granted to me to extend my remarks, I would like to comment briefly

upon the soundness of our national apprenticeship training program under the Department of Labor.

An appropriation to continue this program is included in the present deficiency measure now before us. I urge upon the House the fullest possible consideration for this appropriation since now, as hundreds of thousands of returning servicemen are anxious to take their proper place in industry, apprentice training becomes more important than at any time in our national history.

In order that I might fully understand the scope of the apprenticeship program, I asked some questions of the Department of Labor. The Department's answers to my inquiries were so well stated and presented such an accurate view of the entire program that I desire to include both the questions and answers as part of these remarks. They follow:

NATIONAL APPRENTICESHIP PROGRAM

Question. How many apprenticeship programs does the Department of Labor have in the United States?

Answer. As of September 30, 1945, there were 4,846 registered apprenticeship programs covering 30,339 industrial establishments. Of these there are 76 programs in the State of Washington covering 1,404 establishments.

In addition to the apprenticeship programs there were set up during the war about 2,500 advancing worker programs for war production. A large percentage of these programs will now be converted to apprenticeship.

Question. How many apprenticeship programs were set up in the United States in the last year?

Answer. From October 1, 1944, to September 30, 1945, 1,739 apprenticeship programs were established in the United States. In the State of Washington two programs covering 32 establishments were completed. In addition 149 new establishments have joined existing programs. Development work on a number of large programs, begun since the close of the war, has relieved the need for heavy attention to war production programs.

Question. Is this number an increase or decrease over the average number set up in past years, and to what do you attribute the increase or decrease?

Answer. An increase.

To the fact that the field and national staffs have been working with management and labor for years, endeavoring to persuade them to participate in bona fide apprenticeship programs. Added to this is the fact that during the war period our staff proved to these groups the value of formal training programs by its work on short term training for war production However, the most pertinent thing at the present time is the returning veteran The experiences of veterans in the armed forces has convinced them that thorough and complete training is necessary if they expect to be a success in civilian life. Accordingly, more and more returning veterans wish to take advantage of apprenticeship training under the provisions of the veterans' acts. Unless we have adequate programs set up that will provide these veterans with the proper, all-round training required for journeymanship, they will not be able to reach the skill they desire and the skill so badly needed by industry for the post-war period.

Question. Should additional aprenticeship programs be set up in this country during the remainder of the fiscal year? How many?

Answer. Yes, it is estimated that a minimum of 3,500 programs can be established during fiscal year 1946.

Question. Will additional field men be required to carry out that program during the remainder of the fiscal year? How many?

Answer. Yes; 150 additional field representatives would be needed in order to establish the minimum of 3,500 programs which are available during the year and serve existing programs, especially with respect to apprenticeship for veterans.

Question. Will additional positions be needed in your national office and in the field clerical staff?

Answer. Seventeen additional positions in the national office and 55 in the field, clerical positions.

Question. How many apprentices should there be in the country in all apprenticeable trades?

Answer. There should be approximately 500,000 apprentices in training at all times.

Question. Where will these apprentices come from?

Answer. During the next 3 or 4 years some few will be 18- and 19-year-old boys graduating from high school; but the vast majority of them will be World War II veterans.

Question. What percentage will or could be World War II veterans?

Answer. For the next few years probably about 80 percent of apprentices can be veterans.

Question. If the deficiency appropriation presently sought is not granted, what percentage of reduction in personnel will be required in the field and national staffs?

Answer. Fifty-two percent.

Question. Does the apprentice program division have any functions other than setting up such programs? If so, what?

Answer. Once the program has been set up and operating it is the duty of the field men to continue to service each of his programs. Apprenticeship practically died in this country in the past, and unless these programs are constantly serviced by our field staff we can expect nothing else but that they will again die. If this is to be permitted to happen, we are most certain that we will be faced once again with the shortage of skill and workers that evidenced itself prior to World War II.

Question. If you are not granted sufficient money to carry out your program, who will be affected most seriously?

Answer. At the present time the returning serviceman who wishes to enter the skilled trades under the provisions of the G. I. bill. Small businesses who require assistance in establishing programs will not secure that help and apprenticeship opportunities for veterans in such establishments will not be available. In the long run the Nation as a whole will suffer from the continuation of serious shortage of skilled workers.

Question. To ensure that there will continue to be enough apprentices trained, as estimated above, how many apprenticeship programs should be in operation in the country?

Answer. There are about 400,000 establishments in the country which employ skilled workers and should be training apprentices. On the basis of an average of about 7 establishments per program there should be about 57,000 programs.

Question. Do you believe that the number of apprenticeship programs needed will increase after this fiscal year? Why or why not?

Answer. It is obvious that the need will continue when there could and should be over 50,000 programs and there are now less than 5,000.

Question. How long do you believe it will be before you will have the number of apprenticeship programs in operation that will assure us a sufficient number of skilled journeymen throughout the country?

Answer. This will depend upon the provision of adequate funds for this activity and the continuation of the interest and support of management and labor. The second depends upon the first. If the present interest of industry can be maintained, there is no reason why the country could not have an adequate apprenticeship system within 5 years.

---

## Realistic Training Seen in Legion Plan

EXTENSION OF REMARKS

OF

### HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include an article by David Lawrence, highly respected news analyst and editor, in which he comments on a new proposal for universal military training advanced by the new national commander of the American Legion, John Stelle. Contrary to the Legion's former stand for compulsory military training of 1 year for all youths who reach the age of 18 years, National Commander Stelle advocates a program that would integrate the youth of America into the Nation's preparedness set-up. Mr. Lawrence's comments on Commander Stelle's proposal should be of interest to every Member of Congress.

REALISTIC TRAINING SEEN IN LEGION PLAN

(By David Lawrence)

The American Legion, through its national commander, John Stelle, has just come forward with a sensible program for military training that eliminates virtually all the objectionable features of the plan presented by President Truman and Gen. George Marshall.

Instead of taking a whole year out of the life of American boys and giving them no further training that could be useful 5 or 10 years later, the Legion is to present to Congress a bill which requires only 4 months of basic training but provides for integration of the trained youth into some organization which has a continuing relationship to preparedness.

Under the proposed bill a boy of 18 who is physically qualified would take 4 months of training. Then he could return to school or college or join a National Guard unit or a Naval Reserve unit, or, if at college or school, he could join a Civilian Military Training Corps unit or an ROTC unit. If he were not going to college, the boy could spend "8 months or the equivalent working in some industrial plant engaged in national defense work of a type set up by the civilian authority."

WAR NEEDS TRADES

This is a realistic approach. It recognizes that training in modern times doesn't consist merely of drilling and marching and saluting but of mobilizing young men in mechanical pursuits as well. Training in certain trades is just as essential to a mechanized military service of the future as marching or drilling. Certainly air power needs men in ground crews for repair and maintenance who have had the background of work in factories and plants.

The Legion's proposal is significant because it offers the first important digression from the administration's plan which, incidentally, has no chance of passage anyway. Another interesting proposal is that which comes to the writer from the Regular Veterans' Association, an organization founded by but by no means confined to officers who have

served in the Regular Army and Navy. It says:

"We are convinced that some form of military training is a very real 'must' for this country. * * * But we are not agreed on placing the whole burden on young men of high-school or college age. These boys, for that is all they are, have their lives ahead of them. They are at the place where an education means a great deal to them, especially the ones who are choosing careers in medicine, law, science, and many other professions which require more than the usual 4-year course, and a year from their lives at this time would be a very real loss. Not only that, but they are not yet men with an adult sense of values and to train them fully in the art of killing would be foolhardy indeed."

SWISS PLAN RECOMMENDED

"Hitler proved what one can do with the younger generation by training them in certain arts. In Germany, the youth, not the older folks, were the backbone of his plan of conquest and cruelty. Why, then, should we teach our youngsters this same science and expect them to return calmly to commonplace things without ever having a chance to practice the lessons thus learned? Taken at a time when their minds are pliable, they may wish to use their knowledge at the slightest provocation.

"We indorse a plan, proven by the Swiss to be workable and which has kept them at peace for many years, whereby the adults, who after all are the ones who should carry the burden of responsibility, comprise the civilian army of defense. We ask that all men between the ages decided on as being physically able to fight be given military training each year until they reach an age when they no longer need be called upon to take the training. By this means no undue hardship is placed on any one group.

"Not only that, but returning yearly for a few weeks' training, we will have a male population in better physical health than ever before. By spending a few weeks of each year in this way the men thus taught will not forget the lessons learned nor will they become 'rusty,' which is what will happen under a plan whereby a man receives a full year's training, then forgets about it until such time as he may be called on suddenly and without warning to use what was taught to him maybe 10 years before."

Congress will have before it many plans but the two foregoing proposals begin to tackle the problem on a practical basis and out of many ideas may ultimately come some form of training that does not establish a militaristic tradition but accomplishes the main purpose—preparedness for defense.

## Resolution of Catholic Bishops of the United States on Compulsory Military Training

EXTENSION OF REMARKS
OF
### HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution which was adopted by the Catholic bishops of the United States on the subject of compulsory military training at their meeting in Washington, D. C., on Wednesday, November 14, 1945:

We recognize the imperative need of preparedness for the adequate defense of our country in all circumstances.

In determining what constitutes national defense in our present circumstances, our Government, we feel, should explore the possibility of having military conscription abolished in all countries, and, to that end, might well consider how our control of economic assistance to other countries may be used to lend weight to our plea for such abolition.

If a wide extension of military training is found necessary for present adequate defense of our Nation, we feel that such training should be in keeping with American traditions, and that, specifically:

1. Voluntary enlistments in the armed forces should be stimulated as much as possible, to provide our first line of defense;

2. Any period of enforced training should be integrated with normal school life; and,

3. The War and Navy Departments should work with recognized moral leadership to correct certain policies and attitudes which have wrought grave moral damage to great numbers of young people in the armed services during the past 5 years.

## Erection of a Post Office Building at Cudahy, Wis.

EXTENSION OF REMARKS
OF
### HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution 681

Resolution proposing erection of new post office building

Whereas the city of Cudahy, Wis., is a municipality situated on the shores of Lake Michigan, in the county of Milwaukee, and has a population of 10,550; and

Whereas this city is the most progressive city in the State of Wisconsin, having 14 major industries, among them such nationally known firms as Ladish Drop Forge Co., George J. Meyer Manufacturing Co., Cudahy Bros. Co., and others; and

Whereas this city has a history of steady and conservative growth and harbors many types of civic and fraternal organizations as the Chamber of Commerce, Junior Chamber of Commerce, Kiwanis Club, Moose Club, Eagles Club, Knights of Columbus, Knights of Pythias, Cudahy Women's Club, American Legion, Veterans of Foreign Wars, Cudahy (Veterans) Service League, and others; and

Whereas this community is in dire need of a United States post-office building commensurate with its growth and progress to replace the leased quarters now housing the post office, which are too small and inadequate and uncentrally located on a side street: Now, therefore, it is hereby

*Resolved*, That the mayor and Common Council of the City of Cudahy do hereby formally endorse and subscribe to a petition for the erection of a new post-office building to be centrally located on the main street in the heart of the city; it is further

*Resolved*, That a new post office housed in a modern building will be in accord with the progressive development of this city and will be justified not by civic pride alone, but also by the steady, conservative growth of the city and its industries during the past 50 years and the immediate urgent need for adequate modern quarters; it is further

*Resolved*, That this resolution be spread upon and made a part of the minutes of this meeting and that the city clerk cause suitable copies thereof to be forwarded to the United States Postmaster General, to the two Senators and Congressmen representing this district for early favorable action upon this petition.

Passed and approved this October 2 1945.

VINCENT TOTKA, *Mayor.*

Attest:

JAMES F. KELLER, *City Clerk.*

## Vengeance Legislation

EXTENSION OF REMARKS
OF
### HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. SABATH. Mr. Speaker, under the leave granted me to extend my remarks, I insert a timely article appearing in today's issue of the Washington News written by Thomas L. Stokes, entitled "Vengeance Legislation." I most respectfully ask that the Members read it and I feel that after it has been perused by those who have favored this legislation being reported to the House they will come to the conclusion that they have been imposed upon. The article is as follows:

VENGEANCE LEGISLATION

(By Thomas L. Stokes)

There's a right way and a wrong way to do things—including legislating.

An example of the wrong way may be seen currently in the attempt to rush drastic penalties against labor through the House of Representatives. They are contained in a bill prepared by the Military Affairs Committee. The measure has been ordered to the floor by the Rules Committee for early consideration.

The effort is to exploit the present strike situation. That offers provocation for labor-law reform, certainly, but not through such hasty and ill-considered legislation whipped up hurriedly in a spirit of vengeance. Long-time changes in labor law should be considered carefully and soberly.

The penalizing provisions were inserted in a bill that originally was designed only to repeal the wartime Smith-Connally anti-strike law, so-called. Repeal of that act meets general approval. But the provisions added by the Military Affairs Committee do not. Labor is complaining bitterly, and with reason.

One provision would punish any labor union which struck in violation of a no-strike clause in its contract by suspending its collective bargaining provisions for a year and making it subject to suits for damages incurred by work stoppages.

The obvious effect would be refusal by labor unions thereafter to accept no-strike clauses. Further, it would open the way for employers, so inclined, to provoke strikes themselves and drain union treasuries. There is no penalty for employers who might themselves induce strikes by their conduct.

Another provision would prohibit contributions by labor unions for political convention and primary election campaigns. This would extend the ban already imposed by the Smith-Connally Act against such contributions for general election campaigns, which is to be retained. The latter somewhat restricted the scope of CIO's Political Action

Committee in last year's general election campaign, though it did not interfere much with its ultimate effectiveness. It operated under the exception permitting use of union funds for educational purposes. Former Attorney General Biddle, over protests from some Members of Congress, held that PAC was not violating the law.

The purpose of the prohibition in the case of conventions and primary elections is clear. Members with antilabor records fear CIO attempts to eliminate them in next year's primaries, and with reason. The CIO had some primary successes last year, even in the South. That served as a warning.

Aside from the injustices and the dubious constitutionality of these provisions, and the hasty method of legislating, there is something else wrong with this whole procedure.

This is the matter of jurisdiction. All this was done by the Military Affairs Committee and not the regularly constituted House Labor Committee. The Military Affairs Committee proved its ineptness and lack of experience and judgment in framing labor legislation when it handled the original Connally bill, 2 years ago.

Administration leaders sought in vain to get the Rules Committee to withhold report of the bill for House action until the labor-management conference here had finished its work. But the Republican southern conservative Democrat coalition in the committee, which holds the whiphand, seized the second streetcar and bus strike here and beginning of the General Motors strike to shove the measure to the floor.

## Who Has the Right To Determine What Is Un-American?

EXTENSION OF REMARKS

OF

### HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. COFFEE. Mr. Speaker, recently one of America's greatest newspapers, the New York Times, editorially discussed the adjective "un-American." Is it possible in the United States for one to designate the attitudes, philosophy, or political viewpoints of a fellow citizen as un-American if the same happens to be contrary to the views one entertains in his own behalf? The successor to the Dies committee is now undertaking to censor the radio. This is indicative of a dangerous trend. Just who has the right to impose his views upon any vehicle of public expression? What then becomes of free speech or freedom of the press? The air waves should be equally free. I have always insisted that every facility should be afforded to newspapers to permit their columnists and editorial writers to express themselves freely and fearlessly on any controversial subject. The laws of libel and slander will take care of any excesses such as the dissemination of untruths. One of the characteristics of totalitarianism is to require the submission of newspaper stories and radio scripts in advance to official censors. Let us not emulate the sorry example set for us in the recent past by the Mussolinis, Hitlers, Francos, and Perons.

The editorial is as follows:

WHAT IS "UN-AMERICAN"?

The House Committee on Un-American Activities has subpenaed the scripts of seven radio station commentators and may subpena all or some of the commentators themselves. A committee spokesman told a reporter for this newspaper that the committee had received many letters complaining of "communistic views" reputedly expressed over the air waves by commentators. In the spokesman's opinion, "the time has come to determine how far you can go with free speech."

The committee's mandate is clear up to a certain point. It has the usual and often useful investigating powers of any congressional committee of inquiry. It might use those powers to look into actual breaches of law. But it is handicapped, as the Dies committee was before it, by any precise definition of what is an "un-American activity." In the absence of such definition the matter is left to prejudice. None of the seven commentators mentioned is charged or suspected, so far as we know, with advocating the communization of this country by force and violence. They are said, or some of them are, to have "praised the Russian Army and other Soviet actions, rather than similar American activities." If this is true, which has not been established, have they committed a crime? Obviously not—they have, at the worst, "paralleled" the Daily Worker. Or is material privileged in print to be barred from the air?

We do not believe the committee will find any legitimate excuse to penalize the commentators or the networks over which they speak. It might succeed in scaring the networks, so that they will hesitate to permit a free and lawful expression of opinion. We believe this indirect suppression would be as "un-American" an activity as some others the committee is gunning for. We hope the committee will Americanize its procedure before this happens.

## Russia and Iran

EXTENSION OF REMARKS

OF

### HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Washington Post of November 27, 1945:

RUSSIA AND IRAN

Following the Iranian Government's protest to the United States regarding recent developments in Azerbaijan Province, the State Department has acted with refreshing vigor and promptness in reminding Moscow of obligations which Russia, as well as the United States and Great Britain, assumed at the Tehran Conference. At that time Marshal Stalin, Prime Minister Churchill, and President Roosevelt signed a declaration in which they declared themselves "at one with the Government of Iran in their desire for the maintenance of the independence, sovereignty and territorial integrity of Iran." In view of that declaration it is certainly strange that Russian troops have prevented the Iranian Government, anxious to put down a rebellion, from moving troops through territory under its sovereignty.

Allowing a face-saving loophole of escape for the Soviet regime, the State Department note suggests the possibility that the obstacles in the way of the free movement of Iranian forces may have been put there by local Soviet commanders acting without authorization from Moscow or even in contravention of the latter's orders. Since Soviet agents are not usually given to acting very much on their own, this thesis is questionable. Nonetheless it offers the Soviet government a way out of what may prove a dangerous dilemma—if it really wants to find a way out.

Actually the American note goes even further. It suggests the withdrawal of all foreign troops from Iran by January 1, 1946. In view of the fact that the war has long since ended, this suggestion is very decidedly in order. Certainly the continued maintenance on Iranian soil of foreign contingents, when the reason for their presence there has altogether disappeared, can only lead to the suspicion that those troops are there for reasons that are at variance with repeated professions made by the great powers. As the American note pointedly suggests, in dealing with a country such as Iran, the great powers are under obligations "to follow a line of action which will make it clear that the trust of these nations in the permanent members of the Security Council has not been misplaced."

## Not Unduly Exacting in Korea—Part I

EXTENSION OF REMARKS

OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mrs. LUCE. Mr. Speaker, the present situation in Korea is a significant example of the postwar policy of the United States which has been described by our Secretary of State, Mr. Byrnes, as "not unduly exacting" in our dealings with the Soviet Government.

Korea was the second victim of Japanese imperialist strategy and for the past half century has been exploited by Japanese methods and occupied by Japanese troops and colonists. At the Yalta Conference it was agreed by Messrs. Roosevelt, Churchill, and Stalin that, after the defeat of Japan, Korea would be restored to its national integrity, and eventually to its independent sovereignty.

Allied occupation of northern Korea was achieved first by Soviet troops in the 3-week war between the Soviet Union and the Japanese. As described in a letter from a Korean:

About the time when American arms and blood compelled Japan to surrender, Russia was permitted to rush into Korea. Some thirty thousand Communists were turned loose to preach their ideology. The Korean people, however, are sincerely eager to establish a democratic form of government modeled after America's. Southern Korea now is occupied by the United States Army while the northern half is in Russian hands.

This shortsighted arbitrary arrangement, no matter how short-lived it may be, is bound to wreak havoc on national unity, spiritual and social tranquillity. This deliberate and arbitrary division of Korea is an evil thing. If there is to be peace in the Far East, and therefore in the world, the whole of homogenous Korea must become a bulwark of Christian democracy, not an arena of ideological collisions. * * * It is to the great powers' own interests that Korea, whole and unmolested, become her own master, free and independent.

The importance attached to a rapid and satisfactory solution of the Korean demand by our friends and allies throughout Asia is shown in the following statement of Chinese Generalissimo Chiang Kai-shek, as reported by United Press from Chungking, November 4, 1945:

CHIANG ASSERTS KOREA IS KEY TO EAST ASIA PEACE—CALLS INDEPENDENCE VITAL TO WORLD; PROVISIONAL REGIME OFF FOR CAPITAL

CHUNGKING, November 4.—Generalissimo Chiang Kai-shek said today that peace for East Asia and the world hinged upon speedy achievement of independence for Korea. He promised China would consult with Russia, the United States and Great Britain on self-government for Korea, which was ruled by the Japanese for 35 years.

Chiang delivered an address to about 200 Korean Nationalist leaders and members of the Kuomintang (Chinese Nationalist Party) central executive committee on the eve of the departure for Seoul, Korean capital, of the "provisional Korean government" which has maintained headquarters at Chungking for 8 years.

MUST AID IN OCCUPATION

All groups in Korea must cooperate fully with the American and Soviet occupation troops, Chiang said, pending a time when a decision can be reached regarding independence. He announced that the "fixed policy" of the Chinese Government was to aid in such an achievement. Chiang was emphatic in warning that all East Asia was watching the fate of Korea.

"Korea's failure to achieve independence, freedom, and equality would be equal to China's failure to achieve independence, freedom, and equality," Chiang said. "If Korea is not independent, not only China's independence cannot be complete, but the peace of East Asia and the world cannot be secure.

"For the sake of peace * * * and the freedom of all East Asiatic peoples, we must first achieve independence and freedom in Korea. This is the Kuomintang's only principle toward Korea."

He called for Korea to unite under the leadership of Kim Koo, the president of the provisional government.

Koo, Foreign Minister Josowang, and Minister of Information David Um will leave by plane with about 30 other Korean Nationalist leaders tomorrow for Shanghai. From there they will be taken in American transport planes to Seoul.

WON'T TOLERATE PARTITION

Koo told newspapermen here today that he and his associates could not tolerate any partition of Korea. Apparently he referred to the present division of the country into two zones, one occupied by American and the other by Soviet forces.

Koo said he hoped to strengthen Korea's friendship with the United States and Britain and with China and Russia, whose borders adjoin Korea. He pledged establishment of a democratic government through a popular election.

[Dispatches from Seoul said that the military government was giving support to the Korean Democratic Party, which is composed of conservative, land-owning elements. Dr. Syngman Rhee, Nationalist leader, went to Seoul from Washington to head that party.]

Under the present arrangement of complete separation of the two zones in Korea, the majority of the population is in the American area, and the chief production of food, fuel, and raw materials in the Soviet sphere. To this burden has been added the danger outlined by Mr. Kim, in his letter of November 19, 1945, that some of these badly needed articles will be sent to Japan. This certainly comes under the supervision of our authorities in the Far East, and merits attention:

KOREA SEEKS RESTITUTION—HEAD OF INSTITUTE HERE WANTS JAPAN TO RETURN STOLEN TREASURE

To the EDITOR OF THE NEW YORK TIMES:

According to a press report from Tokyo, the Japanese Government has formally requested the Allies to permit Japan to import foodstuffs and raw materials, including grains, cotton, coal, iron ore, and nonferrous ore from Korea.

If the Allied Powers permit Japan to import the above items from Korea, Korea will be put under Japanese economic bondage. During the Japanese enslavement, more than 40 percent of the Korean grain crops was taken to Japan; consequently Koreans were underfed.

It is about time that the liberated people be given the right to enjoy their own food products. If grains are permitted to be exported to Japan, I am afraid the price of foodstuffs will rise so that the poor people will have a great deal of hardship, even if they do not go hungry again. Korea has insufficient foodstuffs for a proper diet—certainly not enough to be exported at present.

There is no surplus cotton and coal in Korea for export. If they are taken out of Korea, Koreans will again be unclothed and suffer from the lack of fuel for the comfort of the Japanese. Korea needs her mineral ores for her own industrialization.

Furthermore, the Japanese Government proposes to pay for the imports with gold, diamonds, silk and other goods. In other words, the enemy is proposing to pay for his purchases with stolen treasure. The gold and treasure taken from Korea during the last 35 years should be returned to Korea. According to the enemy's own figures, in 1939 alone, 29 tons and 192 kilograms of gold were produced in Korea.

It is well known that during the war the Japanese even went so far as to take practically all the spoons and doorknobs from Korea, and to rob the Korean Red Cross fund of 5,000,000 yen just before the surrender, and yet the enemy is again casting greedy eyes on Korea.

Korea has been exploited by Japan long enough, and an enormous loss of economic wealth has already been sustained which must be recovered.

There should be no commercial arrangement made for Korea with Japan until Japan fully restores to Korea all the gold, treasure, funds and other property taken to Japan, and not until all Koreans who were forced to serve Japan are adequately indemnified.

YONGJEUNG KIM,
*President Korean Affairs Institute.*
WASHINGTON, *November 19, 1945.*

On November 21, 1945, Dr. Syngman Rhee, leader of Korean independence efforts since 1919 and long head of the Korean Provisional Government, broadcast from the capital of Korea, Seoul, a warning to the Korean people, which was cabled in translation to the New York Times:

KOREAN RED GROUP ASSAILED BY RHEE—RETURNED LEADER ASSERTS THAT PLAN OF DISORDERS HAS BEEN FOSTERED BY JAPANESE

(By Richard J. H. Johnston)

SEOUL, KOREA, November 21.—In a radio address to the nation here tonight, Dr. Syngman Rhee, former president of the Korean provisional government and returned exile who is here as a private citizen working for the unity of Korean political parties, clarified his position in regard to the Korean Communists.

Dr. Rhee divided the Communists here into two distinct classes. First, he said, are "those who believe in Communist principles and believe that some of the economic principles of communism will be beneficial to our people." The second group, he asserted, are those who "are not interested in the economic development of the country, but are interested in the establishment of a Communist government." The latter, he said, create agitation, which causes dissension and division among the people.

Declaring, "I believe in some of the Communist ideas," Dr. Rhee said that when the Korean government was established and would undertake to set up its economic policies, he would work for the adoption of many of these theories.

ATTACK UPON RADICALS

After paying tribute to those Communists who fought the Japanese and engaged in underground activities as "patriots," Dr. Rhee vigorously attacked radicals supported by the Japanese. The Japanese, he said, had financed such activities and supported their movements throughout the country to excite the people and instigate an antiforeign spirit.

Dr. Rhee charged these radicals with "creating agitation against the provisional government," and said that these forces were inspired by the Japanese, whose secret aim was to cause a misunderstanding between the Americans and the Koreans so that the allied military government would soon leave Korea. Dr. Rhee charged further that Communists in this group were "determined to create misunderstanding between the Soviet Government and Korea with the hope of leading to international complications."

These forces, by threats and coercion, are creating a state of confusion and fear, Dr. Rhee stated.

The only and best way to solve this problem, Dr. Rhee declared, is for all "good and loyal Koreans" to refuse to be influenced by these agitators and to organize loyal societies in the cities and villages.

Behind all the political maneuvers in Korea, there are certain inescapable material facts which will affect the lives both of Koreans, Chinese, and Manchurians for many years to come. These facts are the removal of basic industries, of transportation facilities, and of food reserves. That such removals are taking place is indicated by a series of reports from northern Korea and adjacent areas in Manchuria, of which the following dispatch is typical:

CHARGES AGAINST RUSSIANS

SEOUL, KOREA, November 21.—The Russians are removing industrial machinery and consumer goods from northern Korea and Manchuria into Russia and Outer Mongolia, Koreans reported today.

The President of the Korea Federation in Manchuria, who has just arrived in Seoul from Mukden, reported that the Russians were moving surplus steel rails throughout Manchuria. They removed one complete line of a double-track railway between Mukden and Antung, he said.

The huge Showa steel mills at Anshan have been dismantled and units were shipped to Siberia, he said. Other industrial machinery has been shipped to Outer Mongolia, the Korean executive said.

A Korean from Hamgyong Province in northeast Korea said that the Russian Army was requisitioning its own supplies and sending surpluses to Russia. He said that the Russian Army had ordered 200,000 pairs of shoes, but the Province could supply only 20,000 pairs. The Russian Army ordered 20 tons of sugar, but only 4 were available in the Province. When Koreans protested that this supply would not even be enough for infant feeding through the winter, the Russians agreed to take 2 tons and leave 2 for the Province.

## Rural Industrialization Will Help the South

EXTENSION OF REMARKS
OF
**HON. BROOKS HAYS**
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Richmond Times-Dispatch of November 26, 1945, commenting upon H. R. 4068 and S. 1385. It was written by the distinguished editor Virginius Dabney, and is an excellent statement of the advantages offered by small industries:

FOR THE SOUTH AND NATION

A bill which deserves the support of the Nation, and particularly of the South, is the Bailey-Hays bill which provides for Federal aid in the industrialization of the country's undeveloped areas. It is sometimes termed the "rural industrialization bill," and the characterization is apt.

Sponsored by Senator JOSIAH W. BAILEY, of North Carolina, and Representative BROOKS HAYS, of Arkansas, the bill appropriates $5,000,000 for the general purpose outlined, the money to be spent by the Departments of Commerce, Agriculture, and Labor. It is not designed to injure the highly industrialized sections of the country, but merely to give the areas which have little or no industry now a better balance between industry and agriculture with a view to improving the national economy. As Mr. HAYS said in an address to the House in support of the measure, the only opposition that he could envision would come from "those who believe that the great industrial cities should be bigger, that Detroit ought to grow at the expense of the rural sections."

Such concept seems outmoded. Great concentrations of industry have served useful purposes up to now, but in the atomic age the planners for this country's future doubtless will insist upon a much greater dispersal. The Bailey-Hays bill fits this program perfectly. It would tend to scatter industrial production through the sparsely settled sections of the South and West, and make the United States much less vulnerable to atomic bomb attacks.

Even if it were not for the far-reaching changes brought about by the harnessing of nuclear energy, the desirability of building factories in the rural regions of America is obvious. Such factories afford employment to the people of those regions, something which in a few years will become a dire necessity in the Cotton Belt, owing to the fact that the mechanical cotton picker seems to be introduced on a wide scale.

Such a program also will tend to eliminate the need for the vast subsidies which the Federal Government has been giving to agriculture. Even today, as Mr. HAYS points out, we have a larger number of people in cotton production than can possibly maintain a fair standard of living, and the present artificial price supports cannot be maintained forever.

The fact that every Southern State except Virginia and Florida lost population between 1940 and 1945 considerably beyond the number of its inhabitants in the armed forces signifies that the people of this region had to go elsewhere, or thought they did, in order to find employment. Some Northern States lost heavily, too, including New York, which had a population decline of over 1,000,000 in the 5 years, but the belief is that a larger percentage will return to New York, since industry already is highly diversified there.

The program by which the Federal Government would promote the establishment of industries in the undeveloped regions is elaborately outlined in the Bailey-Hays bill. It includes providing technical assistance to individuals and groups, helping in the vocational training of returning servicemen and others, giving advice to expanding new enterprises, cooperating with public utilities in enlarging facilities, and in every way furthering maximum expansion in private employment and private enterprise.

It is a worthy objective, and one definitely in the national interest.

## General Motors Makes a Whipping Boy of OPA

EXTENSION OF REMARKS
OF
**HON. FRED BRADLEY**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, I regret very much that you found it necessary not to recognize Members for brief speeches this morning because I want to call the Members' attention to a matter which I think is of importance, representing as it does an unfair and unjust accusation against the Office of Price Administration.

My record will show that I consistently voted against the OPA and I presume I have been as critical of its policies and operations as any Member of this body.

However, in the interest of fair play I resent the present effort of the huge General Motors Corp. to make a whipping boy out of the OPA and represent to the public through its vast organization of distributors and dealers that the only reason General Motors is not delivering cars to the hungry buying public today is because OPA will not release their 1946 prices. This is absolutely not true. OPA has leaned over backward to do everything it can to obtain from the General Motors and its various subsidiary companies their cost figures for the 1946 model cars so that these cars can be released. The fact of the matter is OPA has not yet gotten that information and cannot set those ceiling prices because General Motors, itself, is holding up the information and has notified the OPA that they do not want these prices released because they have no cars available for distribution at this time. Everyone knows, of course, that the present strike which has completely tied up General Motors has been threatened for some time and it was, therefore, but logical for General Motors to make every possible effort to get salesroom cars in the hands of their dealers before the strike set in. In order to move these cars off the end of the production line and into the salesrooms, the OPA—at the written request of General Motors—issued what they call an open billing order or an adjustable pricing order by the terms of which these cars could be delivered to the dealers subject to later price adjustment. General Motors, then—or at least one branch of it, the Buick Motor Co.—forced their distributors and their dealers to sign a written agreement that they would not deliver these cars to the buying public until permitted to do so by the factory which, in turn, would be done only after OPA had issued the new prices.

Subsequently, the distributors and dealers have been informing the public that the only reason they could not deliver cars for which they had bona fide orders and which are on the showroom floor was because OPA would not release the 1946 price schedule. In fact, I was personally told that to deliver a car would subject the dealer to a $5,000 fine imposed by the OPA. This is absolutely false information and is an obvious attempt on the part of General Motors to gain public sympathy in their present strike crisis by blaming the cooperative OPA for the failure of dealers to release cars.

It is and has been perfectly legal insofar as OPA is concerned for the dealers to deliver the new cars at the 1942 price schedule with an adjustment downward for the spare tire and tube that is not included with the cars now in the showrooms.

General Motors is, of course, entitled to set its own sales policy anytime it wants, but I regret the statement repeatedly made to me by a local dealer, the sales manager for one of their large distributors and, indeed, the statement made to me only yesterday by the general sales manager of the Buick Motor Co. that not only was it OPA that was holding up the distribution of their cars but the latter individual went still further and told me that the cars would not be released until Congress woke up and forced the OPA to release their 1946 prices.

## President, Vandenberg, Commended for Labor-Management Conference

EXTENSION OF REMARKS
OF
**HON. WALT HORAN**
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. HORAN. Mr. Speaker, one of the finer parts of our American system is that it does provide means to bring people together. All things can be served, solved and saved if men, in the right spirit, will sit down and talk impassionately about their mutual problems.

I am pleased, in this line, to include a resolution recently received from a Pomona grange in the State of Washington:

Whereas this grange views with alarm the growing unrest of labor and the mounting disputes between labor and management, resulting in strikes and walk-outs, which in turn cause inconvenience, hardships, loss of time, and millions of dollars of damage to thousands of innocent people. It is our opinion that an intelligent and enlightened people and Nation such as ours should be able to work out a better way to settle their disputes than by the strike method.

Whereas Senator ARTHUR H. VANDENBERG, on August 2, recommended that labor, man-

agement, and Government leaders meet to negotiate the end of labor strife, and the President did on August 25, instruct his Secretaries of Labor and Commerce to plan such a conference as proposed by the Senator.

Whereas this grange is very much in favor of such a conference and sincerely hopes that such a meeting can work out a solution fair and favorable to all: Therefore, be it

*Resolved by Columbia Grange No. 87*, That we go on record as commending Senator VANDENBERG and President Truman for such a conference; be it further

*Resolved*, That a copy of this resolution be sent to each of our Senators and Representatives with a further recommendation that they set up a permanent tribunal for settlement of disputes between labor and management. Such a law would outlaw strikes and make labor unions responsible if they do. Surely Congress can work out some way to settle these disputes that will be fair to both labor and management and still prevent a minority group from tying up the Nation or a large section of the Nation and causing loss and suffering to millions of citizens as they have in the past.

Passed by West Klickitat Pomona Grange No. 32.

WALTER OMEG, *Master.*
ALICE K. SCHMIDT, *Secretary.*

## The Coffee Situation Is Hot

EXTENSION OF REMARKS
OF
### HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. JENKINS. Mr. Speaker, the coffee situation is still hot; the following letter received by Congressman HALE is directly in point. I will let the letter speak for itself:

Hon. ROBERT HALE,
*House of Representatives,*
*Washington, D. C.*

SIR: After reading the article relative to coffee conditions in yesterday's World-Telegram and today's Journal of Commerce, you are to be commended in bringing to light the chaotic conditions that exist in this commodity.

Inquiries are coming into the New York market from roasters all over, but the importers, agents, and brokers are unable to furnish or fill these inquiries for coffee, simply because they cannot buy it at source. Reason, our ceiling is from 2 to 5 cents below.

Many of these small roasters have been in business anywhere from 35 to 50 years and now they have to close their plants if they do not obtain coffees within the next few weeks. Relief in the form of the removal of all restrictions is the only cure. By that the law of supply and demand will tend to regulate prices and the good coffees will sell at market or competitive prices and the poor coffees will sell at a much lower basis than present, or whatever the traffic will stand.

The coffee trade throughout the entire United States stands ready to put on additional help, but with the possibility of plants closing up on account of not being able to obtain coffees to roast, it will mean that employers will have to let their help go.

How can one pay taxes if he hardly makes a living? How can one purchase bonds or even hold what he has already? Existing conditions deprive one of doing both. Where is that good-neighbor policy?

Nobody wants inferior coffees, neither do you want to drink a cup of poor coffee, but that's what you will have to take if it keeps up.

I sincerely hope that you will, along with your committee, attain some success in bringing about a very much needed change which will help not only the trade but also the consumer and the neighbor in the South Americas. Best of luck to you.

Respectfully yours.

## Radio Address of Hon. Fred Bradley of Michigan

EXTENSION OF REMARKS
OF
### HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I include my weekly radio broadcast over Stations WSOO, Sault Ste. Marie, and WDBC, Escanaba, Mich., and WMAM, Marinette, Wis.:

The House had no legislative program last week which, as usual, meant that many Members returned to their districts, but a surprisingly large number of Members remained in Washington to take care of ever-increasing quantities of correspondence. Also there were several matters of tremendous national interest and importance to which the Members wished to give their personal attention, as a result of which the daily sessions of the House were attended by an unusually large membership.

Possibly the matter of greatest national interest was the hearings conducted by the Special Joint Committee from both Houses to probe into the Pearl Harbor catastrophe. The public has every right to expect, and I believe will eventually learn, much of the truth about the events leading up to the Pearl Harbor disaster; and it is to be hoped that the Nation will benefit from the disclosure of these facts to the end that we may never again suffer such a disgraceful defeat. For that reason it should have been a strictly bipartisan committee from the very start, with equal representation from both parties. The administration, however, refused to see it in this light and with its greater political strength in both Houses forced the establishment of a 10-man committee composed of 6 Democrats and 4 Republicans, equally divided between both Houses of Congress. In the establishment of the procedure, once again the Democrats voted solidly along partisan lines and thereby set up their own method of procedure and for which, if it is later proven unsatisfactory, they must assume the blame.

On the other hand, in my opinion, some of the Republican members of this committee have not in at least one instance kept the interrogation of witnesses on the high plane that such an important investigation demands.

The first witness to be called before the committee was Rear Adm. Thomas Browning Inglis. Admiral Inglis had just been promoted to his present rank and had assumed the position of Chief of Naval Intelligence about a week previous. In the course of a rather vicious cross-examination of the admiral, his veracity was attacked. To this I personally strenuously objected in a speech on the House floor and in which I was ably supported not only by the majority leader, the Honorable JOHN MCCORMACK, of Massachusetts, but also by the dean of our Michigan Republican delegation, the Honorable ROY O. WOODRUFF, of Bay City. The last time I saw Admiral Inglis was at the naval hospital in Bethesda last April. At that time he was a captain who was just completing a 7-month stretch of hospitalization for serious injuries received while he was in command of the cruiser U. S. S. *Birmingham*. I want to give you just a bit of his background up to this event. In 1914, Mr. WOODRUFF appointed young Inglis to the Naval Academy, when he was 16 years old. His father had been the pastor of Mr. WOODRUFF's Presbyterian Church in Bay City. His mother was a school teacher. Following the death of the father, Mrs. Inglis, together with her six children, had moved to a small farm near Cheboygan. Young Tom was not the beneficiary of a high-school education but instead his mother tutored him specifically for the entrance examinations at Annapolis and finally was able to send him to a naval preparatory school for the last 3 months. Out of some 600 boys, who wrote the entrance examinations, Tom stood at the top of the list, and it is noteworthy that he passed the very difficult geography, mathematics, and English entrance examinations with an absolutely perfect mark, which is, of course, practically unheard of. While he was in command of the *Birmingham* in this war, he served with distinction in practically every theater. He was awarded the Bronze Star for their close-in shore bombardment of Saipan in the Marianas. He was awarded the Silver Star when the *Birmingham* served as part of what the Navy called the "bait squadron." In an action off the island of Formosa our new cruisers *Houston* and *Canberra* had been seriously damaged. These ships had been named for our own U. S. S. *Houston* and the Australian cruiser *Canberra* which had been sunk in the early days of the war. The *Birmingham* and other ships got between them and the Japanese at Formosa and tried to bait their fleet to coming out and going into action.

It was a very ticklish spot to be in for the *Birmingham;* but had the Japanese actually come into action, we had a trap waiting for them with a heavy force ready to pounce on them. A little later in another action the aircraft carrier *Princeton* had been severely damaged by the Japs. The order to abandon ship had been given and the *Birmingham* pulled alongside to evacuate her crew and at the same time made a noble effort to put out her fires. The fires had almost been extinguished when another Jap air-raid warning was sounded and the *Birmingham* was told to pull away to protect herself. As soon as the raid was over--with no further damage to the *Princeton*—the *Birmingham* again sought to return to complete here fire-extinguishing job. She had just pulled close enough alongside to get one line over to the *Princeton* when the *Princeton's* aft magazine blew up. About one-half of the *Birmingham's* crew became instant casualties, including her intrepid skipper, Captain Inglis. He received many wounds from flying fragments and a broken arm. He was removed to a hospital ship, but the next day insisted on returning to his own badly damaged craft and personally reassumed command and she was successfully sailed some five thousands of miles back to Pearl Harbor. Because of this heroic action, for which he received the Navy Cross and the Purple Heart, it became necessary for him to undergo further serious painful operations, including the rebreaking and resetting of his arm. It was from this latter siege that I saw him recuperating and talked with him on many occasions at length while I myself was a patient at Bethesda. And so, with a record like that behind him, I felt that it was not only bad taste but certainly extremely poor judgment to attack the personal

integrity and honesty and patriotism and courage of a sterling character such as Rear Admiral Thomas B. Inglis. What I was, and am, most concerned about is the fact that I do not want the impression to go out to the people of the United States that a dignified and extremely important committee of Congress should, in the handling of their witnesses, spread the false belief that those witnesses are not honorable men giving testimony which is the truth, the whole truth, and nothing but the truth insofar as they are capable of so doing in accordance with the oath taken when they are sworn in on the stand. And I want to say right now that I shall continue to voice my criticism of any such unwise procedure in the future, be it on the part of members of my own party or of the administration party.

Admiral Inglis was followed on the stand by Admiral James O. Richardson, who was in command of our fleet from early 1940 until he was removed unceremoniously by the late President Roosevelt early in February 1941 and succeeded by then Rear Admiral Husband E. Kimmel, whom the President jumped some 46 ranks over the heads of his superior officers to this high command, which command he retained, of course, until removed immediately after the Pearl Harbor debacle. Admiral Richardson gave some very interesting testimony, but it must be admitted that much of his testimony was in the nature of corroboration of information and rumors of which many Members of Congress and many members of the press and radio commentators had knowledge. For instance, many of us had long before been told that Admiral Richardson was removed by the President because of his insistence that it was wrong from a naval standpoint to have our fleet bottled up in Pearl Harbor. Admiral Richardson testified that at a luncheon at the White House with President Roosevelt in October 1940 he had insisted that if there were danger of war with the Japanese that the fleet should be put in battle readiness, and that the only place that could be done, and the only place where the fleet could put aboard a full complement of men and officers, was back on the west coast of the United States. To this practical naval strategy Mr. Roosevelt strenuously objected. And it must have come as quite a shock to many of those who repeatedly stated and believed that the President was a very close student of naval affairs and, therefore, somewhat of a naval strategist in his own right, that he should have objected to taking the advice of his own appointed fleet commander, who was basing his recommendations upon some 40 years of practical naval experience. Richardson had pointed out that the fleet was at only 85 percent of its wartime personnel strength and yet the President had ample authority from the Congress to bring it up to full strength. Then he pointed out that in the event a war did come the fleet could not hope to carry on an extended campaign against the Japanese without a train of supply ships and without considerable repair work having been done in advance, and for which the facilities at Pearl Harbor were totally inadequate. The vulnerability of Pearl Harbor to air attack was acknowledged both by the Navy and the Army, yet because of our haste to get equipment into the hands of the British in the Atlantic theater the improvement of protective facilities at Pearl Harbor was allowed to lag and lag.

It is to be remembered that this luncheon conversation took place in October 1940, just about a month before the people of the United States elected Mr. Roosevelt to his unprecedented third term. Not a little of his support in that reelection campaign was based upon his repeated promises to the American people that we were not going to war and his often-repeated statement that, "I tell you, fathers and mothers, again and again and again, that your boys are not going to be sent to fight another war on foreign soil." Yet, Admiral Richardson testified that at that October 1940 luncheon the President told him that there was definite danger of war and that sooner or later the Japanese would make a mistake which would bring us into the war. That to me was an amazing revelation in view of the President's campaign promises. In February 1941, while he was still insisting that our fleet should be returned to the Pacific coast for adequate preparation for possible warfare, Admiral Richardson was most unceremoniously removed. He was denied even the privilege of an audience with the President upon his return to the United States to inquire why he had been so displaced. He was informed merely by the Secretary of the Navy, Colonel Knox, that he was removed because he had offended the President at the October luncheon. The admiral said he had not heard from nor seen the President following that luncheon up to the time of his death.

There is another interesting angle that we can get from Admiral Richardson's testimony. Despite the fact that he had repeatedly insisted the fleet was not ready for war, yet Secretary of the Navy Knox wrote a magazine article shortly before Pearl Harbor, and later made a speech, both to the effect that our fleet would whip the Japs within 2 weeks anytime. As a matter of fact, I recall an interesting statement made to the Members of Congress by one of the bomber pilots, who sought to defend the Philippines at the time when the White House and the Navy were both trying to calm the fears of the American people, and above all to keep away from the American people the truth of the damage at Pearl Harbor. This pilot and his crew had gone out from the Philippines to bomb the Jap fleet. On their way home the radio operator handed the pilot a copy of a broadcast just received from the States quoting Mr. Knox as saying that the war would be over in 2 weeks if our fleet could locate the Japs in that time. Were it not for the radio silence necessary for that plane to maintain at that moment, the pilot suggested that they might inform the Secretary that they had long since located the Jap fleet and thus might shorten the war perceptibly.

Admiral Richardson was followed to the stand by Admiral William D. Leahy, who was present at that October 1940 luncheon, at which time he was serving as the Governor of Puerto Rico. While he did not recall all of the conversation between Admiral Richardson and the President, he did not question Richardson's testimony, which the latter had prepared from copious notes and memoranda which he maintained at all times. Admiral Leahy did say that he had been amazed at Richardson's disclosures that the Navy was not prepared for war and that he, too, felt that it was necessary to return it to the States to get it ready rather than leave it out on a limb at Pearl Harbor.

There is no question but that this committee can, and should be able to, give to the American people the whole truth and nothing but the truth about Pearl Harbor. Surely the American people are entitled to know and they must know. Let the chips fall where they may. None of the preceding reports, each of which has been released from, and as later has been proved, seriously deleted by the White House, have given the American people all the facts to which they are entitled. It is to be hoped that in the uncovering of further testimony the committee will be as thorough and as painstaking as possible and of which there is no doubt as to its capability. The hearings are open to the public and all the facts can, and should be, laid on the table.

## Organization

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech I delivered at the Massachusetts State Convention of the Massachusetts Federation of Post Office Clerks held on Sunday, November 25, 1945, at Haverhill, Mass., under the auspices of Local 540. This convention was well attended and considerable interest was shown by the delegates on matters of vital importance to the post-office employees. Following the business meeting, the banquet of the delegates and friends was held in the auditorium of the Haverhill City Hall and was presided over by Earl E. Ryan, of Haverhill, State chairman of the Massachusetts Federation of Post Office Clerks.

The speech follows:

As one who is on the pay roll of the Government, it is always a pleasure for me to speak to Federal employees. We work for the same boss, and we share many of the same problems.

When I read, the other day, that the President is lucky to have $3,000 left from his $75,000 salary, after paying various taxes and White House expenses, I felt closer to Harry S. Truman than at any time since he assumed the leadership of our Nation. Taxation and the high cost of living make all men kin. By that same token, President Truman is keenly aware of the problems of Federal employees.

In a democracy, where the various agencies of government are constantly exposed to savage criticism, the Congress is glad that there is one strong arm to save the day. That is the Post Office Department, a vital and difficult service which operates with a high morale and on a sound and businesslike basis.

During the past 4 years, quietly and without fanfare, this Department has performed a back-breaking job with a remarkable degree of efficiency. For my part, I do not believe that it has received enough recognition for the great job it has done.

Ask any man or woman among the millions who served in the armed forces what was the most popular line-up for the day and you will discover that mail call ran a close second to mess call. The tremendous number of letters and boxes sent out to our fighting men was the most important factor in the top morale which led to victory. This was your unsung contribution to the war effort. It is high time that it received due credit. For the purposes of the record I personally want to acknowledge my debt to the members of the Department for the prompt and uncomplaining manner in which they handled the vast correspondence of the Congress during these past and trying years. It was a job well and faithfully done.

During the lush years of the war, however, the post office clerks were not sufficiently compensated for the work they did. What wages and working conditions they did enjoy came to them only through organized effort. Theirs has been a long and difficult battle for economic recognition. It is only half won. In the uncertain days ahead, the postal clerks need more than ever to fight for a just ratio between wages and prices. For

this is the only yardstick by which we may measure a living income. That yardstick, showing a sizable margin of wages over prices, can be won only through organization.

The post office clerks have come a long way since 1813, when a yellow fever epidemic reduced New York's postal staff from three to two clerks. A long climb since the days, 100 years ago, when postal clerks came to work in tall beaver hats and usually sported silver-topped canes. Those were the days when the enemies of labor tried to sell the idea that joining a labor union was somehow vulgar. Postal clerks were told that, being gentlemen, it would be undignified for them to associate with sweaty teamsters and lowbrow hodcarriers, even though these despised workers made more money than Uncle Sam's white-collar mail handlers. This type of propaganda failed completely when it was discovered that clerks in foreign countries got more money, because they belonged to labor unions. Postal clerks have had an uphill fight since 1898, when a Chicago postmaster got the bright idea that he would make his postal clerks, who got the unheard of pay of $600 a year, buy uniforms at their own expense, from a firm in which he was interested. There was not any clerk's organization then of any consequence, but organized labor came to their aid and stopped the uniform racket. Technically, postal clerks owed Uncle Sam 24 hours of work a day for 365 days in the year, 366 in leap year, and exactions of killing overtime hours for months on end reduced them to the position of white-collar slaves. As a matter of fact, this technical requirement of work for unlimited hours ended, so far as Classification Act employees are concerned, only when the new pay law was adopted in 1945.

The postal clerks had to fight for their living rights in 1926, 1927, and 1928, which saw the continuation of President Coolidge's unswerving policy of opposing any and all postal legislation even if such remedial legislation would not cost the Government 1 cent. Employees' contributions to the pension fund had built up a huge surplus without the Treasury having to contribute a nickel, yet Coolidge and his close-fisted Secretary of the Treasury were dead set against the smallest liberalization of annuities above the $60 a month maximum. Tax reductions for the rich remained the highest good and the political horizon of the Coolidge administration. The year 1928 marked the end of an era now gone forever. Characteristic of that remote period of American history and characteristic of that administration was his disapproval of some RFD carrier legislation which would have cost the Government $25,000 the first year and $16,000 the second year. It is interesting to speculate what his reaction would have been to social security legislation.

The first economies of the Hoover regime began in the summer of 1930. While his Secretary of Labor, Davis, was constantly pleading with employers not to lengthen hours, cut wages, or discharge any workers, Postmaster General Brown was speeding up postal workers, eliminating thousands of jobs, refusing to fill vacancies and dumping out thousands of "subs" to fend for themselves in an already glutted labor market. It was during this period that Secretary-Treasurer Tom Flaherty of the NFPOC, said in his annual report:

"The pioneers of our movement were not content to leave things as they found them. They were considered radicals because they dared to criticize and protest against existing wrongs. They had an abiding faith in the destiny of our organization and this faith has been fully justified. On this occasion, marking the twenty-fifth anniversary, we can view with satisfaction their monument in its present form—an aggressive, virile, forward-moving organization, one that has fought the fight and kept the faith."

Then, the depression came, gripping the country in blackest fear and despair. At Detroit, 400 "subs" were dismissed in a wholesale "canning fest." Flaherty took a group of Baltimore "subs" to the White House to leave a petition with Mr. Hoover's secretary for some sort of relief for the distressed substitutes. Drastic wage cuts and wholesale discharges pushed with merciless severity to the very limit was the only practical solution that Republican economists could devise for getting out of the economic morass; that and handing out some $36,000,000 a year in subsidies, most of it pure "pork," to air-line and steamship companies. The West African Line received $87,862 for carrying 133 pounds of mail or $660.62 per pound. The wage-slashing drive obviously came entirely from the great captains of industry who in their panic and fear could devise no other solution for a problem for which all their vision and heretofore supposed economic genius had not prepared them. President Hoover signed the so-called economy bill with limited satisfaction. His chief complaint was that the wage cuts he had hoped for were not drastic enough. Even $300-a-year messengers and $25-a-month "subs" had these already pitifully low wages trimmed down still more. Congress had specifically exempted salaries under $1,000 a year from any cuts whatever, but the Republican administration of the Department interpreted otherwise, reaching down even into the pay envelopes of $300-a-year messengers.

Postmaster General Brown, who had been most active in behalf of postal economies, ranging from salvaging used string to wholesale lay-offs of pauper "subs," was revealed as having bought with Government funds a new and unneeded $3,500 Lincoln car because all the other limousines available for his use were too low for his high silk hat. None of the postal economy experts had the courage to suggest to his excellency that he could save the hard-pressed Government $3,500 merely by doffing his silk topper and carrying it in his lap. Political commentators had a field day with Mr. Brown's high silk hat and the resultant publicity and ridicule added gall and wormwood to the bitter last days of Hoover's Postmaster General.

With their backs to the wall, during the depression, the NFPOC had to fight long and bitter battles against wage-reduction legislation. But the summer of 1935 saw the marshaling of forces behind the 40-hour-week bill sponsored by Representative James Mead. Although the estimated cost of the bill was some $22,000,000, Postmaster General James Farley heartily endorsed the bill in contrast to previous administrations which balked at $25,000 expenditures. With ten to twelve millions still out of work, men were beginning to see the simple, elemental logic in the contention of the A. F. of L. that only the reduction of the workweek would create more jobs. Farley wrote Senator McKELLAR: "I am pleased to advise you that at this time there is every indication that the increase in postal revenues will continue, and it is believed that better working conditions for the employees can be provided. I have talked with the President and he believes that, in view of the increase in receipts and the general objectives of giving additional employment, the bill to reduce the hours of labor of postal employees from 44 to 40 per week is sound. It gives me great pleasure, therefore, to advise you of my approval of H. R. 6990. I cannot forget the splendid spirit of cooperation in which the postal employees accepted the reductions in their salaries and the payless furloughs during the period when it was necessary for the Department to observe the strictest economy." On August 14, President Roosevelt signed the bill.

Years of persistent and persuasive Federation effort in behalf of the post office's forgotten men, the subs, was finally rewarded in 1939 when H. R. 5479 narrowly squeezed through the millstones of Congress. President Roosevelt's signature to the measure granted sick leave and vacations to the substitutes, the first break they had received in many years.

The outbreak of war saw the postal clerks faced with the greatest work load in their history. All claims of upward revision in pay were waived as all pitched in to help in the war effort.

With the coming of peace, however, they must be vigilant, realizing that any increases granted to labor in industry must be compensated for by any increase for Government workers. The upward pressure of prices for consumer goods has already sabotaged your incomes. As members of the white-collar class, who have not enjoyed the huge wartime earnings of those in industry, it is up to you, with the same will to win which you have so ably demonstrated in your long, hard, climb from the days when John J. White and Charles Dvorak in Chicago, had the courage to buck big business and Republican reactionaries, to organize the postal clerks as men and women who are worthy of their hire.

Organization has brought you thus far, and it is organization alone that will surely win for you the decent standard of living which you so richly deserve. In this fight I hope that you will call upon me as your friend—to help you in any way that I possibly can.

## Local Consumer Groups Demand Retention of Price and Rent Control

EXTENSION OF REMARKS

OF

## HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from statements presented by local consumer, labor, church, and settlement groups with reference to subsidies, rent, and price control. These statements were offered at a meeting held on November 14 in the House Labor Committee room by the Congressional Committee for the Protection of the Consumer. More than 200 consumer organizations from a dozen major cities were represented. In arranging this meeting which afforded these groups the opportunity to present their views, I was moved by appreciation of the fact that we should, as Members of Congress, secure a first-hand picture of how American families view price and rent controls.

Statement of Colston E. Warne, president of Consumers Union of United States, in introducing the local consumer groups:

The last 10 years have brought the rapid growth of local consumer organizations and of local federations to protect consumers' interests. We have large federated efforts in Chicago, New York, St. Louis, and Cincinnati. We have the Organized Housewives of Syracuse, N. Y. In Boston, Philadelphia, Albany, Cleveland—indeed, in every major urban center—a spontaneous but little-noted development has occurred under the impact of war and rising prices. Consumers are awakening and are becoming a potent influence in our economic life. This growth has been stimulated by the experience afforded by work on price panels and on rationing boards; by the many hours of educational

work which these groups have spent on problems of price control; and, most of all, by the experience of trying to make personal budgets balance through a difficult war period. Today we have the opportunity to have local consumer groups speak for themselves. They will state what they feel the Congress should do about price and rent control.

We shall first hear from a returning veteran, who has a dramatic statement of how the housing problem affects him. His experience could be duplicated in many cities.

Statement of Lt. Erling W. Eng, Hull House, Chicago:

Homecoming without homes for their families is what growing thousands of angry war veterans all over the United States are up against today.

They have long ago overflowed the already crowded nomes of near and distant relatives. They are being driven into the slums.

If the war had continued, many of these men would have died in the service of their country. They have come back, and their country has made no plans to receive them.

The patience of these men is becoming short. Many of them served in units that made the proud claim: "We do the difficult immediately; the impossible takes us a little longer." And their successes over insuperable obstacles tested the truth of their assertion. These men want to know why the unprepared America to which they have come home does not feel that way about making housing available for the families of the men who lived in tents and in the ground for years in other countries.

The GI bill of rights has turned out to be a mere straw in the rising gale of the exserviceman's and his family's griefs. Three hundred dollars and a reverent pat on the back is not taking care of the veteran's return to civilian life.

After he has been driven back into the slums (if he is "lucky" enough to find a place there) he wants to know why there is a still further move to deny his family milk and bread and clothing. He does not understand why OPA price controls should be jeopardized. Because he also knows that present plans under way to house veterans will be damaged by resultant soaring prices on building materials.

A chain is as strong as its weakest link; all the essential and interrelated price controls must be maintained to insure the protection that veterans' families are demanding.

The war abroad was won; and now the success achieved by cooperative effort during the war at home must be maintained if we are not to lose the victory that counts—the victory in living.

The veteran, as your representative, used what you held out to him to win the war in foreign countries. Now, if that victory is not to be a hollow one in the homecoming, you, as his representative, must use the support he holds out to you to insure the victory at home.

Statement of Mrs. James R. Wilson, president, Organized Housewives, Syracuse, N. Y.:

"What we need is another good depression to drive these ex-war-workers back into our kitchens." This shocking statement was made by a well-bred young matron at a dinner party in Syracuse last week. And a more shocking fact was that there were nods of agreement around that table. That same young lady sees no sense in continuing rationing or price control.

Yes, there are those who look on a depression with no horror. Perhaps they are very young or quite uninformed or maybe just stupid. Most certainly they are a small minority. However, there are others in Syracuse who are mature in their comprehension, informed on the facts of living costs, and clear in their thinking.

It is this latter group whom I represent here today. They have asked me to tell you that they believe that rationing and ceiling prices on foods and clothing must be maintained in order to control the cost of living and prevent serious inflation. They are concerned about the price increases that have come about just in the past year and urge you to do all in your power to maintain subsidies to farmers and to take any other appropriate action which will help to hold the line on food and clothing prices. They have indicated this on a petition which I have with me.

We housewives know what we are talking about because prices to us are not vague economic statistics; because we are the people whose purchases finance this Nation. * * *

The American Institute of Public Opinion in their news letter dated November 13 indicates that the country as a whole agrees with the Syracuse Housewives. According to the Gallup figures 77 percent of the American public want wages and price ceilings maintained.

Statement of Mildred A. Gutwillig, chairman, New York City Consumer Council:

Today, 60 delegates from the 63 affiliates of the New York City Consumer Council are here in this room. We represent trade unions, settlements, consumer councils, women's groups, churches, and cooperatives, thousands of low- and middle-income consumers. A few of us are professional workers from these organizations, but the vast majority are housewives with husbands and children to feed and clothe on strictly limited incomes. Chester Bowles tells us that from the outbreak of World War II to the end of 1944 living costs rose 28.8 percent. By and large, the wages of the husbands in our groups have not kept pace, and costs are still rising. This is the group that from the beginning of the war has faithfully fought the black market in food with every kind of ingenious device possible, appeared in court against overcharging merchants, served on OPA advisory committees, and trudged from store to store as price-panel assistants. In short, we have done everything within our power to try to uphold rationing and keep prices down. We are a working group. As such, I believe, we have the right to appeal to this body for protection.

Since VJ-day, in spite of the official pronouncement of the Office of War Mobilization and Reconversion that it would hold the line, there has been almost indecent haste in lifting controls. One business interest after another has successfully lobbied for price rises on its particular products. It looks now as if we were about to take a headlong plunge into inflation—a threat as serious as war itself to the living standard of low- and middle-income groups.

I would like to sketch briefly the picture as we see it.

1. We are told that almost all food subsidies will be abolished between now and June 30. These are months in which unemployment is expected to rise from the present two million to a high of six to eight million. On top of unemployment, the low-income family is expected to take out of its own pocket the following amounts which the subsidy previously covered:

Five to six cents a pound on butter (this has already occurred), 1.3 cents a quart on milk, 4.8 cents a pound on cheese, 8.8 cents on 10 pounds of flour, 2.6 cents on a No. 2 can of grapefruit juice, 4.2 cents a pound on prunes, 4.4 cents a pound on pork.

These are only a few staples in ordinary demand and the item of food constitutes 40 percent of total living costs. Therefore we want you ladies and gentlemen to introduce a bill requiring the continuation of subsidies until prices of other items of food have decreased to such an extent as to absorb those increases. At the moment there is no indication that this is happening with the lonely exception of potatoes.

2. Shortages in building materials are delaying the construction of urgently needed new low-cost housing. New York is suffering from the greatest lack of apartments in its history. Our boys did not endure the fox holes of Anzio in order to double up with their new families in congested tenements and overcrowded dwellings. We need new housing but along with it, we need price ceilings on old and new houses to avoid a speculative orgy at the expense of a million and a half GI's as well as the rest of the population. Rent control is a must for New York City.

3. Low priced clothing has been promised but not produced. It literally does not exist on the New York market, the garment center for the whole United States. We want inexpensive yard goods channeled to manufacturers of cheap clothing, preticketed with the price to the consumer. Clothing represents 13 percent of living costs and from May 1943 to December 1944, its cost rose 11.6 percent, the greatest single factor in jumping the cost of living.

* * * * *

In this brief statement I have emphasized food, shelter, and clothing because these constitute 70 percent of the cost of living index and because the low income budget in general does not stretch much beyond these. We have fought the good fight to help keep the economy stable all during the war years but we cannot proceed without congressional action for stabilization and against inflation. The Second War Powers Act which expires on December 31, 1945, must be renewed without crippling amendments. We talked with Mr. Snyder last week on all of these points and his answer was, "It's up to Congress." That's why we are here today so that you may know how deeply we, from your home communities, feel.

Statement of Mrs. Iris Brown, New York Auxiliary of the National Maritime Union:

We cannot afford increases in food costs. We urge that food subsidies be retained in order to keep prices down. We also urge that price control be maintained until all threat of inflation disappears. * * *

We urge increased production of low priced clothing of improved qualities. * * *

We urge that all rent ceilings be continued, and that ceilings be placed on all new houses as they become available for occupancy.

Statement of Mrs. Dorothy Silvergleit of the Women's Auxiliary of the National Federation of Post Office Clerks, Local 251, Brooklyn, N. Y.:

Government workers are in a singularly unfortunate position during a period of inflation. Their salaries are fixed by Congressional act, and cannot be raised without further recourse to Congress and the President. * * *

Certain subsidies on food, cattle, and farm products were granted by Congress, after much wrangling. Their purpose was to keep prices on certain products at an even level, in order to enable consumers to maintain as much as possible their standards of living. It was necessary for the common man to exert considerable pressure on Congress to overcome the propaganda of a few selfish, self-seeking interests.

These subsidies have proven very effective. Staple foods, essential in the everyday life of the consumer, have been made available at reasonable prices. This has been of particular importance to Government and fixed income workers.

If subsidies were canceled at this time, with mass unemployment impending, the effect would be disastrous. With the war

over our worst enemy at this time would be runaway inflation. This must not happen.

Statement of Mary Goldstein of Madison House, New York City:

I am here to speak for the wives of postal clerks. We have suffered a big cut in take-home pay since the first of October. In my case this cut amounts to over $60 per month. We have never lived high and this cut comes right out of our food, clothing and other necessities. * * *

With inflation on, we find it impossible to get along. We will have to go to work in order to make ends meet, and that will mean that we will take jobs which could be filled by our home-coming GI's. * * *

We feel that we work for the Government and that the Government ought to set standards for its employees. We want to be proud to work for the Government, but it's hard to be proud when you can't get what you need for rent, clothing, or food. We are entitled to live like human beings.

We ask that the Government look into the matter and make adjustments. We are sure that if the Government does this, they will know we are speaking the truth, and we are sure they will do the right thing.

Statement of Ruth Kuperstein, United Housewives, Bronx, N. Y.:

The housewives in my community want, first, over-all continued rent control. The lifting of rent ceilings offers the greatest inflationary threat to our economy. Second, they want an adequate housing program. Third, they want ceilings on building materials so that their sons can buy the homes they waited so long for. They want continued price control that will make for a stable, secure economy.

Statement of Ethel Lax, United Women's Committee of Parkchester, Bronx, N. Y.:

If subsidies are removed on staples, as has been the case on butter, food prices will necessarily rise. In conjunction with the possibility of increased rentals and prices on clothing, the cost of living will far exceed our husbands' salaries. This is not the time to cancel food subsidies. When our country is back to normal peacetime production and buying, when all war industry is reconverted, when our men in service and our war workers are back in peacetime jobs and earning a living wage, that will be the time to cancel food subsidies.

Statement of Sylvia Tuck, of the Bronx Consumers Coordinating Council:

I am speaking for the housewives of the Bronx, and as a serviceman's wife. On $80 a month it is difficult to manage with prices soaring in all fields. Adults can get along without some things, but our children must have clothing, food, medication, and a home.

Chester Bowles asked for ceiling prices on new houses to guard against inflation, but Reconversion Director Snyder gave builders the go-ahead signal, control free, which will not alleviate the problem for us.

* * * * *

Lifting rent control is not only our problem but lies heavily upon the shoulders of our lawmakers, whose duty it is to prevent chaos, inflation, and then a depression with bread lines.

Statement of Alice Shapiro, Joan of Arc Council for Community Activity, New York City:

During the war our organization did much for the people in our block—and in many other blocks. The people in our block know us and we know them.

* * * * *

We enacted laws, reorganized industries, built communities overnight to turn out the death-dealing weapons our boys used on the enemy. The boys are back now, but on our block they are taking a licking because the "boys" on the Hill are selling them short. "Full rations in war—empty promises in peace."

The people on our block don't like it. They want action. They want it now. Food and clothing at prices they can pay; houses and enough of them at rents they can afford.

We gave them all they needed when they faced death. Mr. Congressman, what are you doing to help them face life?

Statement of Rose G. Goldberg, president of the Franklin Consumer Council, Brooklyn, N. Y.:

In our community the rent problem will become acute if ceilings are lifted.

* * * * *

Food prices have continued to rise until they are out of all proportion to income. With the proposed removal of subsidies it will become impossible for the average wage earner to feed his family adequately. * * *

In our community, where most wage earners are white-collar workers or engaged in manufacturing trades, women have been forced to go to work, to the neglect of their homes and children in order to balance the family budget. We urge the continuance of subsidies and price and rent controls to alleviate these conditions.

Statement of Ann Singer, of the United Club of the American Labor Party, Brooklyn, N. Y.:

Our membership consists of the lower- and middle-class income group—the shopkeeper, the white-collar worker, and the weekly wage earner. Although we are a part of one of the largest cities in the world, we find it well-nigh impossible to obtain low-priced clothing of reasonable wearing strength for the members of our family. * * *

We respectfully petition your aid in obtaining for us durable low-cost clothing that will not receive a disproportionate share of our income.

Statement of Sadie Cohen, of the Grant Street Settlement, New York City:

We need price control now, more than ever. We can hardly make ends meet, and if prices go up even more, it will be impossible to feed and clothe our families.

* * * * *

We in our community appeal to you to do everything in your power to maintain price ceilings and enforce them. If you don't, the people of the East Side and other communities in America will suffer untold hardship in the coming months and years.

Statement of Erna V. Rose, of the Midwood Consumer Council, Brooklyn, N. Y.:

The Midwood Consumer Council represents a community of at least 17,000 families. We urge that your committee enforce a law placing ceilings on low-priced clothing and stimulating production of these items so desperately needed. * * *

We also strongly urge immediate action to maintain present ceilings on rents and resale prices of present housing, and of building costs on new housing. If such action is not taken, the resulting situation in New York, for example, will be indescribable. * * *

We protest the removal of the subsidy on food items. This causes a substantial increase in our food budget and all these tendencies together are plunging us into immediate inflation, which, as you all know, means suffering for the average citizen.

Statement of Mrs. Fay Winston, Midwood American Labor Party, Brooklyn, N. Y.:

In consideration of the fact that the take-home pay of workers has decreased so much, it is imperative that the cost of living should not increase.

Since all economists are agreed that inflation is the greatest evil confronting us, it is imperative that any attempt to create an inflationary current must be stifled. Therefore, I urge that you bend every effort to continue subsidies and help maintain the American standard of living.

Statement of L. Shirley Tark, Independent Voters of Illinois:

We have waged the world's most costly and devastating war with a fair measure of control of prices. The cost of living has gone up decisively, but not a fraction of the extent it would have reached without these controls. Since VJ-day controls have been released on various items and in many instances prices spiraled upward at once. Agitation to remove all controls is definitely inimical to the best interests of our country, and will, if successful, benefit only speculators—a small section of the American public in the form of some businessmen—lead to a boom and speculative orgy, and wind up with a bust. Price control must be retained especially on those items that affect the cost of living to a large extent. It must be maintained over items such as bread, milk and rent, until the supply of bread and milk and housing is balanced by the demand for these items.

If control of these items is not maintained, our average American will find his living costs tremendously increased, will find too much of his income expended to buy these essentials, and find he is left with too little purchasing power for other necessities and luxuries, resulting in reduced consumption of these other items. Instead of a period of healthy prosperity, we will head into a period of inflation with its accompanying sufferings for the masses, and finally conclude in lay-offs, shut-downs, curtailed production, and depression.

Statement of Mrs. Leonard Fuchs, Erika Mann Chapter of the WIVES, Inc., Chicago, Ill.:

The Erika Mann Chapter of the WIVES, Inc., affiliated with the national WIVES, an organization of servicemen's wives, wishes to go on record as strongly opposed to any weakening of the OPA price ceilings. * * *

We must be helped to begin life again with courage and faith in our Government's interest in the ordinary people and we can be helped in this faith by the retention of OPA and price ceilings on the things without which life could not be sustained.

Mrs. Hayes Swanson, of the Chicago Federation of Consumers, said:

We urge renewal of the Second War Powers Act, to continue as long as necessary, the power to ration scarce commodities and further urge that there be no amendments to the Price Control Act which would take from OPA the power to compel absorption of increases at either manufacturer or retail levels.

We also favor the retention and extension of rent controls and the placing of ceilings on prices of houses—old and new.

It is our opinion that the whole price control and rationing structure must be maintained intact so long as goods remain in short supply if we are to dispel the specter of inflation which haunts us.

Statement by Glenford W. Lawrence, representing the Chicago settlements and neighborhood houses:

Having worked at a settlement house for 27 years among the low income groups I have some convictions on the need for holding the line on prices, especially on essential foods.

* * * * *

During the unemployment era I have seen a mother of nine children try to feed them 1 week on a single dollar—stale bread and onion soup was the diet. * * *

The great mass of these foreign-born mothers are not articulate in English and do not speak for themselves, but they give birth to large families of children, many of whom survived for the ranks of our armed forces and of our war workers. There were far too many IV-F's and later medical discharges traceable to malnutrition. If anyone needs proof of the connection between nutrition and food prices in our settlement house communities, I should like to take him into our neighborhood groceries under OPA controlled prices to see the people buying milk, eggs, and vegetables. Now with lay-offs and fear of vast unemployment growing daily among our neighbors, I shudder to think of any rise in prices. The dark days of 1930–32 are too vivid.

I cannot make too strong my plea for subsidies and whatever else is necessary to hold the line on prices—or even push them back if possible.

Statement of Mrs. Dennis E. Jackson, Consumer Conference of Greater Cincinnati:

The Consumer Conference of Greater Cincinnati has 56 affiliated clubs representing a membership of many thousands of homes. We reach members not only around Cincinnati but in many States through monthly meetings, a monthly newspaper and weekly radio programs.

Yesterday we saw an example of special interest group pressure—the auto dealers hearing. We hope Congress remembers that there are hundreds of consumers to every dealer with a few cars, consumers whose interests must be protected.

Inflation is now well under way. Many of the controls necessary to combat inflation will expire December 31 if Congress does not extend the Second War Powers Act. Since there are 212,000,000,000 of money to spend and only 101,000,000,000 worth of goods and services available the results following World War I will be a drop in the bucket to what will happen now if action is not taken to allocate services and materials to relieve the housing, clothing and food situations.

* * * * *

The Consumer Conference of Greater Cincinnati believes that the Second War Powers Act must be extended. We believe that OPA must be continued with adequate appropriations.

We should like to leave with the Congressmen this thought: Business has its Department of Commerce; labor its Department of Labor; the farmers, their Department of Agriculture; why not a department of the consumer in the Government?

Statement of Mrs. John E. Burk, Representative of the Consumers League of Miami, Fla.:

The Consumers League of Miami, Fla., earnestly urges Congress to retain all curbs on inflation—subsidies, rationing, ceiling prices on food, clothing, and housing—both rental and sale properties. We believe we are representative of thinking women everywhere in the United States who would prefer the minor irritations of such curbs to the major disaster of runaway inflation.

We believe this is the only practical way to insure a peace-time economy which would not only give our own people a decent standard of living but would also permit us to give generous aid to less fortunate countries in achieving freedom from want.

Telegram from Harold B. Feinmark, Secretary-Treasurer, Connecticut Federation of Labor:

Connecticut Federation of Labor warmly endorses plan for retention of milk subsidy by Government. In view of drastic cuts in workers' take-home pay, this is no time to raise prices of a necessity such as milk.

## Treatment of Political Refugees in Sweden

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

LITHUANIAN AMERICAN
INFORMATION CENTER,
*New York, N. Y., November 23, 1945.*

The Honorable DANIEL FLOOD,
*Congressman from Pennsylvania,*
*Washington, D. C.*

DEAR CONGRESSMAN FLOOD: Enclosed herewith are the latest radiogram from Sweden, and our prepared "Pro Memoria" which states the entire case quite clearly.

We have been asked if these prisoners know that they are to be turned over to the Russians, a radiogram from Sweden informed a member of one of our committees that they have been informed and that they have gone on a hunger strike.

Mere words fail to express our appreciation for your efforts and your help in this crisis.

Respectfully yours,

MARY M. KIZIS,
*Secretary.*

---

NEW YORK, *November 22, 1935.*

In the morning on November 20 the Government decided not to revise its decision concerning the delivery of 157 Baltic soldiers, including 9 Lithuanians among them, to the Soviets.

On the same day the bishops of Sweden and delegates of the entire Evangelical Church intervened with the foreign office in behalf of the internees. In the lower and upper chambers of the Riksdag (Parliament) the Conservatives and Liberals presented an interpellation.

The official organ of the Social Democrats finds no basis for making a distinction between the interned Germans and the Balts. However, all other press with the exception of the Communists is demanding that the interned Balts be treated as political refugees, and attacks the Government for its intention to surrender the Balts secretly. Regardless of the pressure of the public opinion, the Government does not intend to revise its decision.

A Soviet ship is on her way to pick up the internees. Their transfer may take place within a week. Please take urgent steps to save the Lithuanians; inform (Minister) Zadeikis and Lithuanian Relief.

IGNAS J. SCHEYNIUS.
VLADAS ZILINSKAS.

---

PRO MEMORIA—TREATMENT OF POLITICAL REFUGEES IN SWEDEN

This office is in receipt of the following radiogram from Stockholm, Sweden, dated November 16:

"Grafstroem, chief of the political division of the Swedish Foreign Office, informed us in the name of the Government, that members of the Lithuanian Battalion, who had been forcibly dispatched by the Germans to the Eastern Front and who after the capitulation of Kurland (in Latvia), fled to Sweden, would soon be surrendered to the Russians.

"Their names are Major Ambraziunas; Captain Langis; Dr. Zenkevicius; First Lieutenants Jancys, Plevokas; Second Lieutenants Lengvelis, Vosylius, noncommissioned officers Ingelevicius, Dranseika.

"Our arguments, that the Germans had, in violation of international law, placed them forcibly at the front; that, in view of the position of the Baltic States vis a vis the Soviet Union, they should be treated as political refugees; and that their surrender would be tantamount to certain death—were answered as invalid. We were told that the deciding factor is the fact that they had taken part on the German side.

"The Swedes have already promised to surrender them to the Russians who will claim them shortly. The Swedes say that they had approached London to accept these Baltic soldiers at Luebeck in the British zone, but that the British refused.

"Please do everything with a view that the U. S. A. Government accept these nine Lithuanians into the American zone in Germany. Please save the lives of innocent Lithuanians, and inform Lithuanian Relief and (Minister) Zadeikis.

"Scheynius and Zilinskas."

November 20, the New York Times and other papers carried the following dispatch:

"SWEDEN YIELDS BALTIC FUGITIVES

"STOCKHOLM, SWEDEN, November 19.—Sweden has decided to accede to a Russian demand for the extradition of approximately 157 Baltic refugees who served in the German Army and escaped to Sweden immediately after the end of the war, it was disclosed tonight. A Russian vessel is already reported to be en route to Sweden to pick up the men and is expected to arrive within 10 days."

Obviously, these two items refer to the same subject. The nine Lithuanians listed in the radiogram from Sweden are included in the number of 157 Baltic refugees. Additional information received from Sweden points out that the Soviet demand for extradition of these unfortunate victims of German lawlessness and German-Russian partnership in aggression in 1939, is based on the following reasoning:

(A) They had fought on the German side as members of the Wehrmacht;

(B) They are "Soviet citizens" inasmuch as Lithuania, Latvia, and Estonia are claimed to be "constituent parts of the USSR" and, consequently, qualification of "prisoners of war" is not applicable to them. From the Soviet point of view, these men are "traitors to their own country, the USSR."

To what extent the Swedish Government accepted this Russian argumentation, this office is not in a position to know. But, it is known that—

(a) The Swedish Government tacitly recognized the attempted Russian absorption of the Baltic States in the Soviet Union;

(b) One hundred and fifty-seven Balts are under the threat of imminent delivery into the military-political police arm of the Soviet Union, the NKVD;

(c) Sweden is making exception only to civilian Baltic refugees.

Our point of view is that—

1. Some Baltic people had been forcibly inducted into the Wehrmacht formations or in the so-called SS legions following manhunts and forcible seizures in violation of international law governing the rights and conduct of a military occupant. German lawlessness went to the extent of threatening and imprisoning members of the families of the men in hiding.

2. Forcibly inducted Baltic youths, members of the Wehrmacht and/or SS legions, used the very first opportunity to desert or to surrender.

3. They consider themselves citizens of the independent republics of Lithuania, Latvia, and Estonia, and claim the right of asylum on the soil of neutral Sweden as full-fledged political refugees.

4. No criminal charges are made against these Baltic refugees; they are simply unfortunate victims of Russo-German aggression.

5. Sweden is a neutral country, under no obligation to the Soviet Union to extradite victims of aggression who have done nothing against Sweden and against whom no criminal charges are pending.

This point of view was expressed is the following cablegram dispatched to Swedish Foreign Minister, the Honorable Oesten Unden, on November 20:

"News of Swedish acceptance of Russian demand for surrender of 157 Baltic political refugees, previously forcibly inducted in German armed forces in violation of international law, caused greatest concern among American believers in God-given rights of man.

"Nearly 1,000,000 Americans of Lithuanian descent refuse to believe that democratic Sweden, of immaculate traditions of human liberty, would deliberately deliver innocent victims of Nazi lawlessness to certain death at hands of Russians, former partners of Hitler.

"We appeal through Your Excellency to Swedish Government to reconsider death sentences inadvertently imposed on Baltic victims of German-Russian aggression and to grant them asylum on Swedish soil. Please save these victims, including nine Lithuanians, in upholding ancient Swedish tradition of humanitarianism so greatly admired in America.

"LITHUANIAN-AMERICAN COUNCIL,
"LEONARD SIMUTIS, *President*,
"PIUS GRIGAITIS, *Secretary*,
"MICHAEL VAIDYLA, *Treasurer*."

Some Lithuanians, Latvians, Estonians, Czechs, Slovacks, Poles, Belgians, etc., were taken prisoners in German garb or surrendered themselves to the western Allies whenever the opportunity presented itself. Some were brought to prisoner of war camps in this country. In no instance were they considered traitors to their own country, except in a few individual cases of men with Fascist tendencies which were brought out after a thorough examination of their background. The Allied authorities are fully aware of the fact of forcible induction and the element of duress. It is a fact that some Lithuanians, forcibly inducted in the Germany army, were recently released in Germany as displaced persons and are cared for in displaced persons assembly centers.

Analyzing the status of Baltic refugees, the New York Times gave the following conclusion in an editorial October 20, 1945:

"But the vast majority of these people are refugees who opposed both Germany and Russia in the name of the independence of their countries, which the United States still recognizes. Germany is powerless to harm them, but Russia, having annexed their countries, considers them to be at the very least oppositionists to the Communist Party line and perhaps even traitors; and the fate which awaits them on repatriation can be easily imagined. The American and British Governments have given assurance that no one will be compelled to return to the Russian zone against his will, and it is to be hoped that this pledge will be kept."

On humanitarian grounds, appeals were dispatched to His Holiness, Pope Pius XII, His Majesty Gustav V King of Sweden, presiding officers of both chambers of the Swedish Riksdag, leading Swedish dailies.

LITHUANIAN AMERICAN COUNCIL, INC.

## The Army and Navy Should Clarify and Equalize Their Demobilization Programs

---

REMARKS
OF
## HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. MUNDT. Mr. Speaker, like most of you, I am one of those Members of Congress who throughout the war refrained from voicing criticisms against the heads of our War and Navy Departments. Even when mistakes seemed obvious I did not desire by any criticism of mine to detract a moment's time from the all-important job of winning the war.

Now that the war is over, Mr. Speaker, I am greatly disturbed, however, by the vast amount of correspondence reaching me from service men and women in all parts of the world, and from the parents of service people calling attention to the fact that their son or daughter has sufficient points to be discharged but still they are being retained in the service. Some of these letters have come from men who are close friends of mine and whose accuracy cannot be questioned.

Certainly, sir, where there is so much smoke there must be some fire and in my opinion the Army and Navy without any further delay should clarify and equalize their demobilization programs so that equity and alacrity may displace the present situation which can best be characterized by such terms as confusion, contradition, procrastination, and perpetual uncertainty of plan and purpose.

I have been in contact with both the War Department and the Navy Department urging that in the matter of demobilization first things be placed first and that an over-all policy be formulated and proclaimed which will be fair to all and understood by all. Instead, we continue to receive notices of piecemeal changes in the point system or the demobilization program while reports flow in both from abroad and from within this country to the effect that manpower is being hoarded in uniform and in area after area we hear of servicemen being kept idle while their officers—of whom, incidentally, there appear to be far more than necessary—are unable to find constructive services for them to render.

Mr. Speaker, a long time ago Benjamin Franklin warned his associates saying, "Do not waste time for that is the stuff of which life is made." The sands of the hour glass of time are continuing to flow away for the fine young American men and women who served so unselfishly and valorously in our recent war. Precious weeks and months of irreplaceable time are depriving them of opportunity to complete their education, to establish homes, to get started in their business, farming, or professional careers. For those not expecting to make a career of service in the armed forces, sir, it is unconscionable that any reason or excuse save the absolute necessity for their continued service should be advanced for longer delaying the operation of a demobilization program which will promptly release men and women with substantial service records.

That other reasons and excuses for the retention of service people in uniform are being advanced, Mr. Speaker, is demonstrated by the mail reaching the desk of every Representative and Senator. The most cursory reading of the CONGRESSIONAL RECORD for the past few weeks will provide the most skeptical administrative officer of our Army or Navy with abundant testimony.

At this point in the RECORD, I would like to call attention to two letters which I have recently received and to an editorial appearing in the November 16 issue of Gateway, the official publication of the ATC at the Karachi, India, Air Base. Incidentally, the letter transmitting this editorial to me is from a very good friend of mine—a GI Joe whose first name happens to be Joe but whom I shall not more specifically identify. My correspondent tells me in his letter that he personally handled the currency exchanges for the Indian students mentioned in the following editorial and that he talked with the students who were boarding the ship for the United States while homesick GI's stood on the dock to get the bad news that they were being left behind.

He tells me several of these students were bound for the University of California, one to Pittsburgh, one to Wisconsin, one to Michigan, and one or two to Columbia University. But the American boys who fought to make freedom and travel and education possible were being left behind not because they were needed in India where they are stationed in friendly territory and where there are no occupation duties but because their space was being given to foreign students to attend the American universities these GI's had hoped to attend. Here is the editorial from the service paper:

[From the Daily Gateway, official publication at Karachi, India, ATC base, of November 15, 16, 1945]

STANDING SHORT

(By Kenn Pothoven and Hal Walker)

KARACHI, INDIA, November 16.—The *Santa Rosa*, the *Torrens*, the *General Meigs*, the *General McRea*, the *General Richardson*.

These are the names of a few of the ships which have been allocated to the India-Burma theater for the purpose of evacuating American soldiers.

They are precious ships. They are the most precious ships in the world. They are the ships that were allocated to take us home. That is the purpose for which they were sent to India.

But it seems that they—as has been the case with many less-precious commodities—have been wilfully misappropriated.

And the ticket of admission home is higher than the value of American citizenship and the debt owed to victorious soldiers for a victory.

The gratitude of an Army and a Nation to its soldiers is measured in dollars and cents—translated into terms of fare-paying civilians of another land.

Because civilians—Indian students—are returning to America on these ships as paid passengers. They are visiting America to study—at the expense of the home-hungry GI's who thought the ships came for them.

These students are occupying space that belongs to men with no greater claim to

transportation than the fact they are tired, homesick, and eligible for discharge. And they just want to go home.

There have been rumors that these ships were carrying Indian students. Rumors that the American soldier is being deprived of his right to return to that which he temporarily forsook so that he might return and find it safe.

We discounted most of these rumors. The words didn't translate easily into the familiar idiom of loyalty and faith in the leaders appointed over us. Maybe we didn't want to believe these reports. But at least part of them are true. Terribly true.

FIFTY STUDENTS SAIL ON "TORRENS"

The sobering reality of an official passenger list from the S. S. *Torrens* contains the names of 50 Indian students. Traveling troop class.

And 50 American soldiers are being delayed in favor of 50 paid passengers. Fifty Americans have been sold down the river for American dollars.

There have been other rumors. There are reports that 200 students sailed on the *Santa Rosa*, 59 on the *Meigs*, 68 on the *Richardson*, and 37 on the *McRea*.

These reports may not be true. We will accept them as rumors for the time being. But the civilians now on their way to America on the *Torrens* are not rumors. The Karachi Gazette printed the story yesterday, and we have an official passenger list in the files of the Gateway.

It's pretty hard to take. It's going to be even harder to explain.

No doubt they could write it off as cementing international relations. Or they may simply say, "No comment." It is possible that your correspondents will be taken to task.

But whatever they say or do it will not correct what has been done. And the GI's who watched the *Torrens* weigh anchor will have another name for it. They won't call it "cementing our international relations."

They will call it what it is—the best (and rottenest) example of misplaced authority yet recorded—and the dirtiest trick ever played upon the men who deserve it least. The matter will doubtless be investigated.

And while the band plays the second chorus we will listen to the official explanations.

But the guy that's sitting on his barracks bag watching the civilians walk up the gangplank and dreaming of Christmas at home won't be listening.

He will be tuned to the music of a baby's laughter and the Christmas carols on the radio.

STANDING SHORT

And when the noise of truth and sensibility rings louder than the bells 12,000 miles away, he'll look around him. And he won't like what he sees.

Because somebody is standing short! Whoever is responsible for mixing the cement of international relations with tears of wives and sweethearts, at the expense of the men who underwrote our so-called foreign policy—sold these men short!

GI's expected better treatment at the hands of those they served. They are entitled to better treatment.

The man left on the dock probably has at least 2 years away from home. Ample time to reflect upon the dangerous rumors that were said to be spread by enemy spoilers.

He doesn't want to believe those rumors. "Demobilization deliberately being delayed," and "the military are seeking to build an empire," were reputedly the mouthings of popagandists from abroad. But the meter strangely fits the essentially American official reports and no comment communiqucs. And while the military band plays the music GI Joe hums the words.

The 50 civilians who walked up the gangplank of the *Torrens* should have been Jones and Smith and Kowalski and Ferranchini. But they were Lal and Abdul and Mohd and Sundar.

And their ages were from 25 to 45—late in life to start an education.

They were authorized passage by USF, IBT, APO 885. That was on the top of the list of paid passengers. GI's have seen those letters before. They were on the orders to reduce the quotas of men for shipment.

But the trouble didn't start in APO 885. It probably started in Washington, D. C. Where the GI used to think his court of last appeal was always in session—assuring him that while in service his rights were equal and his treatment normal.

GI Joe never completely understood the complicated ramifications of foreign policy and diplomatic intrigue. But he's learning. He's learning fast, because the medicine is stronger and the doses larger. No one will blame the India civilians who seek to improve their education at 45.

They are entitled to all that America can offer, and welcome.

But Joe wants to go home first. He wants to go to school too. He has a lot of reasons that are important to him alone—and therefore important to us all.

He's learned that a good soldier does not question executive procedure. But Joe isn't thinking in terms of a good soldier. Joe never was a soldier. He was a civilian in uniform. A curious civilian who had learned to ask "why" as soon as he could talk.

The phony excuses and ridiculous communiqués from the War Department are wearing a little thin. It's high time the lawmakers of the Nation Joe represented abroad did something about him.

ACTION—NOT EXCUSES

It's high time Congress—

(A) Declared the war ended and stripped the extraordinary powers from those not used to or qualified for it.

(B) Did something about getting American citizens back on American soil.

(C) Stopped the use of American troop ships for such things as hauling Dutch munitions and Chinese nationals.

(D) Stopped sending Indian civilians or any civilians other than American to America on troop ships.

(E) Demobilized the Army and Navy.

In 99 cases out of 100 the American soldier has done his best. He's played the game with his officers and his country and himself. He's complained no more or less than the healthy release of steam dictates, and will fight at the suggestion his isn't the best army and country in the world.

But the GI in India has been sold short. He's confused. He doesn't want to believe what he sees. He's that loyal.

Now, he wants to know the rules of the new game. He wants to know so that he can continue to play the game fairly.

Nobody ever accused Joe of standing short.

Mr. Speaker, the following paragraphs are from a letter received from a GI stationed at the McCook Army Air Base of McCook, Nebr. It tells its own story and it provides additional food for thought for those charged with the responsibility of formulating and administering an equitable program of demobilization which will remember that the GI is a human being with ambitions, aspirations, and amours, and that in peacetime as in time of war his well being and his personal security are factors which wise leadership should not and must not ignore.

At the McCook Air Base, where this is written, there are over 300 officers who have served over 45 months in the Army and who want discharges. Since VJ-day less than 10 percent of the officers have had duties that even approximate a full day's work. The 90 percent are kept idle almost all of the time. They wait for the discharge plan to get around to them. As things stand now, it appears they must wait until March to July of next year because only then will they have the required 4 years, 3 months of service. Yet they are idle as idle can be, sitting around wasting the taxpayers' money. Although the AAF 2 months ago discharged thousands of flying officers who had served 1½ to 2½ years on the ground they were surplus, these nonflying officers, who are equally surplus are forced to remain on "inactive" active duty. When asked about it, Second Air Force Headquarters claims that these men are essential—yet any officer on the base will testify this is not true. Sir, that is an example of how the point system works out. The system is arbitrary, outrageously unfair, and it discriminates against the very men to whom the Army is most indebted, the long-servicemen. If you by some chance feel this is an unrepresentative opinion, then by all means talk to groups of soldiers and to groups of officers at any Army camp now. In the past 3 months the writer has interviewed thousands of GI's and officers alike—they are unanimous and vocal in their opinions: "The point system stinks" and other comments not fit to print. The censure against the present discharge plan is universal. Only a small group, composed largely of men who feel they have a stake in continued service, uphold it.

## Pauper Oath for Veterans

EXTENSION OF REMARKS

OF

### HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. GWYNNE of Iowa. Mr. Speaker, in accordance with permission heretofore granted, I include as part of these remarks an article on the pauper oath for veterans, written by Joseph Leib, service officer and past vice commander of the Vincent B. Costello Post of the American Legion of the District of Columbia, and also an editorial from the National Tribune:

WHEN WILL CONGRESS ACT TO ELIMINATE PAUPER OATH FOR VETERANS?

(By Joseph Leib)

Veterans from coast to coast are now unanimous in their demand that Congress enact legislation outlawing the use of a pauper oath on Veterans' Administration hospitalization questionnaires.

The American Legion last week officially went on record as opposed to this un-American and bureau-inspired regulation. For a year and a half legislation to remove this oath has been pigeonholed in the World War Veterans' Committee. No hearings have been held and no hearings are scheduled.

Why are the six bills (H. R. 599, SPRINGER; H. R. 1923, MORRISON; H. R. 2413, WICKERSHAM; H. R. 2717, SASSCER; H. R. 2587, MARTIN of Massachusetts; H. R. 3332, BARRY) being ignored and allowed to be gathering cobwebs in a musty file case?

This type of humiliation that now exists in our veterans' facilities must be eliminated. No veteran should be required to swear that they are indigent in order to be admitted to a hospital bed.

Many Members of Congress have expressed deep resentment and astonishment when informed of the existence of the pauper's oath. The pauper's oath in form P-10 reads: "Are you financially able to pay the necessary ex-

penses of hospital or domiciliary care—answer yes or no?" Yet there has never been a clear-cut definition of what constitutes ability to pay and the bewildered veteran who applies for help must virtually declare himself a pauper or make a deliberate liar of himself. This requirement exists on the statute books of the Nation. Congress must have passed this law on one of its off days.

The following editorial which will appear in the Stars and Stripes-National Tribune on November 29, 1945, should be read carefully by every Member on Capitol Hill. It says:

"THE PAUPER OATH

"Although we have not yet had made available to us a copy of the resolution, the National Tribune staff representative who covered the American Legion convention in Chicago last week advises that the delegates placed themselves squarely on record in opposition to the use of the 'pauper oath' on applications by veterans for admission to veterans' hospitals. That lines up with the attitude in convention of the other major veterans' organizations. They can now seek unanimously action on one of the many bills pending in the Congress that propose to wipe out the hateful practice of making a disabled veteran state on oath, or on honor, that he cannot afford to pay for hospital treatment.

"From time to time down through the years there have appeared in legislation clauses that would compel veterans to demonstrate 'need' before they could establish title to benefits. The Tribune has always fought those provisions bitterly and in most instances they have been stricken from the laws, but the 'needs clause,' or 'pauper oath,' still remains in some laws and must come out.

"The application of the provision to hospital rights came by authority of the Congress at the request of the Veterans' Administration, and that agency went to town with bold-faced type that either made a pauper or a liar out of every veteran who signed a hospital application blank. Many of our friends among organized veterans enlisted with us in a campaign to overcome the administration attitude. After a prolonged fight in which Legion rehabilitation officials only half-heartedly joined, the hospital form was modified so that it did not apply to the directly service-connected, penalty provisions were placed on the reverse of the form to make them less offensive and 'the word' of other veterans was accepted on the question of ability to pay. Nevertheless, the needs provision still remains in the law, and what should be a veteran's right is still considered to be a privilege handed out or withheld at the pleasure of the Veterans' Administration.

"We are delighted that the Legion convention has again taken affirmative and positive action. We hope that the resolution is so worded that its purpose cannot be nullified by inaction. Legislation is in fact required to discontinue a practice that is offensive to all thinking veterans. Now that everybody thinks alike, and now that the organizations have expressed themselves in convention mandates, let us go to Capitol Hill and quickly seek action."

## American Foreign Policy

REMARKS
OF
**HON. CARL T. CURTIS**
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. CURTIS. Mr. Speaker, on Monday of this week, an attack was made on this floor against Lt. Gen. Albert C. Wedemeyer, commanding general of our forces in China. General Wedemeyer is a fine, loyal, patriotic American, whose record is outstanding. He is a distinguished Nebraskan. General Wedemeyer needs no defense but I rise to ask the question, Who are his accusers, whom do they represent, and from whom do they get the material for their charges? The spearhead of these attacks in the press is the Communist Daily Worker and their uptown echo, PM.

Mr. Speaker, the message of resignation of Gen. Pat Hurley as an Ambassador to China is a sober warning to the American people. The way to peace is a forthright American foreign policy administered by individuals whose loyalty to the United States is beyond reproach.

I call upon the Secretary of State to discharge from the pay roll of the State Department every Communist and near Communist. We have heard considerable about one John Service. This man was arrested by the FBI on charges of turning documents over to Communist agents. His case was dropped and John Service was placed in charge of the Far Eastern Division as a diplomatic officer to General MacArthur.

Mr. Speaker, if the efforts of General MacArthur, General Wedemeyer, and General Marshall, our new Ambassador to China, are going to be successful in maintaining peace, their efforts must not be sabotaged by underlings in the State Department. The Secretary of State owes it to his country and to his President, who is responsible for our foreign policy, to have the Federal Bureau of Investigation thoroughly investigate such men of his Department as John Service, Alger Hiss, Rowena Rommel, Emile Despres, John Carter Vincent, Abraham H. Feller, Benjamin Gerig, and others and make that record public.

The influence of the United States in the diplomatic world should not be on the side of colonial imperialism or on the side of communistic imperialism.

## Favoritism

REMARKS
OF
**HON. DANIEL A. REED**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. REED of New York. Mr. Speaker, I have a profound admiration for Gen. Hanford MacNider, and I appreciate the distinguished service he has rendered his country; but, notwithstanding this, I deplore the favoritism shown in the case of his son's discharge. I have many cases far more meritorious, both as to points and as to heroic service who should have been released. Moreover, I have in the district which I have the honor to represent, numerous lads in the Army and Navy and Air Corps who ought to be in school or college finishing their uncompleted education. Militarism is now in the saddle and riding roughshod over the rights of the civilian population. The favoritism now being practiced by some commanding officers is ruthless and indefensible. On the other hand, there are some commanding officers who are showing the utmost consideration in cases presented to them for the discharge of the men under their command. The tyrannical type of officer, those who are failing to cooperate, are doing a great disservice to the Military Establishment as a whole. I am keeping a record of cases in which the commanding officers have shown a spirit unworthy of their high positions as American officers. There is no reason why a few officers should destroy the confidence of the American servicemen and their parents and relatives in our Government. The Congress has a duty to perform right now lest the cruel and vindictive attitude of certain officers toward their men furnish aid and comfort to the communistic saboteurs now holding key positions in the Government.

Under leave to extend my remarks, I insert an item appearing in the Washington Times-Herald, November 27, 1945, as follows:

FRIENDSHIP PAYS OFF—GENERAL MACNIDER'S SON TO GET MARINE DISCHARGE ON 38 POINTS

CHICAGO, November 26.—Pvt. Jack MacNider, 18, will be discharged from the Marines at the Great Lakes naval training center tomorrow on 38 service points, 12 points less than the Marines' current discharge standard, because of friendship between his father, Brig. Gen. Hanford MacNider, and the marine corps commandant, Lieutenant General Vandegrift. The friendship has extended through two wars.

"Jack and I were together in Tokyo last month and I thought it would be fine if he could come home with me and go back to school to continue his premedical training," said General MacNider over the telephone from his home in Mason City tonight.

"General Vandegrift is an old friend of mine. I got in touch with him and asked if he thought it could be arranged. Jack enlisted on his seventeenth birthday. He has had nearly 2 years' service, including the landing on Iwo Jima."

## Honoring Brig. Gen. Robert F. Travis

EXTENSION OF REMARKS
OF
**HON. GEORGE H. BENDER**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. BENDER. Mr. Speaker, under leave to extend my remarks, I include a letter I asked Brig. Gen. Robert F. Travis to write me, setting forth the manner in which his camp is accomplishing such excellent results in the demobilization program. When he assumed command at the Sioux Falls Army Air Field at Sioux Falls, S. Dak., there were assigned at that station 56,773 officers and men. This was on August 21. On October 20 he had processed many thousands of men and had only 2 days work left before his camp would be "completely out of work" unless the inflow of men increased in the period thereafter. I was so impressed with the efficiency of his demobilization program that I asked if he would not explain its workings so that others

might benefit from his experience. This is his reply to me:

NOVEMBER 7, 1945.

Mr. GEORGE H. BENDER,
*Member of Congress,*
*Washington, D. C.*

DEAR MR. BENDER: In reply to your kind telegram of November 5, 1945, I give you the following facts relative to Sioux Falls Army Air Base.

As you may note from the heading of this letter, my work there was completed on November 2, and I have been replaced by Col. George Blakey as commanding officer of that base. I have returned to my old job of commanding general of the Seventeenth BOTW with headquarters at Sioux City; but to assure the continued smooth operation at Sioux Falls until it becomes inactivated on December 31, that base has been placed under the command of the Seventeenth Wing. This is a bit out of the ordinary as this wing is primarily interested in B-29 training and not separations.

I was too young to have served in the First World War, but I am informed that the difficulties faced by the armed forces in returning to a peacetime status created the same problems and headaches which we are now passing through. I hope from these two experiences we may be able to set up an efficient and permanent method of demobilization which could be used following any future war. I join all American citizens in hoping that no such war ever occurs, but history proves that war will continue as long as mankind and human nature remains what they are and have been for centuries.

What we accomplished at Sioux Falls was not done by any particular clever or radical changes in known healthy American production-line methods. To put it briefly, we set up our processing and separation lines on exactly the same principles and policies as would, say, an automobile manufacturer who wished to establish a smooth-flowing assembly line. There was a group of some 12 large buildings stretching through the center of the post. My idea was to start the men in at one end of these buildings as soldiers and bring them out the other end as civilians. Each function in their separation procedure was arranged logically in the order in which it should be accomplished, and men proceeded through railed-in passageways so that no confusion could possibly exist. Personnel were staggered in their arrival for separation so that the pipe line of men was full at all times, and every expert used in this system was working steadily 7 days a week from early morning until 5 p. m. As soon as these lines were set up properly I watched the flow of men, and wherever bottlenecks occurred the processing personnel were increased at this point to where the flow became normal and steady. Shortages of key personnel, such as finance clerks, typists, consultants, etc., existed on this base and were not procurable elsewhere in the Army Air Forces, as the demand was critical everywhere. After ascertaining their inaccessibility we established our own schools for training these experts and drew from the pool of redeployable personnel (men who were not then eligible for discharge) for students in these schools.

Quite a few of these separatees presented particular problems due to the fact that they had lost their records, required medical attention, were awaiting disciplinary action, or had other reasons for which they could not be separated as smoothly as the average soldier. These men were not put through the regular line, but were sent to other buildings, properly equipped and staffed to solve their particular problems.

As is easily understandable a soldier who knows that he is returning to civilian life is anxious to get his separation over with as soon as possible. Once a man was up for separation we completed converting him to a civilian status in less than 48 hours. However, there was one part of this separation which I felt was extremely important and upon which I put great emphasis.

As a final part of the ceremony I chose, not one of the regular buildings, but the post chapel to tell these men good-by. We made their departure ceremony as impressive as possible, and I had present besides myself a group of the best public speakers available on the base. The ceremony did not take longer than an hour and during this period we attempted to instill in the minds of the departing soldiers the fact that they had entered the armed services as boys and were returning as men with a much wider knowledge of their responsibilities to this great and powerful Nation. It was not my desire to influence them in what opinions they should hold with respect to the Army or politics, but it was my desire to impress them with their duties as American citizens in participating and forming future policies which would guide our Nation to ever increasing greatness as a democratic and liberal country.

Any success which I may have accomplished at Sioux Falls is not attributable to my personal efforts but mostly to the very capable and enthusiastic group of young officers who served with me on my staff.

With kindest regards,

ROBERT F. TRAVIS,
*Brigadier General, United States Army.*

## Ireland

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the reply of John J. Reilly, national president of the American Association for the Recognition of the Irish Republic, to the recent series on Ireland by Mr. Randolph Churchill, which has appeared in the newspapers throughout the country:

Having read his series on Ireland, it is difficult to avoid the conclusion that Mr. Churchill was motivated, in part at least, by the popular desire to disseminate false propaganda about that country. The conclusion is supported by the observation that his articles are interspersed with many items of fact—sufficient to gain the confidence of his readers—a characteristic common to the best propagandists. This, in brief, may explain the over-all yes-no tenor of his series. Among those who are familiar with the subject it is doubtful if Mr. Churchill's profession has benefited by his contribution.

No attempt will be made here to reply to all the misleading statements contained in the articles. Some are too trivial, while others are obviously so involved and technical that they require the efforts of experts.

Surely no one who is familiar with current and recent Irish history—and Mr. Churchill certainly is—would seriously repeat the well-worn canard that Ulster "upholds the union (with England) with abiding fervor." The assertion is entirely correct if Mr. Churchill has in mind the subsidized government at Belfast, which was set up in the first instance without the consent of the people's representatives, either Unionist or Republican. It is a matter of historical record, however, that 2 years prior to the inauguration of that government the people of all Ireland voted, by approximately 80 percent, in favor of a republic. In the area now under the jurisdiction of the Belfast government—the "loyal" north—approximately two-thirds of the electorate voted with the rest of Ireland for that republic. But once in operation, the first duty of the Belfast government was to gerrymander the electoral districts, with the result that the voice of the electorate is silenced; the power of their vote nullified. Mr. Churchill's statement is, perhaps, the greatest calumny perpetrated upon the people of the northern section of Ireland. To persistently accuse a politically intelligent people of favoring such an antidemocratic regime is a cruel demonstration of insult added to injury. It is particularly nauseating in the light of our recent experiences with the Quislings on the continent.

Discussing Ireland and the war, Mr. Churchill blames the English people themselves for the gratuitous surrender of their "rights" to the southern Irish ports. A strange philosophy indeed: that restitution being long delayed, the trespasser acquires the right of ownership. It is a philosophy unknown to the people of Ireland. May Providence decree that it shall never become universally adopted.

Like many others, Mr. Churchill attempts to explain the reasons for Irish neutrality, but he seems to have missed the point. A reference to an address by Mr. de Valera before a special session of the League of Nations on July 2, 1936, should be of help. "Despite our juridical equality here, in matters such as European peace, the small states are powerless," de Valera said. "As I have already said, peace is dependent upon the will of the great states. All the small states can do, if the statesmen of the greater states fail in their duty, is resolutely to determine that they will not become the tools of any great power, and that they will resist with whatever strength they may possess, every attempt to force them into a war against their will." Had the League but followed the advice of de Valera in this and previous talks, the world might well have been spared its most terrifying blood-bath. But the statesmen failed in their duty, and therein lies the answer to Ireland's neutrality.

The history of Anglo-Irish relations, and the postwar fate of the small nations of Europe, particularly that of Poland, do not clarify the reason, in the minds of the Irish people, for Britain's participation in the war. An ostensible reason has been furnished, it is true, but if Mr. Churchill can restate it convincingly, he should prove himself to be a journalist of uncanny ability indeed.

## A Soldier Views Peacetime Military Conscription

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. WHITE. Mr. Speaker, in our democracy, citizens in all walks of life have a say in formulating the policies of our Government. In considering the proposed legislation for peacetime military conscription, the young men who have been called to military service and have gone to the defense of our country with all the sacrifice that service implies should be heard. It is with serious reflection that I submit a letter from a re-

turned veteran, the son of a prominent educator, for the consideration of my colleagues and the people of this country:

MOSCOW, IDAHO, *October 25, 1945.*

Congressman COMPTON I. WHITE,
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN WHITE: It looks very much like our President has been taken in by our country's militarists. By militarists, I mean the high-ranking officers of the Army and Navy who know nothing or very little of civilian life and education. These men have been graduated from the Nation's academies and, naturally, they have been taught the militaristic ways of life. Their mind is of one track—war, Army, Navy. That is all they know. They have been trained in aristocratic institutions where they were taught discrimination between themselves and the enlisted men—the common man. Is that very democratic? Is that the American way of life? I am asking you. I claim that it definitely is not. They want to take the young men out of high schools, send them off to military camps, and occupational duties. Tell me, is this the betterment of the common man, the thing the late President Roosevelt based his successful campaigns on? It merely serves to delay the young man from attending college, sometimes turning him away from college entirely. And, as a rule, college is the final touch to a person's education.

The young men attending college are required to take 2 years of military training as a part of their college course. In this training they are given all the basic ideas of military life and routine. Now, is it not better to give them these 2 years of military in college than to send them away for a whole year, away from their homes, their friends, and the environment that is going to improve them educationally and morally—the benefits that a military camp cannot offer. In this proposed training plan of the President's he would train men for military duties or tasks in the wartime industries. However, he forgets that this training is going to be just as obsolete, if not more so, as the training given to the men in the last war was for the entirely rejuvenated industrial and military tasks of World War II, with the exception of the fundamentals which I advocate can and should be given to them in the schools they are already attending, not in military camps.

Of course, there are the young men who do not go to college; why not have military training in high schools all over the country as there are in some? This gives them a good basis for entering the service in time of war. When war strikes again, the men will all have to be retrained for the battle, which will differ entirely from the battles of this war, whether they have been trained under the President's proposed plan or trained by our public-school system. So the logical conclusion is to incorporate new systems in the schools of the Nation and not to try and set up some undemocratic system of forcing the young men into the service.

I sincerely hope that our Nation's Congressmen will not be as gullible as the President and that they will realize what they owe the young men of the country, and that is: More complete training in the public-school system. By doing this there will be no necessity for sending them off to the military camps that help to tear down the worthwhile things that had been built up in them prior to this time.

At present I am attending the University of Idaho, having just returned from 18 months' war duty. I don't want to see the young men coming up have to go into something they don't like as I did. So let's get back to our democratic ways, abolish this conscription and squelch the power of the militarists.

Very truly yours,

R. E. FAHRENWALD.

## Not Unduly Exacting in Korea—Part II

EXTENSION OF REMARKS
OF
## HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mrs. LUCE. Mr. Speaker, here are additional facts which cast an unhappy light on the failure of our foreign policy in relation to the liberated country of Korea:

On November 23 the New York Post's correspondent, Robert P. Martin, cabling from Shanghai—a city some 550 miles from Seoul across the Yellow Sea—gives the left-wing "liberal" appraisal of American errors in Korea. Mr. Martin's conclusions about the difficulties facing any Korean administration seem to substantiate the claim that Korea as a whole is neither "left" nor "right," but a sincere seeker after the "middle way," which is the essence of Confucian teaching.

KIM KOO: KOREA'S HOPE?

(By Robert P. Martin)

SHANGHAI, November 23.—One hundred days ago Kim Koo, the veteran Korean revolutionary exile and President of the so-called Korean Provisional Government, requested permission from American authorities to return to his homeland. Today he boarded a United States Army transport plane here and took off for Seoul and an unfathomable political future.

Why the American authorities did not want Kim Koo in Korea has not been explained. The past reason for that transportation from Chungking was unavailable, but it is noteworthy that 12 former exiles who lived in the United States, including Dr. Syngman Rhee, had no trouble obtaining high air priorities with the State Department's blessing.

It would seem, therefore, that the United States wanted to give Syngman Rhee the first opportunity to organize Korea politically. Rhee had lived in the United States for decades, speaks English, and is pro-American. Obviously, he would be an easier man to work with than Kim Koo, who had lived in China, speaks no English, and has even permitted Communists to participate in his provisional government, which was not recognized by any foreign power.

For weeks Koreans have trooped faithfully to the airfield there whenever it was rumored that their most famous exile was returning.

BIG JOB AHEAD

But prestige will not carry Kim Koo to political leadership in Korea. He will first have to prove that he is capable of rescuing his people from the mess created by 35 years of Jap occupation, and 2 months of bungling ineptitude by American Military Government officials.

Kim Koo will be an alien in his own country. He frankly admits he has had no contact with Korean underground or patriotic societies since Japan invaded China in 1937. He has received no communications from Korea since Japan's surrender.

Rhee is extremely conservative, dogmatic, and dictatorial. He is firmly entrenched with the right wing Democratic Party and has accepted wholeheartedly the military government attitude that anyone who has liberal tendencies is a Communist.

Although Kim Koo arrives in Korea later than any of the exiles, he will enjoy the distinct advantage of studying the mistakes that Rhee and the other exiles from the United States have made.

If he and his advisers can chart their political course to avoid any of the extremes of current Korean politicals, he will be in an excellent position to fulfill his avowed aim of unifying Koreans as the first step toward independence.

DOMINATING INFLUENCE

Kim Koo will find the Democratic Party the dominating influence in Seoul, the capital. The party has the O. K. of Korea's four big families—Kim, Yunchi, Pak, and Han—which control Korea's land and industry.

These families form the core of the Yangpan or upper class, and they are using their financial position and close relationship with the AMG to purchase the 80 percent of Korea's land and property which until the end of the war had been owned by Japanese nationals.

They frown on anything that would encourage economic liberalism. Opposing this landlord-industrialist coalition is the self-styled Peoples Republic group which has a nucleus of Korean patriots who served in the anti-Jap underground and many of whom were imprisoned by the Japs for sabotage or their political activities.

WANTS CONFISCATION

This group urges outright confiscation and free distribution rather than sale of Japanese property. Generally speaking, the party also advocates government ownership of major industries.

This group has little financial backing and its leadership is impractical, but it has tremendous appeal among the Korean masses who intend to resist any exploitation by their richer countrymen.

It is not uncommon for landowners to collect 66 percent of the crop as rent from peasants.

Kim Koo believes in agrarian and economic reform for Korea but is not yet certain how it should be accomplished. If he speaks too strongly for these aims he will find himself branded by the American Military Government as a "Communist," which will result in a serious curtailment of his freedom to speak and write under the American "benevolent dictatorship."

DEFINITELY REPRESENTATIVE

If he does not speak strongly enough he will be classed as ultrareactionary by the Peoples Republic group and their satellites which, regardless of their leftist tinges in leadership, are definitely representative of the great masses of Koreans.

If Kim Koo does not cooperate with AMG he will be considered a saboteur of "law and order" and if he does jump through the AMG's "hoop" his prestige among the Korean people will be lost because AMG officials are largely recruited from among Korean businessmen and industrialists who cooperated with the Japanese and are scathingly called pro-Japanese still by other Koreans.

In this muddle of political alinements Kim Koo must walk carefully and quietly.

Korea's request for an independent existence appear modest and reasonable in comparison with those of several other nations, even smaller in area and population, whose policies have only recently turned away from aid to the Axis. Mr. Kim Koo, President of the Korean Provisional Government, has just expressed

the aims of his Cabinet in a dispatch from Seoul dated November 23, 1945, the day Mr. Kim arrived in the Korean capital:

KIM KOO ARRIVES IN KOREAN CAPITAL—HEAD OF PROVISIONAL REGIME SAYS HE EXPECTS DIVIDING WILL BE ELIMINATED

(By Richard J. H. Johnston)

SEOUL, KOREA, November 23.—Kim Koo, President of the Provisional Government of Korea, arrived here tonight from Shanghai. Returning for the first time since 1919, the 69-year-old patriot arrived with five members of his Cabinet and eight aides as a "private citizen."

"I do not intend to ask the United States for recognition of the provisional government in the immediate future," Mr. Kim announced. "I might do so at a later date.

"I don't like the idea of dividing Korea into two military zones. I do not know the military or political situation between the Allies, but I believe the dividing line will be eliminated and that Korea will be one united force."

Mr. Kim had been long awaited by Koreans and Americans. Expected momentarily for nearly 2 months, he did not explain the long delay in his taking off from Shanghai.

"The arrangements for my return home were made by Chinese and Americans," he said.

Immediately after his arrival in a Seoul house that had been prepared for him by friends, Mr. Kim was greeted by Dr. Syngman Rhee, former President of the Provisional Government and life-long friend of Mr. Kim, whom he had not seen since a meeting in Shanghai in 1921. Dr. Rhee, who returned here October 16, also as a "private citizen," has been trying to unite Korea's 55 political parties.

Mr. Kim refused to express his thoughts on Korea's internal situation. He said he had been unable to obtain full information.

"I have heard some rumors of what is going on in Russian territories," he said, "but I'll not express ideas on rumors."

He said he was unable to say whether the Koreans wished to go Communist or to the extreme right.

"I shall meet with the political parties and talk over the question of unity," he went on. "I think that in the future there might be several parties. I think it will be necessary as a first step to reduce the number of parties."

The large house in which Mr. Kim and other Government members are staying is surrounded by an armed guard of Koreans and Americans. A large group of Korean reporters clamored at the gates seeking interviews.

At least three times in the last several weeks Seoul suspended business and children were turned out of schools to welcome Mr. Kim on false reports of his coming. This afternoon the only persons aware of his arrival were the American headquarters staff and the American press.

All the facts now being disclosed about our policies toward Korea led the editors of the New York Times to sum up the situation on November 25, 1945, as follows:

KEYSTONE OF ASIA

One of the sore spots of the Far East today is Korea, divided into American and Russian zones of occupation by a decision that never has been explained either by our own State Department or by the Russian Foreign Office. Not the least of the tragic aspects of the situation is that a policy could be initiated there that could make of Korea a symbol of Allied good intentions to which all Asia could look with hope for the future.

Korea is the one place in Asia where the world's two most powerful countries have direct contact. There lies an opportunity to exhibit a unity of purpose and a sober acceptance of joint American-Russian responsibility for Asia's future that could have almost incalculable consequences for that continent where dwell half of the world's peoples. Yet there is no evidence that there is any unity at all. American and Russian soldiers face each other across the Thirty-eighth Parallel with little opportunity even to become acquainted. There is no evidence that the Governments even are consulting each other. Our State Department seems to feel that Korea is one of the minor problems which it will get around to in due course. It is too important, we believe, for that.

According to a dispatch to this newspaper from its correspondent in Seoul, Richard Johnston, and private advices to friends from Dr. Syngman Rhee, first President of the Provisional Government, who is in Korea now working as a private citizen, the Koreans are showing increasing signs of political unity, considerably more, at least, than are our State Department and the Foreign Office in Moscow.

With Korea's former Japanese overlords largely shipped back to Japan there would seem to be no reason why some formula for withdrawing occupation forces and eliminating the present division of that small country cannot be worked out promptly. As Dr. Rhee says, the Koreans at least deserve the opportunity to make the attempt to govern themselves. There is nothing in their history to indicate that they will not succeed. All their traditions are to the contrary. Their only great historical fault has been that they are small, and weaker than their powerful neighbors. This country betrayed the Koreans once, when we gave Japan a free hand there in 1905. Our effort now should be to do all that we can to correct this injustice and give the Koreans their chance.

If it is true, as stated by the Times, that our State Department is not even consulting regularly with the Moscow Government in regard to the occupation of Korea, which is a responsibility both Governments have assumed, Mr. Byrnes grossly understated the fact when he announced that we "are not unduly exacting" in our relationships with Russia over the fates of our friendly allies.

## Hon. Samuel Dickstein: Our Best Choice for Justice of the Supreme Court

EXTENSION OF REMARKS

OF

### HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address by Prof. James H. Sheldon over Station WMCA, New York City, Monday, November 5, 1945:

I am not going to make a political speech in the usual sense tonight, because the election of a judge ought not to be undertaken as a political matter. The men and women of New York, and our returning soldiers and sailors, must look to the courts of our city for even-handed justice—justice uninfluenced by any consideration except for the rights of the citizens.

On this standard there is one candidate for supreme court in New York whose record makes him preeminently deserving of your vote tomorrow. This man is Congressman Samuel Dickstein, a man who has spent the better part of his life as a Member of Congress representing the people of our city. In his long years in Congress Mr. Dickstein has become chairman of the Committee on Immigration and Naturalization and the senior member of the Committee on Claims, two committees whose decisions have touched with particular closeness the affairs of millions of New Yorkers.

I want you to vote for SAMUEL DICKSTEIN for supreme court, however, not so much because he has been a good and hard-working Congressman or an able lawyer, but rather because I am convinced that the things he has fought for during his long years in public service are the things for which you want a supreme court justice in our city to stand during the critical years after the war.

SAMUEL DICKSTEIN was the first Member of Congress—in fact, the first public official of any importance—to become aware of the danger to America from the infiltration of Nazi propagandists and the operations of German agents. He did not wait until the enemy dropped bombs on Pearl Harbor to start his battle against the Axis—for as far back as 1934, when Adolf Hitler and Benito Mussolini were merely comic-strip characters to many Americans, Mr. DICKSTEIN introduced into Congress a resolution to investigate and punish these dangerous and un-American agitators who were coming here supplied with huge funds from the Nazi party of Berlin, to corrupt America and to undermine our form of government. In the beginning of this fight, Congressman DICKSTEIN was a prophet crying in the wilderness—but today there are millions of New Yorkers who know that their sons, their brothers and husbands, are coming home sooner from the battle fronts because Congressman DICKSTEIN kept urging, day in and day out, that we must prepare for the Axis menace, and must punish Hitler's agitators and saboteurs here in America, if we were to be strong in the war which he saw coming.

Mr. DICKSTEIN's preeminent service to our country in this regard was repeatedly recognized and praised by President Franklin D. Roosevelt, whom New Yorkers know fought a heroic battle during the dark years of the early thirties, in trying to prepare our country for the terrible war which finally burst upon us. There are thousands of other New Yorkers whose sons or husbands lie buried in the battlefields of Europe and Asia, who know today that these dead sons and husbands might be landing from a ship over in the North River, if there had only been a few more men like DICKSTEIN and Roosevelt who saw the dangers in store for our country, and saw them in time, and dared to act. Had we but had more men of DICKSTEIN's type on the bench 10 years ago, it is quite possible that, as a result of a proper enforcement of penalties against un-American or pro-Nazi agitators, many of those sacrifices might have been avoided.

Now, I have found in my experience that it is a fairly easy thing to buy certain kinds of friends, but you can tell a man's true colors by the enemies that he makes, because they are an index to the policies that he has stood for and the things he has fought to achieve. Here on the night before election I can think of no better way to tell you the kind of man SAMUEL DICKSTEIN is, than to tell you about some of the enemies he has made.

First off, there are the Nazi agents in jail, or interned over on Ellis Island. If you happened to go to the movie that everybody is talking about, The House on Ninety-second Street, which tells how the FBI apprehended thousands of these dangerous characters, you will have seen portrayed on the screen some of these men who do not like SAMUEL DICKSTEIN. There is, for example, the central figure of Col. Edwin Emerson—and in the movie you see him

coming in to sell the secret plans of American guns to Hitler's pay-off man at a hangout up near Columbus Circle. In SAMUEL DICKSTEIN's report to Congress in 1935—10 long years ago—this same Colonel Emerson was exposed—and that was the beginning of the downfall of Hitler's ace agent in New York. If I had the time I could call a long roll of men like this Nazi agent Emerson, and the bund leader, Elmhurst (whose real name is Fleishkopp) and the notorious Fritz Kuhn and the equally notorious Gerald L. K. Smith, who tries to set Jew against Christian and Christian against Jew, and who thinks Negroes should be deported back to Africa, and who stirs up his followers to hate immigrants like the millions of hard-working Italians, Poles, Greeks, and Czechs who have come to our shores in recent years. Fellows such as Kuhn, and such as Gerald Smith and Elmhurst, do not like DICKSTEIN, they hate him so much that they have circulated pamphlets around New York trying to stop his election—and that is one of the very best reasons why I feel sure that he will be elected to the supreme court tomorrow, through the votes of the decent law-abiding people of this city.

I have here in my hands a publication which is well known for its extreme pan-Germanism. It is the current issue of the Steuben Society News, and the whole back page of this publication is an attack on Mr. DICKSTEIN. It is quite obvious that this Steuben Society does not like him—and it is quite obvious that that is one of the best reasons why you should vote for him tomorrow. This editorial is signed by a man who in 1934 came back from Germany and told New Yorkers that he considered Hitler one of the world's greatest leaders. "Hitler is an idealist * * * honest and sincere," are the very words that he used. That is what the writer of this Steuben News editorial said about Hitler in 1934. No wonder that he spends a whole page attacking SAMUEL DICKSTEIN in 1945—and by the way, if any of you people listening in tonight want to come up to WMCA tomorrow morning, I will leave this document here for you to look at, and then I know that unless I happen to be talking to someone who is still, in the blackness of his heart, an admirer of Adolf Hitler, you will go home and urge your neighbors to do their duty and elect SAMUEL DICKSTEIN to the supreme court.

There are even some New York lawyers who have banded together to attack him—the same kind of lawyers who attacked Abraham Lincoln because they said he did not have enough education to be President, and who fought Felix Frankfurter because they said he had never been a judge before Franklin Roosevelt appointed him to the Supreme Court.

Now my friends, I think it is enough if I tell you that this particular group of lawyers is the very same group I met last winter when it was my privilege to organize the public support in favor of the Ives-Quinn bill, an excellent law which provides that employers in New York must not discriminate against citizens because of their race or their color or their religion or because of the country from which they came. This is the law to which many thousands of our returning soldiers in New York must look for the opportunity to have a square deal. I first met this group of lawyers, who don't like DICKSTEIN, when they came up to Albany to oppose and obstruct this patriotically conceived legislation. On the very day that these lawyers were opposing New York's anti-discrimination law in Albany, SAMUEL DICKSTEIN was busy in Washington advocating a Federal Fair Employment Practice Act.

No wonder that this self-appointed group of lawyers do not like SAMUEL DICKSTEIN—and no wonder that selfish, rapacious interests who would like to keep for themselves the lion's share of the good jobs available in our city should be out fighting tooth and nail against my good friend and yours, Congressman DICKSTEIN. When a man has made enemies such as these because he has honestly fought your battles, you can safely rely upon him to continue to fight for you in the future. SAMUEL DICKSTEIN is a man whom you can be proud to honor with the title of justice of the Supreme Court of New York, and for whom you can be proud to cast your vote tomorrow.

Now, in the 2 or 3 minutes remaining I want to say something about the functions of our court system. As that great writer of American Government, James Bryce, once pointed out, the courts touch the citizen more directly and more closely than perhaps any other part of the Government; yet, because their activity is not particularly spectacular, we oftentimes pay little attention to choosing our judges. For this very reason, it is of tremendous importance that our judges be men who can be trusted to think as you would have them think. Congressman DICKSTEIN in 30 years of public service has, in my opinion, turned out to be just the kind of man that I think you would want to find on the bench, if you knew that you had to appear in court tomorrow and had to depend upon the judge to see to it that you got even-handed justice.

Congressman DICKSTEIN has never been a man to seek monetary or political rewards for his own sake. I recall, for example, that back in 1933, when he was first starting his investigation of the Nazi agitators and propagandists who were trying to undermine our American Government, he conducted that investigation for nine long months at his own expense before he was finally able to persuade Congress to vote him a budget for the purpose; and because SAMUEL DICKSTEIN came from an ordinary, hard-working New York family and never inherited any large sums of money I happen to know that it took him a long while to pay off the cost of that investigation, which he undertook because he was so convinced that your safety and my safety depended on somehow exposing the secret un-American plots of these German spies.

Some people laughed at DICKSTEIN in those years—and the Deutscher Weckruf, the official organ of Hitler's Nazi bund in America, laughed loudest of all, and put cartoons of DICKSTEIN on its front page. These bundists ridiculed him—and I quote the bunds own newspaper—as the man who wanted to put "that sterling citizen Fritz Kuhn out of the country as an enemy." That is what the bund said, and why they hated him. How right SAMUEL DICKSTEIN has since turned out to have been, and how much better off America would have been if the bund leader Fritz Kuhn had been sent to jail 10 years ago, instead of going free to carry out his evil plots until the very hour of Pearl Harbor. I tell you, my friends, that when history has shown a man's judgment to be so often right as it has in the case of Congressman DICKSTEIN, he is a safe and desirable choice for our Supreme Court.

Throughout his career he has been a friend of the downtrodden—and an opponent of those who would discriminate against people because of their religion or color. As far back as '24 he spoke out vigorously against the Ku Klux Klan, which he characterized as the worst enemy of all Catholics, Jews, Negroes, and immigrants. In those early fights, he won the friendship of men of both our political parties, and the Democratic Al Smith and the Republican Calvin Coolidge were equally lavish in their praise of the battle which DICKSTEIN fought against the forces of bigotry.

And, as I mention such names as Calvin Coolidge and Al Smith, it occurs to me that perhaps you would like to hear the names of some other people whom you respect and whom I respect, and who in turn respect Congressman DICKSTEIN. I have already mentioned the friendship which President Roosevelt so often showed toward the Congressman—and if public considerations did not prevent me, I would like to tell you of the intimate way in which Mr. Roosevelt depended upon the Congressman's advice in his dealings with the thousands of men and women who have come to our shores from all over the world, before and during the war.

Another man who has felt no hesitation in breaking a precedent to express his friendship and support for Mr. DICKSTEIN as a candidate for our New York Supreme Court is Harry S. Truman, the President of the United States, who, when in the Senate, as chairman of the Truman committee to investigate the conduct of the war effort, came to realize in a very special way the services which DICKSTEIN had performed for our country. Then there is the head of the legal work of the Justice Department, Hon. James McGranery, and our own senior Senator from New York, ROBERT WAGNER, and the majority leader in Congress, my good friend Hon. JOHN W. MCCORMACK, all of whom have repeatedly and publicly expressed their appreciation of Mr. DICKSTEIN and his work.

Another of his friends and supporters in this campaign is the Honorable James W. Gerard, our Ambassador to Germany during the First World War, a man who is peculiarly qualified to say how much New Yorkers—and, in fact, all Americans—owe to Mr. DICKSTEIN's foresight in routing out and punishing the Nazi enemies of our country, as well as in judging the thousands of immigrants from all over the world who have come to our shores during Mr. DICKSTEIN's long and able chairmanship of the Immigration Committee. Then there are such distinguished jurists as Judge Jeremiah Mahoney and the able judge and lieutenant governor, Charles Poletti—these men and a hundred organizations speaking for the rank and file of the citizens of our great city, are behind SAMUEL DICKSTEIN, and with their support he will become your next supreme court justice from the district which comprises Manhattan and the Bronx, to be sure that when you go into the election booth tomorrow you not only indicate your choice for mayor, but be sure before you open the curtain to pull down the lever under the name of SAMUEL DICKSTEIN for supreme court. That is one of the most important responsibilities that you have to perform tomorrow, and that is the reason I have spent the last 15 minutes reviewing with you the history of this distinguished New Yorker and elder statesman—a man whose 30 years in public service qualify him above any of his opponents for the high post of justice of the Supreme Court of New York.

## The Luce Bill on Housing for Veterans

EXTENSION OF REMARKS

OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mrs. LUCE. Mr. Speaker, the following editorial and poem by Sgt. Smith Dawless, a veteran of the CBI theater, appeared in the Army Times on November 24, 1945, in support of H. R. 4742:

CONGRATULATIONS, MRS. LUCE

Last week Army Times called upon the President, Congress, and the National Housing Agency to act immediately to alleviate the acute housing shortage in this country, which is keeping thousands of veterans and their families homeless.

On Monday, just 2 days after the editorial appeared, Representative CLARE BOOTHE LUCE (Republican, Connecticut), introduced in the House a bill to give veterans an unconditional priority on building materials; to guarantee loans up to $5,000 for home- or farm-buying purposes, and to set up a Veterans' Housing Bureau in the Veterans' Administration to facilitate the handling of home loans.

Army Times congratulates Mrs. LUCE on her prompt action. We hope the House Veterans' Committee will act with equal promptness.

---

CURBSTONE LAMENT

Ah, chill were the Normandy fox holes
And bitter and dank was Attu.
But far more disturbing
Is life on this curbing
Where the cold is fast turning us blue.
The Housing Committees are buzzing.
But though their proposals sound fine
There's no satisfaction
In words without action—
It's shelter we need, me and mine!

My wife has turned suddenly frigid,
The winter winds wrinkle her face.
Her once-fetching dimples
Are lost in goose-pimples.
Can't somebody find us a place?
The building authorities holler,
"Priorities keep our hands tied!"
And we've been unable
To locate a stable
Or Chic Sale that is not occupied.

All vets, states the FHA's Blandford,
Should "double-up" now without fuss.
But letters from Mother
And my younger brother
Say they plan to move in with us!
The landladies laugh at our misery,
The future's appallingly black.
We're plumb out of plumbing
And Christmas is coming—
Oh, Santa, please bring us a shack!

Four walls and a roof are sufficient,
Just cardboard—we don't hope for brick.
I've begged and petitioned,
For my wife's heir-conditioned
And we've got to be off the streets quick.
Dear Congress, I'm not a brass monkey,
And I long to defrost my poor spouse.
Be assured my selections
For next year's elections
Will be men who can find me a house!

—*Ye Olde Vettie.*

---

## Lest We Forget

EXTENSION OF REMARKS
OF
## HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. HOFFMAN. Mr. Speaker, while the impractical dreamers play with the thought of a universal peace brought about through some super world organization, such as Union Now, Super United States of the World, United Nations Organization, knowing, as they do, that the world has always known war and that now, despite the unconditional surrender of Germany and Japan, there is fighting throughout the world, to my mind a more powerful incentive to universal peace are the writings of Lt. Henry G. Lee, of the Headquarters and Military Police Company, Philippine Division, United States Army, who met death when a Japanese prisoner ship was bombed off Formosa by his comrades on January 9, 1945, 21 days before he would have been liberated had he not been moved from his Philippine prison camp where the verses were written.

The heart-rending, thought-provoking lines, which appeared in the Saturday Evening Post of November 24, 1945, are as follows:

PRAYER BEFORE BATTLE

TO MARS

Before thine ancient altar, God of War,
Forlorn, afraid, alone, I kneel to pray.
The gentle Shepherd whom I would adore,
Faced by thy blazing playthings, slips away
And I am drained of faith, alone, alone.
Who now need faith to face thy outthrust sword.
Bereft of hope, turned pagan to the bone,
I kneel to thee and hail thee as my Lord.
From such a God as thee I ask not life;
My life is forfeited, the hour is late.
Thou need not swerve the bullet, dull the knife.
I ask but strength to ride the wave of fate,
And one thing more—to validate this strife
And my own sacrifice—teach me to hate.

---

MAIL INCIDENT

He clutched the precious letter in the hand,
Unopened and unread, and in his eyes
The nearest saw and could not understand
The weary, listless look of one who dies
Replace the eager, glad, expectant glow;
And then, with neither anger nor in hate,
He tore it into bits, precise and slow.
The nearest heard him whisper, "Late—too late."
And watched him—with a strange untroubled mask,
Watch till the tiny pieces ceased to blow,
And then resumed some trivial daily task.

---

MANILA

SATURDAY NIGHT, DECEMBER 6, 1941

Dark-eyed girl toes a conga's beat,
Beckons with her shoulders and hips asway,
Colorful, exotic in the moist night's heat,
Lips half parted in a smile that is fey.

CHORUS (repeat after each verse)

This was a city—this now is dead.
This was Manila when the rains had gone.
Do the wild birds scatter when the thunderhead
Looms upwind in the summer sun?

Blond-head viking in a sharkskin suit,
Feet unsteady and a wolf-gleam eye,
Pounds on the bar in a loud dispute,
Forgotten each time that a girl goes by.

Flat-back German in a stiff-front shirt
Whispers to a Russian with a painted frown;
Eyes which flicker like a riding quirt
Play on the contours of her sleek black gown.

Turbaned Hindu with an ox-eyed face
Drums soft fingers on a whisky glass,
Clean-cut features of his dusky race
Changeless and calm as the hours pass.

White-haired tourist with a false-tooth grin
Prowls through the alleys where the girls are sought;
Finds a mestiza with a cream-gold skin;
They can't be won, but they can be bought.

Grinning corporal with tousled hair,
Shirt thrown open and a golden curl,
Cross-stitched chevrons lend a martial air,
Sentimental drink with a fat brown girl.

Englishman, Dutchman, Spaniard, Jew,
Soldierman, sailorman, and pioneer,
Get yourself a girl and a bottle, too,
Blind yourself, hide yourself; the storm is near.

TO OUR WOMEN

If you could hear us mock the lonely night
With tales of amorous conquest from our past,
In little huddled groups that shun the light,
Each story more erotic than the last,
Till we betray our tenderest memory
And drag it nude before the common ear
In all its detail, anatomically,
You would not wait for us if you could hear.

We offer no excuse here in our pen,
Our servile heads pressed down into the dust,
Who, though confined alone, are no less men,
And if we need your bodies for our lust,
Much more we need your gentleness again,
Your beauty and your patience and your trust.

---

AN EXCEPTION

Red in the eastern sun, before he died
We saw his glinting hair; his arms were tied.
There by his lonely form, ugly and grim,
We saw an open grave, waiting for him.
We watched him from our fence, in silent throng,
Each with the fervent prayer, "God make him strong."
They offered him a smoke; he'd not have that.
Then at his captor's feet coldly he spat.
He faced the leaden hail, his eyes were bare;
We saw the Tropic rays glint in his hair.
What matter why he stood facing the gun?
We saw a nation's pride there in the sun.

---

LETHAL EPIDEMIC

I could not know the meaning nor the way,
I was not one with all that time must end,
Until one hopeless, joyless, bitter day
I looked on unmasked death and saw a friend.

---

STARVATION ROMANCE

I dream so often of the days we knew—
Those days when love was like a guiding light—
And yet, although I know your eyes were blue,
Although I swore to be forever true,
Although I dream of going home to you,
Your name has slipped my memory tonight.

---

PRISON CAMP REVERIE

THREE YEARS FROM HOME

The right or wrong we cannot judge or know,
We only see that here a few must pay
A bitter penance, living day to day
And watching years unfold unused and slow.
We only feel our hungers wax and wane
To suit the whim that guides our captor's hate.
We only see the palsied hand of fate
Grope blindly in the tangled threads of pain
And leave this man untouched and that man dead.
We only feel the dream fade at the test,
The spirit quenched, the youth starved in the breast,
The heart grown calloused and the once-proud head
Bowed low beneath the captor's iron hand.
We only know our candle gleam of hope
Glows in a darkness where our minds must grope,
Lost and forsaken, through a strange gray land.
My country—oh, my country—well we know,
Each one a soldier trained, that sacrifice
Is war itself, and some must pay a price
To cultivate the fields where victories grow.
And we were sacrificed—perhaps to gain
That little time that warded off defeat
In those first awful months of swift retreat.
If that be true, dare we begrudge our pain?
And yet we walk in fear, for we can see,
Clear-eyed across the path the years have flown,

Your failings and your sins which were our own,
Your selfishness, your smug complacency,
Your foolish bickering, your selfish lusts
To gain your end while others pay the price,
The cautious hand that will not throw the dice
Till they are loaded, and the foolish trust
In each new demigod who takes your mind
And shapes it to his own false dream of gain.
Your inability to see the pain,
The bitterness, the suffering you find
In your own life is only magnified
In other lives around the wailing earth.
You who regard the accident of birth
Not humbly, but with boastful pride.
And still we have our faith—faith in your might,
Slow to arouse and still more slowly cooled.
If faith moves mountains, then our faith is tooled
In each bright weapon in the far-flung fight;
Our faith is echoed in the smudge-dark sky
That clouds your roaring cities; in the grains
Of each ripe golden shock of prairie wheat;
Our faith is in the blood of weary men
Who take the coral beaches back again.
For we have seen their brothers in defeat,
For we have seen their brothers meet their end,
Unsuccored on a jungled foreign shore;
Nor did they question if their lives meant more
Than that small plot of ground they must defend.
My country—oh, my country—well we know
That final victory will be your part,
But bitterness claws at the waiting heart,
And still the years go by unused and slow.

---

AWAKENING

All night I lie with eyes that ache to close,
And fight my mind, which cannot find repose,
And listen to the soft familiar sound of rain,
Distorted by the tenseness of my brain,
Play on the nipa with a rhythmic stamp,
And hear the mutter of the prison camp,
And wonder if I ever will be sane.

All night in endless circles that return
Each to the same beginning, I discern
The deep-grooved wheel ruts of the captive's mind
Obliterate the path I search to find—
The well-marked trail I followed through Bataan.
And so the circle ends where it began;
The trail was blazed and marked, but I am blind.

There was a bomb-pocked, dusty jungle hill;
The trail was there and I was on it still,
And there were shambling men whose eyes were bright
Hollows of suffering touched with fevered light.
I felt my way with weary, stumbling feet,
Between the broken fragments of defeat.
There was a homemade flag of dirty white.

There was a broken murmur in my ear,
And as I forced my sleep-dazed mind to hear,
One sentence caught and stung like wind-blown hail:
"We have our honor. We were meant to fail."
"Now I can sleep," my mind said, with a smile.
I threw my loaded pistol on the pile,
And when I turned to look, there was no trail.

There was no trail, and I am wandering still
In search of something lost upon a hill;
The cadence of the rain above my bed
Beats out familiar rhythms in my head—
The shambling walk of driven, tortured men.
I stumble into line and smell again
The carrion pungence of our sun-black dead.
There was a blazing road that had no end;
Eight thousand captives, not a single friend;
A dry canteen and an artesian well
Where it was death to drink. We spread the smell
Across the miles of sun-baked tropic plain,
Marching in step with death and drugged with pain.
There was a bayonet for those who fell.

Then came the bitter days when those alive
Fought in a vicious struggle to survive.
When we begrudged the little strength we gave
To dig our withered dead a shallow grave.
Behind the wire, the sleepless nights have taught
That our escape from death was dearly bought,
And honor is a luxury to slaves.

The rain has ceased; the camp lies deadly still;
The circle has returned upon a hill.
I find my way with weary, stumbling feet
Between the broken fragments of defeat.
"We have our honor. We were meant to fail,"
I hear the words, but still there is the trail,
Well-blazed and with no symbol of defeat.

The ground is littered with the waste of war;
I choose a rifle with a perfect bore
From off a pile, and with a practiced hand
I check the working parts for clogging sand.
An extra bandoleer. I'll travel light;
I'll need no blanket roll to sleep tonight.
My needs are few to do the thing I've planned.

I find my place upon an open slope.
Methodically, with hands that do not grope,
I dig my elbow holes; arrange my gear;
Easy to hand I place my bandoleer.
I tie my pistol's greasy lanyard string
Around my wrist, adjust the rifle sling
And wait exultant and released from fear.

I am awake. Across the prison yard
I hear the challenge where a foreign guard
Patrols the wire. The camp is deadly still,
And now I know the truth. I never will
Again be free to see and choose my way.
I barter choice for life, and I must pay.
The trail I followed ended on a hill.

---

## What To Do With Germany

EXTENSION OF REMARKS
OF
## HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

**Mr. SMITH of Wisconsin. Mr. Speaker, what to do with Germany is one of the most complex problems facing the United Nations. Under leave to extend my remarks, I am submitting herewith a radio talk by the well-known commentator, Mr. Robert St. John, over the National Broadcasting Co. on Monday, November 5. Attention is called to a suggestion made by a listener in New Hampshire in response to the question "What to do with Germany." Her suggestion is a novel one and quite pertinent. I am sure that Members of the House will appreciate the opportunity to read them herein:**

Now I want to tell you about a new answer to the old, old question of "what to do with Germany?" But first, let me explain where the answer came from. The source of ideas is sometimes surprising. All the experts have long ago been heard from. We have had the Morgenthau plan, deindustrializing Germany. We have had plans from London, from Washington, from all the free capitals of the world. We have heard from politicians and from statesmen, from dreamers, and from "doers," from Europeans and from Americans, from those who argue that the only good German is a dead German, and from those who want to recreate Germany, "just as she was," in that Cliveden-set-hope that maybe someday Germany and Russia will destroy each other. Yes, we have heard from them all. And still we don't seem to have decided on any concrete, long-range, constructive scheme for solving the long-standing problem of "what to do with Germany?" But the other day I received, from a woman listener to this program, her ideas on the subject. I had never heard of her before. She is just one of the ordinary people, one of that vast multitude whose ideas never get much circulation. She lives in the small city of Lebanon, N. H. But I think that if the great statesmen of the world adopted her plan the problem of Germany might well be solved for all time and that we might achieve some good and lasting results from World War II. My friend in Lebanon, N. H., starts out like this:

"The German people are hard working, industrial-minded, and ambitious; but, their belief that their goal justifies any means, regardless of honor or decency, makes them a threat to world peace. The following proposition is offered because I believe that first, it would make it impossible for Germany ever to wage war again; second, it would make use of the very qualities in the German people which make them good citizens when they are working constructively, but dangerous under the leadership of an Adolf Hitler; and third, it would make Germany pay for the suffering she has caused the world in the past decade in a way that she can pay."

That is the introduction to the plan. And now, here is the idea itself:

"The world needs a place which is not part of any country, but belongs to all countries, a place where every nationality can meet, on an equal footing, and exchange ideas and culture. Therefore, the proposal is made that the land of Germany be taken by the United Nations and made the capital of the world. Every country in the world, except Japan, would henceforth be a part owner of Germany, which would become the District of Cooperation, and would be to the world what Washington, D. C., is to the United States. Germany would not have its own government of its own people, anymore than Washington, D. C., has. It would be governed by a commission of the United Nations, just as Washington is governed by a commission appointed by Congress. Germany's industries would also be owned and controlled by the United Nations. The profits would not go, as in the past, to German financiers and industrialists, who would support Hitler regimes and finance wars, but instead would be used to support the institutions of the United Nations.

This new world capital would be the seat of the United Nations Government, of the World Court, and there we would also establish a permanent world's fair which would present a continuous exhibition of the wonders created by the genius of man. There also would be established a world university, where the culture of all nations would be taught. There also would be established a world library. There the literature, the art, the music, and the theater of each country would be represented. The new world capital would become the place where there would be a continuous exchange of ideas in world progress. If the great powers are going in for universal military training, let's make it universal throughout the world. If boys of 18 are to be taken into armies, let them all be trained at the world capital. Let them form part of an international police force. Let them be trained together and thus learn to understand the men of other nationalities, and then maybe

the fears and the suspicions which create wars would gradually vanish. There in the new world capital they would learn to respect and appreciate the peoples of other lands. Such a world capital would become the Mecca of all travelers. Customs and boundary lines and perhaps even tariffs and economic barriers would gradually melt away. The very act of building such a capital in the center of a country which spread fear and hatred throughout Europe would help the people to forget and forgive. It would be a practical step toward doing away with war, for there men of all nations would be working together on a project of universal interest, each country training its soldiers under the very noses of all other countries, with no hidden secrets, with scientific research and international affair, with a continuous exchange of ideas and a sharing of progress in medicine, science, politics. This is the way to do away with war. For example, if at the world university there was a college of government where each country's system could be studied in comparison with others each country would then tend to borrow the best from others and would thus better its own system. A good law would spread from nation to nation. The whole idea is exciting and challenging. Science has tackled the smashing of atoms and other ideas which a generation ago even scientists would have called crazy and fantastic, yet look how far the scientists have gone. It's about time that we, the rest of us, became bold and forward-looking. Now is the golden chance. If we wait it will be too late. The very methods which science has developed for wiping out civilization make it imperative that we get out of our rut of thinking and start to work quickly and eagerly to create that world state which Einstein and so many others with vision have been talking about. And here is a way to commence. Create the center of the world state there in the heart of Europe, taking over Germany as the place. The germ of this idea came from a modest woman in the hills of New Hampshire. I pass it on to you with a few of my own elaborations. I want your reaction. If you have suggestions to offer, any modifications or revisions of the idea, or any objections, send them to me quickly. If this or any other constructive idea is even to be given consideration, there's no time to be lost. Let's change war plants to peace plants. Let's convert a dozen armies into one police force. Let's use the same intelligence and energy in organizing for peace as we did in organizing for war. Let's give democracy a chance.

## Resolution

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a resolution unanimously passed by the members of Local 227, Textile Workers Union of America, CIO, on November 18, 1945:

Whereas the Fair Labor Standards Act now places a floor under wages in interstate commerce, a notable achievement for organized labor since, when the law was passed, wages in a large part of American industry were far below the level set by the act; and

Whereas since the passage of the Fair Labor Standards Act, the cost of living has increased so that the present 40 cents an hour minimum is no protection against substandard conditions of living; and

Whereas approximately 4,000,000 workers in interstate commerce are now receiving less than 65 cents an hour, among whom are approximately half a million textile workers; and

Whereas the payment of low wages to so many American workers shows itself in the high rate of illness among these groups and the impossibility of these people to complete their education and to live in decent homes; and

Whereas a higher minimum wage is necessary to create the additional purchasing power which is essential to the promotion of full prosperity, full production, and full employment in these postwar years; and

Whereas there is presently before the Senate a bill S. 1349 and before the House a companion measure H. R. 3914, which would make the legal minimum wage 65 cents an hour immediately, 70 cents an hour after 1 year, and 75 cents an hour after 2 years: Now, therefore, be it

*Resolved*, That this local union, No. 227 of the Textile Workers Union of America, CIO, endorse these amendments to the Fair Labor Standards Act, and call upon our Senators and Representative to support them.

ALFRED BRENNAN,
*President.*
JOHN O. ROSS,
*Vice President.*
EDWARD J. KELLERER,
*Secretary-Treasurer.*

NOVEMEER 18, 1945.

## Our Foreign Service in China

EXTENSION OF REMARKS
OF
### HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mrs. BOLTON. Mr. Speaker, in the morning paper is the text of a statement issued by Ambassador Hurley upon his resignation. I have read it several times and find myself confused. He attacks the members of our foreign service in blaming them for the lack of foreign policy and for the failure of our efforts. These men of whom he speaks are career men. They have chosen to serve the United States in the far-flung offices maintained by this country. Most of them are underpaid, many of them are separated from their wives and children because of the impossibility of education.

Before criticizing these particular public servants because of the lack of cohesion it might be well for any critic to take cognizance of the complete confusion existing in the State Department itself. The lack of trained personnel; indeed, the lack of adequate personnel.

Information from the field is sent into the State Department with great regularity. How much of it is even read? How much of it is even given consideration in the formulating of opinion by the "tops"? I am in complete accord with Mr. Hurley when he says that all too little information is given the people of the United States in the matter of what we are doing and attempting to do in the foreign fields. There can be nothing but confusion in the minds of the people in a representative republic such as ours unless there can be an informed public opinion. I trust that the State Department will make some effort to inform the public.

Is it not possible that it would have been wise if the State Department listened more sympathetically to the reports and advises sent them by the career men who have been in the field far longer than the administration-appointed ambassadors? Is it not possible that they might know these situations more intimately even than these ambassadors? I wonder if the ex-Ambassador knows that many Army men—men of both experience and judgment have differed quite violently with the methods we have employed toward and in China. He failed to mention them.

Mr. Hurley graciously admits that there are a few loyal members of the foreign service. That is generous of him. Having recently talked with many of our very fine foreign service men and women out in the European field and seen the evidence of their loyal, honest work, I could do no less than protest the accusations made by the just-resigned Ambassador to China. Certainly they cannot be allowed to go unnoticed by this House. They should be given examination by the proper authorities.

## Aluminum Plant Disposal

REMARKS
OF
### HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. COFFEE. Mr. Speaker, a few days ago my distinguished colleague from the State of Washington, Senator MITCHELL, introduced in the Senate a bill, S. 1612, to authorize and direct the Reconstruction Finance Corporation to purchase for stock piling purposes pig aluminum to be produced by Government-constructed aluminum plants to the extent that such production is in excess of current industrial demand limited, however, to one and one-half billion pounds of primary aluminum. I am thoroughly in accord with the sense and purpose of this bill, and in the hope of expediting action by the Congress I am today introducing an identical bill in the House of Representatives. I understand that Senator MITCHELL's bill has been referred to the Senate Banking and Currency Committee, of which the distinguished Senator WAGNER, of New York, is chairman. It is my sincere hope that that committee will act favorably upon the bill without delay so that this session of Congress may vote on it before adjourning for recess.

Necessities of the war resulted in the taxpayers of this Government having invested today in production plant and equipment over $16,000,000,000 of which over $1,000,000,000 is accounted for in aluminum and related facilities, and in

turn almost half of this investment was made in my own State of Washington and in the neighboring State of Oregon. The problem of aluminum plant disposal, therefore, while being of great national importance, is of particular importance to our people in the Pacific Northwest and it is for that reason that I feel it is my privileged duty to bend my best efforts in the direction of a sound and constructive resolution of this very important national and regional problem.

Of all the surplus plant disposal problems there is none more complicated nor more difficult than this aluminum plant disposal problem. At the same time there is no single problem of surplus property disposal that will do more to spark reconversion than this one. There are a billion dollars of taxpayers' money and over a million jobs at stake.

I have read and studied the reports of the Attorney General and of the Surplus Property Administrator. I have followed with great interest the proceedings of the various investigating committees, including the hearings of the Murray Small Business Committee in March of this year, the hearings of Senator MITCHELL's committee at Spokane in August, and the joint hearings so ably conducted by Senator O'MAHONEY here in October, all of which should have served splendidly to enlighten the people and the Congress upon the problems involved. Such enlightenment, however, in the absence of affirmative action by the Congress, not only falls short of its objective, but serves to complicate the problem further.

Time does not permit of a full and complete treatment of this problem before this body, but the more pertinent facts and observations, briefly stated, are as follows:

First. For 50 years prior to the war the Aluminum Co. of America not only dominated the aluminum industry, but owned it lock, stock, and barrel. No stronger, tighter, nor more effectively dictated monopoly ever existed in any industry, with the result that the price of aluminum was high and the production was restricted.

Second. The highest court in the land has not only adjudged the Aluminum Co. of America a monopoly, but it has charged the Surplus Property Administrator with a mandate to see to it, through proper disposition of Government-owned aluminum facilities, which incidentally now accounts for more than half the entire industry, that that monopoly is forever broken up.

Third. The Congress, through the Surplus Property Act, has directed and charged the Surplus Property Administrator with the responsibility of disposing of these facilities in such a manner as to prevent monopoly and promote a maximum of free private enterprise.

Fourth. In 1940 the Reynolds Metals Co. entered the aluminum industry in a comparatively small way by borrowing money from the Government and mortgaging all of its assets. Although Reynolds Metals Co. has done an outstanding job and, I am informed, still owes the Government some $35,000,000, its operations do not afford either enough or sufficiently strong competition in the industry.

Fifth. With the exception of the small reduction plant at Tacoma, Wash., and a few scattered prefabricating facilities, the Aluminum Co. of America operated under lease during the war all Government-owned aluminum plants. As of August 30 this year these leases became subject to cancellation upon 60 days' notice. The Reconstruction Finance Corporation undertook to keep the plants going by offering the Aluminum Co. of America a 1-year lease subject to cancellation upon 60 days' notice. The Aluminum Co. of America refused to cooperate with the Government on this basis, with the result that all leases were canceled as of October 31. This meant that thousands of employees who could have been gainfully employed lost their jobs and hundreds of millions of dollars worth of highly efficient Government-owned property is standing idle and depreciating at a greater rate than if in operation. It also meant that hundreds of thousands of dollars worth of Government power is going to waste over the Grand Coulee and Bonneville Dams, never to be retrieved.

Sixth. The Surplus Property Administrator has recommended that these plants be leased or sold to bidders other than the Aluminum Co. of America. I am informed that the disposal agency, the Reconstruction Finance Corporation, has received offers from only two bidders other than the Aluminum Co. of America for any substantial portion of these plants; namely, Reynolds Metals Co. and the Columbia Metals Corp.

With regard to the Reynolds Metals Co., I understand that certain of the Government-owned facilities are needed by it properly to balance its operations, and, assuming that satisfactory financial arrangements can be made, every consideration should be given to this company.

With regard to the Columbia Metals Corp., this company is composed of a group of outstandingly successful businessmen and bankers in the Pacific Northwest. This company launched its program of establishing an integrated light-metals industry in the Pacific Northwest almost 5 years ago. To begin with, it showed rare good judgment in selecting the Chemical Construction Corp., one of the most outstanding and competent engineering firms in the country, to design and build the $5,000,000 aluminum-from-clay plant now in operation at Salem, Oreg. By way of a temporary digression from its main purpose of making alumina, this plant is now turning out very much needed ammonium sulphate, thus helping to relieve the fertilizer shortage in that area. In addition to sponsoring the establishment of the Salem alumina-from-clay plant at substantial expense to itself, I am informed that the Columbia Metals Corp. has conducted extensive surveys and has made exhaustive studies of the problems involved in connection with developing a completely integrated aluminum operation, and that it was the first to propose taking over certain Government-owned plants. Although the Salem operation is a comparatively small one, I have heard nothing but good reports upon the manner in which the Columbia Metals Corp. has discharged its responsibilities in connection with that project. Having done well in the handling of smaller responsibilities, it can be expected to do well in larger ones, and I unhesitatingly bespeak for this company every consideration on the part of the proper governmental authorities.

Seventh. Both of the above offers are conditioned upon the Reconstruction Finance Corporation agreeing to purchase for stock-piling purposes a portion of the pig aluminum production for an interim period of time. All members of the Congress are undoubtedly aware of stock-piling legislation as proposed in S. 752 and S. 1481, bills relating to the acquisition of stocks of strategic and critical materials for national defense purposes as recommended by the Army and Navy Munitions Board. At the hearing before the Subcommittee on Surplus Property of the Committee on Military Affairs on October 30 this year, the following testimony was recorded:

(a) From the statement of Commodore Lewis L. Strauss, United States Naval Reserve, Special Assistant to the Secretary of the Navy:

> It is our confirmed belief that one of the essential elements of national defense is the maintenance of really adequate stock piles of those strategic materials needed to supply the military, industrial, and essential civilian requirements of a country such as ours conducting a major war. We think it is the safest investment of the public wealth and manpower. * * * They Navy believes, therefore, that S. 1481 is constructive legislation to this end.

(b) From the statement of Col. William H. Hutchinson, United States Army, Army executive secretary, Army and Navy Munitions Board:

> For years the War Department has been interested in a program for the stock-piling of strategic materials. Since 1921 it has made in conjunction with the Navy Department, continuing studies for the development of such program. Accordingly, it has recommended and supported appropriate legislation at every opportunity. * * * In the light of these factors the War Department is of the opinion that Senate bill 1481 is the more appropriate and effective legislation to accomplish the basic purposes of national defense stock piles.

(c) From the statement of John W. Snyder, Director of War Mobilization and Reconversion:

> Above all else we believe that so long as there is any possibility that we may be forced again to face the great calamity of war, the United States should establish stock piles of strategic materials to help preserve our national interests. I can only express the hope that the stock piles is never used. But until national defense measures become unnecessary, stock piling must be maintained as an essential guaranty of our security. * * * I believe that S. 1481 fulfills those requirements.

Thus it appears that there is general agreement as to the wisdom of stock piling strategic materials, and since aluminum is and has been classified as one of the most strategic materials, it can be expected that stock piling of primary aluminum will be authorized in time, but probably not in time to facilitate a prompt disposition of this aluminum

plant-disposal problem. I am, therefore, in complete agreement with Senator MITCHELL when he said in his remarks in the Senate last Friday that since an aluminum stock pile is generally accepted as vital to national security and since such purchase by the Government will expedite the resolution of this problem, there should be no reason why the two programs cannot be coordinated.

Eighth. In 1939 the shameful amount of a little over 150,000 tons of aluminum was produced in this country. This compares with over 60,000,000 tons of steel produced in the same year. Today, with the price of aluminum at two-thirds of its 1939 price, and with over 2,000,000 new workers having learned how to use aluminum, industry generally, and the automobile, railroad, aircraft, and electric industries in particular, are yearning for the establishment of competition in the aluminum industry so that they will be assured of a stable and continuing supply of aluminum at reasonable prices. I wholeheartedly share the opinions of many authorities who have predicted that, with the establishment of free competition in the aluminum industry, our present production capacity, although seven times as great as it was in 1939, will not be adequate to supply the demand.

CONCLUSION

It is not enough for the Court and the Congress to command and direct without at the same time making it possible for those commands and directions to be carried out. Looking at the situation realistically, we have tied the hands of the administrators of the Reconstruction Finance Corporation and the Surplus Property Administration. Now we must untie them. The situation calls for affirmative action on the part of Congress. The people will not tolerate a do-nothing policy which not only will play into the hands of monopoly but will defeat the very objectives that have already been defined by Congress as set forth in the Surplus Property Act. I urge, Mr. Speaker, the immediate passage of this bill.

## Showing of American Films in Great Britain

EXTENSION OF REMARKS

OF

### HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. PATTERSON. Mr. Speaker, I noted in a recent issue of a Hollywood motion-picture trade paper that the British newspapers and motion picture industry are attempting to put a ban on the showing of American feature films in the British Empire. I am amazed at this shortsighted view, on the part of our wartime partner and ally. The dependence on each other for trade by all nations is one of the keys to peacetime prosperity, and yet a policy of discriminating against American products is now being promoted by British interests.

I am sure that Britain does not intend to establish such actions as her postwar policy. As a nation asking us for billions to set herself back on her feet, I do not see how she can expect the loan to be made, if it is to be reciprocated only by a boycott of our manufactured products.

It is my feeling that the attitude of the British motion picture industry and its press be admonished by this House, which will have to raise the revenue and authorize the loans requested. Certainly, no one is more in favor of helping to establish stable trade relations with our world neighbors than I, but I could not put my stamp of approval on a loan to be made if the recipient were to deny us the right to trade with her nation.

I hope that present policy reflecting such thought by the British motion picture industry will be rescinded, and that all trade between our two nations will again become peaceful and harmonious.

## Keep It Fair

REMARKS

OF

### HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an article by former Marine Sgt. Jim Lucas, now of the Scripps-Howard newspapers, on the maintenance of the point system without favoritism to special cases. I would also like to include an editorial from the mid-Pacific edition of the Stars and Stripes, service newspaper, on this same matter.

The article by Jim Lucas is as follows:

[From the Washington Daily News of November 28, 1945]

PRO FOOTBALLERS' ATC TRIP HOME AHEAD OF GI'S DRAWS HOUSE FIRE

(By Jim G. Lucas)

Use of Army transport planes to fly professional football players back from the Pacific to finish the 1945 season with their old teams while thousands of high-point combat veterans waited for any kind of transportation drew fire from Congressmen today.

Representative MONRONEY (Democrat, Oklahoma) said he would call the matter to the attention of the House.

"If the point system is going to work we should stick to it," Mr. MONRONEY said. "Air transportation should go only to high-point men, the sick, and the wounded. I am shocked that the Army has extended itself to accommodate professional football teams at the expense of combat veterans."

Air Force public relations had "no information" on the subject but had asked the Fourth Air Force in Hawaii for details.

THREE PRO PLAYERS

At least three pro players whose names have appeared in National League line-up recently—Bill Dudley of the Pittsburgh Steelers, Jack Jacobs of the Cleveland Rams, and Elmer "Tippy" Madarik of the Detroit Lions—are among 54 members of the AAF Hawaiian Flyers team reported by Stars and Stripes, Mid-Pacific edition, to have flown home since the end of the season, November 12.

Awaiting transportation on November 17, in Hawaii, were 5,154 combat veterans. An additional 8,318 were on Saipan and New Caledonia.

"Five of the players had 60 or more points and were returned to the States for discharge," Stars and Stripes said. "Of those being returned for reassignment, some have point totals as low as 24 and only 8 months overseas."

Only 13 of the 54 will be eligible for discharge even after the Army lowers its points to 55 on December 1, the service paper said.

"In most cases," it added, "they will be given furloughs upon arrival."

In Detroit, Madarik said he had "enough points to get out" but would not give his total. He said he is in a Detroit preseparation center and will report to Chanute Field, Ill. "All of us had enough," he said.

Louis Cromwell, Lions' general manager, said his team did not request Madarik's return.

"As a matter of fact," he added, "it was a complete surprise to us when he showed up. Naturally, we were pleased, because he is a whale of a ball player and we need him. I understand he had a furlough due him and decided to spend it in Detroit."

Stars and Stripes reported that Jacobs, a former Oklahoma University star, was "reassigned" to the States and received "an extended furlough during which he will play professional football for the Cleveland Rams."

Cleveland officials said Jacobs, an Air Force lieutenant who spent all his Army career on the gridiron, still is wearing his Army uniform and "it is our impression he is on terminal leave."

A spokesman for the Steelers said Lieutenant Dudley came home on emergency leave several weeks ago because his father was ill. Dudley later was discharged, and the Pittsburgh spokesman said he "understood reliably" he qualified on points. Dudley, a former Virginia University star, could not be reached.

A directive issued by ATC, Pacific Division, states that "personnel requesting assignment to the continental United States must have a minimum of 18 months' continuous service overseas prior to July 1, 1945."

Air Force athletes saw little combat, if any. Their activity was confined almost wholly to barnstorming tours and exhibition games, principally in Hawaii and on the west coast.

The editorial from the Stars and Stripes is as follows:

LET'S STICK TO THE RULES

Service athletic contests were instituted chiefly to build the morale of servicemen.

Now it seems the function of some big-name baseball, football, and other athletic stars is—perhaps unwittingly—to help lower the morale of overseas servicemen.

A case in point is the local AAF Hawaiian Flyers eleven. Gathered together from scattered points—through more than coincidence—star footballers were molded together into a local championship eleven. Now the grid season is over, and instead of taking their place in the demobilization parade in routine fashion according to point totals, 54 players are scheduled to fly home to the States, some for reassignment and some for discharge.

The majority of them are not eligible under current readjustment regulations for return homeward. One such is Lt. Jack Jacobs, who has 53 points, 12 shy of the necessary officer discharge total. He's already gone, and after landing at Hamilton Field was given an "extended furlough." He is scheduled to play for the professional Cleveland Rams in coming football tilts.

Members of the team who haven't already departed are at present waiting for stateside

air lift. One is a strapping 19-year-old with a grand total of 24 points.

Early in November, 37 baseball stars, also AAF athletes in uniform, were flown home after playing exhibitions in Central Pacific areas. Among them were Enos Slaughter, Dario Lodigiani, Joe Marty, Walt Judnich, George Tebbetts, Joe Gordon, Max West, Cecil Hudson, Howie Pollett, and Al Dean. They were excellent baseballers and good morale builders during their tour; somehow that doesn't provide sufficient justification for their air return to the States, when most of them lacked sufficient points for discharge.

Too, it doesn't strike so well that the baseballers went ahead of guys with more points who sometimes had to go later in LST's or worse. Some of those men were combat veterans. Some of them are still in the forward areas. Right at present some of those baseballers with less than 60 points are being discharged as "surplus," under Army regulations pertaining to stateside EM only.

Then there's tennis player Frankie Parker, who not too long ago was flown from Guam to participate in the national amateur at Forest Hills. Since then Staff Sergeant Parker has competed in several other tournaments, including one in Mexico, no doubt scheduled as military duty.

In Sunday's sports headlines is the name of halfback Charles Trippi, who is sparking the University of Georgia football team. Just a little more than a month ago he was discharged as a "surplus" staff sergeant with 41 points; Georgia Senators insisted they had requested his discharge on a "genuine hardship" basis, because his father, mother, wife, and child were dependent on him for support. Apparently the collegiate "amateur" football wage scale has gone up considerably since prewar days.

It may be argued that the release of all these athletes and their quick transportation home is justified because they have completed their jobs and there is nothing for them to do. The same situation exists today for thousands and thousands of other GIs, not athletic stars, who are still sweating out point drops in the Pacific and elsewhere. Surely the fact they aren't great halfbacks or pro fullbacks shouldn't be prejudicial to their interests.

The Stars and Stripes is not interested in smearing anybody or anything, least of all athletes and athletics, which have important morale value for servicemen when handled correctly.

But before the sport world and the Army demobilization system suffers a black eye from these proceedings, we ask that "reassignment," transportation, and discharge of athletes be handled the same as for every GI, swabbie, and gyrene now in service.

Frankly, we don't want the demobilization program degenerating into a wild scramble for discharges based upon who you know, how much dough you've got, how much seniority your Senator has on a certain committee, or whether you're a star for Deplorable State. We think this type of "angling" should be thoroughly investigated to prevent any recurrences.

Speaking for Pacific servicemen, the Stars and Stripes emphasizes once more we want a sensible, speedy, and fair demobilization. You can underline "fair."

Mr. Speaker, most of the Members of the House have loyally supported the fairness of the Army's point discharge system and believe in the equity of these combat veterans with the longest service being given first opportunities for transportation back to the States.

I was shocked at the recent revelation by the mid-Pacific edition of the Stars and Stripes and by the Scripps-Howard newspapers over the Army's flagrant disregard of their own system. I refer to the recent action of the Army flying 54 members of the Army Air Forces' Hawaiian football team back to the States after their football season had ended November 12.

Despite the fact that only 13 of the 54 will be eligible for discharge even after the Army lowers its points to 55 on December 1, air transportation was furnished these men. According to the Stars and Stripes, most of the cases involved included furloughs in the States and for reassignment.

At the same time that these football players were given air priorities to make the trip, 5,154 high-point combat veterans were waiting for transportation in Hawaii and 8,313 in Saipan and New Caledonia. Only 5 of the players involved had 60 or more points, according to the Stars and Stripes.

If the point system is to work, it must be handled in a way fair for all and with no favoritism shown. The Army should jealously guard the system or it will itself destroy all confidence that the combat veterans and the public have in it. Air transportation should go to those veterans with the greatest amount of combat service and to the sick and the wounded and to run in ahead of these cases others with lower points is destructive of the system.

The Army should investigate this case to prevent a recurrence of this favoritism.

---

## Pre-New Deal Idealism

EXTENSION OF REMARKS
OF
## HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of David M. Proctor, of Kansas City, Mo., to the chairman, board of directors, William Jewell College, disapproving conferring an honorary degree on Harry S. Truman. Mr. Proctor states very clearly the idealism for which America has always stood in the training of our youth. I do not consider that this letter is a personal condemnation of Mr. Truman so much as a denunciation of the New Deal's straying away from fundamental truths on which our country was founded, which has had a disastrous effect on the morals of our country, and because of its seeming generosity has fooled millions of good American citizens.

KANSAS CITY, MO., *November 21, 1945.*
Hon. JOHN B. PEW,
*Kansas City, Mo.*

DEAR JOHN: Please find enclosed my signed pledge for $500 to be credited to the class of '02 as part of the Fruit Memorial Fund. This subscription completes the quota of $2,500, and a little more, allocated to my class.

I congratulate you on your effective work for William Jewell College. You have been almost slavish in your untiring efforts to promote the welfare of three institutions—your family, your church, and your alma mater. There will be many lustrous stars in your crown. Other friends of the college, both alumni and nonalumni, have contributed generously to its present stature. I am thankful for such men.

While my service and direct contribution to the college has been negligible, my interest in its welfare has never waned. As a result, the recent publicity with reference to the proposed conferring of an honorary degree upon President Truman deeply stirred me. The trustees probably foresaw only the advertising it would give and possibly had an eye on Federal aid. Some actually believe that even bad advertising is better than none. I am not in sympathy with that school of thought.

You will recall that some 20 years ago a storm threatened William Jewell in connection with the published scholastic degrees of Dr. H. C. Wayman, then president. After prolonged conferences I advised him, in the interest of the college and himself, to immediately tender his resignation. I prepared the draft. The trustees refused to accept it. The storm gathered and finally burst in all of its fury, sweeping Dr. Wayman from the scene in disgrace and seriously retarding the growth of the college over a period of years. That was costly advertising. I sought to avoid it, but was unsuccessful.

I admire you and your associates on the board in your desire to promote the best interests of William Jewell. In the move to confer a degree on Mr. Truman, however, you have been blinded by your own zeal.

Many friends of the college, including Dr. Green, your parents and mine, who nurtured the institution when it was struggling, sometimes against heavy odds, would not approve the conferring of an honorary degree on Harry S. Truman. In support of country, its Government, William Jewell, and church, they clung to a definite pattern. They saved, stinted, and sacrificed for their families, their church, and the college. Neither glamour nor fame marked their lives. They subscribed to the Ten Commandments as a code of human conduct, and the Sermon on the Mount as a formula for human souls. To "do justly, love mercy, and walk humbly before their God" was their goal; they believed in thrift, economy, self-reliance, and individual initiative, in representative government without the lash of regimentation and private enterprise without hobbling verbotens. Undoubtedly they would have been opposed to encouraging idleness by placing unemployment on a salary, because they spent no time inventing an ointment to take the place of sweat.

"Trust in God and work" was the framed motto that greeted you at their door. They supported the Constitution of the United States and had reverence for the Supreme Court, the only tribunal created in the document itself. Yet, complete separation of church and state was an important item in their political code. To them, the ballot box stood as a symbol of freedom—not as a handy device for fraudulent voting to enrich political spoilsmen and to promote their candidates. While recognizing that a full complement of officials is necessary to enforce the law, they knew, as did Thomas Jefferson, that "swarms of officials" would "harass the people and eat out their substance"; they sided with Grover Cleveland, who without fear proclaimed, "Though the people support the Government, the Government should not support the people." They worshipped no idols, no golden calves, no graven images, and seldom were they deceived by "false lights on the shore." In short, they were rugged, home-loving, God-fearing, patriotic American citizens, possessing the qualities that produced the miracle nation of the world. I ask you, in all fairness, would they approve conferring an honorary degree on Harry S. Truman?

For 12 years the New Dealers have controlled the Federal Government. There are

millions of American citizens in the very section from which the college draws its students who sincerely believe that the New Deal in all of its ramifications and implications is the greatest curse, scourge, blight, and calamity that ever befell America. They actually believe that there are many common denominators of nazism, fascism, and new dealism. Whether this is correct or not, it will always be historically significant that the Lord in His infinite wisdom removed from the earthly scene Hitler, Mussolini, and Mr. Roosevelt in April 1945—all in a single anniversary month of the Resurrection. In any event, millions of good citizens—God-fearing, tax-paying, patriotic—many of whom are friends of William Jewell College, will never forget the overt acts of the New Deal, some of which I list:

Deficit spending; increasing our national debt $30,000,000,000 in peacetime; filling the civil list of our Federal pay rolls until we now have more than 3,000,000, apparently frozen in office, who may be a self-perpetuating bureaucracy which only the dynamite of revolution can dislodge; the sinister attempt to pack the Supreme Court and make it a rubber stamp for the Executive; fanning the flames of racial and class hatreds until today we have the spectacle of a Negro of New York City referring to Mrs. Truman as "the last lady of the land"; the coddling of communistic and racketeering labor leaders, representing vote-producing groups, raising them up from harmless cubs to roaring lions seeking whom they would devour and who are now lunging and plunging at the very throat of our Government and industry; tripping the light fantastic down the corridors of a fool's paradise and fiddling to the rhythm of oft-repeated phrases—"I hate war" and "the more abundant life," while the Japs meticulously planned, with sinews of war we furnished, our most humiliating military debacle.

You may say Mr. Truman is not responsible for these tragic follies. But he admittedly supported them a hundred percent. He aided the "indispensable" man in his attempt to pack the Supreme Court; he voted for the back-breaking appropriations now a part of a staggering national debt which for a hundred years will impress its lien on every drop of American sweat. He is a product of one of the most brazenly criminal political machines which for a dozen years looted and plundered Kansas City to the very brink of bankruptcy; he was catapulted into the Senate by the satanic power of a debauched primary election; he opposed for reappointment a courageous public official merely because he successfully prosecuted election crooks and his own political creator.

No, Mr. Truman, though likable, friendly, and normally possessed of good impulses, is not worthy of an honorary degree at the hands of William Jewell College. The presidential oath does not a benefactor make nor high office a hero. Though not in any sense a quack or a charlatan, his background is tainted. His foreground is devoid of personal achievement. He is merely an outstanding example of the quixotic quirks of a distorted political fate. He received his nomination for the Vice Presidency, on the second bounce, through the maneuverings of Mr. Browder, an ex-convict and Communist, and Mr. Hillman, labor racketeer. Then he became President through the grim accident of death. Conferring an honorary degree on Mr. Truman would reflect adversely on the college without aiding one cubit to his stature or erasing the indelible record.

Will the youth of this country construe the honorary degree as approval of the New Deal and Mr. Truman's record? Bear it in mind that friends of William Jewell, opposed to the New Deal and its titular head past and present, are not asking the college to condemn or even criticize Mr. Truman. But will conferring the degree cause them to conclude that the college at last has launched upon a course of political partisanship and become a substation for a highly vulnerable, if not sinister, philosophy of government? The reputation of a denominational college is a good deal like that of a woman—it is either good or bad. It is never just medium.

The trustees should quietly, without publicity, withdraw their proffer. President Truman's overlapping engagements will make this easy of accomplishment. The college should not slap in the face thousands of its friends. It cannot be done with impunity. They should not run the risk of misleading thousands of boys and girls by the implications. William Jewell should avoid the pitfalls of partisan politics. Standing as a spiritual Gibraltar, it must resist the lure of golden calves, graven images, and fleshpots. In an era of confused action and blurred thinking it should retain its accustomed poise. In a period of cross currents and the "madding crowd's ignoble strife" it should not join but pray for the throng and place on the hill a burning beacon that will send its "blaze afar." If it would survive, it must ever cherish the inspiring ideals of its founders and the dreams of its faithful friends through the years.

If my position is wrong, don't place the blame on my doorstep. It merely reflects the teachings received in my youth from my parents, a Baptist pulpit, Dr. Green, Professor Semple, Dr. Clark, Dr. Stafford, Dr. Fruit, and other sturdy patriarchs, who helped build William Jewell and America. If I am wrong, they deceived and mislead us.

With kindest regards, I am

Yours sincerely,

DAVID M. PROCTOR.

Copy to Dr. Binns and each member of the board.

## Time for a Show-Down

EXTENSION OF REMARKS

OF

### HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. HOFFMAN. Mr. Speaker, some folks are parasites. They want to live in comfort without making their fair contribution to the welfare of all. They are insistent and loud-mouthed, though comparatively few in number. They, their theories, and their demands are the cause of much of our present trouble. Every American who is not a businessman or an employer wants and should have a job at a fair wage and most of them are willing to earn the wage paid.

In theory we are all born with equal opportunity, and we would like to believe with equal ability, but in reality neither is true. We cannot all have a business of our own, be employers; some must work for others, others must provide the jobs. The job providers are comparatively few in number but they are governed by the same motives, they have the same desires as do those who must work for them.

Unless a potential employer thinks he can make a profit, he will neither create nor maintain a job. Fortunately, or unfortunately, a majority of the employers possess competency and they can during a strike eat, wear clothing, and have a shelter for a longer period of time than can the average employee.

For the last 12 years those who must work for a livelihood have been told by politicians and agitators that employers, as a class, were a bad lot, intent only on serving their own interest, while every witness, including Director of the Budget Smith, Director of Reconversion Snyder, Secretaries of Commerce, the Treasury, and Labor, Wallace, Vinson and Schwellenbach, and representatives of the A. F. of L. and the CIO, appearing before the committee considering the so-called full employment bill, admitted that we have here in this country a system of government and economy which has given the man who must work for a livelihood a greater prosperity and happiness, more of every desirable thing, than any other system anywhere in the world. Each, while giving lip-service to that system, advocated a policy which, in my judgment, would destroy it.

The last administration and the present one each has been sowing seeds of discord and the harvest is now with us with strikes and threatened strikes throughout the country. Today this Nation is confronted with a situation which is the direct result of the teachings of the last administration and of its corrupt alliance with politicians and racketeers in the so-called labor movement.

Sidney Hillman with his Political Action Committee, Phil Murray, R. G. Thomas, Walter and Victor Reuther, and Richard Frankensteen, with their UAW-CIO, in effect over the years have been telling employees who have been receiving higher wages, under better working conditions and for shorter hours than any group of employees anywhere in the whole world, that the men who gave them employment were greedy, selfish, arbitrary, unfair, unpatriotic, and inhuman profiteers. The result is a strike against General Motors, a threatened strike in the steel industry, and here in Washington a strike which affects the everyday operation of the Government.

Hundreds of thousands of employees have been, or will be, thrown out of their jobs, deprived of their means of livelihood by these strikes which either now exist or are threatened. Millions of others who are dependent upon the operation of our industrial system will suffer.

What has Sidney Hillman and his PAC, Philip Murray, R. G. Thomas, Walter and Victor Reuther—who received part of their training in Russia—and Richard Frankensteen and the others who are advocating these strikes, to offer the employees of General Motors and others who go on strike in lieu of their pay checks? Do not the gentlemen who are causing these strikes, who have created the conditions which have brought them about, realize that Wilson of General Motors, that the Fords, in fact a majority of the employers, can if they wish, when a strike is called, just close shop and go on a vacation?

If General Motors, Chrysler, Ford, Steel, and the Transit Co. here in Washington in answer to the demands of the union and in reply to the strikes should say, "All right, boys, we cannot compel you to work. We cannot meet your demands. We are closing shop and going on a vacation. When you get ready to work let us know—we are going to Miami, Fla." Just what would Sidney

and his cohorts offer? Just what will they do to meet the unemployment? The answer is obvious. Nothing constructive. As wreckers they are superb. As creators of jobs, meeters of pay rolls, they are worse than failures—they never even started.

What is their answer? Permit me to anticipate. They will ask the President to take over private industry, meet their demands, and charge the cost to the taxpayer. That would be fine and a convenient solution were it not for the fact that neither they nor the administration has the ability or the experience, the thrift nor the willingness to work, to successfully operate any of the businesses which give their adherents the bread, the butter, the clothing, and the shelter they enjoy. And unfortunately for them the Federal Government has only one source of revenue—taxes—and again unfortunately, if private enterprise is put out of existence, there will be insufficient tax money.

When the agitators and the politicians have destroyed private enterprise, ended the ability of the businessman and the industrialist to pay taxes, Sidney, Murray, and the rest of the wrecking crew will discover they are trying to lift themselves by their own bootstraps, and that procedure has never been strikingly successful.

Yes; it is time for a show-down, and the Federal Government here in Washington should, as an example, authorize the Capital Transit Co. to employ the necessary help, to use the armed forces of this country to operate the system which here in the Capital must function if the Government itself is to transact its business. (See H. R. 4612.)

Employees cannot, they should not, be forced to work; but if they do not want to work under the terms the employers can give them, they should get out of the way for those who are willing to accept the jobs.

If the taxi drivers call a sympathetic strike, a short cut to the solution to that would be the revocation of their licenses or a transfer of Federal employees competent to operate until other drivers come in.

This is supposed to be a free country. No man should be compelled to work against his will nor should any man be permitted to stand in the way of another willing and eager to work at an offered job.

Sidney and his outfit should discover now that while they have the right to advocate a strike, while their membership has the right to strike, employers may also reach the conclusion that they too have the right to quit providing jobs.

Heretofore, strikes have been "duck soup" for some labor agitators, organizers, and some union officials. This has been especially true during the wartime, when, no matter what the cost, production was necessary.

The Government cannot indefinitely meet the demands of union leaders and, unfortunately, while the organizers and the leaders of these strikes will not themselves, because of the salaries which they receive, suffer, the members of the unions, like the rest of us, who must work for the money which we need to purchase food, clothing—the necessities of life—may be out on a limb if employers, adopting the policy of the agitators, go on strike.

The rain, we are told, falls on the just and the unjust. Unfortunately and regrettably, the hardships of a strike fall not only upon those who cause it but upon the innocent worker and the innocent bystander.

## UNRRA

EXTENSION OF REMARKS
OF
### HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mrs. BOLTON. Mr. Speaker, no one who has had the experience of seeing the ravages of war as I have seen them could fail to be torn by the need that exists for relief—immediate and basic. Nor could one fail to wish that the machinery for which we supply 72 percent of the fuel were less ponderous, more efficient, and more effective. In addition no one could fail to wish to recognize the earnest, sincere work being done by a very major portion of the employees of UNRRA. Personally I have no question of the sincerity of purpose of the Director, the Honorable Herbert Lehman. His task is a herculean one and his problems many.

UNRRA has come to us at this time for additional funds to continue beyond the time originally agreed to. This would seem to be the moment when careful and conscientious study of the actual machinery should have been made with a view to insuring greater efficiency within the organization so that the actual relief got to those who need it in the shortest conceivable time with as little waste as possible.

The Foreign Affairs Committee has held hearings for several weeks. With one exception the witnesses were administration witnesses and had only praise to give. One witness came before us as a good American who felt the committee should and would welcome a frank presentation of some of the criticisms being made of UNRRA methods and mistakes. It was disillusioning to find that the questions asked him by the administration members of the committee were those of discrediting the witness rather than of getting from him all the information possible.

I should like to be able to tell this House that after the hearings were closed the committee had met and made a careful study of the evidence and of the information requested by members of the minority. Unfortunately I cannot do so. I can say only that the committee met on November 26 and voted the bill out. We could not study the evidence because we did not have it before us. Galley proofs will eventually be given us when we have opportunity to correct whatever we ourselves have said; the requested information will probably be secured by that time as UNRRA officials constantly expressed themselves as more than ready to supply it. Ultimately this testimony will be available to committee members and to all who desire it.

The bill, H. R. 4649, will come to the House without amendments, even the five which I understand the Secretary of State, Mr. Byrnes, has agreed would not be inimicable to the continuance of the international procedures.

When we helped set up this international relief administration we were deeply influenced by the need to pool all food and other basic supplies and by our desire to hold the United Nations together after the capitulation of the enemy. The ponderous machinery, the fundamental difficulty presented by the language problem, the slowness with which mistakes of personnel and method have been corrected, added to difficulties of transportation and of distribution, have without question stood between food and hunger. But we are faced with the fact that the Administration has not had imagination enough either to provide a better machinery by which we can give of the much that is ours to the starving of the war-torn areas of the world. We are faced with a need so great that even an inefficient method is better than none at all.

## Postwar Operation of Los Angeles Aluminum War Plant Feasible

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. McDONOUGH. The postwar operation of the aluminum plant built in Los Angeles for war production by the Defense Plant Corporation is feasible and essentially necessary to supply a large and growing consuming market as well as supplying profitable employment to returning veterans, according to a comprehensive survey recently made by Mr. E. F. Scattergood, advisory engineer of the Los Angeles Department of Water and Power, who is a nationally recognized authority on hydroelectric power.

Here are excerpts from Mr. Scattergood's survey:

HEARINGS BEFORE THE SENATE JOINT COMMITTEE ON THE ALUMINUM PLANT DISPOSAL PROGRAM OF THE SURPLUS PROPERTY ADMINISTRATION

PRELIMINARY STATEMENT BY E. F. SCATTERGOOD, OCTOBER 19, 1945

The Pacific Southwest will afford an ample market in the immediate future for an integrated aluminum industry, of appropriate capacity, located in the Los Angeles area. In dependent estimates, checked by the engineers of the department of water and power of Los Angeles, indicate an available market on the Pacific coast of 120,000,000 pounds per year of aluminum—15,000,000 pounds in the Northwest and 105,000,000 pounds in the Pacific Southwest. These estimates seem definitely conservative and presumably the Pacific trade portion of this market will be much greater than the allowance.

Such an available local market emphasizes Los Angeles as an advantageous location for

an integrated aluminum industry giving the industry a goodly cushion for margins of profits resulting from the substantial transportation costs for shipping aluminum, particularly partially fabricated aluminum products, from other centers in the Northwest or the East.

Transportation of such aluminum products is comparatively costly and generally represents a substantial part of total costs in the production and marketing of the same. This results from the fact that partially fabricated aluminum, that is, aluminum sheet and the products of extrusion, rod, and forge plants, generally require costly crating and are very bulky in proportion to the weight of metal, thus requiring large space in first-class transportation carriers.

The Pacific Southwest is unique in that it has a very substantial market isolated, economically, from other production centers by long distance transportation, but available to an integrated aluminum industry located in the Los Angeles area.

As shown in the statement, which we will read into the record, available for discussion, an alumina plant, an extrusion plant, a sheet rolling mill, and an aluminum reduction plant all may be operated with economic advantage in the Los Angeles area as compared with other sections provided, only, that an adjustment in the power rate for the reduction plant equal to one-half mill per kilowatt-hour may be worked out as suggested in the statement.

The department of water and power of Los Angeles most heartily endorses the policies expressed in the report of Surplus Property Administrator Symington to Congress dated September 21, 1945, the report of Attorney General Clark on the aluminum industry, and the interim report of the surplus war property subcommittee of the Small Business Committee of the Senate and desires to cooperate in every possible way to the end that an integrated aluminum industry may be maintained in the Los Angeles area under terms and conditions which are in harmony with the policies so set forth

We feel there is ample justification for presenting these suggestions to your committees respecting establishment of an integrated aluminum project in the Los Angeles area in the fact that an aluminum rolling mill can be maintained and operated in that area on a very favorable competitive basis aside from the advantage in transportation costs in furnishing its local and prospective foreign markets, and in the further fact that the Los Angeles area is a natural point for such an integrated operation, as it is not only the center of the aluminum market in the West—in part because of the extensive use in airplane production—but also because the area provides other favorable factors, such as an ample and skilled labor supply, desirable living conditions and forward looking community leaders.

Conservative estimates indicate that there can be no question as to the adequacy of the market for an integrated aluminum industry centered in the Los Angeles area. There is attached a tabulation prepared by the business agents' division of the department of water and power in collaboration with industrial leaders and interested civic groups indicating for California and the Pacific Southwest a market of 105,800,000 pounds of aluminum per annum. This quantity is predicated, of course, on a stable price on aluminum resulting from free competition.

*An estimate of market for aluminum for Pacific southwest industries prepared by business agent's division, department of water and power*

(Estimates based upon information obtained from local and national markets and from executives of local manufacturing companies.)

END PRODUCT AND ANNUAL QUANTITY OF ALUMINUM

| | *Pounds* |
|---|---|
| Airplanes | 30,000,000 |
| Automobiles | 50,000,000 |
| Furniture | 2,500,000 |
| Auto trailers | 2,000,000 |
| Truck trailers | 3,750,000 |
| Residential building: Construction materials | 2,250,000 |
| Commercial, architectural, and decorative materials | 5,000,000 |
| Cooking utensils | 5,000,000 |
| Aluminum foil | 1,000,000 |
| Home appliances | 2,350,000 |
| Miscellaneous: Fixtures, reflectors, hardware, aluminum powders, refrigeration, pistons, heaters, containers and a multitude of extruded-pressed and die-cast articles | 2,000,000 |
| Total | 105,800,000 |

## A Children's Crusade

EXTENSION OF REMARKS
OF
## HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks, I include a letter proposing a children's crusade. The plan was started this summer when some American children raised money for toys for some of the orphaned displaced children of Europe. Later the project has grown into a wider and more imaginative plan which should capture the hearts of children in all parts of the world. The letter, from Miss Mabel Katherine Pearse, 4700 Kenwood, Chicago 15, Ill., follows:

DEAR MRS. DOUGLAS: Knowing that children of all races and creeds are dear to your heart, I am appealing to you on their behalf. Will you help create a Children's Crusade for the children of Europe, including those of our former enemies, to be carried out by our children of America?

Let me tell you how it started. Last summer a very wonderful thing happened to a group of children at a camp on Washington Island, Wis. The 6 oldest of a group of 30 children between the ages of 8 and 17 had a dream—a vision. All summer they had listened with deepening understanding and interest to the real-life stories which had been read to them from letters written me by my sister, Dorothy T. Pearse, child welfare officer for UNRRA in the British zone of occupation in Germany. Her work is specifically with children. As the campers listened they could see those who for years had lived in concentration camps, often with only one parent, and in most cases separated entirely from their families. They wondered what it would be like always to be hungry, cold, dirty, and clothed in rags, afraid of everyone and everything; never to have gone to school, played games, or had toys, even a ball; never to have had the narrowest gay hair ribbon to wear. They rejoiced that the 337 blond and blue-eyed Latvian children, all under 8, had been found and rescued from the boat in the Baltic, where before VE-day they had been left and forgotten for 12 days alone, without even one adult. It was too bad, though, that UNRRA didn't have the things to help them get well more quickly, for it would be hard to sleep really well four on a mattress. But how wonderful that the women who had been sent to help them, few and overworked as they were, could be so kind and loving. That there are not many children under 12 alive today in Holland and her neighboring countries again made them sad and thoughtful, although a few of the older ones thought it might be better at that. The Polish children have not known for many months where they belonged, while the Estonians, Latvians, and Lithuanians are still unable to return to their own countries for fear the Russians would claim them.

Then, no one knows how it happened, but on July 25 the six oldest campers surprised everyone with a midsummer Christmas party. So genuine was the feeling, so sincere the spirit of giving in that evergreen festooned and bewreathed old barn, with the simply decorated tree, filled stockings for one and all at the fireplace, the Christmas carols, and finally jolly old St. Nick himself, that I'm sure all Christmases forever will take on a deeper meaning for everyone present that night. Here, in a sincerity that was almost reverent, was being lived what Christmas must finally come to mean, a true giving of self in service to others. And out of that moment was born a desire for a farther reaching activity, the carrying of Christmas to the children overseas. Within 5 days the islanders were invited to a "Benefit for a European Children's Christmas" where they, too, for a few hours on that warm July evening actually lived Christmas again as they watched the play, created and acted by the campers, culminate in the colorful tableaux. To most of the audience it was a new and never to be forgotten experience. The free will offerings and later contributions from parents totaled $200. This will be converted into the necessary Christmas cheer, sweets, toys, and gifts of warm clothing, etc., and sent to my sister for a party for the children in her center.

To date, however, no way of sending the supplies has opened. UNRRA, to whom naturally the first appeal was made, can do nothing. Avenues through the Red Cross and British Consulate are closed. The American Friends Service Committee, which is sending packages of food and clothing to the liberated countries of western Europe, and whose combined efforts with the Brethren organization are reaching perhaps 100,000, feel definitely only a very small part of the need is actually met, in spite of the additional outstanding work of the Unitarian Service Committee, the American Relief Organization, the Save the Children Federation and others. Moreover, their work must of necessity be for physical welfare only. Our aim should be to satisfy their hunger for spiritual food. And there is ample evidence that countless groups and individuals all over the United States are seething to help, but are completely bottled up because of lack of channels.

Therefore, I turn to you. Will you help open a way whereby the free, strong, and alert children of this country can build a bridge of international amity to reach their less fortunate, innocent, helpless contemporaries overseas? Think what it will do also for our American children. The interchange of resulting benefits can never be estimated. On these other children, as well as our own, rests the hope of the world tomorrow.

As it is now late, could our Children's Crusade be started in the following way? Broadcast an appeal throughout at least this city and environs, asking our children through their schools, churches, play-clubs, etc., to write a note on a Christmas card to an unnamed child in Europe, telling him (1) His

own special Christmas box will be sent him as soon as ships are available; (2) On Christmas Eve if he will, with his little friends, sing first Holy Night, and then any other carols for 10 minutes or so, at the usual time of 6 p. m., the children of this country will join them in singing the same songs at the same hour, which will be 12 o'clock noon here.

The letters could be sent perhaps to the various UNRRA and other relief heads working throughout Europe, who in turn can address each letter and forward it to an individual child in his district. Or, perhaps, they can all go to UNRRA headquarters in London to be forwarded. Before making the necessary contact with UNRRA and any other agencies regarding this, I am writing you that you may evaluate the possibility of bringing it into reality. You, of course, realize that we must act immediately. The voices of the children of liberated countries and our allies also must ring out as well that Christmas Eve.

Then having utilized the approaching Christmas season to get the people working, a follow-up article in the Reader's Digest should, by the time the ships are available for the delivery and distribution of our Christmas boxes, make possible a midsummer Christmas celebration in Europe, probably on July 25, or earlier, should the way be opened. No harm in having Christmas last a little longer, surely.

We are not attempting to solve the food or clothing problems, nor do we feel that what we will do will be more than a pathetic drop in the bottomless bucket of need. We only hope to put out a hand, or many hands, of warm friendship to those other children everywhere, to let them know that in a very real way the children of this democracy care.

In her letter of late October, my sister wrote that many of the children of the group to whom England is opening her doors, in spite of her continued stiff rationing and personally grim winter ahead, had come from Belsen, where they had kept themselves alive by eating the hearts of corpses. England is taking 1,000 of these orphans; Switzerland 500. Why can't we, in this enormously wealthy country, be equally humane? If any of us have once visualized the suffering of children everywhere, other than our own, how can we enjoy Christmas this year, or even see the elaborate window displays and other decorations, without feeling at least shoddy?

The foreign arrangements for the international carols of Holy Night, etc., will have to be made through the proper sources here—perhaps by cable or telephone—but what a superb prelude and opening chorus for our crusade.

## The Palestine Situation

EXTENSION OF REMARKS
OF
### HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. HERTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by former President Hoover in regard to Palestine:

There is a possible plan of settling the Palestine question and providing ample Jewish refuge. It is at least worth serious investigation, for it offers a constructive humanitarian solution.

IRRIGATION THEORY

In ancient times the irrigation of the Tigris and Euphrates Valleys supported probably 10,000,000 people in the kingdoms of Babylon and Nineveh. The deterioration and destruction of their irrigation works by the Mongol invasion centuries ago, and their neglect for ages, are responsible for the shrinkage of the population to about 3,500,000 people in modern Iraq. Some 30 years ago, Sir William Willcocks, an eminent British engineer, completed a study of the restoration of the old irrigation system. He estimated that about 2,800,000 acres of the most fertile land in the world could be recovered at a cost of under $150,000,000.

Some progress has been made under the Iraq Government, but their lack of financial resources and the delays of the war have retarded the work greatly. Some years ago it was proposed that this area should be developed for settlement by Jewish refugees. This did not, however, satisfy the Jewish desire for a homeland.

ARABS WOULD BENEFIT

My own suggestion is that Iraq might be financed to complete this great land development on the consideration that it be made the scene of resettlement of the Arabs from Palestine. This would clear Palestine completely for a large Jewish emigration and colonization. A suggestion of transfer of the Arab people of Palestine was made by the British Labor Party in December 1944, but no adequate plan was proposed as to where or how they were to go.

There is room for many more Arabs in such a development in Iraq than the total of Arabs in Palestine. The soil is more fertile. They would be among their own race which is Arab speaking and Mohammedan. The Arab population of Palestine would be the gainer from better lands in exchange for their present holdings. Iraq would be the gainer for it badly needs agricultural population.

MODEL MIGRATION

Today, millions of people are being moved from one land to another. If the lands were organized and homes provided, this particular movement could be made the model migration of history. It would be a solution by engineering instead of by conflict.

I realize that the plan offers a challenge both to the statesmanship of the Great Powers as well as to the good will of all parties concerned. However, I submit it and it does offer a method of settlement with both honor and wisdom.

## Development of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. SHERMAN ADAMS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. ADAMS. Mr. Speaker, under leave to extend my remarks, I submit a resolution of the physics department of Dartmouth College, in my district of New Hampshire, concerning the development of atomic energy and the need for legislation to control its use under the guidance of men competent to understand the import of this discovery:

We, the undersigned members of the physics department of Dartmouth College, aware of the tremendous import of atomic energy and atomic weapons to all mankind, believe that the security of the United States can be achieved only through international cooperation for the joint control of these new forces. We believe that a policy of secret research and exclusive national control can only result in a ruinous competitive armaments race in which all the nations of the world will join, leading to the danger of a new and catastrophic world war. From such a war no people will emerge free, if indeed they survive at all.

We therefore resolve and urge:

1. That the United States, as the country that has opened the way for the development of atomic energy, should immediately invite the Governments of Great Britain and the Soviet Union to a conference to prevent competitive armaments and consider the problems arising from this overwhelming development.

2. That the United States champion the need for international development with the broadest utilization of all resources and the widest freedom of research and interchange of ideas.

We believe furthermore that any legislative effort which stifles free and open scientific investigation, which seeks to prevent public surveillance and criticism of the application of atomic energy, will stifle scientific progress, undermine peace, and is therefore harmful to the national interest.

We therefore urge the Congress:

1. That legislative action for the control of atomic energy be preceded by full, free, and public discussion.

2. That the authority for the guidance of the development of atomic energy shall consist of men of scientific competence, fully compensated for their services and able to work toward the maximum utilization of atomic energy for the welfare of the public and not for the interests of any special group.

3. That the administration chosen to direct the work of such an authority be a civilian.

4. That security regulations be limited to direct military application of atomic power and that free research and right of publication be immediately resumed in the field of atomic physics.

A. B. Meservey; A. L. King; G. F. Hull, Jr.; Leslie F. Murch; Rupert H. Hopkins; J. W. Tanch; Gordon H. Gliddon; W. M. Rayton; Robert I. Haseltine; C. A. Proctor; G. F. Hull, Sr.

HANOVER, N. H., *November 26, 1945.*

## Discharge of Medical Students From the Armed Services

EXTENSION OF REMARKS
OF
### HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. KILDAY. Mr. Speaker, on yesterday it became known that the son of Gen. Hanford MacNider had been discharged from the Marine Corps, although he had not accumulated sufficient points, and because of the request of his father. General MacNider is an excellent officer who has rendered distinguished service in two wars. He is an exemplar of that body to which we owe so much—the citizen soldier. He was one of the few Reserve officers to see service at the front in general rank and he acquitted himself in accordance with the best traditions of the citizen soldier.

Still, his son should not be entitled to release because thereof. This evidence of preference will be deeply resented by many men held in the service and by their families. Similar instances must be prevented and, I am sure, the publicity attending this incident will serve to do so.

However, the incident does serve to bring forward a very critical situation confronting the Nation. General MacNider explains that his son had completed 1 year of his premedical education and he was anxious for him to resume his studies because of the long course of study necessary. It is essential to the well-being and future health of the Nation that premedical and medical students be released from the armed forces at once. It is also necessary that students of other specialties be released just as quickly as possible. The medical students cannot be longer delayed. In most courses of study a student may enter at the beginning of any semester during the year. Medical students must enter in the fall or lose a complete year of study. Their absence from their studies renders it essential that they take refresher courses in chemistry and other subjects prior to the opening of the fall term of the medical schools. No delay can be permitted.

In his message on a national health program the President recognizes a serious shortage of doctors and urges the expansion of medical education. I call upon him, as Commander in Chief of the Armed Forces, to direct the immediate release of all medical and premedical students, that they may return to medical school or enter upon refresher courses. To fail to do so will seriously aggravate the critical shortage of medical men. Should the President not see fit to exercise his power in this regard, Congress must take action.

Medical students are not entitled to any preferential treatment because of themselves. The Nation does require that they be returned to the pursuit in which they can render the greatest amount of service to mankind.

## The Late Dr. Jacob Thorkelson

EXTENSION OF REMARKS

OF

### HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. D'EWART. Mr. Speaker, on Monday, November 26, I addressed the House in regard to the death of an ex-Representative from Montana, Dr. Jacob Thorkelson, which address will be found on page 10986 of the CONGRESSIONAL RECORD for November 26. Today I should like to add to these remarks the article taken from the Evening Star, of Washington, D. C., Wednesday, November 21, which tells in more detail of the career of Dr. Thorkelson:

Dr. Jacob Thorkelson, 69, physician and surgeon and one of the Nation's most vociferous isolationists during the 2 years he served in Congress as a Representative from Montana between 1939 and 1941, died yesterday of a heart ailment in Butte, Mont., according to the Associated Press.

The Norwegian-born doctor's political career was short, but during the single term he served in the House he remained an articulate foe of Communism and of all acts on the part of the Government which he felt would draw this country into war. He was outspoken in his opposition to revising the Neutrality Act in 1940, through which the United States was able to furnish Great Britain with supplies.

Only 2 days after Germany invaded Poland he wrote a letter to the editor of the Star in which he referred to the "absurdity of meddling in European affairs."

"UNADULTERATED DEMOCRACIES"

"The unadulterated democracies of Europe are Russia, Germany, and Italy," he wrote, "and not * * * autocratic England and republican France. We are entirely too liberal with the word democracy because it is synonymous with socialism and communism."

Dr. Thorkelson's passion for absolute American neutrality led him to champion many isolationist movements. During the 1940 Christian Front trial in New York, when 16 men were charged with sedition, testimony was given attempting to show that the legislator was a member of the action committee of one of the defendants.

Dr. Thorkelson denied this, but at the same time he described the Government's charges against the Christian Fronters as laughable. He termed the trial a fiasco and said it was a childish attempt to shield the Communists, who operate openly and with the utmost freedom in the attempted destruction of our Government.

FILED LIBEL ACTION

Dr. Thorkelson filed a $300,000 libel suit against Kenneth Crawford, author, and Julian Messner, Inc., publishers, in November 1939, charging his professional reputation had been damaged by reference to him in a book called The Pressure Boys. The suit was dismissed the following year after Mr. Crawford apologized to Dr. Thorkelson.

Dr. Thorkelson worked as a deckhand on a Norwegian ship to come to this country in 1892. He eventually became captain of a three-masted schooner, and during one of his voyages his leaking ship was blown out to sea during a storm off the Argentine coast.

He became a naturalized citizen in 1900 and was graduated from the medical school of the University of Maryland, in Baltimore, in 1911.

Dr. Thorkelson was a licensed airplane pilot and a member of the Naval Reserve.

## Statement of Maj. Gen. Patrick J. Hurley

EXTENSION OF REMARKS

OF

### HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. RIZLEY. Mr. Speaker, Maj. Gen. Patrick J. Hurley, who is perhaps Oklahoma's most distinguished citizen, warrior, and statesman, dropped an atomic bomb, so to speak, on the heads of some of the so-called career diplomats in the State Department who, as he put it, have constantly "sided with and aided the Chinese Communists" and the "imperialistic bloc," and whose policy it is to "keep China divided against herself" and who are contributing to a third world war in the making and are endeavoring to suck the United States into a power bloc of "colonial imperialism versus Communist imperialism."

It is not surprising that some of the little people in this country who style themselves as Liberals and who are constantly condemning our American system of government, its free institutions, and our system of free enterprise; and who are from day to day continuously endeavoring to stir up and breed hatred, discord and division among our people, have let out a terrific "squawk" with respect to General Hurley's courageous exposure.

Mr. Speaker, under unanimous consent approval, I include the full text of the statement made yesterday by General Hurley, as it appears in the press reports of today:

[From the Washington Post of November 28, 1945]

TEXT OF STATEMENT ISSUED BY AMBASSADOR HURLEY ON RESIGNING

The statement issued yesterday by Ambassador Pat Hurley in announcing his resignation follows:

"I am grateful to both the President and the Secretary of State for the support they have given me and for their kind offer in requesting me to return to China as Ambassador.

"In one capacity or another I have been on the perimeter of America's influence since the beginning of the war. During the war I have served in Java, Australia, New Zealand, and generally in the southwest Pacific, in Egypt, Palestine, the Lebanon, Syria, Trans-Jordan, Iraq, Saudi Arabia, Iran, Russia, Afghanistan, India, Ceylon, Burma, and China. Of all of the assignments, China was the most intricate and the most difficult. It is a source of gratification to me that in all my missions I had the support of President Roosevelt, Secretary Hull, Secretary Stettinius, President Truman, and Secretary Byrnes.

"In the higher echelon of our policy-making officials American objectives were nearly always clearly defined. The astonishing feature of our foreign policy is the wide discrepancy between our announced policies and our conduct of international relations. For instance, we began the war with the principles of the Atlantic Charter and democracy as our goal. Our associates in the war at that time gave eloquent lip service to the principles of democracy. We finished the war in the Far East furnishing lend-lease supplies and using all our reputation to undermine democracy and bolster imperialism and communism. Inasmuch as I am in agreement with the President and the Secretary of State on our foreign policy I think I owe it to them as well as to the country to point out the reasons for the failure of the American foreign policy in reaching the objectives for which we said we were fighting the war. I will confine my remarks in this statement to Asia, although I wish to assure both the President and the Secretary of State that I will be at their service in discussing frankly other phases of our international relations."

PREDICTED COLLAPSE

"I was assigned to China at a time when statesmen were openly predicting the collapse of the National government of the Republic of China and the disintegration of the Chinese army. I was directed by President Roosevelt to prevent the collapse of the government and to keep the Chinese army in the war. From both a strategical and diplomatic viewpoint the foregoing constituted our chief objective. The next in importance

was the directive to harmonize the relations between the Chinese and American military establishments and between the American embassy in Chungking and the Chinese Government. It will readily appear that the former objective could not be accomplished without the accomplishment of the secondary objective as a condition precedent. Both of these objectives were accomplished.

"While these objectives had the support of the President and the Secretary of State it is no secret that the American policy in China did not have the support of all the career men in the State Department. The professional foreign-service men sided with the Chinese Communist armed party and the imperialist bloc of nations whose policy it was to keep China divided against herself. Our professional diplomats continuously advised the Communists that my efforts in preventing the collapse of the National government did not represent the policy of the United States. These same professionals openly advised the Communist armed party to decline unification of the Chinese Communist army with the National army unless the Chinese Communists were given control.

"Despite these handicaps we did make progress toward unification of the armed forces of China. We did prevent civil war between the rival factions, at least until after I had left China. We did bring the leaders of the rival parties together for peaceful discussions. Throughout this period the chief opposition to the accomplishment of our mission came from the American career diplomats in the Embassy at Chungking and in the Chinese and Far Eastern Divisions of the State Department."

SOME SIDE WITH REDS

"I requested the relief of the career men who were opposing the American policy in the Chinese theater of war. These professional diplomats were returned to Washington and placed in the Chinese Far Eastern Divisions of the State Department as my supervisors. Some of these same career men whom I relieved have been assigned as advisers to the supreme commander in Asia. In such positions most of them have continued to side with the Communist armed party and at times with the imperialist bloc against American policy. This is an outline of one of the reasons why American foreign policy announced by the highest authority is rendered ineffective by another section of diplomatic officials.

"The weakness of American foreign policy has backed us into two world wars. We had no part in shaping the conditions that brought about these two wars. There is a third world war in the making. In diplomacy today we are permitting ourselves to be sucked into a power bloc on the side of colonial imperialism against Communist imperialism. I am opposed to both. I still favor democracy and free enterprise.

"Our announced policy in the First World War was to make the world safe for democracy. That slogan was elaborated for the Second World War by a definite statement of principles in the Atlantic Charter and the Iran Declaration. We won both wars, but in both instances we failed to establish the principles for which we alleged we were fighting. America's foreign-policy officials have always been divided against themselves. Consequently, we have always been a prey to the nations that give lip service to our ideals and principles in order to obtain our material support. The war that is now in the making is not even intended to defend or establish democratic ideals. Instead of putting our weight behind the Charter of the United Nations we have been definitely supporting the imperialistic bloc. At the same time a considerable section of our State Department is endeavoring to support communism generally as well as specifically in China."

CHARGES CONFUSION

"The hydra-headed direction and confusion of our foreign policy in Washington during the late war is chargeable to the weakness of our Foreign Service. If our Foreign Service had been capable of understanding and sympathetic effectuation of our announced war aims it would not have failed so completely to couple our logistical strength with our foreign policy to obtain commitments to the principles for which we claimed to be fighting from the nations to which we gave the strength of our productivity and manpower.

"A democracy must live on its intelligence and its integrity and its courage. The people of a democracy should be given all the facts to enable them to form correct opinions. The discrepancy between American foreign policy as announced in the Atlantic Charter and the Iran Declaration and in the President's recent Navy Day address and as carried into effect may be attributed in large measure to the secrecy which has shrouded the actions of the State Department. All too frequently information concerning the conduct of our foreign relations 'leaks' out to the public in distorted, garbled, or partial form. The result is that the American people have too little basic information to judge the extent to which their State Department correctly interprets and administers the foreign policies of the Nation.

"During the war we had to maintain secrecy to prevent giving aid to the enemy. I grant that sometimes during the war we had to be expedient. Now we should endeavor to be right. I raise this issue because I am firmly convinced that at this particular juncture in our history an informed public opinion would do much to give intelligent direction and implementation to our international objectives."

POSITION MISUNDERSTOOD

"With special reference to China and the other nations where I have served in the last 4 years, the blessings of factual publicity would be manifold. Now that the war is over I am willing that all my reports be made public, together with the reports made by those officials in the Foreign Service who have differed with the promulgated American policy.

"Our true position in China is misunderstood abroad because of this confusion of policy within our own Government. This situation suggests the need for a complete reorganization of our policy-making machinery beginning at the lower official levels. No international policy can succeed without loyal and intelligent implementation. Because of the confusion in our own international policy America has been excluded economically from every part of the world controlled by colonial imperialism and communist imperialism. America's economic strength has been used all over the world to defeat American policies and interests. This is chargeable to a weak American foreign service.

"I wish to absolve from this general indictment some of our career men. Some of them are very admirable and well-equipped public servants who have fought in the State Department and in other countries against overwhelming odds to advance American ideals and interests.

"America's economic and diplomatic policies should be coordinated. America's strength should not be allied with any predatory ideology.

"America should support the amendment or revision of the San Francisco United Nations Charter to make it democratic. Our strength should be used to uphold the decisions of the United Nations rather than to support conflicting ideologies or warmaking power blocs."

## The Bulwinkle Bill

EXTENSION OF REMARKS
OF
**HON. LOUIS LUDLOW**
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. LUDLOW. Mr. Speaker, by unanimous consent I present for printing in the CONGRESSIONAL RECORD the following editorial which appeared in the Indianapolis Star on November 25, 1945:

SQUARE DEAL FOR CARRIERS

The railways of the country, in supporting the Bulwinkle bill now before Congress, are not asking concessions or favors. All they seek is to know where they stand. They are entitled to that.

The Interstate Commerce Commission was created back in 1887 to have supervision of the operation of interstate carriers. It was authorized to adjust rates and to regulate the carriers in the interest of the public.

The law has been amended many times since 1887 to make it meet changing conditions. The original commission of five has been enlarged to 11 members to handle the present volume of business. The Commission has done a good job. The Bulwinkle bill would put regulation of the carriers squarely up to the Commission, where it has been for years and belongs.

Need for such a law has resulted from tactics of the Federal prosecutors who have taken carriers into court on the theory that some of their policies are violations of the Sherman antitrust law. The roads were trying to do what the Interstate Commerce Commission had said they legally can do. They cannot serve two masters when those would-be bosses do not agree.

The Bulwinkle bill would put final authority up to the Commission. It would not relieve the carriers of any regulatory restriction, but could let them know what to expect, which is fair.

## Republicans Urged To Declare Themselves Conservatives To Assure Party's Future

EXTENSION OF REMARKS
OF
**HON. ROY O. WOODRUFF**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent, from the Washington Evening Star:

REPUBLICANS URGED TO DECLARE THEMSELVES CONSERVATIVES TO ASSURE PARTY'S FUTURE

(By Frank R. Kent)

Soon the Republican National Committee will meet in Chicago to make plans for the 1946 and 1948 campaigns. And the Republican State leaders of New York also will gather to map out their fight for next year. Some of these Republicans recently were asking for "suggestions for a program."

In this connection, it is interesting that the increasingly important part in politics which the new parties in New York—the American Labor Party and the Liberal Party,

to say nothing of the Communist Party—are coming to play has brought out more clearly than before the necessity for the maintenance of the two-party system—that is, if the Nation is to remain healthy.

At any rate, such is the view of many thoughtful men who feel that the lack of character and sense among the national Republican leaders which led them in three campaigns to imitate the New Deal and foolishly bid for the support of the so-called liberals and professional labor leaders stands in the way of a strong two-party system and thus damages the national interests and paralyzes party prospects.

DEGENERATED INTO BLOCS

Their argument seems sound. Ten democratic governments, it is pointed out, set up in Europe after the World War, failed largely because they could not concentrate into two major parties. They degenerated into bloc governments, survived for a few years through compromise and negative action. Then they died. But, it is urged, the basic purpose of two major parties is much wider than this. They must present alternative programs and issues. It is only thus that our revolutions are at the ballot box and not by street mobs.

The natural division between men in private life is conservatism and radicalism. Today, with us, the radicals on the "left" are organized and vigorous; the conservatives on the "right" are unorganized and impotent.

The American people have a right to an organized expression of conservative thought. It is no crime to be a conservative. Neither is it fascism nor reaction. A conservative is not allergic to new ideas. He only wants to try them out slowly and without destroying what we have that is good.

In the last 12 years the Democratic Party has preempted the radical field. And the radical parties are infected with bureaucracy, with socialism, and communism. During this time the Republican Party has been divided and uncertain.

If the Republicans really believe in the two-party system and want to prevent the disintegration of their own party, it is argued, they would at once take the conservative position and gladly declare it. The Democrats completely hold the radical fort. They cannot be dislodged from it. There is no room for the Republicans in it and no position to the left of it.

TOWARD DISAPPEARANCE

Republicans have tried to compromise, they have tried to outdo the radicals in promises and they have straddled repeatedly. The results have been bad for the party and bad for the country. If they continue along these lines the Republican Party will as certainly disappear as did the old Whig Party.

Eventually a conservative party will come into power as a result of radical excesses and accumulated blunders, which are inevitable for any party too long in power. The Republicans should take the conservative position without apologies, but with pride in conservative priniciples and the service they offer to the country. It is absurd to be afraid of the word.

Whatever party opposes the radicals will be smeared. That is the radical technique, but it is losing its effectiveness. Soon or late the American people as a whole see through the smears.

The Republicans should stop shrinking from the charge that they are not "liberal." Let the radicals have that word. It has been thoroughly polluted. It has been robbed of all its real meanings. The Socialists, the Communists, the labor bosses and the crackpots of every variety daily announce that they are "liberals." They have nested in the word until it smells very badly. It no longer makes sense.

## Communism or Democracy

EXTENSION OF REMARKS
OF
### HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. RIZLEY. Mr. Speaker, I have a very interesting letter from a young woman in Oklahoma, who will reach her twenty-first birthday in time to cast her first vote next year. She is not a resident of my congressional district, and I happen to know that she was born and reared south of the Mason and Dixon's line and that her parents not only grew up in the Jeffersonian faith but have been active in democratic politics in Oklahoma for many years.

One of the important things about the letter, as I view it, is that this young lady is doing her own thinking. Certainly the letter furnishes much food for thought for those who pretend to believe in a republican form of government and the democratic processes that flow from such, and for those who believe that the people should support the Government instead of the Government supporting the people.

I include as a part of my remarks this very interesting letter:

As one who will vote for the first time next year, I find myself 6 months before election with the conviction that a choice between the Democratic and Republican Parties may also be a choice between communism and democracy.

I arrived at this conclusion because of the following facts:

In Russia the government is responsible for jobs; there are no private profit-making employers.

Here in America the CIO is demanding passage of House bill 2202 known as the full employment bill which sets forth Government policy to aid in creating jobs.

President Truman recommended passage of this bill; has taken Congress to task for pigeonholing it.

In Russia labor unions operate the social security system for all wage and salary earners.

The CIO is demanding passage of the Wagner-Murray bill to extend social security coverage under the Federal system.

President Truman sent a message to Congress November 19 asking passage of this bill.

Up until 1930 unemployment insurance was included in the social security system in Russia.

The CIO is demanding passage of the unemployment compensation bill to pay $25 for 26 weeks to unemployed.

Mr. Truman also asked Congress to pass this.

Medical and hospital care is free for all citizens of the Soviet Union.

The Wagner-Murray bill also sets up health facilities, provides funds for medical care.

As stated above Truman recommended this on November 19.

Soviet unions also concern themselves with workers' housing.

On the CIO calendar is S. 1592 to provide funds for study and building of low- and middle-cost housing.

I don't know whether Mr. Truman has recommended this one or not.

Soviet unions also conduct educational activities.

The November 24 issue of the Washington Post says: "Look for President Truman to send a message to Congress soon on Federal participation in education. It's a good bet he will ask legislative provisions designed to keep teachers up to date professionally, perhaps by making available books, laboratories, and refresher courses."

My authority for the statements about the Soviet trade unions is an article in the November 26 issue of the CIO News by Len de Caux, the editor. In the same paper on another page appears the list of bills the CIO wants passed. Fresident Truman's recommendations are a matter of record.

Maybe you will draw a different conclusion from finding that the legislation recommended by Mr. Truman is almost a carbon copy of the bills demanded by the CIO and the CIO's list of bills reads like a carbon copy of the list of activities of the Russian labor unions. But it leads me to believe that in choosing between our two major parties, I may also be choosing between a government which calls for the complete abolition of all private property of every description and the absolute control by the community in all matters pertaining to labor, religion, social relations, etc., and our present form of government where the supreme power rests with the people.

I do not mean to say that Mr. Truman is a Communist. I think he believes he must play ball with the labor unions in order to stay in office.

I know Detroit and the other centers of these activities seem as remote as Russia to most of us in the Middle West, but if we don't wake up and take note of what they are doing we may find they are a lot closer home than we think.

## Civil War in China

EXTENSION OF REMARKS
OF
### HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I desire to insert as part of these remarks an intelligent article by Edwin A. Lahey, of the Chicago Daily News, on the situation in China.

This article, by an outstanding newspaper columnist, is an important contribution to our thinking on the present undeclared civil war in China. Published last August 22, when many of us were unaware of the implications of our policy of all-out aid short of war to the reactionary Chunking regime in China, it predicted with unerring accuracy the present armed conflict within China's boundaries.

Mr. Lahey, who has been in China and seen the situation there, lays the blame for civil war squarely at the door of our Ambassador who resigned yesterday with a fanfare of charges against those whose policy he changed. He speaks of Gen. Patrick J. Hurley's "tortured" American policy. He said last August that the real alternatives in China were to "set up a democratic coalition government or produce a civil war." Those are still the alternatives today.

Mr. Speaker, if we return to the policy of President Roosevelt, former Ambassador Gauss, and General Stilwell in China and abandon our present course of aiding the side which is suppressing the

struggle for democracy and self-government in China, we can bring peace and a democratic coalition government to China.

With that purpose in mind, several Members of this House, including myself, recently introduced identical resolutions calling for the recall of all troops, transports, and supplies now in China.

At this point, Mr. Speaker, I desire to insert the article from the Chicago Daily News. It reads:

HURLEY FOR CHIANG

(By Edwin A. Lahey)

WASHINGTON.—Since the death of President Roosevelt, our Ambassador at Chungking, Patrick J. Hurley, has tortured American policy in China to fit the assumption that our only alternatives were to deal exclusively with the government of Chiang Kai-shek or with the Communist government at Yenan, described by Hurley as an "armed political party."

In the private view of many Americans in China, whose opinions are suppressed by strictly military orders against "political discussion," or by the creeping Chinese censorship encouraged by Hurley himself, the real alternatives in China are either to persuade Chiang Kai-shek to set up a democratic coalition government or to produce a civil war.

It will be difficult at best for Americans to appraise what goes on in China during the ensuing months, for at least three reasons: (1) the censorship exercised by the Nationalist government; (2) the engaging subtlety of the Chinese, which makes their political motives elusive to a naive Occidental; and (3) the passion with which our Ambassador, Mr. Hurley, clings to the belief that it is his mission to preserve Chiang Kai-shek and his government, as they are, come what may.

It is impossible for American newspapermen in China to report the extent toward which the Chiang Kai-shek government has drifted away from the democratic principles upon which the Kuomintang was founded and into the excesses of one-party dictatorship, including the use of secret police, concentration camps, and the suppression of civil liberties. The Chungking government recently refused to allow two American correspondents to reenter China because they had written reports considered hostile.

The issue in China is presented to American readers by the generalissimo and by Ambassador Hurley as a dispute between a bona fide government in Chungking and an "armed political party" in Yenan.

It is more than that, however. Chiang Kai-shek has a war on his hands right in Nationalist China, in repressing demands for the restoration of democratic rights. How much of this unrest within Chiang Kai-shek's China can be traced directly to the Communists in Yenan seems beside the point. The fact appears to be that all the inegredients of a savage civil war are bubbling throughout China.

## Return of Soldiers

EXTENSION OF REMARKS

OF

### HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. D'EWART. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the following letter and resolution of the United Mine Workers of America:

WESLEY A. D'EWART,
*United States Representative,*
*Washington, D. C.*

DEAR REPRESENTATIVE D'EWART: The following letter from Local Union 1095 is self-explanatory and has been endorsed by Local 2301, U. M. W. of A., Stockett, Mont., and is submitted to you for your consideration.

Respectfully yours,

JOHN MOTIL,
*Recording Secretary.*

"In behalf of the soldiers who have fought and bled to bring this war to an end and whereas these men have not been able to get passage home, to which they are rightfully entitled: Therefore be it

"*Resolved*, That Local 1095 of the United Mine Workers of America urge all locals and districts of the United Mine Workers of America and the Honorable President of the United States, as well as the Honorable Senators and Representatives of our Nation, that they do all in their power to get all available transportation to bring these soldiers home from foreign shores. We demand immediate action for these soldiers who have waited months for a ship to take them home.

"Sincerely submitted.

"C. A. REAT,
"WILLIAM CODINA,
"WAITO KOSKI,
*"Resolution Committee, Local 1095."*

## Better Medical Care Is Inevitable

EXTENSION OF REMARKS

OF

### HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Star-Times:

BETTER MEDICAL CARE IS INEVITABLE

In calling upon Congress to establish a compulsory national health insurance system and to provide for greater Federal aid in the field of public health, President Truman recommended the inevitable. It is what Mr. Justice Holmes used to call one of the felt necessities of the time.

The experience of Selective Service has dramatically underscored the national need for better medical care. The fact that 30 percent of the Americans—men and women—who were examined for military duty had to be rejected as unfit, not to mention the large number subsequently discharged from the services or treated for preinduction disabilities—came as a shock to a nation proud of its high standards. Yet it was not a surprise to expert medical and social workers. They long knew how spotty our health facilities really are.

However, no people were better aware of the shortcomings than the victims. Agitation for better service and better facilities was growing steadily in volume before the war. It is sure to continue after the military interruption. As President Truman said, decent care is part and parcel of freedom from want.

The stand-pat leadership of the American Medical Association may raise its old hue and cry against the President's proposals, but the rank and file of practicing physicians will know that their own leadership is wrong and that the President is right. If they are completely frank with themselves—and we are sure that the great majority of them will be—the doctors will acknowledge that present medical economics means adequate care only for the privileged few. They will also acknowledge that with almost painless reforms in business practices, the medical profession can meet the demands of the many.

Under the proposed system, patients will still be free to go to doctors and hospitals of their own choice. Such patients simply will be the beneficiaries of a plan which insures them of being able to pay their bills. This would be supplemented by disability insurance to guard against loss of income during the period of sickness and treatment. The purse no longer would stand in the way of the health. Without argument, that is how it should be.

In addition to compulsory national health insurance—which would also cover dental work—Mr. Truman's proposals call for Federal aid in the building of hospitals and health facilities where these are needed. This means particularly the rural sections of America. The country dweller is the real forgotten man of modern medicine.

There would also be more Federal funds for the expansion of cooperative State-Federal public-health, maternal, and child-health services. There would be Federal aid for the medical schools so that hospitals and clinics could be adequately staffed. There would be aid also for research so that a more widely spread medical service might become ever more efficient.

Better medical care means a better Nation. It is inconceivable that we should willingly make it possible for a future President to report as Mr. Truman did yesterday that "about 12,000 counties, 40 percent of the total in the country with some 15,000,000 people, have either no local hospitals, or none that meets even the minimum standards of national professional association."

It is inconceivable that we should willingly permit a future President to make a report similar to Mr. Truman's on the state of the health of our young people, not to mention the undoubtedly worse lot of those in older age groups. America can afford to be strong, and America will be strong.

One hopes against hope that the organized doctors will take a more enlightened position on these proposals than that of Dr. Fishbein and Senator TAFT. One hopes that Members of Congress will solidly support the legislation introduced immediately by Senators WAGNER and MURRAY to bring the President's plan into being. There may be some valid criticism of details, but there can be no sound opposition to its basic principles.

If there is to be a fight, it will be a fight against the people—and in such fights the people always are eventually victorious. How soon the victory comes will depend largely on the vigor with which the President backs up his plan.

## An Unsung Hero

EXTENSION OF REMARKS

OF

### HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. MASON. Mr. Speaker, immediately after the attack on Pearl Harbor Col. Charles A. Lindbergh came to Washington and offered his services in any capacity he could be used. Both the Army and the Navy wanted him as an expert flyer and technical adviser, but the White House said "No." United Air

Lines and Pan American also wanted him as a civilian expert in connection with their war activities, and again the White House said "No." Then Ford called Lindbergh in and asked him to do research work and conduct experiments in connection with the war planes that Ford was building for the United States Government. Lindbergh said he would be glad to do so but warned Ford about possible White House objection. Ford took Lindbergh on in spite of White House opposition, and Lindbergh went to the Southwest Pacific to test war planes under actual combat conditions.

In demonstration test flights—as a technical civilian adviser to our fighting forces—he actually shot down several enemy planes, all of course off the record because he was a civilian and noncombatant. Thus did this 43-year-old civilian flier, far beyond the regular age of Army fighter pilots, demonstrate what fighter planes could do under actual combat conditions. Not only that, but he demonstrated what American bombers could do. On one test he piloted a bomber loaded with a bomb load three times as heavy as the regular bomb load and took off after a much shorter run than our regular bomber pilots thought safe even with a normal bomb load. Lindbergh risked his life time after time in order to demonstrate to our Army pilots what could be done with our fighter planes and with our bombers.

Mr. Speaker, previous to Pearl Harbor, because of his testimony before congressional committees concerning Germany's war preparations and Germany's superiority in fighter planes, and also because of a startling report made to the Roosevelt administration as a result of an official European inspection trip—which report was pigeonholed and entirely ignored by our War Department—Lindbergh was forced by Roosevelt to hand in his commission as a colonel in the Army Air Force Reserve. His recent war services warrant not only the award of a Distinguished Service Medal, but the full restoration of his rank in the Army Air Force Reserve. Only thus can partial atonement be made for the great wrong done this great American. Lindbergh is the Billy Mitchell of this war. Will Lindbergh, like Mitchell, have to wait 20 years after his death for suitable recognition of his services?

## Higher Pay and Allotments for Servicemen

EXTENSION OF REMARKS

OF

### HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. COFFEE. Mr. Speaker, in a recent issue of the Stars and Stripes, there appeared a provocative article interesting to people all over the country. It discusses a burning question of growing concern to servicemen everywhere. Many men in uniform have called it to my attention and have suggested that it be printed in the CONGRESSIONAL RECORD. It carries a strong and pertinent message. I believe the recommendation to be sound; it is based on common sense. Here is the editorial:

HIGHER PAY AND ALLOTMENTS FOR SERVICEMEN

There has been much talk recently of raising the wages of mainland civilian workers in order that take-home pay may be held at something approaching wartime levels.

The Stars and Stripes suggests that any such wage increases be accompanied by reasonable increases in servicemen's pay and dependency allotments.

The United Automobile Workers union has asked for a 30-percent boost in basic wage rates.

Henry Ford II, president of the Ford Motor Co., may agree to a 15-percent increase for Ford workers.

Secretary of Commerce Wallace has suggested a 15-percent increase in wages and around a 10-percent increase in manufactured goods prices.

The higher wages, it is argued, are to come out of increased production efficiency, business savings due to lower taxes, and higher prices.

The Stars and Stripes does not wish to enter the dispute over whether or not the wage increases can be justified. That is a matter to be settled by genuine collective bargaining between unions and management, with impartial assistance from Government.

But the Stars and Stripes does wish to make the point that if wages of civilian workers are to go up—10, 20, 30 percent—and in prices are to go up as well, then the serviceman's pay and his dependency allotment should be raised correspondingly.

If, in the national economic picture, civilian wage increases, with accompanying price rises can be justified, then surely a similar increase in the soldier's, sailor's, and marine's pay is no more than fair.

To be sure, the serviceman has no union to bargain for him, and rightly so. But, if Army and Navy careers, whether for a lifetime or only a year, are to be made as attractive as civilian jobs, and especially if voluntary enlistments are to amount to much, someone must see to it that the financial rewards of the man who chooses to remain in the service of his country keep pace with what he might be making as a civilian. The waiving of income tax on wartime service of enlisted men is merely a step in the right direction.

Dependents of servicemen have to pay for food, housing, clothing, transportation, and recreation in the same markets as other civilians. The price level, if it goes up, will affect everybody at home, not just those who get the higher wages.

The Stars and Stripes has no intention of driving a wedge between civilian wage earners and servicemen and their dependents. That would be foolish because most servicemen are wage earners at heart and want nothing so much as to get back into overalls.

We are merely putting in a bid for readjustments in servicemen's pay and dependency allotments commensurate with any widespread increase in civilian wage rates.

## Increased Sugar Supplies for 1946

EXTENSION OF REMARKS

OF

### HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. AUGUST H. ANDRESEN. Mr. Speaker, in view of the improved sugar situation for the American people, I have written the following letter to the Secretary of Agriculture, urging an increase in the sugar allotment for home and industrial use. Considering the supply situation, I feel that the American people should be given an additional supply of sugar for the month of December to take care of the needs for the Christmas holidays.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., November 26, 1945.*

HON. CLINTON P. ANDERSON,
*Secretary of Agriculture,*
*Washington, D. C.*

Re increase in sugar allotments for civilian and industrial uses for December 1945.

DEAR MR. SECRETARY: Sugar supplies for American consumption for the coming year are now fairly well determined. The sugar crop has been made, and prospects for harvest and refining in this country and the insular areas which supply the United States are greatly improved as compared with the 1945 supply picture. A few months ago we were threatened with a sugar famine due to the severe drought in Cuba, our main source of supply, but satisfactory moisture in Cuba since the latter part of June has greatly improved the sugar supply in that area.

Furthermore, with the British having the largest stock pile of sugar in history, and with a prospective additional supply of 1,600,000 tons from Java and certain unknown quantities from the Philippines and other sugar-producing areas available for world consumption, the demand on supplies of sugar available for this country should be materially decreased. It is very doubtful if the British and Dutch will share the Java sugar trove with the United States. Also, it must not be overlooked that at least one-half of our Army and Navy has been promised for demobilization by Christmas, which will provide more sugar for civilian consumption.

Reliable estimates of raw sugar production for the 1945–46 crop year are shown to be: Cuba, 4,700,000 tons; Puerto Rico, 1,000,000 tons; Hawaii, 900,000 tons; domestic (United States) sugar beets (including carry-over), 1,400,000 tons; Florida and Louisiana sugarcane, 600,000 tons; Virgin Islands and other Caribbean areas, 50,000 tons. This makes a total of 8,650,000 tons of sugar, from which must be deducted approximately 450,000 tons for use in the areas of production and for coastal export, which leaves 8,200,000 tons for the United States and export. Supplies allotted to domestic consumption for 1945 amounted to 5,092,000 tons.

The war is over, and millions of American fighting men are returning to civilian life. Rationing of all foods except sugar has been discontinued. I do not suggest that rationing of sugar be discontinued until greater production is secured, but in view of prospective supplies, which are now being harvested and refined, I wish to urge that for the month of December 1945, the sugar allotment for home use be increased by 2 pounds per capita, and that the quotas of sugar for industrial users, including bakeries, soft drink beverage producers, ice cream and candy manufacturers, be increased to 70 percent of 1941 usage as compared to the present 50 percent allotment.

I also desire to call to your attention that most of the refineries of sugar are now operating in all parts of the country, and therefore, supplies of sugar are readily available to carry out my suggestion to you.

With kindest personal regard, I remain

Sincerely yours,

AUGUST H. ANDRESEN,
*Member of Congress, First District, Minnesota.*

## The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
**HON. CLARENCE E. KILBURN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I wish to include resolutions adopted at a conference at Canton, N. Y., November 15, 1945, on the St. Lawrence seaway and New York State power project:

Resolutions adopted at a conference at Canton, N. Y., November 15, 1945, on the St. Lawrence seaway and New York State power project

Whereas the United States and Canada on March 19, 1941, signed an agreement to complete the Great Lakes-St. Lawrence seaway and power project; and

Whereas most of the construction work needed to complete this great development, the Nation's No. 1 postwar project, is to be undertaken in the International Rapids section of the St. Lawrence River in boundary waters of the State of New York and the Province of Ontario; and

Whereas the completion of the seaway will modernize an existing channel for commerce already improved for use by ocean cargo vessels over 90 percent of the distance from the head of the Great Lakes to the open sea; and

Whereas the dual-purpose navigation and power project to be built in the International Rapids section will develop 2,200,000 horsepower of the cheapest electric power in the world, to be divided equally between the State of New York and the Province of Ontario; and

Whereas the State of New York in 1931, through the adoption of the Power Authority Act, by a unanimous vote of the legislature, declared it to be the public policy of this State to develop the International Rapids section for both power and navigation, and authorized the Power Authority, as the accredited public agency of the State, to take over the ownership and operation of the St. Lawrence power project to be constructed in this State, upon assuming the construction costs thereof; and

Whereas the Legislature of the State of New York, in March 1944, again declared by unanimous vote that New York State's power project should be completed to serve the postwar needs and interests of the people of this State; and

Whereas President Truman and Governor Dewey in September 1945, by an exchange of telegrams reaffirmed their nonpartisan support of the development authorized by the United States-Canadian agreement of 1941 and specifically recommended the completion of the St. Lawrence seaway and the New York State power project under the terms of the Federal-State accord of February 7, 1933: Therefore be it

*Resolved*, That we favor the approval of the United States-Canadian agreement of 1941 and the prompt enactment of legislation to authorize completion of the St. Lawrence seaway and the New York State power project, in full conformance with the recommendations contained in the statements of President Truman and Governor Dewey, made public at the White House, September 27, 1945; and be it further

*Resolved*, That we who live in the St. Lawrence Valley and for years have seen the waste of its mighty resources, declare the proposed project to be the greatest public improvement now available for postwar completion, in any part of the world, and strongly favor its construction in order to provide tens of thousands of postwar jobs for returning veterans and displaced war workers, to promote the foreign trade and domestic commerce of all parts of the United States and to furnish 4,000,000 industrial, commercial, domestic, and rural consumers in New York State with power and electricity, at low rates which will permit increased use of electrical energy and electrical appliances, and be it further

*Resolved*, That we commend the non-partisan support given to the St. Lawrence seaway and New York State power project by such outstanding leaders as Governors Roosevelt, Lehman, and Dewey, Senator Wagner, President Truman and all Presidents of the United States, regardless of party, since World War I; and be it further

*Resolved*, That copies of these resolutions be forwarded to the President of the United States, the Honorable Harry S. Truman, to the Governor of the State of New York, Hon. Thomas E. Dewey, to the senior Senator from the State of New York, Hon. ROBERT F. WAGNER, to the junior Senator from the State of New York, Hon. JAMES M. MEAD, and to members of the New York delegation in the United States House of Representatives, together with a list of the civic organizations of northern New York represented at this conference.

---

A committee was appointed at the conference, which was sponsored by the Northern Federation of Chambers of Commerce, to cooperate with farm, labor, and civic organizations in support of the project, as follows:

Dr. Rollin A. Newton, president, Northern Federation of Chambers of Commerce, Massena; Clarence F. Hall, Clayton; Ernest C. Gould, Secretary, Chamber of Commerce, Watertown; Charles McHenry, Cape Vincent; Assemblyman William L. Doige, Chateaugay; Franklin R. Little, Editor, Journal, Ogdensburg; W. Allen Newell, Ogdensburg; W. Preston Loomis, Gouverneur; Edward B. Crosby, Massena; Ernest Mason, Malone; M. H. Ginsberg, Tupper Lake; H. L. Garren, Lake Placid; George W. Sisson, 3d, Potsdam; William T. Field, Watertown; and A. F. Shortt, Saranac Lake.

Among the speakers at the Conference were Dr. Eugene G. Bewkes, President of St. Lawrence University, Canton; City Manager C. Leland Wood, Watertown; Assemblyman William L. Doige, Chateaugay; Mayor O. T. McGuiggan, Massena; and former assemblyman Grant F. Daniels, Massena, joint author of the St. Lawrence resolutions adopted in 1944 by the New York State Legislature.

---

## Run It for All the People

EXTENSION OF REMARKS
OF
**HON. JOSEPH E. TALBOT**
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Waterbury Republican of Waterbury, Conn.:

RUN IT FOR ALL THE PEOPLE

General Motors is a colossus. CIO is a colossus. Both are awake in a gigantic strike battle. United States Steel is another colossus. Its CIO union is taking a strike vote tomorrow and we doubt that there is anyone who believes that it will not favor a strike. There is a colossus bigger than any of these but it is sound asleep. It constitutes the consumers of our Nation, the rank and file of the people. Efforts are being made to keep it asleep, but maybe these efforts will not be successful. Just as the people must pay for the great war just ended, they also will have to pay for whatever is decided upon in the strike war now raging.

Sleepy and powerless as they may seem, the rank and file of the people who must pay the bills for everything that goes on in this world are capable of a terrific punch when once they make up their minds to deliver it. This is the punch that goes into an election when they are aroused. Congress is aware of this even in a period when the administration running our Nation has shown such reluctance to face the realities of what the Nation is up against in this labor war.

The mind of the administration is disclosed in the statement of House Democratic Leader MCCORMACK to the effect that he fears "there is danger Congress will pass vicious antilabor legislation if strife and unrest remain acute." No one wants vicious legislation, but there is no reason to fear legislation long overdue that will put governmental controls on labor even as it has upon management.

Long ago, at the insistence of the American people, legislation was enacted controlling trusts and monopolies of corporations. As new evils of this character arose, more legislation went on the books. Our laws obligate companies to keep contracts. Unions should be likewise obligated. No company making a contract with a union should be permitted to violate it. Nor should a union be permitted to violate its contract with a corporation. Why, then should anyone fear legislation as proposed that would take away for a year the collective bargaining rights of any union striking in violation of no-strike agreements? Why should not unions be liable for civil damages even as corporations are? Why should either corporations or unions, especially these tremendous unions, be permitted to gang up tremendous funds to pour into elections so that the men nominated and the men elected shall be under their power when they get to Washington? Where do the people get off with such control in Washington?

The cry of the automobile strike leaders to the effect that they are against price increases for cars is but dust thrown to blind the people. They are out for increase after increase for their workers. They demand domination of the business. They want to dictate everything about the work, the amount of production permitted for each worker, the prices charged for the product, the finances, in short the entire control. Right now the CIO is permitted to be a colossal monopoly of unionism spread over countless plants using its tremendous power to force what it demands. But it would be against the law for the various managements so to be united in monopoly to battle the unions or do anything else in unison.

What Congress needs to do is give its attention to protecting the rank and file of the people in these strikes and all strike wars. It should still see to it that management does not practice monopoly and likewise see to it that unions do not. We still want this an America of free enterprise, run in behalf of all the people.

---

## The Pulse

EXTENSION OF REMARKS
OF
**HON. DANIEL A. REED**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting a letter which appeared recently in the Atlanta Constitution, Atlanta, Ga. The writer of the letter, Lewis Ayer Smith,

draws a deadly parallel between the peacetime conscription of the American youth for war, and the conscription of young men for our domestic police force. There is real logic behind the sarcastic presentation of the comparison of the two types of the proposed conscription.

THE PULSE

COMPULSORY COPS

EDITOR, CONSTITUTION: Few Atlanta citizens realize how inadequate our police force is to protect us in case of any sudden large-scale outbreak of lawlessness. Riots have occurred in Atlanta in the past, and may occur again. Is anyone so foolish as to believe that our present police force could effectively cope with large organized bands of gangsters armed with machine guns and other modern weapons?

The obvious answer is "No." We must have more protection. We cannot continue jeopardizing our lives and property. We must so prepare ourselves that no gangster mob will dare start anything here, and that presents the question: "How can we get more police protection?"

Our city government tells us that we cannot get a sufficient number of men to join the police force to give us adequate protection, no matter how much we may offer to pay. Furthermore, they say it has always been customary to underpay policemen. It's good for their morale, keeps them obedient, etc.

But let us not be discouraged. There is an alternative. We can compel every Atlanta boy, on reaching 18, to take basic police training for 1 year. Then we will always have a police force in training, and a backlog of previously trained men who with a little extra training, we can call upon in time of emergency to quell any riot, and make any gangster think twice before starting anything in Atlanta.

Of course, this will entail some sacrifice on the part of the young men. But postponing going to college for 1 year; or of delaying starting a career—even though it means passing up a present opportunity for attractive employment—should not be too big a price to pay for insuring the safety of the older people.

And there are compensations. The boys will learn about the facts of life—especially criminal life. They will get a liberal education and learn the meaning of such words as "moll," "stir," "soup," and "rod." And their basic training will include courses in crapshooting, beer-drinking and prostitute-hunting.

Of course, there will be some who will contend that recruiting a police force by conscription of boys is a violation of the rights of "life, liberty and the pursuit of happiness." But this is no time to quibble over such outmoded principles. Already, the Marietta Communists are menacing us. Let us begin conscripting while there is yet time.

LEWIS AYER SMITH.

ATLANTA.

## Humanity Waits While America Chooses—Total War Against World War III, or Conscription for Annihilation?

EXTENSION OF REMARKS

OF

### HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial appearing in the Catholic Universe Bulletin, of Cleveland, Ohio, in its issue of Friday, November 16, 1945:

HUMANITY WAITS WHILE AMERICA CHOOSES—TOTAL WAR AGAINST WORLD WAR III, OR CONSCRIPTION FOR ANNIHILATION?

We Americans are about to make the most important decision in our history.

It is more than that.

It is the most important national decision in the history of mankind.

We the American people are about to decide:

Whether civilization is to continue.

Whether the human race is to survive in any very large sense of the word.

The enormity of the question before us is something to stagger the imagination.

But it need not stagger the intellect. We can grasp it if we will open our minds to all the facts.

We can understand it if we will think big.

All the thinking we have had to date on the subject of universal compulsory military training is small thinking.

It is thinking that is chained to the past. It is thinking in terms of World War I and World War II.

But the past is dead.

Our thinking now must be in terms of World War III.

And on that basis our choice is clear.

It is the choice between peace and a catastrophe that makes the mind reel.

We have been talking about total war, but we have not seen it yet.

We will see it in World War III, if we permit World War III to come.

There will be no such thing as a noncombatant.

There will be no safety anywhere for anyone or anything.

World War III will be total war in the full and absolute sense of the words.

And the question before us is this:

Shall we prepare for it, or shall we forbid it?

The advocates of universal compulsory military training want us to prepare for it.

But they are thinking small, either because they are incapable of thinking big, or because they don't want us to have the whole truth.

The whole truth is this: that universal compulsory military training is only the first drop in the bucket.

It is only the first tiny step toward preparation for Total World War III.

It is the molehill which will grow into the mountain; and then fall on us.

If we are going to prepare for World War III, this is what we must do:

We must put all thought of peace behind us, and gear ourselves totally to war.

We must not stop at conscripting boys.

We must conscript everybody and everything in America.

We must prepare totally for total war.

We must conscript all citizens, male and female, of all ages.

We must conscript capital, labor, business, industry, communications, transportation, science, scholarship, literature, music—everyone and everything.

We must leave nothing to chance.

We must yield nothing to peace.

We must harness all our energies and all our resources to war.

And we will be wasting our time.

We will not be prepared.

We cannot be prepared for World War III.

No one can be prepared for it.

We can only be prepared for universal destruction.

We would be wiser to dig a few caves hundreds of feet underground in some uninhabited wilderness and stock them with food and human beings so that the race shall not totally perish.

We have not been told the whole truth about the atomic bomb.

Its apocalyptic powers of destruction have not even begun to be tapped.

Its development in the next quarter century, if it is developed, will make all present concepts of warfare plain nonsense.

One atomic bomb will be able to wipe out the greatest fleet ever assembled—to disintegrate it so that not even debris will be left to float on the ocean.

One atomic bomb will be sufficient to eliminate any army with all its equipment—to atomize a million men and a million guns into primeval dust.

One atomic bomb will reduce any city to nothingness with all its inhabitants.

It is perfectly possible that one atomic bomb might start a series of atomic explosions which would dispose of all our problems by disposing of all of us.

In the light of such cataclysmic facts—which at that may be less than the whole terrible truth—all talk of preparing for World War III becomes what Shakespeare called a tale told by an idiot, full of sound and fury, signifying nothing.

We can prepare for it if we choose, but to do so we shall have to surrender all our freedoms, only to discover in the end that we were preparing for suicide.

For if we accept World War III as inevitable, so will the other nations; and the whole world will engage in a race of armaments which cannot have any result but the elimination of all but a few scattered remnants of the human race, wandering through a man-made desert and lapsing back into savagery.

Have we any other choice? We have.

We can set the face of America against war.

We can lead the world in the absolute outlawing of war.

We can turn our tremendous energies and brains and power into a total war against war.

We can insist upon the setting up of a real working world organization, with a world court settling disputes, and a world police force keeping order.

We can recognize the simple fact that the world has become as small as a village, and the whole human race as interdependent as a family.

And we can act accordingly.

In our village of the world, we can have a mayor and a judge and a constable and a town council, laboring for the welfare of all and supported by the force of public opinion.

That way lies peace and the kind of world of which mankind has dreamed for thousands of years.

The other way lies the apocalyptic disaster of an earth in atomic ruins and a human race self-destroyed by its own folly.

Upon us, the American people, in the providence of God, the choice has fallen.

Do we conscript our young men, and ultimately everyone and everything, for the world-wide race to destruction?

Or do we enlist ourselves and ultimately all nations in the march toward peace on earth?

It is for us to choose.

God guide us.

## Universal Compulsory Military Training

EXTENSION OF REMARKS

OF

### HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. REECE of Tennessee. Mr. Speaker, under unanimous consent, I insert in the Appendix of the CONGRESSIONAL RECORD a copy of a letter written by Dr. Harry Emerson Fosdick, pastor of the

Riverside Church, in New York City, which outlines forcefully his reasons for being against universal compulsory military training.

As we all know, Dr. Fosdick is one of America's greatest thinkers and preachers. He is known and respected throughout the United States and the world.

His logic is so impelling and his reasons for opposing universal compulsory military training are so valid that I believe millions of persons who thoughtlessly have decided in favor of universal, compulsory military training will be influenced to reexamine their thinking on the subject.

This letter was sent to members of the House Committee on Military Affairs:

DEAR SIR: Like millions of our fellow citizens I am profoundly disturbed by the insistent pressure being put on Congress to fasten on this country a policy of universal, compulsory military training in peacetime.

I honor the sincerity of those who favor it; I understand the arguments by which they have been persuaded; but I am convinced that they are being blinded by immediate circumstances to the long-range consequences of the policy they are backing.

To say that this policy does not mean conscription seems to me obviously false. A system of universal compulsory military training will reach into all our homes and will conscript a year out of the life of all our young men. This is the most radical break with our American tradition ever proposed, and for the United States to install this system now is to follow our victory over fascism by surrendering our liberties to one of the most central factors in fascism—a factor, moreover, that far from preventing wars has been one of the chief elements in causing them.

I am convinced that the resentment of millions of our people against this system will be deep-seated and continuous, growing more intense as the system's incidence upon our youth becomes more acute. The endeavor to fasten prohibition on an unwilling people will, I think, have been easy compared with the endeavor to fasten universal compulsory military training on the liberty-loving people of the United States. If this system is introduced there will be no rest from attack on it, and from mounting resentment against it, until it is repealed.

Millions of our citizens are convinced that we do not yet know enough about what kind or new world order can be established, about the degree of security that may be achieved under the United Nations Organization, about the nature of future war, and the place that vast masses of men will play in it, or about the value for such war of the halfway training a single year can assure, to make it wise now to plunge into so radical a break with our American tradition, and so dangerous a conflict with the liberty-loving instincts of our people.

We are convinced that the policy now being insisted on will inevitably mean the growing dominance of a powerful military class—not primarily the young men who are being trained, but the continuous, official, military caste, who must be maintained to do the training. That they will insist on more power, more money, more control over our youth's education, and in the end more time than 1 year, seems to me so probable as to be a practical certainty if the system persists for any length of time.

No such vast potential army as this measure proposes is needed for the immediate tasks of occupation. That immediate problem can be met by measures scaled to the numbers needed and to the length of time the forces of occupation will be required. We have never yet explored the possibilities of the volunteer system with inducements sufficient to attract the number of men wanted, and until that has been thoroughly and honestly tried, no system of compulsory military training should be introduced into this country.

This conviction, I am sure, represents the judgment of millions of Americans now, and these millions will be increased if and when the impact of the proposed conscription begins to hit their homes.

## Additional Appropriation for UNRRA

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the American Slav Congress before House Appropriations Committee hearing on President Truman's request for $550,000,000 UNRRA allotment, Washington, D. C., October 11, 1945:

Mr. Chairman, members of the House Appropriations Committee, appearing on behalf of the American Slav Congress, we wish to state from the outset that our organization, representing millions of Slavic Americans throughout the country, wholeheartedly supports President Truman's request to Congress for an additional appropriation of $550,000,000 for UNRRA aid to the peoples of the liberated countries.

The urgency for such an appropriation has been amply emphasized in the President's message to Congress and in the reports by UNRRA representatives in the hunger-stricken regions of Eastern Europe and elsewhere.

If additional proof is needed, here is a letter by a nurse who holds the rank of captain in the United States Public Health Service and is attached to UNRRA in Yugoslavia. She writes:

"I'm about to go to Bosnia to improve the orphan children's diet by adding 2 ounces of powdered milk to the one piece of bread they eat every other day. Of course, I'm supposed to teach nutrition—what they should eat if they had it. In case anyone at home wants to know—they've lost the victory if we don't feed Southern Europe this winter. We hear that the United States of America is afraid to draw on its food reserves because the average American diet is down to 3,800 calories. Ask them how they'd like to live on 800 and watch their children starve to death. It's true that about two of the fifteen million people will have enough to eat. But there's no surplus, and even if there was, there's no transportation. Roads have to be rebuilt and railroads reestablished. Between Servia and Bosnia the railroad has 99 tunnels and everyone is dynamited and mined. Hard manual labor is required and hungry people can't work very efficiently. The enemy has been brutally cruel to this nation that refused to capitulate and literally fought on with bare hands. For miles on end there isn't a village or farm left standing. I read somewhere that all America knows about Cassino, but there are thousands of Cassinos in Yugoslavia. Our nursing program is started. The girls want to learn, but I wonder if it's worth the effort if the nurses and patients are going to starve this winter. You may be sure the Yugoslavs will produce superhuman effort, and if they're fed this winter they'll do the rest themselves."

Another heartbreaking story of the terrible sufferings of the people of Yugoslavia and how inadequate present UNRRA help is was offered by chief of UNRRA mission to that heroic country, Mr. Srgeychik. In a statement to the press he said:

"During the day the men and horses are dying. They bury men, women, and children, but have no time to bury the horses. The urgent vision of winter drives them on. They and those who lie buried by the road are casualties, not of the war but of the liberation, victims of the promise that would make an ironic epitaph: 'Being determined that immediately upon the liberation of any area by the armed force of the United Nations or as a consequence of the retreat of the enemy the population shall receive aid and relief from their sufferings; food, clothing, and shelter, and aid in the prevention of pestilence and in the recovery of the health of the people.' This was written in 1943 by the 44 nations setting up the UNRRA. The people who came back to their villages heard it on the radio or as it was repeated from mouth to mouth.

"You do not have to travel far in Yugoslavia to see the meaning of the facts and figures in terms of suffering and courage, life and death. The people in devastated Yugoslavia know that many will die this winter. Even on the hottest days, as they sweat at their work, the prospect of a winter without food, clothing, or shelter is before their eyes. They know it is too late to save all, so their only concern is to make the death roll as short as possible. The time has come for more than promises. The UNRRA mission to Yugoslavia, aware of world shortages, advised the Yugoslav Government to prepare their requests, not on the basis laid down in 1943 but on their own bare minimum requirements. They were advised that the requests would stand a better chance of acceptance if this were done. But when these requests were submitted by UNRRA the Combined Boards in Washington drastically scaled down the total allocation for UNRRA.

"The area of western Yugoslavia is as large and as unfertile as Greece. Yet the allocation is eight times as much to Greece as to Yugoslavia. This does not mean to say that Greece does not need these supplies, but that Yugoslavia needs them equally. The point is that the total allocated by the Combined Boards to UNRRA countries is quite inadequate, no matter how it is divided. Washington is far from Europe, but if the members of the Combined Board could spend a day in Lika and Bosnia and see with what courage the Yugoslavs are facing their grim present and their grimmer future, it would be impossible for them to continue the allocations at the present inadequate level. They would realize that reduction in Washington means the increase of the death rate in Europe."

In central Poland, for instance, nine out of ten persons you meet, Gladwin Hill cabled New York Times the other day from Stettin, are those who have been uprooted, persons who came from somewhere else, persons whose normal livelihood has been wiped out and who are seeking an existence elsewhere, persons whose mothers, fathers, brothers, sisters, sons, and daughters have been slaughtered by the Germans.

Ukraine and Byelorussia have been devastated beyond description. All these countries do not have foreign exchange and cannot buy any food even if they can find it somewhere. Their people depend entirely on UNRRA aid.

Letters from the people of these countries to relatives in the United States are full of the most terrible stories of the slow death by hunger. Most of these letters have been printed in the Slavic newspapers of Pittsburgh, Cleveland, Detroit, Chicago, New York, and the large Slavic population of these and other vital centers of the country have been greatly aroused by the failure of Congress so far to allocate additional funds for UNRRA.

We have with us a letter to Congress signed by 60 of the most outstanding Americans of Slav descent in which they urge every Congressman to give his or her support to the request of President Truman. We are submitting this letter with the names of the signers as part of our statement at this hearing. Millions of Slavic Americans throughout the country have been among the most conscientious and energetic participants in the war effort of our country and their views on this important question should be taken under most serious consideration by Congress.

We would like also to call your attention to an editorial in yesterday's New York Post entitled "Our Pledge to UNRRA," in which this problem is treated in a very concrete and simple way that makes the need for immediate action now most obvious. The editorial states—in one part:

"Deaths from tuberculosis, scarlet fever, diphtheria, etc., are sweeping Europe, claiming thousands more people than were killed by the fighting. In some areas, 8 out of 10 babies have been dying soon after birth.

"These decimating diseases are all spreading from the same cause—malnutrition. These hundreds of thousands of people are all dying by the same death—starvation."

The $550,000,000 which the President requests has been long overdue. This is the balance of the appropriation which we promised UNRRA more than a year ago. Frankly speaking, it seems inconceivable how any further delay in appropriating this sum can be justified on any humanitarian ground.

Representative CLARENCE BROWN, from Ohio, said a few days ago, as reported in the press, that no UNRRA funds should be used in foreign countries which do not accord free access to all news and do not permit freedom of the press as it is understood in the United States. But such a condition in granting aid to hungry men, women, and children of the liberated countries will be a gross departure from, and a clear violation of, the basic humanitarian principles and purposes of UNRRA. Such a condition would mean that we would use food and clothing as a political weapon, as a club, over the heads of our allies who happen to have a different concept of what constitutes a free press. No; a free country like ours cannot adopt a policy of using food to impose on its allies its views on vital matters. We call upon Congress to reject such proposals. They are inconsistent with the spirit and the principles of our democracy.

In our opinion, Congress should approve speedily the appropriation on the basis of our freely arrived at and freely undertaken obligation to help save the lives of millions of hungry people who fought our common Nazi foe and whose towns and homes were destroyed by the Nazi hordes.

Any further delay in approving and giving this sum to UNRRA will mean an increase of the death rate in the liberated countries. America should not do that. Congress must not commit such an act.

We strongly urge immediate approval by Congress of the request of President Truman for $550,000,000 for UNRRA aid to the peoples of the liberated countries. We also urge favorable consideration by Congress of UNRRA's request for a second assessment of 1 percent of the national income of the member nations which have not suffered invasion. "Without food there can be no peace," General Eisenhower declared.

"We must act, and act now. It is inconceivable that the United Nations could abandon the peoples of the liberated areas of Europe at the moment of their greatest peril," said UNRRA Director, former Governor Lehman.

Timely aid is a double aid.

AMERICAN SLAV CONGRESS,
ZLATKO BALOKOVIC,
*Acting President.*
GEORGE PIRINSKY,
*Executive Secretary.*

A LETTER TO CONGRESS—AMERICAN SLAVS CALL ON CONGRESS TO APPROPRIATE FUNDS FOR UNRRA RELIEF TO EUROPE—IMMEDIATE ACTION NEEDED TO PREVENT STARVATION

Starvation and misery face untold millions of Europe's liberated peoples this winter unless American aid is rushed with the utmost speed.

In the message to Congress asking for the appropriation of $550,000,000 for immediate aid, President Truman declared:

"The peoples of the liberated countries who so gallantly resisted Axis oppression throughout the war now face a winter of acute need and privation.

"They look to UNRRA for assistance.

"Unless UNRRA is enabled to speed ample shipments of supplies to these war-stricken areas, widespread starvation and disease will result.

"Our wholehearted support will be a real contribution toward a stable and enduring peace.

"We must help to the limits of our strength. And we will."

This pledge, made not only to our allies but to the American people, now awaits the action of Congress for fulfillment. The $550,000,000 authorized for UNRRA, but not yet appropriated, must be acted upon with speed.

America must fulfill this sacred pledge. It has the means to fulfill it. The peace and security not only of Europe but of America as well rest upon our speedy honoring of this wise obligation strictly on a humanitarian basis and not as a political weapon, as some Congressmen have suggested recently.

On behalf of millions of Slavic Americans, who have worked unflinchingly in the war and whose kinsmen in Europe made so great a contribution toward our common victory, we appeal to Congress to take immediate action to appropriate the already authorized sum and the additional $1,350,000,000 needed to maintain even the below-subsistence level of life in the liberated countries.

---

STATEMENT OF THE AMERICAN SLAV CONGRESS BEFORE HOUSE FOREIGN AFFAIRS COMMITTEE HEARINGS ON PRESIDENT TRUMAN'S REQUEST FOR $1,350,000,000 UNRRA APPROPRIATION FOR 1946

The national committee of the American Slav Congress, representing millions of Americans of Slav descent throughout the United States, fully supports President Truman's request to Congress for an appropriation of $1,350,000,000 for UNRRA relief to the peoples of the liberated countries of Europe and Asia in 1946.

We consider this appropriation vitally necessary to help save the lives of hundreds of thousands of starving people and urge every Member of Congress to vote for it.

As President Truman stated in his message to Congress on this urgent matter, "This country has pledged itself to do all that is reasonably possible to alleviate the suffering of our war-torn allies and to help them begin the task of restoring their economic productivity."

Congress and the country as a whole cannot afford to break this pledge to the people of the liberated countries, who by sacrifice and courage kept the enemy from realizing the fruits of his early victories and from bringing his military might to bear upon our shores.

Millions of Slavic Americans, who, like all true patriots, worked day and night to help win the war, have been shocked by the recent disgraceful performance of the House of Representatives in delaying previously authorized UNRRA funds and playing politics with the lives of starving people in Allied countries. We refer to the Brown-Dirksen free-press amendment to the House Joint Resolution No. 226 for the appropriation of the long overdue $550,000,000 to the UNRRA fund for 1945.

We fully agree with the Washington Post, when it wrote editorially on Nov. 11 that "when people are suffering cruelly from hunger we can no more ask them to embrace freedom of the press in return for food than we can buy a change in politics or religion by domestic relief grants. It is an outrageous misconception of democratic principles to suppose that they can be fostered by this means. Throw freedom of the press up as a barrier between starving people and the food they crave and we shall create everlasting hatred of that principle and those who so stupidly espouse it."

As the Post correctly stated, "UNRRA was established not for the purpose of opening foreign doors to American newspapermen but for the simple humanitarian purpose of getting food to starving human beings."

We are sure that all conscientious newspapermen will themselves abhor the idea of purchasing their right to report freely on UNRRA activities at the price of the lives of thousands of starving people. This right they have even now. The newspapers are full of reports from countries where UNRRA relief is being distributed. It is reactionary politicians in Congress and outside that are trying to make such an issue of this question.

Many of our members in the great industrial centers of the country as Detroit, Pittsburgh, Chicago, Cleveland, and New York, have been receiving heartbreaking letters from their starving relatives and friends in the liberated countries. The stories of these hungry people who fought the Nazis so bravely and did so much for our common victory over Germany are too long to recite here. That they are in desperate need of immediate help is generally recognized.

What is not recognized yet is the fact that every day of delay in appropriating UNRRA funds increases the death rate in the liberated countries. To withhold, to sabotage the appropriation of funds for UNRRA means to cause the death of thousands and millions of freedom-loving people in allied countries.

UNRRA's director, Mr. Herbert Lehman, is 100-percent right when he says that the catastrophe which would be caused by the stoppage of UNRRA aid to nations dependent upon it because of lack of funds "is too serious to contemplate."

AMERICAN SLAV CONGRESS,
ZLATKO BALOKOVIC,
*Acting President.*
GEORGE PIRINSKY,
*Executive Secretary.*

NOVEMBER 15, 1945.

## Aluminum Plants Disposal Program

EXTENSION OF REMARKS
OF

### HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

*Thursday, November 29 (legislative day of Monday, October 29), 1945*

Mr. MITCHELL. Mr. President, because of the importance of the aluminum plants disposal program, I ask permission to have printed in the Appendix of the RECORD part of a letter showing the general reception to my speech on the subject of November 23, and a telegram which my colleague, the senior Senator from Washington [Mr. MAGNUSON], referred to me, together with my reply. I should also like to have Senate bill 1612 printed following the telegrams.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

REYNOLDS METALS COMPANY,
REYNOLDS METALS BUILDING,
*Richmond, Va., November 26, 1945.*

Senator HUGH B. MITCHELL,
*Senate Office Building,*
*Washington, D. C.*

DEAR SENATOR: I read with much interest your speech in the CONGRESSIONAL RECORD of November 23 in which you discussed the disposal of aluminum plants.

I want to congratulate you upon a clear and pointed analysis of the situation as it now exists. Your speech came out at an opportune time and was an excellent presentation of the problem. I think it quite probable that your remarks will expedite action.

With assurance of my great admiration for you, I am

Cordially yours,
KEEN JOHNSON,
*Vice President.*

---

Hon. WARREN G. MAGNUSON,
*United States Senate,*
*Washington, D. C.:*

It is costing Defense Plant Corporation $400,000 a year to maintain our aluminum rolling mill idle. It is costing $350,000 a year to maintain our aluminum-reduction plant idle. It will cost between seven and eight million dollars to terminate power contracts with Bonneville Power Administration. What does the Reconstruction Finance Corporation mean by subsidies? This is subsidy on a gigantic scale. They had better make a deal with private operators and get these plants going.

J. A. FORD,
*Manager, Spokane Chamber of Commerce, Spokane, Wash.*

WASHINGTON, D. C., *November 29, 1945.*

JAMES A. FORD,
*Manager, Chamber of Commerce,*
*Spokane, Wash.:*

Senator MAGNUSON has referred to me your wire regarding the cost of maintaining idle aluminum plants and urging that Government-constructed plants be turned over to private operators. The Reconstruction Finance Corporation contends it does not have the power to purchase aluminum from Government plants. Such aluminum is vital to private operation. I have introduced Senate bill 1612 which will allow the RFC to purchase aluminum for national defense stock piles. Congressman COFFEE has introduced a companion bill in the House. The greatest service the Spokane Chamber of Commerce could give to the cause of permanent employment in the Pacific Northwest aluminum industry would be to obtain support of the National Chamber of Commerce for our legislation which would enable the Government to work out leasing arrangements with private operators.

HUGH B. MITCHELL,
*United States Senate.*

S. 1612

A bill to amend the act of January 22, 1932, as amended (47 Stat. 5), to authorize and direct the Reconstruction Finance Corporation to purchase aluminum for stockpiling purposes

*Be it enacted, etc.*, That the act of January 22, 1932, as amended (47 Stat. 5), is hereby amended by adding at the end of section 5 (d) thereof the following new paragraphs:

"The Corporation is hereby authorized and directed to purchase not to exceed 1,500,000,000 pounds of primary aluminum at not to exceed the current market price, which primary aluminum is—

"(a) in excess of current industrial demand; and

"(b) is produced in a Government-constructed aluminum plant.

Such purchases shall be made in such amounts and at such times as will enable the lessees, purchasers, and operators of such Government-constructed plants to supply such Government requirements in a manner which will best promote the development of an expanding commercial market for primary aluminum.

"Any aluminum so acquired shall be transferred by the Reconstruction Finance Corporation to any stock pile of strategic materials, the creation of which is or may hereafter be authorized and directed, and upon any such transfer from the Reconstruction Finance Corporation, or any corporation organized by virtue of the authority contained in the act of January 22, 1932, as amended (47 Stat. 5), the Secretary of the Treasury shall cancel notes of Reconstruction Finance Corporation, and sums due and unpaid upon or in connection with such notes at the time of such cancellation, in an amount equal to the cost to the Reconstruction Finance Corporation of the aluminum so transferred."

## The Luce Bill on Veterans' Housing

EXTENSION OF REMARKS
OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mrs. LUCE. Mr. Speaker, on November 19, I introduced H. R. 4742, a bill to provide housing for World War veterans.

Just recently an article appeared in The Nation, by Franklin Delano Roosevelt, Jr., on this very question. I invite the attention of my colleagues who are interested in this issue to some excerpts from that article. The son of our late President, who is now aspiring to political leadership, has some very true things to say on this very important subject of finding homes for our veterans, which is the sole object of my bill:

NO HOMES FOR VETERANS

(By Franklin D. Roosevelt, Jr.)

Only last year men slept on the frozen ground in Belgium or stood watch on deck in the freezing winds of the North Atlantic. This year they don't want to sleep on a park bench in the cold of an American winter. Yet we may see them there, and possibly much worse sights, unless immediate action is taken to remedy the housing shortage.

The scarcity of housing has been an acute national problem all during the war years. Now, with service men and women being discharged daily in increasing numbers, the problem has become more critical than ever before. If the situation in New York City can be taken as an index, it has already, even in these early stages of demobilization and reconversion, reached the proportions of a major crisis and even scandal.

For a long time many New York City officials have recognized that some provision would have to be made to bridge the gap between the very little new building and the demand for housing. But while there have been many conferences and a great deal of talk, talk is all the city has done. The men and women who have been discharged or are about to be discharged, who have had all they want of fox holes and now seek homes, are becoming disillusioned, bewildered, and bitter. Today in New York City 20,000 veterans and their families are searching for places to live. With every week that passes their number increases by 3,500. By next summer more than 100,000 veterans and their families will be in need of housing in New York City alone. But nothing has been done to provide homes even for the 20,000 veterans now demobilized and badly in need of a place to live.

Home is probably the most precious thing in the world to a man who endured war. There is hardly a man who didn't spend hours remembering his home, how it used to look, or how it was going to look when he and his wife got a place and bought their furniture. Most soldiers dreamed of a clean little place, all-American, with good plumbing, plenty of heat, a bathtub, and unlimited hot water. But the only places now available in New York City for the veterans are substandard tenement dwellings—cold-water flats where you are lucky to find one toilet for a whole floor instead of one for the whole building out in the backyard, and where the tenant has to heat his water, heat his own apartment, and wage continual war against roaches and rats. Medium-priced and even the highest priced buildings are fully rented and have waiting lists that don't give the veteran a chance. And even if the veteran were willing to move into the tenements—and they are not willing, I can tell you—there still would not be enough apartments to take care of all of them.

Are returned servicemen and their families actually going to have to set up housekeeping in pup tents in the parks before the city provides immediate temporary housing as a stopgap?

Unless something is done quickly, the veterans will become more and more cynical—just what we do not want to happen this time. A man has to have a home before he can look for a job and become again a productive part of community and national life. In even larger aspects, we have learned through grim experience in a global war the dangers inherent in a dissatisfied group which considers itself cheated of its rights.

* * * * *

This is a critical period for veterans. It is imperative that we secure the minimum

essential of life—a home—for the men and women who fought for the life of this Nation. It is also imperative that the veterans be made to feel that their Government recognizes their problem and is at least doing something to solve it. The public officials of our Government have a great responsibility to act in a way that will preserve the faith and confidence of the veterans in the American way of life.

## Point System a Farce

EXTENSION OF REMARKS
OF
### HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. SHAFER. Mr. Speaker, the Army, Navy, and Marine Corps have made a farce of the so-called point system for discharges. They have made a mockery of the plan through the granting of discharges to sons of generals, movie actors, football players, and other low-point favorites. In the meantime Congress is being blamed. And rightly so. The majority of Members are doing nothing to correct the situation.

There are three discharge petitions on the desk, Mr. Speaker, that would bring to the floor legislation that at least would show the GI that he has not been forgotten by Congress. The most signatures on any of the three petitions today is around 130.

I urge those Members who have not yet signed petitions Nos. 7, 8, and 9 to read the following letter from a high-point GI from my district—not the son of a general or a football player—and then attach your signatures to bring out these bills.

Make no mistake. The GI's are going to ask you next year what you did to expedite the release of fathers and high-point men of World War II.

Since the war with Germany and VJ-day was announced we men with 63 points have been constantly on the move. We are shipped to an outfit that has a point bracket of from 60 to 64 points, and we are told we should hit a port soon when the so-called readiness date is reached. What happens? Orders are changed and the point bracket is changed, and we are told that we will be shipped to another outfit with the same point bracket. Which was true until now.

We have been eligible for discharge since the 1st of November, and we're still beating our heads against the wall here in Germany. Being still in Germany when we were eligible for discharge was hard enough to take, but when we heard that men in the States were being discharged with far less points topped everything.

You people at home there in the good old U. S. A. certainly cannot realize how these men here in this theater with over 60 points feel. It's as if our best friends were turning against us and saying, "Oh, well, those Joes beat the hell out of the Jerries and Japs, the war's over, and I don't have to worry about us losing."

If there are any Americans who feel this way, and I doubt it, they had better think again, because just having an excombat man sitting around and brooding about this thing isn't going to make him forget the war, not by a darn long ways. Most of the Joes I know are bitter and getting more so every day.

Some people seem to think that men with from 60 points couldn't have seen much combat. That's where they are wrong. Number of points means nothing; it's just who you know, proven simply by checking records. Cases I know where men with not enough points to stay with a homeward bound unit were given the Bronze Star to boost their points up enough.

Maybe I'm wrong in thinking that it isn't fair to a man who had to earn his Bronze Star the hard way, and believe me most combat men had no Bronze Star in mind when we pulled off some of those stunts; more often he was thinking of his sweetheart, wife, Mom and Dad, and how much he wanted them to keep on enjoying the life you free Americans are leading now. We who seem to be lost men since the war is over would like a chance to enjoy the life we think is entitled to us; we don't want much, just a boat to come home on; just 1 of those 4,000 ships that the Joint Chiefs of Staff haven't decided what to do with yet. All of us would be willing to stand on the deck of any boat, all the way home; even a rowboat.

If in a 3 months' time we can ship 750,000 tons of food to England, why can't some of those ships take GI's back to the States? Don't say they are, because if they were, there wouldn't be much more than 400,000 troops left in the ETO now, which are occupation forces. I understand that most of the ships that are bringing food to England are Liberty ships that are poorly ventilated, slow and unsanitary. It didn't make any difference when we were coming over here, why should it going back? I would sooner be on a Liberty ship that was about to sink than spend one more month in this Godforsaken country, and I know I'm speaking for thousands of GI's when I say it.

## Is the Construction of Veterans' Hospitals Becoming a Political Football?

EXTENSION OF REMARKS
OF
### HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Joseph Leib, service officer of Vincent B. Costello Post of the American Legion:

IS THE CONSTRUCTION OF VETERANS' HOSPITALS BECOMING A POLITICAL FOOTBALL?

(By Joseph Leib, service officer, past vice commander)

In the first deficiency appropriation bill of 1946—debated on the House flood Tuesday—an allotment of $158,320,000 for the construction and extension of veterans' hospitals was rejected. The next day the House overrode its Appropriations Committee. On page 11046 of the CONGRESSIONAL RECORD, November 27, Representative CANNON of Missouri is quoted as having said:

"It is felt that the Congress should have some voice in the location of hospitals and in the priority of providing for such locations."

This very question has become a sore spot in official Washington. General Bradley has stated that he wants the new hospitals located near medical schools or big cities so that patients can have the benefit of experienced practitioners. General Hawley, Surgeon General of the Veterans' Administration, has explained why such a program was necessary in these words:

"The best medical work today is done around teaching institutions, and we do not have money enough to employ these men, even if there were enough of them to go round. That means that we must build our hospitals around those institutions so the veterans can have the benefit of the consultant service."

Shortly before General Bradley took over the Veterans' Administration (August 15) the Federal Board of Hospitalization approved the construction of 29,000 additional beds. The Hospital Board, however, gave no indication or recommendation as to possible locations. Immediately a storm of inquiry arose from interested cities throughout the Nation. They exerted powerful pressure in behalf of a local Government hospital. Criticism that started then has continued to this day, involving more than 250 cities that do not wish to be left out of any extensive building program.

President Truman was obliged to step into the picture by stating that no location was to be made public because he believed that General Bradley was entitled to the fullest leeway in getting this program under way.

Now, the fight over the $158,000,000 appropriation seems to be the result of this unfortunate controversy and bickering. Everyone wants to be in at the pie counter, and in the meantime needy and disabled veterans are standing in line or being turned away because of the lack of accommodations in Federal hospitals. Why is this situation being permitted? Every day lost is going to be a hardship on some veteran.

Since June 30, 1941—approximately 6 months before Pearl Harbor—there have been added to veterans' hospitals merely 8,404 beds. Think of it. Then consider also the fact that over one million and a half veterans of this war alone have been discharged from the armed forces for medical and disability reasons—with over 300,000 drawing health pensions—all potential hospital cases—yet only 8,404 beds have been added to date.

In this connection I would like to call attention to hearings held before the Committee on Expenditures in the Executive Departments, House of Representatives, relative to the bill to provide for an Administrator of Surplus Property. Dated August 28, 1945, pages 37 and 38, there appears some amazing testimony.

Congressman COCHRAN was discussing the dangerous predicament within the veterans' hospitals, pointing out that Congress authorized the Veterans' Administration to construct facilities throughout the Nation but refused to give them a dime to go ahead. That was 8 months ago. The situation remains the same. Here are the comments as they appeared in the hearings. Every Member of Congress should read the following very carefully:

"Representative GOSSETT. The hospital problem is arising all over the country.

"Mr. SYMINGTON. Yes, sir.

"Representative COCHRAN. That is our own fault. We authorized the Veterans' Administration to construct hospitals all over the United States and we did not give them a dime. They had plans and specifications to build, but we did not give them a dime when we authorized it. I know as a fact that the Bureau of the Budget has had the plans and specifications from the Veterans' Administration for new construction in present facilities and the Veterans' Administration has not had 5 cents to go ahead and construct them, because all we did in the GI bill was to give them the authorization. There is upward of $700,000,000, I think, needed to go ahead and build additional hospitals and enlarge the present ones.

"Representative JUDD. Will the gentleman yield for a comment?

"I cannot let the statement of the gentleman from Missouri about the Veterans' Ad-

ministration stand without some comment. It is true that we authorized the appropriation of several hundred millions of dollars for hospitals, but in March and April when we actually appropriated seventy or eighty million dollars, as I recall, some of us said we were going to need more hospitals for the veterans. At that time General Hines said that Congress has never failed to give the Veterans' Administration whatever it asked for. I cannot see that the present need was the fault of Congress, when we appropriated all the money for hospitals that the Veterans' Administration asked for.

"Representative COCHRAN. The Veterans' Administration made a mistake in not coming down and asking for more appropriations.

"Representative JUDD. Some of us went down and talked the matter over with General Hines and told him that he had a bigger problem than in the last war. However, Congress gave him every dime he asked.

"Representative COCHRAN. The Army today has thousands upon thousands of men who are ready to be turned over to the Veterans' Administration, but they cannot discharge them because the Veterans' Administration has no place to put them and they still must be hospitalized by the Army although they have received the maximum treatment by the Army; and that applies to the Navy.

"Representative JUDD. We tried to correct it but did not succeed.

"Representative ERVIN. The Army cannot discharge them until they are physically able to be discharged, but when they are discharged they will be turned over to the Veterans' Administration.

"Representative COCHRAN. And the Veterans' Administration has no place to put them.

"Representative ERVIN. And I think that is why the President appointed a new head for the Veterans' Administration.

---

## John J. McCloy

EXTENSION OF REMARKS
OF

### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit herewith a speech made by the Honorable John J. McCloy, the Assistant Secretary of War, before the Academy of Political Science at the Hotel Astor in New York City on November 8 last. I am sure that the readers of the CONGRESSIONAL RECORD and the country generally will be interested in this splendid statement.

In this connection, Mr. Speaker, Mr. McCloy retired on Saturday of last week from the position which he has so ably filled as Assistant Secretary of War for the past several years and will shortly return to his home in up-State New York, where he plans to again enjoy the life of a private citizen.

On this occasion I should like to add my word of praise to that of many other people who knew him while he was engaged in performing his responsible and arduous duties here during the late war. It was my pleasure to know John McCloy both in his official capacity and personally. From the very first time I met him I was impressed with his sincerity, his high sense of duty, and his devotion to his Government and his country. The zeal with which he attacked the many problems of his office during that global conflict was indeed inspiring.

The speech follows:

Ladies and gentlemen, my assigned subject is Our Policy in Germany, but I hope you will excuse me if I vary it somewhat. It is more fitting that I talk of the problems of our occupation in Germany and make some observations on the operations of our administration there rather than to discuss our policy. After all, our policies have been pretty well stated. The directives to General Eisenhower have been published. The Potsdam Declaration has been promulgated and at least our general objectives have been well advertised. Moreover, as a representative of the Army, it is not my province to discuss our state policy. General Eisenhower is correct when he says that he and the Army are the instruments and not the makers of policy.

The Army is in Germany to achieve the objectives which are given to it, and in talking briefly of the problems the Army is facing and how it is coping with them, I know that I can be more informative than if I attempt to expound our policy or discuss its merits. Moreover, I feel better qualified to speak, for I have just returned from a trip which has taken me around the world, during which it was my chief task to observe on the ground something of the operations of our occupational administration in Germany, Austria, and Japan.

Again, I know you will forgive me if I only give you my first-hand impressions. They are bound to be sketchy and I fear incomplete. I returned to this country only a few days ago after an absence of a little over a month from my desk. Since I landed from my plane there have been people to see and things to do in such quantity that I have not had an opportunity to prepare a thoughtful and balanced analysis of the problems of occupation. However, I will attempt to give you a sort of running account of the things that come to my mind, as a result not only of my observations on this trip but of a rather sustained and continuous association with the problems of German occupation from the invasion of Germany to the present.

I can pass quickly over the period of the fighting when it was the duty of the military government to keep the lines of communication open, to keep the civilian population out of the way of the armies; in short, to relieve the combat forces of concern for the enemy population behind the lines. This in itself was an enormous task, and men had to be trained for it, and they were trained for it. The training commenced before our initial landing in Africa and it continued throughout the period of the hostilities. Men were selected in and out of the Army who had knowledge and experience in administration of cities, towns, and States—sanitary engineers, city managers, public officials, lawyers, financiers, economists, administrators of every sort. We recruited the leaders of the country, men who had records of capacity and who were induced through patriotic appeal to give up their jobs and take on the rigors and inconvenience of army life. These men were given courses in the form of government of the countries we might be called on to occupy and training in dealing with the problems they would be called upon to meet. The courses were well instructed, or as well instructed as the facilities of the country could supply.

We had no large corps of civilian administrators, such as the British Empire could call on from their colonial administration, but we recruited an excellent body of highly experienced professional and business men, government officials, and representatives of labor. They were men of devoted spirit, and it is these men who constitute in the main the men who are now carrying on our occupational job in Germany. They did their job well during the period of combat—we had no disturbances behind the lines, the troops moved ahead freely, and the rear was organized by teams of these men as the armies moved ahead. The test of their efficiency was the repose which everywhere followed the progress of the combat troops. Refugees were cared for, food was distributed, sewers were repaired, dead were buried—all of the enormous problems of reorganization and stabilization which follow the wake of battle were dealt with, and they were dealt with well.

Then came the victory—a victory almost unparalleled in history—a Russian, a British, a French, and an American Army bore in on Germany. They met in the center of Germany—a once highly organized country, centralized and articulated. The forces and the conflict surged right up to the very desk of the Fuehrer in the Chancellery in Berlin—some of the heaviest fighting took place in the portico of his office.

The result was the most complete economic and political collapse, at least of modern times. There was no government, there was no economy left, and the American Army had on hand a group of men and officers whose duty it was to take over the administration of Germany. But the American Army was not the only army which had conquered Germany. There were three other armies and all four were faced with plans for the government of Germany contained in Allied decisions, made long before, which necessitated joint control of a nation of 70,000,000 people.

It is a novel situation in history—four nations have assumed and exercised supreme governmental authority over an area which was once the most vigorous political and economic unit in Europe. The objective agreed to by the four powers is the complete demilitarization of that area, the drastic reorganization of the political, economic and ideological life of these people and their ultimate reeducation and redevelopment as a self-governing democratic body.

The peoples of these four governing nations are themselves widely scattered over the world. Their histories are diverse. The four nations differ radically in their prior experience, methods, and objectives in the government of other areas and peoples. Their fears and hopes and interests with respect to the future of the people in the territory to be governed were and are different and to some extent widely apart. There is the tremendous barrier of three different languages which impedes communication and accurate understanding among the governing groups. There is the further barrier of the fourth language of those who are governed.

It would be idle to expect any simple and entirely satisfactory results from any such novel and complex undertaking.

With the victory, additional specialists were recruited to supplement those already in the Army or connected with it. New staffs were organized—a council of the four nations was set up—each nation had contributed to the victory, each had an obvious and a deep interest in the area to be occupied. But the negotiations and agreements effecting central control take time to evolve, and pending the achievement of these agreements the commander in chief of each of the armies was given the authority to exercise complete governmental functions in the area his army occupied until common agreement could be reached.

I think it is safe to say that no zone commander was faced with as many diverse and heavy problems as was General Eisenhower. It is difficult for anyone who has not observed conditions in Germany during the last stages of the war and after the defeat to begin to

appreciate the complexity of the task of reconstituting the functions of government in the conquered area. Not only did he and General Clay have the task of handling the great military forces involved in the reshuffling of the armies, the movement of their supplies as they settled themselves, the quartering of the troops, but immediately they were plunged deeply in the problem of redeployment for the Pacific war, and, shortly thereafter, in the even more greatly complicated process of demobilization.

The varied functions of government had to be set up in accordance with the drastic denazification directives which General Eisenhower received. Communications, transportation, and practically all productive facilities were either shattered or paralyzed, and on top of it all came the monumental influx of the refugees. The millions of persons cast loose by the Nazi collapse, former prisoners, and the so-called displaced persons drawn from every nation in Europe and many from Africa and Asia, flocded the American zone seeking refuge. In numbers they exceeded the greatest European migrations of history and they were more disorganized. They had to be sorted out, transshipped, deloused, fed, tended to, relocated. People of every condition, of age, and health—men, women, children. The conditions were literally indescribable, yet the Army set about the task, checked disease, supplied clothes, organized camps, fed, and moved these people by the millions. There are hard cases yet to be dealt with—those who do not want to move or cannot move or those for whom no arrangements can be made for their reception in other countries—but the great bulk of the displaced persons have been cared for and transferred to the lands of their choice.

No one has yet adequately appraised the size and complexity of this task. Yet while it was going on the process of reorganizing the German communities was also proceeding. Take the city of Nuremberg—many of you are familiar with it—you would not recognize it now. All of the old city—the city enclosed by the old wall—is virtually a rubble heap—and Nuremberg is not unique—most of the wall is torn down and the entire city is a great wreck. It was a center of Nazi activity and consequently there were many Nazis in office. They were either apprehended or discharged from their administrative posts which they held. Although they were the skilled, energetic people, under our rules they had to be replaced. Water had to be made available and centers of food distribution set up, sewers repaired, streets made passable, power reinstalled. This was not done to rebuild our former enemy but to make it barely possible for people to live and function on anything other than an animal basis. The military government people tackled the job and something resembling livable conditions have been restored.

Our short-range policy included the demilitarization and denazification of our zone. Today there is no German Army, there is no Gestapo, and there is no Nazi administration left in the country.

From some of the reporting which we have had in this country one would get the impression that the Army had been very lax in its execution of the denazification policy. On the contrary, it is demonstrable that we have been drastic. Indeed, in our zone our policy has been more severe than has been the case in any other zone. The English, for better or worse, have not gone half so far. Nazi specialists discharged by us have been reemployed by the French and even the Russians are not so strict in rooting out these former German leaders. We have not been able to obtain Russian or English concurrence to our denazification policy for both of these Governments feel that it does not allow sufficient leeway to utilize the services of those Germans who have special aptitudes or experience. To date we have about 87,000 former Gestapo, SS troops, Nazi leaders, military officers, and industrialists in detention. We have removed more than 100,000 Nazis from office. I doubt whether the record of the armies of the other powers is an consistent or far reaching. At least, if it is, we have no knowledge of it.

As I have indicated, we have carried out our immediate demilitarization plans completely. The German Army no longer exists. The general staff is dissolved and many of its former members are in jail or awaiting trial. German war materials have been taken into our custody. Much of their war-making industrial plant was destroyed during the war or is awaiting removal pursuant to the Potsdam reparations policy. We have taken complete control of all of the I. G. Farben combine which lies within our power and at American instigation a four-party agency has been set up to deal with its dissolution.

Criticism there has been. Where it is founded on fact the Army welcomes it. In a task so complex, so far flung, it is inconceivable that we should not make mistakes. When they are discovered, every effort is made to correct them promptly.

I want to say a further word about the men who are doing this job for they are a group of which this country can be proud. Most of them are older men, former leaders in their communities. Perhaps the majority of them are "retreads"—officers or veterans of the last World War who came forward to serve their country again in this war. They have given up established homes and livelihoods to undertake the unglamorous tasks of cleaning up after the battle and the shouting have passed. They have to live in the most depressing of surroundings and deal every day with the headaches of a destroyed and dislocated society. It is their task to furnish the follow-through while the nation demands and obtains the quick demobilization of its forces. There is nowhere in this country a comparable group of such devoted, experienced, and skilled men as the Army has called upon to perform this task. Those who have taken the pains to examine with any reasonable care the work they are performing, and who are objective in their observations, recognize and appreciate the work of these public-spirited men and officers. Some of the irresponsible and outrageous attacks which have been made on the competence of these officers, and, in some cases, even on their motives, are hard to understand or condone. The views of the attackers, safe in their remoteness from the problem, should be properly discounted.

Many of these men are classed by the Army as essential and in spite of the fact that they may have served in Africa, up through Italy and then in France, they still have to remain on the job in Germany. Very few sought the job, the job sought them and they forever deserve well of their country.

Without the follow-through the objectives for which the battle was fought and won may be dissipated. Today we have Germany and Japan stricken and conquered. It is our aim to create the conditions which will make them peaceful and law-abiding members of the world community. It is a long process requiring the use of sustained force and enlightened administration. The future destiny of our country is closely related to the manner in which we cope with the problems of administration in the conquered areas. The work of the men who are charged with the task, for your own sake and interest, should be intelligently followed and upheld no less than was the case of the combat troops without whose efforts we should never have had the opportunity to concentrate on the achievement of our peace objectives. I urge all of you who do have an interest in this great problem to read the excellent monthly reports which General Eisenhower is making to the Secretary of War on the administration of the occupation. No other nation publishes so full and frank reports.

I have given you some of the short-range objectives which either have been achieved or which are well on the way to being achieved in Germany. Our objectives, however, cannot all be negative ones. If Germany is not to be a burden on the American taxpayer, constructive steps have to be taken to enable the German people to work out their own political and economic reconversion.

The situation in Germany today as the Army finds it is not a pleasant one. Industry and commerce is at so low a scale as practically to be nonexistent—clothing, food, transportation, are scanty with the result that every city is full of long queues of people waiting to obtain the simplest necessities of life. There will be very little coal except for some meager heating of such institutions as hospitals and the supply of food processing plants. There is a fiscal and currency situation which hovers on the brink of complete collapse. In short, on every side there is the evidence of complete demoralization. Every town of any size, main or provincial, with almost no exception, has been heavily bombed. On this stage we must erect a new society—a peaceful society and a democratic, liberty-loving one.

The Army has not yet been able to reconstruct in anything like adequate measure such services as the postal system and the general communication and transportation systems, to make it possible for people to exchange things and distribute the limited quantities of goods which are available. If there is famine and freezing on top of the other depressing conditions which are to be found in middle Europe, there will be a very scanty soil in which political wisdom or liberal political thinking can be nurtured. By February 1, a determination will have been made as to the amount of industry which can safely be left in Germany; give her a standard of living not exceeding that of her surrounding countries, and prevent her from becoming a public charge. The rest will presumably be destroyed as a war menace or transferred as reparations to those countries who wish to receive it. The reports show that 25 percent of the industrial plants of Germany have been destroyed by bombing or war damage, with, I do not know how much already removed from the Russian and French areas. Vast removals of industrial plants are still to take place under the reparations program. General Eisenhower reports that less than 5 percent of industry in the western zone is operating, and we know that Germany normally has a large food deficit. On these facts, you cannot envy the Army its task of achieving one of the objectives given it by the Berlin protocol, namely to permit Germany to sustain a peace economy without external assistance.

Germany is not primarily an agricultural country, in fact it is far from it and with the resources it possesses and the needs which the world demands I personally do not believe it can ever be turned into an exclusively agricultural or pastoral society. I have seen reports which show how relatively little of the existing German industrial plant has been destroyed but in all conscience there would appear to any visitor to Germany to be enough destroyed to give a terrific set-back to German industry when it is compared to that of her neighbors among the Allies. Particularly is this true when one has in mind the removals already effected on the Russian side and those still contemplated throughout Germany. But even if not destroyed in large, or even substantial part, the plant is idle. Plants do not operate of themselves. They are merely part of a great nexus of communication and transportation facilities, of trade, and raw materials.

I do not believe that it is in our interest, or possible while we have any responsibility in the matter, to permit famine and disease, or even malnutrition to ravage our occupation area. The Germans may deserve such treatment for the much worse which they have visited upon the other peoples of Europe. Yet we know that the American people will not long tolerate such conditions and the directives to the Army and the Berlin agreements do not contemplate that they shall exist. We must be prepared to provide for the time being such basic food supplies as may be deemed essential and the Berlin agreements themselves state that measures shall be taken promptly to repair transport, to enlarge coal production, to increase agricultural output, and to effect emergency repair utilities and housing. These are the essential, immediate prerequisites of restoring the possibility of any economic life in Germany. Without these immediate steps the Germans cannot assume the responsibility of operating the little German industry, which immediately can be restored, to pay for food which must be imported. Without this minimum degree of rehabilitation there will be no portion of the peaceful domestic industry which the Berlin agreements permit the Germans to develop. In the next months it will be a struggle to get some economic life going and, with the almost total absence of coal, there will be little enough. Certainly for a long time to come there is no justifiable fear that Germany's war potential is being rebuilt.

The immediate task is the avoidance of epidemics, famine and unrest and the restoration of stable conditions in which a political rebirth of Germany can take place. It is time that the American people realize that this short-range task is now the important issue and not whether there is still some Nazi in the town of Obersdorf or Nuremberg whom the Army has overlooked.

I am convinced that the danger from Germany at the present time is not in any tendency toward loose control and quick or even ultimate revival. It lies rather in the immediate prostration which can readily produce a state of permanent desolation likely to defeat our objectives even if it does not turn the stomachs of our own and other peoples. It may lead later to a too great relaxation of controls and perhaps at the same time to a degree of civil disturbance and strife which will make the task of our military government officials even more difficult than it is at the moment.

Even those most determined to defeat Germany completely and see that Germany shall not again become a menace to the world, if they are thoughtful, must realize that we cannot now draw back from taking at least the immediate sensible and constructive steps which are necessary, to use the words of the Potsdam Declaration, to enable the German people to subsist without external assistance.

In accordance with a policy with which, because of its military implications, the Army and the War Department are in complete agreement, the highly centralized and subsidized economic controls of old Germany are being destroyed. The same is true of Germany's excess industrial plant but what that excess is should be determined by the most objective scientific appraisal which the experts of this country and our allies can furnish. It cannot be settled by passion or ideology nor by impugning the motives of those who differ. When that decision is made the Army will carry it out but in the meantime there is the immediate necessity of keeping body and soul together. We must understand that the Army's job in Germany cannot be successfully accomplished unless there ultimately emerges in that area a people or peoples who are conditioned and prepared to take a useful place in the society of nations. It is the duty of our Government and of the Allied governments to see that the Army commanders who are now controlling the situation receive directives which make this possible.

The Army is, of course, hampered in its effort to decentralize industry and at the same time achieve a self-sustaining Germany by the existence of the separate zones. It is only by operating the zones as an over-all unit with a balanced distribution of supplies between them that such an objective becomes feasible. The greatest credit is due to General Eisenhower and General Clay for their persistent and untiring efforts to obtain agreement in the Council for the central administration of the fundamental services of the country, such as transportation and communication. In spite of many trials and tribulations real cooperation was achieved in the first meetings of the Council and the difficulty we are now encountering in our attempt to achieve a central machinery for the Nation-wide services, contrary to the general conception, does not emanate from the Soviets but from France, one of the western democracies. The French have been reluctant to permit any form of central administration which would include all areas in the west. They are afraid, I assume, that if they do, a pattern will be set for the west as the turning of the administration of the area east of the Oder to the Poles and the Russians is likely to set the permanent pattern in the east. At the bottom of this is, of course, the desire of the French for the separation, if not the annexation, of the Ruhr and the Rhineland. I think that but for this difficulty there would have been a very substantial measure of four-party agreement in the Council. Whatever the cause, matters of the utmost consequence have been held in abeyance—banking, currency, taxation, for example, and until such problems are dealt with there can be very little progress made in treating Germany as a unit—which is the agreement of the four powers. Of no less significance is the question of the public debt on which is built the whole structure of savings banks, life insurance, social insurance, and bank deposits. Exports and imports should also be treated centrally if Germany is to be regarded as a unit but all these vitally important matters seem to be held up by France pending the settlement of Germany's western frontier.

The Army has about accomplished the short range objectives of our occupational policy in Germany though there is still considerable work in the way of basic reconstruction to be done under that program. I venture to give the assurance that nothing has been done by the Army or will be done by it which will in any way prejudice the long-range objectives of the country in relation to Germany. How much industry will eventually be left to Germany can later be determined unprejudiced by any steps the Army may now be taking to keep things barely afloat in the areas of Germany over which it exercises jurisdiction.

There is one more thought I should like to leave with you before I close and that is that if we seek security there is only one way to achieve it. It is as it always has been, by eternal vigilance. There is no high short road to the permanent pacification of either Germany or Japan. It cannot be accomplished by a single once and for all blow of destruction. I have no illusions about the repentant character of either the German or the Japanese people. In my judgment there will be a prolonged period before we can hope that the roots of free living, free thinking, and peaceful conduct are seated in German soil. This means that this country must not only have the will, but the continued capacity to step forward and check, as it appears, any recrudescence of aggression in Germany. It is mainly in our own strength and steadfastness of purpose that the future peace of the world lies and we must never forget it.

## Medical and Hospital Care of Veterans

EXTENSION OF REMARKS
OF
### HON. WILLIAM T. BYRNE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remaks in the RECORD, I include the following telegrams:

ALBANY, N. Y., *November 29, 1945.*
Hon. WILLIAM T. BYRNE,
*House Office Building:*

As of November 24, 1945, veterans' waiting list, Veterans' Administration, Bronx (N. Y.) Base Hospital 81, has mounted to 1,053. We understand they are not admitting pneumonia cases, No. 4 heart cases, and cancer cases. Same thing was not known in the annals of the Veterans' Administration prior to this date. Kindly do all things possible so that our hospital at Albany, N. Y., will be built within the very near future.

GEORGE J. PICKETT,
*Veterans County Service Office.*

ALBANY, N. Y., *November 29, 1945.*
Representative WILLIAM T. BYRNE:

The Victory War Loan drive is nearing the climax. Purchase of bonds by individuals is lagging. Posters urging the public to buy bonds depict wounded veterans, present the argument funds are needed to provide medical and hospital care for them. How can Congress deny an appropriation for new veterans' hospitals, particularly when facilities in New York State are inadequate now for wounded and disabled veterans of World War II? A vote for the veterans' hospital fund will help the victory loan.

THE TIMES UNION.

## The Chinese Situation

EXTENSION OF REMARKS
OF
### HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. PATTERSON. Mr. Speaker, I am very much disturbed by recent press and radio reports concerning the status and activity of our troops in China. These reports have created much confusion and distrust in the minds of our people because of the seeming conflict with the President's declared statement that—

All peoples who are prepared for self-government should be permitted to choose their own government by their own freely expressed choice, without interference from any foreign source.

The recent events in China involving the use of American servicemen to transport Chungking troops to battle fronts with the Chinese Communists amounts to unjustifiable intervention in the internal affairs of China, and is consequently a grave mistake on our part.

The internal strife within China is added incentive for our speeding up the establishment of the United Nations Organization for the maintenance of world peace and justice, and the self-determination of the peoples of the world. In

the absence of such an organization at this time, this country can play a vital role toward attaining these objectives in China, not through intervention and taking sides, but through encouraging the unification of all forces in China by peaceful negotiations between representatives of all sections of the Chinese people, leading to a free national election in which the people of China can express their own desires and draw up a people's constitution in accord with the type of rule they wish to adopt.

I am not questioning the necessity of maintaining American troops in China and Manchuria to complete the Japanese surrender. I respect the decision of the military in this regard. However, the use of American troops or American arms in any way indicating an act of intervention or taking sides cannot be condoned. Our marines should be withdrawn from this area as quickly as is feasible.

It is the duty of this Nation to foster and encourage a functioning democracy in China through free elections and a coalition government. Such action will be not only to the interests of a peaceful, unified, democratic China, but also to the interests of the people of our own Nation. For only through a democratic China, organized for the welfare, and economic and political freedom of its people, can we promote international cooperation, international trade, and further our goals of a lasting and enduring peace.

I ask that our acts of intervention come to a halt immediately, and that our troops be withdrawn from northern China and Manchuria. This is absolutely necessary in the interest of world peace, democracy, and self-determination of the people.

## Republic Steel and the CIO

EXTENSION OF REMARKS
OF
### HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reprint from the Washington Post of November 27, 1945:

CIO UNION STRIKE VOTE THREATENS CONTRACT VIOLATION

On August 11, 1942, Republic Steel Corp. signed a contract with the United Steelworkers Union (CIO).

On April 11, 1945, a new contract was signed. It runs until October 15, 1946.

The union's contract with Republic is a written document, signed by national officers and the local union presidents of the United Steelworkers Union, as well as by Republic.

Both the 1942 and the 1945 contracts contain a specific agreement on the part of the union that there will not be any strikes for the duration of such contracts.

This no-strike pledge in the existing contract reads as follows:

"During the term of the agreement, neither the union nor any employee, individually or collectively, shall cause or take part in any strike or other interruption or any impeding of production at any plant of the company covered by this agreement."

In return for this no-strike pledge and for the express purpose of enabling the union to discipline any members who might violate such pledge, the union was granted maintenance of union membership and the compulsory check-off of union dues.

In the face of this solemn pledge not to strike for the duration of the contract, the union has petitioned for, and the National Labor Relations Board—at public expense—will conduct a vote on November 28, 1945, to determine whether or not Republic employees want to go on strike.

Republic protested the taking of this strike vote and so informed the National Labor Relations Board. The Board, through its Chairman, informed Republic, "Let me state at the outset that the National Labor Relations Board would much prefer not to take any action which might encourage strikes in violation of collective bargaining agreements." The Board then pointed out that when a petition is filed, the Board has no alternative but must hold the election.

Regardless of what the Board may be required to do—regardless of what the outcome of this strike vote may be—the United Steelworkers Union (CIO) and Republic employees are definitely bound by their contract not to strike.

Any strike of Republic employees during the life of this contract—whether it has been approved by a vote or not—would be a direct, flagrant violation of the contract which the union has with the company.

REPUBLIC STEEL CORP.

## Transportation of Troops

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. VOORHIS of California. Mr. Speaker, under unanimous consent, I include with my remarks a letter from the Secretary of War concerning the transportation of troops back to the United States.

This letter was in answer to one which I addressed to the Secretary on October 31 and concerning which I made comment in a speech in the House on November 16. Both because of these facts and also because of the important contents of the letter, I am inserting it in the RECORD:

NOVEMBER 20, 1945.

Hon. JERRY VOORHIS,
*House of Representatives,*
*Washington, D. C.*

DEAR JERRY: After receiving your letter of October 31, concerning the return of servicemen from overseas, I asked the Chief of Transportation to look into the matter very thoroughly and then submit a report to me. Although this has caused some delay in replying to your letter, I wanted to be sure of the facts and satisfied that every available piece of adequate transport equipment was being utilized.

I have read with interest your remarks addressed to the House on this subject on November 16, and have noted your proposals in this connection. Please be assured that all available shipping, both Army and Navy, suitable for the transport of troops is being utilized to its fullest extent.

Allocations of available shipping to theaters is based on the theater commander's space requirements predicated on the number of men eligible for return under the current War Department readjustment procedure. This procedure is the basis for the determination of military personnel's adjusted service-rating scores. In its computation, consideration is given, among other factors, to each man's length of service, both overseas and within the continental United States. From this score, each man's priority for return to the United States is established.

Theater commanders have been instructed to utilize all available space, including that allocated to another service which should happen to be in excess of its requirements for any particular voyage. In accordance with these instructions, joint loadings between services, including Navy battle craft, have been effected.

A large percentage of vessels, designed primarily for cargo, have been converted in part for the carrying of personnel. In seeking the maximum use for each vessel, many factors must be considered. Among these are the vessel's construction, type, speed, reefer, and dry-storage capacity, life-saving equipment, as well as the personnel and supply requirements of the theater. These factors largely determine the number and particular vessels for conversion. All ships, including those converted in part for carrying of passengers returning from the Pacific theater, are filled to maximum passenger capacity. This applies, also, to aircraft.

During the month of October, about 160,000 Army personnel arrived in the United States from the Pacific area. It is anticipated that approximately 190,000 Army personnel will arrive during November, and 200,000 in December.

I am keeping after this matter, and assure you that everything possible is being and will be done to bring our veterans back home as soon as possible.

With best personal wishes,
Sincerely yours,

ROBERT P. PATTERSON,
*Secretary of War.*

## Army Discharges

EXTENSION OF REMARKS
OF
### HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. H. CARL ANDERSEN. Mr. Speaker, the enclosed letter has been received by me today, and I am refraining from leaving the signature attached to the letter for obvious reasons. This letter, however, has been sent to me by a man whom I have known for years and in whom I have the utmost confidence.

On November 8 this battalion was informed that they would embark from the port of Manila on the 11th; however, on the 11th they were told that they might possibly leave sometime between November 20 and December 1. Such indecision is wearing upon these boys who are waiting to come home, and I sincerely hope that every possible effort

will be made by the Army to prevent what is described in the letter as "sweating out." The letter is as follows:

FIVE HUNDRED AND SIXTY-FIFTH
SIGNAL AIRCRAFT WARNING
BATTALION, LUZON, P. I.,
*San Francisco, Calif., November 14, 1945.*

DEAR SIR: I am one of 2,700 enlisted men of the Five Hundred and Sixty-fifth Signal Aircraft Warning Battalion located near Clark Field, Luzon, P. I. Fifty-two percent of my organization have 70 or more points or are over 35 years of age. No man has less than 60 points. The organization is a class IV unit.

Hostilities have ceased and I no longer feel it a duty or obligation to refrain from asking for answers to questions that are vital importance to me. I feel, rather, that now we should have the facts—and all of them. These questions I list as being most important at this time.

First. Why is it not possible to return personnel from this theatre so that they may be discharged on a par, in regard to points, with Stateside personnel?

Second. If there is no possibility of doing so, why cannot we be told definitely when we will return? This would eliminate "sweating out" an indefinite period of time, mail stoppage, the let down following false rumors, and the many other disappointments.

Third. The publicity attending the return of divisions, etc., is grossly misleading in that it tends to indicate that personnel of all units or organizations of comparable point average are also on their way home. Must this publicity continue to confuse our families and lower our morals?

Yes, hostilities ceased some time ago. The Japs aren't shooting at us now, but the insects are—and their aim is better. The boredom is here—and the heat—the poor chow—and the regimentation. Our mail has been stopped at San Francisco and we are stopped here.

I would be sincerely grateful, if through any means available to you, something might be done to bring us back to our families and loved ones.

## What's the Word, Mac?

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. VOORHIS of California. Mr. Speaker, if any piece of writing ever carried its own message and required no comment from me or anyone else, it is the following feature editorial written by Paul C. Smith, editor of the San Francisco Chronicle and appearing in that paper on November 18. Without saying more than simply that it should be read by every single Member of Congress and every American citizen, under unanimous consent, I include it with my remarks herewith:

WHAT'S THE WORD, MAC?

(By Paul C. Smith)

Last night I had a little bull session with an ex-marine friend of mine. Never mind his name. You will find it on a white cross in a former rice paddy out on Guam. He wasn't a hero. That is, he wasn't a hero because nobody decorated him for anything. He just got his head cut off by a concealed machine gun shortly after he jumped out of the amphtrac down on the left flank, by Adelup Point.

He is buried out there now, but he has been dropping in on me lately to bat the breeze.

Last night he started off the conversation by saying: "Say, Mac, what the hell is going on back there Stateside?

"When we hit the beach out here, 16 months ago, everybody said he knew what it was all about.

"We had a war on. The job was to win it. Some of us didn't get far as individuals, but you people who had the luck to make Stateside again got your victory, and so did the people who never left the States.

"We're not beefing, but it seems to some of us out here, stirring around under our crosses, that a lot of you back there have been doing some awful fast forgetting.

"Where are you headed back there anyway? Give us the scoop. Don't you know there's a peace on?

"Don't you know there are a lot of 'beach heads' that have to be taken if you are going to win this peace? We can't win it for you, Buddy."

"Well, it's pretty complex, you know," I interrupted. But he went right on.

"Maybe so, Mac, maybe so. It all depends on your point of view, I guess. But what's everybody scared of back there? They look to me like they've got the old stuff right up to their necks. Fear, fear, fear—doom, doom, doom—what a battle cry. I don't remember the boys yellin' that on the way up to the top of Suribachi. So you're scared of the atomic bomb? It's complex and so you are in a dither. Well, isn't that tough? What's the matter? Are you afraid it'll kill you any deader than a couple of machine-gun slugs? As long as you've got something so hot in the atomic bomb, why don't you knock off the blue funk and settle down to figure out how to use atomic energy to remove the basic causes of war?

"What's that stuff the papers are full of about the mistakes of the past? Of course, there were a lot of dumb people in the war, along with a lot of pretty solid Joes who turned in performances that got you your victory. But that's water over the dam. Why are you wasting your time and substance in sneers and jeers? Why not concentrate your brains and energy on the present and the future, and make some honest effort to whip up a deal without some of the dumbness of the past?"

"Well, now, in politics you know—." The very expression on his face interrupted me.

"Politics, my aching back," he said. "I didn't get my noggin shot off for a lot of dopey politicians. Or did I? And speaking of politics, what's going on in this Indonesian and this China show? I see some big four-star man—I forget his name—is telling my old buddies to 'shoot back' out in China. Well, O. K., they'll shoot when they're told. But just why are we out there? Why is anybody shooting at us? Yeah, I heard that part about guarding coal trains. O. K., Mac, but who are we guarding them against? Where's the coal coming from and who is it going to and why? Why doesn't somebody cut us in on the know? It doesn't take much shooting to start the whole works over again. Maybe this is the time we ought to know what we are trying to do.

"I know that if the next crop of marines and soldiers and sailors are caught up in another war, they're not going to run from it any more than we did this time. But what are the reasons for getting caught up in another mess?

"Who are your leaders back there now, anyway? Nobody seems to be putting out the plain, ungarbled word. What's your foreign policy? What's your national policy? What's this so-called industrial warfare all about? Isn't that just a fancy-pants term plain dump anarchy? In a nutshell, Mac, what's it all about? Have you lost your sense of direction? Where are you headed for?

"As you know, I'm not getting home on points, but Stateside still looks pretty good from over here. Botch it up much more, Mac, and—well, don't say I didn't warn you.

"What's the word, Mac?"

## Surplus Doctors in Service

EXTENSION OF REMARKS
OF
### HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. MICHENER. Mr. Speaker, I only want a minute on this busy day to read a letter from a constituent now stationed in Germany. The letter is self-explanatory.

We all know that our civilian population is in dire need of more physicians and surgeons, commonly called doctors. We all know that our veterans' hospitals are understaffed because of an apparent scarcity of medical men. In the light of these facts, my constituent's letter, written in Germany, is most revealing. It is difficult for me to answer his questions, and every Member of Congress will understand why. The conditions outlined must not be permitted to continue. I am not using my constituent's name for obvious reasons. I can, however, assure the House of his reliability. His letter is unusual, in that he does not insist on his discharge, other than in his regular turn under the regulations. He is interested in keeping doctors where they are needed, and not detaining them in the service for the purpose mentioned in his communication. The letter reads:

NOVEMEER 10, 1945.

Representative EARL C. MICHENER,
*House of Representatives,*
*The United States Congress,*
*Washington, D. C.*

DEAR MR. MICHENER: This is to introduce myself. I am a captain in the Medical Corps of the United States Army. My home is ———, Mich., and I graduated from the University of Michigan Medical School.

I am seeking information as to the status of the redeployment of medical officers. From my personal experience and talking with other medical men, I have verified what is common knowledge over here: that is, a majority of medical men in the Third Army area have little or nothing to do. In this field hospital, we have 15 medical officers, and I can assure you that 3 doctors doing a reasonable day's work could easily handle all the work we have to do. Furthermore, in this same town is a clearing station with another six doctors, who have next to nothing to do.

There is no question in the minds of my fellow officers and myself that this installation is entirely superfluous. Yet why is it being kept open? So far as I can see there is only one answer to that question. We have a Regular Army commanding officer, and this hospital is maintained mainly so that he can have a command. Since he has come here he has made every effort to build up the patient census, in certain cases to the actual detriment of the patient. The

Regular Army officers will give us absolutely no satisfaction as to our status, and in every way indicate that they simply do not care whether we ever get home or not.

Another question I would like to have answered is why should there be such a disparagement in the critical point score for medical officers and enlisted men? We are just as much in excess and just as useless over here, and we believe we should be sent home on the same basis.

Furthermore if the Army is to persist in its stupid and costly policy in regard to doctors, is anything being done to send over replacements for us? I understand that about 15,000 doctors have graduated under the ASTP. Are these men being taken into the Army and will they be sent overseas to replace us? So far I have not met or heard of any of these individuals being over here.

Can you give us any information in regard to the shipping situation? From our point of view the whole picture is very confused and it does not appear that every effort is being made to hasten the homeward redeployment of troops. According to the figures in the Stars and Stripes shipments are falling off steadily. Yet there are still hundreds of thousands of men over here and, believe me, we are as anxious to get home as the men who have gone before us.

Incidentally, I have 65 points and I do not want to go home before my just turn. But I am anxious to see results and to obtain just redeployment of medical officers. The men who helped win this war for the United States do not relish lingering over here as the forgotten Army.

I certainly will appreciate any information and help you can give us in regard to the above problems.

Very sincerely yours.

## Strikes

EXTENSION OF REMARKS
OF
### HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. RABAUT. Mr. Speaker, in the past week, since the General Motors strike began, we have heard Members of this House ask anxiously about innocent citizens who have no part in the present conflict. I wish to include in my remarks an excerpt from the diary of one of our most distinguished citizens, the former First Lady of the Land, Mrs. Eleanor Roosevelt:

STRIKES

So far, in the General Motors strike, I think the labor representatives are showing a more public-spirited attitude than the company officials. Why should anyone in any business these days refuse to conduct further negotiations if these will lead to production? When labor is willing to have the Government conciliators present there should be no objection. It looks as though the company officials were not interested in production. Of course, we know that it would probably not hurt the company financially if they were not to be in active production until the first of the year. But even if they do not lose money, they should be interested in the public.

We are anxious to get new cars, and we are also anxious to see the resumption of work in all lines of business production in this country. It is bad for the morale of the rest of the world when we do not produce.

## Wrong Approach

EXTENSION OF REMARKS
OF
### HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Akron Beacon Journal of November 27, 1945:

WRONG APPROACH

There's no doubt about it. Relations between management and labor are in a mess.

Collective bargaining sessions are hopelessly deadlocked over the wage issue. Interpretations of existing contracts are miles apart. Strikes are breaking out all over the country.

So far as we know, no one has a sure-fire remedy. The trouble is that too many people and organizations are trying to take advantage of the situation to put across their own favorite schemes. In most cases, they would kill rather than cure.

Congress has a whole hopper full of labor legislation. As public sentiment against crippling strikes rises, there is a hazard that laws will be passed which will do more harm than good.

For instance, the Rules Committee of the House is giving the green light to the Military Affairs Committee on a bill which originally was designed to repeal the Smith-Connally antistrike law, so called, but which now has all manner of antilabor clauses tacked to it.

The Smith-Connally law was a poor piece of legislation in the first place. It is ridiculous now, because of the way in which it involves the Government as a virtual sponsor of strike votes.

Without question, repeal of the Smith-Connally law is long overdue. But the ill-conceived new restrictions which antilabor Congressmen are trying to sneak through at the same time will only make things worse.

For instance, the provision that would punish a labor union which struck in violation of a no-strike clause by suspending its collective bargaining provisions for a year and by making it subject to suits for damages.

Obviously, the effect would be that labor unions would no longer accept no-strike clauses. So that restraining influence, for whatever it is worth, would be lost.

Nor can we approve of the clause that would further restrict union activity and contributions in political campaigns.

Most union members are citizens and if they want to throw their weight around in an organized way for certain candidates, we don't see but what they have a right to do so. Business and industrial organizations have always had their say in politics.

It's not too surprising that there should be a lot of strikes at this time. During the war there was a moral compulsion to stay on the job. That has been removed. The result is obvious.

It is understandable that the workers want upward wage adjustments to offset loss of overtime pay during the war. It is also understandable that in the present state of uncertainty, employers are hesitant about committing themselves to paying more money. That makes it doubly hard to reach agreement on this most vital of issues.

We'd like to see unions become more responsible, more conscientious about living up to their contracts. We'd also like to see unionists more anxious to give a full money's worth of productive activity during their working hours.

We wish that more employers would discard double talk and stalling as tactics in collective bargaining.

Perhaps it's too idealistic to hope for such enlightened attitudes in this time of turmoil.

Of this, however, we are convinced: The labor turmoil won't be cured by repressive legislation. The lasting cure must come from within—by both labor and management taking saner, more realistic attitudes.

## Hon. Edward E. Browne

EXTENSION OF REMARKS
OF
### HON. MERLIN HULL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 28, 1945*

Mr. HULL. Mr. Speaker, the passing of Hon. Edward Everett Browne, a Member of the House of Representatives for 18 years, closes the long and honorable career of one of Wisconsin's ablest men whose great service to his State and to his Nation was marked by his sterling character and unimpeachable integrity. The news of his passing on November 23, 1945, at the age of 77 years, brings sorrow to his former colleagues in Congress, and to his host of friends in his native State.

Mr. Browne was born at Waupaca, Wis., on February 16, 1868. He graduated from the law school of the University of Wisconsin in 1892, and at once entered in the practice of his profession in his native city. He served three terms as district attorney of Waupaca County. Gaining early distinction as an attorney, he was elected to the Wisconsin State Senate, in which he served 8 years. Among the many good laws of which he was the author and sponsor were Wisconsin's first highway aid law and an enactment establishing a system of State parks.

He served as a member of the board of regents of the University of Wisconsin from 1905 to 1907. Later he was a member of the Wisconsin Conservation Commission from 1937 to 1941, and for several years past he was curator of the Wisconsin Historical Society.

He was elected to Congress in 1912, and continuously was reelected by large majorities, serving in the House of Representatives until 1931. His congressional career was of broad service to his constituency and to the Nation. He was an earnest student of public affairs, and conscientiously enlisted his support in favor of measures in which the welfare of the common people was advanced.

Upon retiring from Congress he again resumed the practice of his profession at Waupaca and continued active until his final illness. In later years he was associated in his practice with his son, Thomas.

Of sincere Christian training, he exemplified his faith in his daily life and it was his guide in his public as well as professional career. He was a good man, one whose years were spent in the cause of humanity, and his great following of

friends attest the high esteem in which he was held by all.

The following eloquent tribute to Mr. Browne is from the Capital Times at Madison, an editorial by his long-time friend, Hon. William T. Evjue:

EDWARD E. BROWNE

One of the great names of Wisconsin's golden era has quietly closed a life of service to the people and stepped out of a world for whose betterment he had made a lifelong fight.

Few men have dedicated their time, energy, and ability to serve the public as wholeheartedly and unselfishly as did Edward E. Browne, of Waupaca. He came early in the fight for a people's government and he stayed late. He asked but one thing of the world and that was to serve the people he loved.

As a young man just starting out in his law practice he saw the great challenge of his day—the slow strangulation of America's new-born democracy by a rising industrial feudalism. Like the elder La Follette, he accepted the challenge. He joined Wisconsin's Progressive movement and plunged into a fight that was to electrify the Nation and offer inspiration to all who believed in good, clean, democratic government.

There was hardly a field of public activity in which he did not share and leave his stamp. The people of Waupaca County three times asked him to serve them as district attorney. As the Progressive cause broadened and intensified for State-wide reforms they sent him to Madison as their representative in the State senate. In the two terms he served in that body he erected a living memorial to himself by writing and fighting through the first highway-aid bill and State park-extension measure.

Progressives then were determined to carry the fight into the national level. The people of his congressional district asked him to represent them in that historic battle. He served for 18 years as a Member of the House of Representatives with honor and distinction.

The University of Wisconsin felt the influence of his ideals when he served for a time on the board of regents. For 4 years he helped to shape the policies of Wisconsin's conservation department.

Much of the good in the lives of the people of this State and Nation is due to the devotion and high sense of public responsibility of Edward E. Browne. Much of the bad is still with us because the world has too few men of his caliber.

## Stamp Honoring Commodore John Barry

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. LANE. Mr. Speaker, I have today written to Postmaster General Robert E. Hannegan, urging that he expedite the departmental approval of design for the stamp commemorating the bicentennial anniversary of the birth of Commodore John Barry, "Father of the American Navy," proposed in S. 1620 by Senator JAMES MEAD, and H. R. 4787 by Representative WILLIAM B. BARRY. I intend to actively cooperate with these colleagues in having the legislation promptly approved by the House and Senate.

Many important organizations of men and women of Irish blood in my district have for years sought this recognition for Commodore Barry, who fought in the Revolution both on land and sea, cooperated with the founding fathers in establishing this Nation. It was he who outfitted the first fleet of the Colonies, who carried our emissaries to solicit, successfully, aid from France, including food, clothing, and munitions for Washington's suffering army, who fired the last gun at sea in the Revolution. In our Navy under the Constitution he received the commission No. 1, and was at the head of the United States Navy under three Presidents—from June 5, 1794, until his death September 14, 1803—under Presidents Washington, Adams, and Jefferson. It was he who first advocated a Navy Department separate from the War Department, supported by President Adams, was retained as senior captain by President Jefferson when the then existing Navy was taken off the seven seas.

Truly, "no American naval hero was deserved of posterity greater appreciation of his career and received less than John Barry," and truly, as was written into his first appreciative biography in the leading magazine of those days, the Port Folio, in July 1813:

So many of the distinguished naval men of the present day commenced their career under Commodore Barry, that he may justly be considered as the "Father of our Navy."

## Unique Philippine-United States Relationship

EXTENSION OF REMARKS

OF

### HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER FROM THE PHILIPPINE ISLANDS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. ROMULO. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an editorial appearing in the November 9, 1945, issue of the Washington Post, and my reply thereto which appeared in the November 13, 1945, issue of the same paper.

At this critical juncture in Filipino-American relations I feel that it is of the utmost importance that we understand clearly the true nature of the absolutely unique relationship between the two peoples. This editorial is clearly indicative of the confusion which exists in the public mind concerning the bonds existing between the United States and the Philippines, and I deem it my duty to clarify what I believe is the fundamental relationship between the United States and the Philippines.

[From the Washington Post of November 9, 1945]

CONSISTENCY

Consistency is a jewel, but of late it has become pretty tarnished in our foreign policy. Consider the British-American negotiations in the light of our colonial policy. With Presidential approval Senator TYDINGS introduced a bill last May which would permit the Puerto Ricans to decide by referendum vote whether they desired independence, statehood, or some form of dominion status. The bill also provided that, whatever the form of government chosen, free-trade relationships would be maintained between the island and the United States except for tariffs imposed by mutual consent. It specifically declared that the importation of Puerto Rican sugar into this country should continue "on a basis not more restrictive in principle than that which has prevailed during the last 5 years in which a quota was imposed under United States law."

A few days ago Senator TYDINGS introduced another bill, this time for the rehabilitation of the Philippine Islands, permitting establishment of preferential tariff rates and duty-free quotas on a specified list of articles, under the terms of an executive agreement to be authorized between the President of the United States and the President of the Philippines. The bill provides also for the duty-free admission of 850,000 tons of Philippine sugars and the allocation of quotas among island mills that were exporting to the United States in 1940.

Undoubtedly the United States is under obligation to see that Puerto Rico and the Philippines do not pay too great an economic price for political independence. Special agreements and concessions are undoubtedly justified to assist them to raise living standards. But it is at the same time necessary to view specific concessions in relation to long-range policies and objectives and to consider the effect of such concessions upon other countries. More particularly, we shall run the risk once again of being inconsistent in our foreign policy. At the moment we are negotiating with the British for the abandonment of their trade preferences and their empire preferences. Talking one way and acting another is not the way to behave for a great power anxious to keep world goodwill.

NOVEMBER 9, 1945.

To the EDITOR OF THE WASHINGTON POST,

*Washington, D. C.*

SIR: I should like to record my astonishment at the inconsistencies revealed in the editorial on consistency which appears in this morning's Washington Post.

The writer of this editorial claims that proposals for a special Philippine-American trade relationship are inconsistent with American desires that Britain abandon her system of Empire preferences.

To my knowledge, there is no British dominion or colony which holds the same relationship to the United Kingdom as the relationship of the Philippines to the United States. If there were, I doubt whether many Americans would object to British treatment of such dominion or colony that would correspond to the proposed American assistance to the Philippines.

Ours is the only subject people in the world who have grown toward independent status with the help of the colonizing power. That was the reason why our people fought when American sovereignty was attacked in the Philippines—which, as you know, cannot be said of any other area in the Orient where a western flag flew. Our reward for the bitter resistance we put up to the enemy was total destruction. Our cities and homes are rubble. Our fields have been ravaged and are now barren. Our industries are gone.

To help us get back on our feet, we need assistance from the United States, not as charity but as simple justice. Getting back on our feet is a business proposition. No businessman is going to rebuild his factory unless he has reasonable assurance that he will be able to sell his products. Our only market outside the Philippines—as a result

of American policy since 1939—has been the United States. It is, therefore, proposed that 20 years of quota-limited free trade be assured our two countries, thereby giving our farmers and businessmen the opportunity to restore our shattered economy.

This is no revolutionary idea. It is the logical end product of America's commitment, which began when the United States assumed sovereignty over the Philippines, deepened when the United States insisted on tying our economy to its own, intensified when the United States admitted its economic responsibilities to the Philippines in the words of the Philippine Independence Act, and wound up in the many pledges made to us by your Congress and your elected leaders during and after World War II. If there is any consistency to be asked for, I suggest that you look to the consistency of American pledges to recognize and protect—economically as well as militarily—our forthcoming independence. Among them was President Roosevelt's message broadcast to us while we were fighting in Bataan in which he said, "I give to the people of the Philippines my solemn pledge that their freedom will be redeemed and their independence established and protected."

CARLOS P. ROMULO,
*Resident Commissioner from the Philippines to the United States.*

## Three Sides to a Labor Dispute

EXTENSION OF REMARKS
OF
**HON. NOAH M. MASON**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

[From the United States News of November 30, 1945]

THREE SIDES TO A LABOR DISPUTE

(By David Lawrence)

PUBLIC IS THE INNOCENT BYSTANDER WHO GETS HURT IN CONFLICT BETWEEN MANAGEMENT AND WORKERS—THE GOVERNMENT'S OBLIGATION TO SEE THAT BOTH PARTIES MEDIATE THEIR DIFFERENCES

The general impression is that labor and management are the only parties to a labor dispute. Hence they fight it out by strikes or lock-outs and insist that the rest of the citizens must await the outcome.

But in all this strife there is an innocent bystander who gets hurt. He is the party of the third part—the public.

The public at the moment needs motor-vehicle transportation. Not only is there a shortage of new cars due to the restrictions on production during the war period, but many automobiles now operating on the roads are a menace to safety.

The public needs jobs.

The armed services are being demobilized and the returning soldiers and sailors have expected to return to a peaceful America where they could resume their normal occupations.

What do they find today? Two powerful economic groups engaged in bitter strife while the public interest is apparently unrepresented by anybody. The curious tendency of President Truman and his administration to assume that Government must keep its hands off while an internal war goes on is merely the supine acceptance of economic anarchy.

For neither labor nor management has a right to commit the Nation to economic war. They cannot exert economic pressure on each other without impinging on the rights of the public.

*People's interest paramount*

Mr. Truman has been told that the way to convert from wartime to peacetime is to abolish the war boards and let nature take its course. This is a philosophy more reminiscent of the Harding-Coolidge-Hoover attitude than the Grover Cleveland-Theodore Roosevelt-Woodrow Wilson-Franklin Roosevelt concept of the Federal obligation. It is Republican conservatism rather than Democratic liberalism which Mr. Truman has evidently adopted as his guide.

The American people want a President to exercise and assert leadership when economic anarchy approaches. They are not concerned with technicalities or prejudices—they want the people's interest protected by orderly and courageous government.

Labor disputes are not novel. The fundamental issues surrounding them are decades old. What is needed is clear and forthright action to protect the public as against encroachments by both labor and management. Mr. Truman is mistaken if he continues to assume that the labor controversies are two-sided. They are three-sided and he not only is a party to the automobile strike, but he represents by far the largest interest involved—the public interest.

*Paper plans impractical*

Mr. Truman is new at his job. He is cautious about taking a stand because perhaps he is unfamiliar with the background. He started out with the theory that if he appointed a disinterested and honest man as Secretary of Labor he could delegate to that Cabinet officer the whole problem of labor. He took a paper plan and decided to assemble all bureaus and boards into one department. This was a grave error.

It is unwise to group administrative and judicial functions in the same department. Commissions and boards must remain free from political or executive influence. The way to handle these matters is to deal with labor problems as such irrespective of what jurisdictions or functions are involved and thus to provide effective facilities—not one but several—so as to encourage the settlement of labor disputes.

Mr. Truman was told that one trouble with the War Labor Board was that it became a sort of compulsory arbitration agency and that labor and management didn't bargain collectively but simply passed the buck to the tribunal. The War Labor Board, on the whole, administered its job fairly well but it was not responsible for the break-down of collective bargaining. War conditions which brought wage control did that. As long as it was the Federal Government which controlled both wages and prices it was inevitable that the Government should be required to act as a means of compelling arbitration.

But when VJ-day came, the President was mistaken in announcing the liquidation of the War Labor Board without setting up immediately some other tribunal to take care of the public interest. Neither he nor his Secretary of Labor saw that what labor and management really were urging was a free hand to do as they pleased—to demand the highest wages and to refuse to grant such demands without increases in price.

Since the administration retained control of prices it was illogical to say to the management group that it could nevertheless raise wages and adhere to ceiling prices just the same. The situation was not helped by the President's vague proposal that industry and business might well increase prices somewhat and absorb the increased costs out of profits while waiting for volume to grow and efficiency in production to rise.

America's economic system is much too complex to be dealt with by blanket pronouncements or by an inflexible formula. The theory that prices can be maintained at the same level or even reduced as volume grows is in itself inapplicable to many lines of business which make high-cost products in a narrow market. It is also impractical in those industries where basic costs of materials or labor are subject to fluctuation or seasonal variation.

A wage inflation can be as dangerous as an inflation resulting from speculation in securities. The whole economic mechanism can get out of gear and be wrecked if any two wheels start going opposite ways.

The Government of the United States, as the representative of the American people, must steer away from the perils of economic anarchy.

How shall this be done? By compulsory arbitration? By prohibiting strikes and lock-outs? By a system of voluntary arbitration?

*Groups are amenable to law*

The American people do not wish individual or group rights to be abridged. The right of an employee to quit work is basic in the right to strike. The right of an employer to shut down a plant is the right to strike. But when individuals conspire to bring about a strike or a lock-out they are subject to public regulation.

We have for years conceded that big corporations must be regulated by law. We have not conceded as yet that big labor unions must be regulated by law. The public interest demands both up to and including certain obligations to the people as a corollary to the operation of businesses or organizations.

The process of regulation need not in any sense impair individual freedoms or the freedom of private enterprise. A simple solution has been indicated for many years. The time has come to put it into effect.

First of all while the right to collective bargaining has been recognized, there are no written rules for its conduct. Congress must provide those rules.

When two parties to a dispute get irritated or angry with one another, as happens often in labor disputes, it is desirable that a third party who doesn't get angry and is interested only in healing verbal wounds and bringing the parties together should come into the picture. The method of selecting such mediators, not arbitrators, can be prescribed by Congress. The Federal and State governments can train and supply them.

*Compulsory mediation*

Existing statutes should be amended by Congress so that both parties will be required to avail themselves of mediating machinery before resorting to strikes or lock-outs. The public is entitled to that much consideration. If this be deemed compulsory, then it may be recalled that the obligation to bargain collectively with a bona fide majority of the employees is already compulsory.

So long as agreement on terms isn't compulsory the public interest demands that the parties shall at least be required to follow orderly processes in attempting to arrive at voluntary agreements. But, supposing mediation does occur? What then? The mediator can suggest arbitration but this should also be voluntary—not obligatory on the parties. And supposing one side or the other still refuses? Then the Government should require the appointment of a fact-finding panel in each case and the parties must be required by law to await the publication of these fact-finding reports—not later than 60 days after submission of the cases.

When the facts are given to the public, one side or the other will yield. Most disputes will never get to that stage. The vice of the present system is that, under cover of secrecy, selfishness and greed are common on both

sides of labor disputes. The public is entitled to have these arbitrary positions exposed to the healthy air of discussion.

This method has, in a sense, been used in the field of railway transportation under the Railroad Mediation Act. It has been tried. It is effective. Why not protect the public interest by extending the principle at once to all labor disputes?

If President Truman falls down on the job—as he apparently has in failing to prevent the auto strike—then it is up to Congress.

When will Congress act or will the American people be compelled to weed out the timid and the passive from the ranks of both the Republican and Democratic Parties in the primaries a few months hence?

Plenty of returning servicemen are talking of running for Congress. They may find political ammunition in the failue of the present Congress to provide effective means of settling labor-management disputes.

## Veterans' Hospital Problems

EXTENSION OF REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, Lt. Col. Harry E. Brown, Acting Director, Hospitalization Service, gave the following talk to the house of delegates, American Hospital Association, Chicago, Ill., November 5, 1945.

Later a resolution was passed by delegates of the American Hospital Association to assist Veterans' Administration at cost.

General Hawley regrets that he is unable to be with you this evening. I, too, regret that his plans had to be changed very suddenly, for he, more than anyone else, could give you a clear picture of the problems with which he is faced.

When General Bradley was appointed Administrator of Veterans' Affairs, he asked and received permission from the President to select a few key officers from the Army as his advisers. Among these officers was Maj. Gen. Paul R. Hawley, Medical Corps, United States Army. General Hawley was Chief Surgeon, Communication Zone, European Theater of Operations, and Chief Surgeon, European Theater of Operations, from June 1944 to May 1945. In addition to his primary responsibility for the health of more than 3,000,000 American military personnel, he was responsible to a very large degree for the care of the civilian population in the areas of Europe in which the American armies were engaged, prisoners of war, and Italian service units.

General Hawley established a medical service which reached far forward to the battle lines to give immediate support to the wounded and to see that they were rapidly evacuated to areas where they could be treated by the most modern methods. Through his knowledge, gained over many years, and recognized ability, it was possible to set a record of saving the lives of 96 out of every 100 wounded soldiers. He supervised over 318 hospitals and convalescent units, the evacuation of more than one-half million casualties from the Army areas, and nearly 200,000 to the United States. This task required superior coordination and management.

This is the officer that General Bradley has selected as Acting Surgeon General of the Veterans' Administration to reorganize the Medical Service of the Administration.

The Veterans' Administration, insofar as the medical service is concerned, is faced with three major problems:

1. Quantity and quality of professional personnel.

2. Lack of bed capacity to care for the veterans who are entitled to such care under the present laws.

3. Out-patient service.

The shortage of personnel will not be discussed at this time. No doubt all of you have or are experiencing this in the operation of your own hospitals.

At the present time the Veterans' Administration is operating 97 hospitals and, in addition, has in excess of 5,000 patients hospitalized in other governmental and civilian hospitals.

As of October 18, 1945, the census of the veterans hospitals was 69,661, of whom 45,605 are non-service-connected.

The bed capacity of the veterans' hospitals is 72,157. In addition there are approximately 11,000 emergency beds that must be eliminated at the earliest possible moment. It can be very readily seen that the facilities of the Veterans' Administration are sadly overtaxed.

Authorization has been received to increase this capacity by approximately 50,000 beds, consisting of additions to present hospitals; the construction of new hospitals and the acquisition of approximately 3,500 beds constructed by the Army and Navy for the Veterans' Administration. It will be at least 2 years before all of these beds will be available for use by the Veterans' Administration. The present planning indicates that by 1950 there will be need of additional 15,000 beds.

New hospitals and additions must be located according to the veteran population of the various States.

Hospitals will be of four standard sizes: 200, 500, 750 and 1,000 beds. The larger hospitals will be built near medical and teaching centers. The smaller hospitals will augment the larger ones. Although there are no available statistics, it is believed that approximately 25 percent of all patients admitted to the smaller hospitals will require hospitalization in the larger units where specialized care may be obtained.

In addition to providing hospital facilities, the medical service is faced with the problem of conducting a large number of physical examinations and applicants claims for compensation and pension. It is anticipated that approximately 1,300,000 veterans will require physical examinations during the year 1946, and 1,500,000 during the year 1947. The same number of examinations for other than claims for hospitalization purposes is anticipated. We do not have the adequate medical staff to conduct this large number of examinations, and consequently must ask the help of the medical profession throughout the United States to aid us in this work.

It is General Hawley's aim to raise the standard of the veterans hospitals to such an extent that they will be recognized for internship and residencies. To do this he must, and will, have the complete support of the American Medical Association. As a matter of fact, the medical profession has shown its willingness to cooperate to the fullest extent.

General Hawley desires very much to secure the help of the American Hospital Association in the vast program with which he is confronted. It is hoped that he will receive the same support and cooperation from you gentlemn that he has received from the medical profession. Unless he does receive this support, and I am sure he will, his task will be much more difficult.

We hope that arrangements can be made whereby private hospitals throughout the United States will hospitalize a large number, perhaps 20,000, veterans in their own hospitals on a contractual basis. It is realized that many problems will have to be solved so that your hospitals will be reimbursed for the care they will give to our patients. There is no doubt, however, that some sort of formula can be worked out whereby hospitals can determine their cost in exactly the same way. We all realize that the operating cost of hospitals varies sometimes to a large extent, even though the general service is approximately the same. It is not the desire of the Administration that any hospital care for our patients at a loss.

If desired, the Veterans' Administration will furnish clerical help to those hospitals caring for our patients, provided the number of patients will justify it. I can assure you that regulations and red tape will be cut, to a minimum in any contract that may be agreed upon.

I again express my regret that General Hawley could not be with you for I know he would have presented his problem in a much more enlightening way. However, I am sure that all of you agree that we are faced with a very difficult problem and that you will help us solve it.

## Discharge of Soldiers in the Western Pacific

EXTENSION OF REMARKS
OF
### HON. CHESTER H. GROSS
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

OKINAWA, *November 18, 1195.*

*The Congressmen from the State of Pennsylvania, House of Representatives, Washington, D. C.*

DEAR SIRS: As Representatives of the people of the State of Pennsylvania, you are entitled to know certain facts and figures concerning the readjustment of Army personnel whom you represent. It is therefore the purpose of this letter to inform you of certain deficiencies which exist on the island of Okinawa, Ryukyu group.

The writer has personally seen a certain wire or radiogram, an official document, which was sent from the commanding general, Okinawa Base Command, to the commanding general, Armed Forces Western Pacific. The document was far more in detail than I can now remember since the "wire" is no longer available to me, however, I shall relate the contents as nearly correct as I remember them—they will be neither enlarged upon or exaggerated.

Based upon the contents of the document, which was compiled as of November 17, 1945, the data therefrom follows:

1. There are in the vicinity of 3,000 men with points from 80 to 105, inclusive.

2. There are 3,500 men who are 35 to 38 years of age.

3. There are approximately 8,500 men in the groups 75 points to 105 points, and the 35- to 38-year-old-man group.

4. There are over 39,000 men in all eligible groups—including the 60-point group.

5. As of the date of this document, there were, I believe, a total of six ships en route Okinawa to return eligible men to the States.

Of this total, one ship was in Okinawa waters undergoing repairs, to be made available between the 25th and the 28th of November with a loading capacity of approximately 1,100 men; another ship was still in port in the United States; the remaining ships were en route Okinawa, via Japan, date of arrival at either point was unknown. The total loading capacity of the six ships combined was 6,012 spaces.

6. It was alluded by subtle intonation of the document that Okinawa was not on parity in allocation of available shipping spaces for men of this base compared with other bases of the Western Pacific area. This statement may be true if news items from Pacific edition of Stars and Stripes can be relied upon.

The difference between the total men eligible for readjustment and the total spaces available to return these men, as set forth in items 4 and 5 above, are far too vast. Coupled with a radio news item from San Francisco, November 17, 1945, to the effect that men who have 55 points, 3 children, or 4 years of active duty become eligible for readjustment as of December 1, 1945, the difference will assume astronomical proportions by comparison if the condition is not alleviated in the meantime.

You are reminded that the total number of men set forth in item 3 above have been eligible for discharge for a period from almost 2 months to more than 6 months that the total available spaces available to the island does not meet even the requirements of this group alone.

The situation has become desperate; the men's morale is at a low ebb. From groups with whom I have come in contact there is considerable talk, which cannot be entirely discounted, that the men would have been not much worse off had the United States been defeated in this war. There is also the opinion expressed that democracy is decadent, out of control, and needs to be curbed. Men are laying plans definitely not along democratic lines, principles, or ideals to replace this so-called decadent democracy with a government that will represent their views and principles. This, Mr. Congressmen, is detrimental to the country itself. I've heard men say the type government they desire is a "government even more democratic than a democratic government itself." This quotation, you will find, is direct from Karl Marx' Das Kapital, whose principles I'm sure you will agree are also not in line with a democratic government such as our own. The situation is alarming, and it is with this thought that this letter is written.

As representatives of the State of Pennsylvania, your representation on behalf of the men is sorely needed. It is requested you express the opinion of the thousands of men on Okinawa in order that they may return to their loved ones. In this manner you can perhaps help to heal the wounds of war and appease these men's bitterness, thereby perhaps helping to save America itself.

Yours sincerely.

## Compulsory Peacetime Military Training

EXTENSION OF REMARKS

OF

### HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. GILLIE. Mr. Speaker, during the current widespread discussions on the subject of peacetime compulsory military training, I found of interest the following article written by Wendell Knoche, a senior in high school in my district. The author is one of those young men whose occupational and educational plans would be interrupted by the initiation of such a system in this country, and I believe he has expressed very well the hope of the vast majority of the people of this Nation that we will follow programs which will build a strong peace rather than embark on programs which breed distrust among nations and war:

Many people are of the opinion that wars are inevitable and that we shall have wars as long as civilization exists. The destructiveness and deadliness of the World Wars in the last century has proven without a question of a doubt that if we are to continue to exist, a method of ending wars must be found before much time has elapsed. Otherwise civilization shall perish. Military preparation and activity is certainly not a logical path for us to follow if our goal is the establishment of worldwide peace.

Peacetime military conscription has been weighed in the balance and found wanting in many European countries. This policy has led many countries to the brink of destruction and utter collapse. Militarism in some of our sister American republics has bred internal dissension and civil wars. Compulsory peacetime military training is in fact a breeder of wars. The conquests of Alexander, Caesar, and Napoleon have proven that military-minded nations have become aggressor nations. When nations arm to the teeth and put forth their energies into the establishment of huge armies and navies, situations arise or create themselves for the use of these forces.

We are interested in preserving our American form of democracy and this can be best accomplished by devoting our energies toward the establishment and maintenance of world-wide lasting peace. Much preparation and activity went into the much sought for United Nations. It is inconceivable that we, who were leaders in the creation of this idea, should take any course of action which would create disunity among the members of the very organization on which we are building our faith.

Compulsory peacetime military training forces upon an impressionable youth a type of discipline which is not in keeping with our peaceful democratic form of life. This form of training would bring a peace-loving America into an alinement with those European and Asiatic nations whose military activities have been the chief source of international fear and alarm in the past. These military activities have created incidents which have had a disturbing effect on neighboring nations and have often led to bloodshed.

Due to the rapid progress in the field of scientific inventions, it has been clearly proven that the super military minds of the present generation cannot prepare for the next war. France sealed her own doom by her blind faith in the invulnerability of the Maginot Line which was supposedly to act as a protection against any future wars. Instead of being a protection, it actually was the very cause of her collapse and subsequent defeat.

The Japanese relied on the sneak attack on Pearl Harbor as a means of a speedy victory in the Pacific. Instead of this, opinion was united in this country in a short period of 24 hours to make possible a Nation-wide activity in an all-out production effort which was to later be the very means of ending the Japanese threat to our security.

We are embarked upon a good-neighbor policy especially as it involves our sister nations. Intensive maneuvers, especially on our borders and on the high seas, will tend to disturb and alarm the very nations whose friendship we are striving so hard to obtain and hold. How are we to serve as an instrument of international peace and goodwill if we have not the confidence of the border nations?

Forced military training will make our neighboring countries embark on a similar policy even if it is contrary to their own ideals. Arming to keep up with the armaments of one's neighbors can lead to economic collapse and utter ruin.

After previous wars our leaders have striven diligently to steer our Nation on the paths that led to lasting peace but somewhere along the road we were misguided by a few men in high places who succeeded in their own personal ambitions. This led us to the most disastrous and costly war in our entire history. Now that we are again seeking the road back to peace we are again confronted by leaders who are also trying to force on us a policy which will eventually lead to another devastating war.

## Lawrence's Example

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Daily Evening Item, Lynn, Mass., November 16, 1945:

LAWRENCE'S EXAMPLE

The neighboring community of Lawrence recently concluded a campaign to raise $600,000 for a new hospital.

After 2 months of intensive effort in which civic spirit and community morale rose to new peaks, more than $1,000,000 had been secured, or 166 percent of the original quota.

As a result, Lawrence will not only have a new, modern hospital, completely equipped, but a training school for nurses as well.

The purely financial results of the Lawrence campaign for the Bon Secours Hospital are impressive, but the demonstration of community cooperation, the ability to cross racial and creedal lines in a common cause, are even more notable.

Lawrence was faced with a need—a great need. A new hospital was urgently required to meet the demands of a growing area whose residents were becoming increasingly health-minded and who wanted the best care modern medical and surgical science can provide. Once the objective was clear Lawrence residents headed straight for the goal and they reached it in a surprisingly short time. When a community can raise more than $1,000,000 in 3 months, it means business.

Archbishop Richard J. Cushing summed up the secret of the success of the Lawrence drive when he said at its conclusion: "Here people of all nationalities and all faiths worked together in unity for a great cause."

We believe Lynn civic leaders and the community as a whole can profit from a study of Lawrence's achievement. Whether we decide we want a new hospital or new factories or new schools in Lynn, we can rest assured that we can attain them most speedily and most assuredly by uniting all the elements of the community behind the common cause, just as Lawrence did.

It is interesting to note, too, that Lawrence was fortunate to have the support of its banks and larger corporations as well as the rank and file of individual citizens. A good

part of the success of the drive was attributed to the assistance of the Lawrence Eagle-Tribune and its publisher, Irving E. Rogers, who went "all out" in support of the project. Lynn residents can be assured of similar support by The Item for any worthwhile local project. Any community undertaking will succeed only to the extent that the entire community gets behind it.

## The Luce Resolution on Atomic Power

EXTENSION OF REMARKS
OF
### HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mrs. LUCE. Mr. Speaker, the following editorial appeared in the Hartford Courant of November 22, and, under unanimous consent, I include it in the Appendix of the RECORD:

MRS. LUCE ON ARMAMENTS

Connecticut's Representative CLARE BOOTHE LUCE has introduced into Congress a concurrent resolution into whose 46 words is packed a great deal of sense. The resolution, now before the House Committee on Foreign Affairs, says simply this: "The Congress hereby expresses itself as favoring the creation of appropriate international machinery within the existing framework of the United Nations Organization for international control and reduction of armaments and weapons, especially those involving atomic power."

This resolution would take Congress even further than the Truman-Attlee-King proposal for a United Nations commission to make recommendations on atomic energy and weapons. Mrs. LUCE believes it would do much to clear the international air of suspicion as to our intentions, and to improve proposed domestic legislation on the atom. She is right. Just as the Connally and Fulbright resolutions were essential to making the United Nations Organization a reality, so Mrs. LUCE's resolution might extricate the world from the exceedingly dangerous impasse into which our handling of the atomic bomb has put it. For no matter how innocent our intentions appear to ourselves, the fact is that not only Russia but all other nations suspect us of hugging the atomic bomb to our chests for our own purposes. To have Congress say that it wants the United Nations Organization to control and reduce atomic and other weapons would cut the ground out from under the world's conviction that this Nation, the supposed leader in world justice, would rather trust its own armed might than international action.

The resolution has added value in calling attention to the urgent need of reducing armaments all around. After the last war the Allies imposed disarmament on Germany under the plea that it was necessary "in order to render possible the initiation of a general limitation of the armaments of all nations." The League of Nations Covenant also called for the reduction of national armaments. But this time the United Nations Charter says nothing on the subject. And while the victor nations all sing the praises of international cooperation, they show their real thoughts by keeping their powder dry—in quantities unsurpassed in the history of the world. In this the United States, with its agitation for universal military training, its demand for bases far from our own shores but near other people's, its vast Navy and air fleets, is far from being without sin.

If Congress should pass Mrs. LUCE's resolution, and make it a standard against which to measure its action on universal military training, and indeed all matters of armaments, it would do much to pump life into the United Nations Organization. And that Organization remains the only protection we have against the cataclysmic explosion another war would be.

## Bankers' Splendid Activities in War Financing

REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

Mr. PATMAN. Mr. Speaker, a few days ago I had occasion to make a statement on the floor of the House concerning the magnificent job that has been done by 6,000,000 of the people of the Nation in selling hundreds of billions of dollars of war bonds during the last 4½ years. Today I want to make a few further remarks covering the part that the bankers of the country have played in the completion of this extraordinary financing activity. I find that it is impossible to cite a body of statistics that measure the bankers' activities in connection with war financing, because bankers have been so intertwined in the entire sales program that their part cannot be taken out from the whole and set aside to be measured statistically. There is in this country no banker who has not participated in the war-financing program. There is hardly a bank teller who has not sold war bonds across the counter. There is hardly a bank employee who has not participated one way or another in the greatest war bond sales program ever undertaken in the world. The Treasury has relied on the help of the Nation's bankers during the 4½ years of defense and war financing, and it was happy and eager to accept their assistance in selling the bonds of freedom to the people of the country.

In peacetime as well as in wartime the banks of the country are styled the "prime official receivers" of subscriptions to the marketable securities issued by the Government. In this capacity they serve to help the Treasury with the distribution job by acting as thousands of outlets for the securities. But the banks did more than this. They solicited their customers and asked them to buy the securities.

Banks play even a greater role in the distribution of the savings bonds, particularly the series E bonds. These are the bonds upon which the Treasury has relied so much to hold the anti-inflation line. It astounds the imagination to realize that during the past 4½ years almost a billion separate and distinct savings bonds have been issued. That was a tremendous operating job. Practically every bank in the country enlisted in the ranks of those who helped put this large number of securities in the hands of 85,000,000 patriotic Americans. For this and for their services as "prime official receivers" of subscriptions to marketable securities, the United States Government has paid the banks not a single penny.

In addition, the Treasury had the problem of finding adequate redemption facilities as purchasers of series E bonds found that redemption of some of their purchases was necessary. More than 90 percent of the banks in the country—about 13,500 in the aggregate—have signed up to render this very important service.

AMBASSADORS OF THRIFT

In playing their part as sellers of Government bonds to the public, the bankers have justly been called ambassadors of thrift. The banks have been acutely familiar with the problems of war financing, dealing, as they do, with the savings of the public. Early in the war-financing program they realized the necessity of going down the line with the Treasury in siphoning off the increased earnings of the public in order to hold down the price level and to prevent inflation.

EXCELLENT COORDINATION JOB

The American Bankers Association and the Mutual Savings Bank Association have been active on the national level in coordinating the efforts of the banks in war financing. Committees on war bond drives were organized by both of these organizations with the idea of formulating a national program and presenting it to the member institutions through the State and local banking associations. Plans of action were created for the member banks and a wide variety of promotional material was distributed. The associations encouraged the use of State, regional, and city bank quotas for the sale of Government securities. They engendered the competition between banks in various communities. By use of national publicity they endeavored to elicit the fullest cooperation of the banks.

CUSTOMERS URGED TO BUY

Throughout the country individual banks have spent large sums of their own money in advertising the war bond drives. They have used newspaper advertisements, radio programs, bank-lobby displays, outdoor billboards, and the like. In addition, they personally solicited depositors and members of the public coming into the bank. The bankers have sent large quantities of literature explaining the war loan and the securities offered to their depositors and have continually urged them to buy as many securities as they possibly could.

Organization by banks of $1,000 bond clubs have been instrumental in many localities in reaching thousands of depositors who would have otherwise been missed by other war-bond-promotion activities. Many banks have allowed customers to withdraw funds from their savings accounts without loss of interest to the next interest date if such withdrawals were directly invested in Government bonds purchased through their institutions.

UNUSUAL PROMOTIONAL PLANS DEVELOPED

Many individual banks have been extremely active on their own account in other promotion activities. In a great many parts of the country, for example,

bank teams have been organized among bank employees for the solicitation of potential buyers. One large bank in Connecticut, for example, enrolled every male employee during the Sixth War Loan drive in a special campaign during which personal calls were made on a large number of depositors. Banks in some of the farm States, such as North Dakota, have made it a point of soliciting personally every depositor with about $500 or more for the purpose of selling him some war bonds. In Massachusetts, to take another example, several banks jointly sponsored a sound truck which moved around town on a previously published schedule to conduct a bond canvass in each neighborhood. As for other activities, thousands of banks have set up lobby displays and war-bond posters on their outer walls and have participated in community exhibitions and other war-bond-promotion programs. These operations have not been concentrated in the big cities, but have extended throughout the country and have been prominent even among the smaller country banks. Some banks, such as one in Indiana, go out of their way to personalize the war-bond campaign. Others, such as one in Illinois, open a full-sized movie theater in its lobby showing to its depositors a series of 16-millimeter films supplied by the war finance committee.

WAR FINANCE COMMITTEE WORKERS

In addition to actively soliciting their depositors, the banks of the country have furnished many of the war finance committee workers. Hundreds of bankers serve on State, county, and local executive and advisory committees and thousands of bank employees are included among the 6,000,000 volunteer salesmen. Half of the war finance committee State chairmen are bankers and so are half of the vice chairmen. The State war finance committees have banking and investment divisions which coordinate the joint selling program with the banks. Every State has an American Bankers Association representative who joins in the activity.

Every State also has representatives of other financial institutions who are associated in the war bond sales operation. Included among these are representatives of the building and loan associations and savings and loan associations, cooperative banks, insurance companies, credit unions, farmers credit organizations, and the like. From the records that are available it seems that every financial institution in the country has played its role during the long period of war financing.

CITATIONS TO BE DISTRIBUTED

The United States Treasury has always been ready to recognize the volume and extent of the patriotic service rendered by the banks in the seven war loans and in the final Victory loan. I am advised that the Treasury is awarding special citations to the banks of the country, signed by Secretary Fred Vinson, and will distribute these soon after the conclusion of the Victory loan. I am advised further that a citation to members of the Investment Bankers Association was awarded to them at their annual meeting in Chicago on November 27. It seems to me that the bankers of the country are well entitled to their citations and that their patriotic efforts in connection with the financing of World War II will stand as a monument to them for many years to come.

## A Single Department of Defense Is Favored by National Aeronautic Association and National Aviation Clinic—Gen. Ira C. Eaker Makes Strong Appeal for Continuing Air Power and Tells Facts About Air Forces in Our Victory

EXTENSION OF REMARKS

OF

### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. RANDOLPH. Mr. Speaker, it was my privilege to participate in the Third Annual National Aviation Clinic at Oklahoma City, November 19–21, and I am pleased to report that more than 1,200 delegates, consultants, and observers were in attendance.

The clinic adopted many worth-while resolutions, including a strong endorsement for the immediate establishment of a Secretary of Defense with coequal status for air, land, and sea forces. It is also gratifying to report that the National Aeronautic Association board of directors urged that Congress enact as soon as possible appropriate legislation to create a unified command. The board requested its more than 18,000 members to inform other citizens of the United States the compelling reasons for the passage of the proposed legislation.

One of the most informative and challenging addresses was the one delivered by Lt. Gen. Ira C. Eaker, Deputy Commander of the Army Air Forces. In this speech he urged a single defense organization. At this point I quote, in part, from General Eaker's remarks:

WINNING STRATEGIES IN AERIAL WARFARE

Against Germany we dropped 1,500,000 tons of bombs. Our total tonnage against Japan was about one-third of this, making 2,000,000 tons in all dropped against the two enemies. To do this we flew roughly one airplane flight per ton, or a little more than 2,000,000 flights in all.

In the war against Germany individual airmen of the Army Air Forces crossed enemy lines and penetrated deep into German territory 7,235,000 times. That is equivalent to 482 divisions of 15,000 men going over the top.

We destroyed in all 40,000 enemy aircraft, 30,000 of these German and 10,000 of them Japanese. We wrecked the German system of communications; we virtually eliminated the German oil industry. We dealt crushing blows to the Japanese homeland from which the Japanese people never will entirely recover.

Our losses were 18,000 airplanes in Europe and 4,000 in the East. More important, our total casualties killed, wounded, and missing were 115,000. These are sobering facts, and I assure you that the senior officers of the Air Forces are well aware of their implications.

* * * * *

Further, we were convinced that we had to reduce the German Air Force. Large-scale amphibious operations against Europe were contemplated. To insure the success of these landings, to guarantee the required lines of supply and communication—to make it possible for the men on the ground to advance once the beachhead had been secured—the German Air Force had to be taken out of the air.

These were moments to pause.

We had to get air superiority.

And we couldn't get it by a series of dog fights over the Channel and France.

We had to uproot the industrial structure that supported the German Air Force. The greater part of this industry was deep in Germany.

To destroy it we had to bomb with great accuracy. We had to fly in the daylight over the Reich.

Time, as usual, favored the defender. We assumed that eventually we would be on the offense. If we waited for an ideal set of circumstances—for our forces to arrive in large numbers—we donated the same amount of time to the German to stiffen his defenses—to get ready for the punch.

In a nutshell—we had to start fighting.

And so on August 17, 1942, we sent out our first force.

Our beginnings were modest. We only had 4 squadrons in England—of 12 aircraft each. We had no fighters for protective cover. We had to fly shallow penetrations into enemy territory to feel the situation out—we had to walk before we could run.

There was another reason we felt we had to engage the enemy without delay. This was 1942—American industry was gearing up for tremendous production. Our planes were designed for precision bombing—they were capable of long flights. They were equipped to defend themselves against enemy fighters. Our crews had been trained to do their jobs.

* * * * *

We picked a fight with the German Air Force—an opponent who up until then had run things his own way.

This was the situation in 1942:

Numerical superiority rested with the Germans.

We had no battle experience—only untested doctrines.

Our program called for an attack.

The picture was hardly auspicious.

Much has been written—much more will be written—on what happened in the months that followed. We did engage the German Air Force and we made the Hun fight.

I would like here to tell you that in my opinion there are no braver men in this war than those early crews of the Eighth Air Force who fought over Europe against terrific odds—and without the benefit of fighter protection. They well knew that it was their lot to spearhead an attack. They knew that thousands of American boys would follow in their footsteps in the air, and that millions would fight on the ground beneath them. And they recognized that before there could ever be a D-day the enemy had to be driven from the skies. For air superiority is a prerequisite of invasion. They knew they had to win—that they couldn't be licked.

I have said that our force was small at that time. Further we had few replacement crews coming through. Some of our early groups, normally organized with four squadrons, were down to two and three squadrons. The

messes were only half full. It was a grim picture. But our formations never were turned back by the enemy—the crews flew sometimes on three successive days.

These were brave men. I cannot speak too highly of them.

I do not want to give you the impression that our only targets were the aircraft and engine plants supporting the German Air Force. This was our first important system. The Luftwaffe had been an important factor in the war in Europe. It had to be trimmed down to size. That it was trimmed down is history now—well known to all of us. It did not operate effectively against the invasion fleets either in Normandy or in southern France. As a matter of fact, the German Air Force flew only a small number of sorties on the two D days; I think it was about 30 in southern France.

Another target system, perhaps the most important, was oil. It is no fable that an army moves on fuel. If we could hit the German refineries and the storage depots it was apparent to us, as it will be to you, that we would be striking a telling blow against all of the German war machine. For the Panzers required fuel, and the training planes of the Luftwaffe needed it, and, to the truck convoys supplying the Germans on half a dozen fronts, fuel was vital.

Fuel, in fact, was a natural.

The story of the fuel campaign, like the story of the rise and decline of the German Air Force is a subject for a full-length book. We followed the progress of this campaign step by step while it was being conducted, almost bomb by bomb. In addition to the Eighth Air Force, based in England, the Fifteenth Air Force, as you know, was located on the Foggia Plain in eastern Italy and played a most important role in bringing the full impact of American air power to bear on the German oil industry—especially in connection with the series of attacks carried out against the Ploesti refineries in Rumania.

* * * * *

German stocks of aviation gasoline fell from 500,000 tons in May 1944 to 230,000 tons in September 1944 to 84,000 tons in March 1945. More revealing, perhaps, was the production figure which had gone from 150,000 tons per month in May 1944 to 7,000 tons in September 1944 to 40 tons in March 1945.

When the war with Germany ended we were simultaneously presented with an opportunity to talk to the leading German military, naval, and air commanders. You can be sure that we grasped at this chance with enthusiasm. The stories that they told of the war from the German side of the line were intensely interesting, often dramatic, and sometimes very amusing. Had we heard these reports during the course of the war, I am sure that they would have brought us comfort during some of the trying times.

The Reichsmarshal himself, Hermann Goering, was a favorite topic with the senior officers of the German Air Force who had served under him.

Here is what one colonel of the Luftwaffe had to say showing the easy manner with which Goering issued detailed orders telling others how to fight a war. I will quote the colonel verbatim:

"A Fortress, a Boeing B-17, was flying home in the early days of the war alone after a raid, one engine shot to pieces. Four of our Me-109s attacked. Three were shot down and the fourth made off. As a result an order was issued that for the time being the Fortresses were not to be attacked as apparently no fighter could shoot them down. That was the first terrible blow to the morale of the German fighter pilots.

"Personally I had the feeling that if we made our attacks from the front that we would have a reasonable chance of success. From the front you are only faced with the fire power of two to four guns and you have the tremendous passing speed in your favor at which you approach the American bomber. Another advantage to the frontal attack is that you are aiming at the crew and the four engines and the tanks, all of which are vulnerable.

"But the results did not satisfy Goering who issued a strongly worded order in which he again reminded the pilots of their duty to protect the fatherland and ordered that the attacks be delivered from the rear and that fire was not to be opened until the range had closed to 400 meters. If one can get within that distance, there's a lot of point in what he said. But when one of our fighters attacked a B-17 from the rear it was faced by six or seven machine guns. Eighty to a hundred and twenty American aircraft used to fly over the Reich in the very closest formation, a flying achievement of the first order. If you take the average of 80 aircraft approaching in close formation, you have to reckon with 560 machine guns firing out to the rear at you, 560. Figuring the rate of fire roughly at rounds a second it can be seen that we expected our men to go through an actual curtain of fire. You were almost certainly hit at a distance of 1,000 meters.

"As a result of the Reichmarshal's order, our pilots approached from the rear doing only a slightly greater speed than the enemy, and 50, 60, 70 percent or even a greater percentage of them were shot down. It was dreadful to see," the German officer concluded. Well, dreadful or not, I am sorry I didn't get a chance to see it.

* * * * *

I believe that the small-plane enthusiasts will be interested to know that the light airplanes not only carried out the many tasks to which they were assigned such as courier service, reconnaissance and artillery spotting, but that the little ships actually had a bad morale effect on the supermen of Hitler's Wehrmacht.

General Leutnant Linnarz, who commanded the crack Twenty-sixth Panzer Division in Italy, had this to say about the small planes. I quote the general:

"The really demoralizing experience for the ground soldier is the sight of the artillery directing aircraft circling over our positions for hours. You know for a certainty that if you make one move, you will have a shell in your fox hole within 2 minutes. The troops were afraid to move about, and when the fighting started they were reluctant to come out and fight, feeling that they were constantly being observed. The light artillery-directing aircraft seem to have a personal grudge against you. Toward the end of the war, movement in vehicles and on foot became almost impossible, and during the last stages of the battle of the Appenines I reported that our troops could accomplish movements only during a 3-hour period at night. At dawn their positions were frozen by the fighter bombers and by the small artillery-directing planes."

Frequently I have been asked to name the important winning combinations of the war, the vital things that turned the tide in our favor.

One of the most decisive factors in winning the air victory in Europe was the close cooperation that existed between the crews that flew our ships against the enemy, and the engineers and designers here at home. It was this teamwork between American industry and the fighting men overseas that gave the Germans some of their worst moments, and they had many.

* * * * *

No less an authority than Field Marshal Keitel, Chief of the German High Command, stated to American officers when he was interrogated that, "The principal reason for Germany's defeat was that we had not preserved our technical superiority." Keitel was responsible directly to Hitler for the coordination of the three military services. I think his statement illustrates clearly the importance of keeping pace after a war has started.

We kept pace.

Another thing that contributed materially to victory was the natural resourcefulness and inventiveness of the American boys that were sent over to man our bomber, fighter, and service groups. It has been said that the American is the greatest of improvisers. I don't believe that there has ever been a truer statement.

* * * * *

Operationally our young commanders in the field displayed this same resourcefulness. Many of the group commanders with four squadrons of fighting airplanes on their field were between 24 and 27 years of age. These young men, many of whom only a few months before had been college students, varied our tactical doctrine, added to it and improved it. This was of the greatest importance. In warfare, a commander can ask no better break than to be pitted against an opponent that follows the book without varying his plan of attack. The young American group commanders did not cede to our enemy any such advantage. They were willing to try anything. They mixed up the tactical pattern as they would mix up plays in a football game. They employed deception in a way that kept the German always on the jump and never allowed him to get set for the punch. He never knew what was coming next. When we wanted to cut off a tunnel and all other means had failed, one group skipped the bombs into the tunnel opening and caused a landslide that blocked the line for a week. And when, in the oil campaign, our intelligence officers said that a few hundred more well-placed tons on the Ploesti refineries in Rumania would pay big dividends, the boys hung bombs on fighter airplanes and went out and did the job, and did it with great accuracy. They exploited to the utmost the great flexibility of the airplane, and in doing so they made it a weapon feared as much by the enemy ground soldier as by the German pilot. These characteristics, resourcefulness, inventiveness, and adaptability are priceless in a military campaign. Conditions in a theater of war are never exactly as anticipated. The speed and enthusiasm with which these boys tackled the job of getting the most out of our equipment was a major factor in winning the war. This national trait is one of America's great assets.

A word about the future.

Wars are fought today not solely by ground, naval, and air forces, but by all citizens unified in a joint effort which touches every phase of national and private life. The danger zone of modern war is not restricted to the battle lines and adjacent areas, but extends to the innermost parts of a nation. No one is immune from the ravages of war.

With present equipment, an enemy air power can, without warning, pass over all formerly visualized barriers or so-called "lines of defense" and can deliver devastating blows at our populations centers and our industrial, economic, or governmental heart even before surface forces can be deployed. Our own air force, when mobilized and deployed, would have a similar capability and might attack an enemy within hours instead of the days, weeks, or months required by our surface forces.

In any future war the air force, being unique among armed services in its ability to reach any possible enemy without long delay, will undoubtedly be the first to engage the enemy, and, if this is done early

enough, it may remove the necessity for extended surface conflict.

Air superiority accordingly is the first essential for effective offense as well as defense. A modern, autonomous, and thoroughly trained air force in being at all times will not alone be sufficient, but without it there can be no national security.

In the future we must anticipate that aircraft, either with or without pilots, will move at speeds far beyond the velocity of sound, well over 700 miles an hour.

Improvements in aerodynamics, propulsion, and electronic control will enable unmanned devices to transport means of destruction to targets at distances up to many thousands of miles. However, until such time as guided missiles are so developed that there is no further need for manned aircraft, research in the field of conventional aircraft of improved design must be pursued vigorously.

It is possible that a defense against present-day aircraft may be perfected by target-seeking missiles. Under these circumstances only aircraft moving at extreme speeds will be able to penetrate enemy territory protected by such a system of defense.

From what we have already seen, especially in the closing phases of World War II, I think it is obvious to all that fully equipped airborne task forces will be able to strike at far distant points and will be totally supported by air.

Regarding atomic energy, I believe that its influence on air power can be stated very simply. It has made air power all-important. Air power provides not only the best present means of striking an enemy with atomic bombs, but also the only available protection against the misuse of atomic explosives.

The atomic weapon thus makes offensive and defensive air power in a state of immediate readiness the primary requisite of national survival.

To illustrate this, let us suppose for a moment, that you are a member of the Japanese war cabinet and that you are charged with the responsibility of preventing the atomic attacks on Hiroshima and Nagasaki.

How could you have prevented these bombings?

The first and only sure course of action open to you would be to attack the elaborate research laboratories and production facilities where the bomb itself was developed and produced. In other words, you would first elect to strike at the source to insure cutting down the enemy's atomic potential.

An alternative course would be to hit at the air bases from which atomic bombs might be launched. However, this is an unsure method of defense.

But whether you chose to strike at the source, or whether you decided to go after the operational bases, you would have to have a strong air force before you could even consider taking countermeasures against atomic attacks. Without an air force with an attached guarantee of air superiority you would be helpless.

The spectacular innovations in technological warfare which appeared with ever increasing momentum in World War II and culminated with the atomic bomb must make it clear to all of us that scientific research to insure the maintenance of our national security is vital.

I believe it is in the national interest to establish a national research foundation composed of the most highly qualified scientists in the United States and charged with the responsibility of furthering basic research and development in all fields of science, and the scientific training of adequate numbers of highly qualified men. Scientific planning must be years in advance of the actual research and development work. The Air Force must be advised continuously on the progress of scientific research and development in view of the new discoveries and improvements in aerial warfare.

## Philippines Face Economic Struggle

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 28, 1945*

Mr. DOYLE. Mr. Speaker, it is a pleasure for me to insert in the CONGRESSIONAL RECORD this very significant article by Vicente Villamin. It is copied from the Washington Evening Star of November 25, 1945.

Mr. Villamin is a distinguished lawyer and economist and since coming to America from his native land of the Philippines has proven a source of reliable information about those important islands:

PHILIPPINES FACE ECONOMIC STRUGGLE

(By Vincent Villamin)

Not as a result of the war, but by virtue of the act of Congress of March 24, 1934 (the Philippine Independence Act), the United States will declare and recognize Philippine independence on July 4, 1946. If the date is to be postponed for any reason, the Philippines, not the United States, will have to move for its postponement and the American Government will consider it.

However, if before independence there is a revolution, the United States may, under section 2 (a-14) of the act, "intervene for the preservation of the government of the commonwealth * * * and for the protection of life, property and individual liberty, * * *" The Philippine Army of around 20,000 men is not yet fully organized, while there are between 200,000 and 400,000 persons who obtained firearms during the war. The American Army is the greatest stabilizing force in the Philippines today.

After it becomes an independent nation, the Philippines will virtually be an American protectorate. This is the logical effection of section 2 of the Joint Resolution of Congress No. 93, dated June 29, 1944, which provides for the establishment of naval and air bases in the Philippines "for the mutual protection of the Philippine Islands and of the United States."

According to tentative plans, the American military establishments in the Philippines will be much greater and stronger after independence than before it.

LARGE BASES PLANNED

A subcommittee of the House Naval Affairs Committee, in an elaborate report dated August 6, 1945, recommends the following bases in the Philippines: A main fleet base in Iloilo, a secondary base in Subic Bay, a main naval air base in Mactan, landplane and seaplane bases at Guimaras and Puerto Princesa, and a fleet or task force anchorage with seaplane bases at Coron Bay and Tawi-Tawi.

It is an elemental fact that if the Philippines is to play its role effectively as America's military spearhead in the western Pacific she should be strong, prosperous, and cooperative.

There are five elements that could bring that about. They are: (a) The continuation of free-trade relations with the United States, (b) the rehabilitation of the war's devastations, (c) the receipt of surplus property from the United States, (d) the reparations from Japan in the form of materials, utilities, facilities, and industries, and (e) most important of all, the creation of a new domestic economy—a producer-consumer economy that will, on the one hand, expand the domestic economic activities and, on the other, lessen the country's dependence on overseas markets. At present the Philippines exports over 70 percent of its total production as compared to 6 percent of that of the United States. That is an unsound condition. It should relax its emphasis on products like sugar and coconut oil, which are considered competitive in the United States, and direct its efforts to the production of noncompetitive articles of which it has a great many that have not been developed. A complementary, instead of a conflicting, economy with the United States should at last be the basic economic policy of the Philippines.

FREE TRADE IS URGED

Free trade with the United States is essential. Today, and for some years to come, it is the main support of the Philippine economic structure. It should not be for a period of years but should continue as long as the military position of America in the Philippines is maintained.

The bill also provides that the difference between the total losses of a minimum of $600,000,000 and the amounts appropriated will be made up by the reparations and indemnities which may be acquired from Japan. It is relevant to state here that war damages are for losses to property, while reparations are for the enemy's aggression which caused deaths, sufferings, and moral injuries. The two reliefs are for two separate causes and purposes.

The report on the bill states clearly that the participation of the Filipinos in the war shortened it considerably.

A House committee is considering a bill giving the Philippines 8 years of free trade after independence and a progressively increasing tariff for 25 years.

A strong producer-consumer economy must be established in the Philippines. It calls for the creation of many small industries, businesses, trades, occupations, and services as well as the diversification of agricultural production. To do these things there must be legions of trained Filipinos enthusiastic to build their country. Technicians, including Japanese technicians, must be used.

The vast amounts of money that the United States will grant the Philippines will give tremendous impetus to the implementation of the domestic economy.

## The Atomic Bomb

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. REED of New York. Mr. Speaker, I have stated before on the floor that the atomic bomb is serving as New Deal propaganda very effectively. It tends to keep people frightened and jittery, so much so that their minds are not disturbed by the communistic activities within the Government itself. It serves another useful purpose and that is to "black out" the failure of the entire domestic program and the extent to which the administration has stirred up trouble in almost every part of the globe. It is refreshing to know, however, that many people have their feet on the ground and they are not confused by atomic bomb hysteria, but instead are giving careful thought to public questions and are giving their Member of Congress the benefit of the reflections and studies. Under

leave to extend, I am inserting an editorial which appeared in the issue of the Evening Observer under date of November 24, 1945, and published in the city of Dunkirk, N. Y., my home town:

CLAUSEWITZ MAY BE OBSOLETE

If there were no atom bomb we would have little to fear in the way of foreign aggression for at least a quarter of a century. The aggressors are too badly defeated to revive within that time.

With the atom bomb it is possible that we will be attacked within the next quarter of a century. It is conceivable that we must defend ourselves some time against that form of attack.

No one knows at this time what type of defense, if any, can be used against the atom bomb. Almost, certainly, however, the defense will not be possible through the old-fashioned infantry, artillery, and naval tactics.

To the layman it seems as if any defensive scheme based on universal military training is aimed at the last war, not the next one. It is a little disheartening to see so much stress being placed on obsolete ideas. For want of a knowledge of how to proceed our military men are resorting to the only thing they know.

How much better if a dozen or more military-scientific institutes were established throughout the country, with highly specialized courses and carefully selected enrollees. The general of the next war will be a laboratory man. His troops will be highly trained technicians and far fewer in numbers than the millions of doughboys of this war. All officers from the commander in chief down to the shavetail will have to know more about Einstein than Clausewitz. The next war may be too fast for the movement of masses of men.

The old-fashioned parade ground, spit-and-polish military technique may be useful only as a pastime for obsolete generals.

Of course this thought will be brushed aside by the so-called military experts as typical of the ignorance of the layman. But there are no experts in military science for the new atomic age. Everyone begins at scratch, without precedents, without accumulated learning, and the theories of the layman are quite as valid as the theories of the military authority. In fact the layman is apt to be less hidebound and less steeped in tradition.

Twelve thousand military-scientific men trained each year will give the country a greater feeling of security than an old-fashioned standing Army of 4,000,000 men.

---

## Sudden War End Brings Sudden Impact to Western States—War Has Brought Basic Change Equalizing Prior Handicaps—West Possesses Natural Assets and Advantages—Amazing Productivity of War Industries in West Proves Reality of Natural Advantages of the West—Distinguished Assistant Attorney General Illuminates

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. DOYLE. Mr. Speaker and colleagues, being a native son of the Golden West, history records that you can expect a boost for California from me as a native son of that great State which has already contributed so much to our natural progress and our national solidarity and security.

But, I rise today to also include in my brief remarks specifically the West and all the romance, history, advantages it is already known to possess and enjoy and also, to urge that you read and reflect upon the contents of the pages of remarks made by the distinguished Assistant Attorney General of the United States on two recent occasions in Los Angeles County. Some of the residents of Long Beach, my home city, heard him deliver same and called my attention to their timeliness and richness of contribution to the economic thinking of our Nation.

I therefore am honored to call them to your reading benefit:

THE WEST COAST'S STAKE IN MAINTAINING A COMPETITIVE ECONOMY

(By Wendell Berge, Assistant Attorney General of the United States)

During the past few years the American economy has moved forward at a rate which is perhaps unique in modern history. Despite severe initial handicaps, this country created in record time a war economy whose productive power the aggressor nations could not hope to match. To the Axis this economic accomplishment spelled final disaster. To our own people and to millions throughout the world the economic performance of the United States represents one of the most amazing and heartening chapters in the story of democracy.

As a result of the labor and sacrifices made during the war years, this country now can turn toward the building of peace and toward the resumption of efforts to fulfill the aims of a free society. We are equipped with a strong, productive industrial system. We are equipped, moreover, with that will to progress, which is the surest guaranty of the continued advancement of democratic institutions. In the larger aspects of our political and economic life this war has made us more aware than ever before that we are a nation. The same unity of purpose and desire to cooperate which enabled this country to turn its full strength into victory can now serve to create a sound and enduring prosperity for the American people.

We have come to realize that what injures one section of the country injures all others, and that what benefits one section accrues to the credit of all of us. We have come to recognize from a national standpoint how vital it is that every region of the economy should have every possible chance and all possible equality of opportunity to develop its own resources, and thus to make its distinctive contribution to a balanced and prosperous national life.

To the West the sudden end of the war has brought the full impact of reconversion. More immediately than most other areas the West is confronted with the attendant difficulties of reconversion and is compelled to face squarely the problems of the present, at the same time keeping in sight the long-range considerations which will affect permanet industrial development.

The problems of western industry, both now and in the years ahead, will require careful analysis and thoughtful action for their solution. It is on the basis of realistic appraisal that we must assess the opportunities and the obstacles which are present. Someone has properly said that the great war plants open a new frontier in American economic development. This is especially true for the West. In the past the West has lacked factory and plant facilities. Now it has scores of them scattered all over the vast area from the Missouri River to the Pacific Ocean.

The total war-plant facilities built from June 1940 through December 1944 were something over $21,000,000,000 in value, of which the Government supplied $16,000,000,000 and private enterprise about $5,000,000,000. Of the total facilities, the 15 States of the West [1] have war plants valued at about $3,130,000,000, of which slightly less than $2,475,000,000 was supplied by public funds and about $675,000,000 by private funds.

In effect these industrial facilities constitute a drastic and far-reaching change in the economic position of the West. The contrast is striking if we compare the picture as it is now with the situation which existed only a few years ago. Before the war the West was far behind the country as a whole in the value of its industrial products. In 1939 manufacturing industries in the United States produced approximately $57,000,000,000 worth of goods. The factory products of the 15 Western States were valued at about $5,500,000,000, or less than 10 percent of the total for the country.

It is possible to present the very essence of the economic problem of the West as it was at that time in terms of a few figures. These same 15 Western States contain 50 percent of the land area of the United States. Yet in 1939 they had only 14 percent of the population, 8 percent of the factory employment, and 10 percent of the value of factory products out of the national totals. In 1939, in other words, the West had a long way to go if it was ever to achieve its fullest economic development.

There is still a long way to go, but the war has brought about a basic change. The problem of the West is to prevent these gains from being dissipated and to add to them the elements required for economic balance. This means that as far as possible the war industries must be kept going to produce articles of peacetime trade. This applies equally to the enormous plants on the coast and to the thousands of smaller plants here and inland which came into existence during the war. It means that western capital must have an opportunity not only to continue in industries already established, but must also be able to enter new fields.

Although it is not possible to examine in detail all of the various industries which the West now has, I should like to discuss a few of the more important ones and to draw attention to some of the fields which, I believe, will afford the greatest room for expansion in the years ahead. In doing so it should be understood that not all of the war plants can be expected to survive the peace, particularly those producing arms and munitions. Our concern is the degree to which industries capable of reconversion will be given a fair chance, and with the more important problems which will be encountered in this respect. With these limitations in mind, it is possible to consider some specific fields such as aluminum, steel, and chemicals.

Before the war the aluminum industry in this country was dominated by a single producer. All of us are familiar with the pattern of monopoly under which the aluminum industry operated for so long. War demands and Government action have resulted in the establishment of a new aluminum industry in the West. Six major plants are now in existence, four of them in the State of Washington, one in California, and one in Oregon. These western plants have a combined aluminum ingot capacity of nearly 820,000,000 pounds annually, or more than two and a half times the average annual consumption

---

[1] The 15 States west of the Missouri River and north of Oklahoma and Texas: i. e., Washington, Oregon, California, Montana, Idaho, Nevada, Utah, Arizona, New Mexico, Colorado, Wyoming, North Dakota, South Dakota, Nebraska, Kansas.

of aluminum in the whole of the United States before the war. In the 5 years from 1935 to 1940, the average annual consumption was approximately 316,000,000 pounds, which is nearly 40 percent of the present ingot capacity of the western plants alone.

These plants cost a lot of money. The one at Spokane cost the Government $23,000,000; at Torrence, Calif., nearly $25,000,000; and at Troutdale, Oreg., about $19,000,000. There is therefore a total Government investment in western aluminum ingot plants of nearly $75,000,000. If to this figure are added the Government loans to private companies of at least $65,000,000, we have a total Government investment in western aluminum plants of $140,000,000 for ingot aluminum. In addition to the ingot plants, there is a sheet mill up at Spokane which cost the Government more than $47,000,000. In round figures, therefore, the Government has $200,000,000 in western aluminum plants. What is to become of them?

It is not possible to trace all of the ramifications or all of the intricate issues which stem from this question. It must be recognized, however, that the character of the policies adopted in the aluminum industry and the success with which decisions are carried out will affect the entire pattern of reconversion. It is generally agreed that, although the demand for aluminum for some time will not attain the proportions of wartime consumption, the ultimate market for aluminum will be much greater than it ever was before the war. It is agreed also that the establishment of competition in the aluminum industry is a test of economic policy which must be met if we are not to invite once more the domination of the field by monopoly.

The Department of Justice has already submitted for the consideration of the Congress its recommendations concerning the best means of providing healthy competition in aluminum. In general, these recommendations and the facts upon which they are based set forth at length the conditions which must be sought if competition with a minimum of Government participation is to operate by a self-sustaining process in the aluminum industry. I need hardly add that a successful competitive solution of the problem of aluminum would make possible the survival and growth of a western aluminum industry. In turn, a western aluminum industry would provide material for many new fabricating facilities, to produce planes, household articles, and other aluminum products. A whole cluster of new industries would grow up around aluminum.

Aluminum is only one branch of production in which the West has made tremendous strides during the war. It is an economic event of the first magnitude that there is now a sizable steel industry in the West. Before the war the bulk of all steel consumed in Western States was shipped several thousand miles by rail and water to Pacific ports and then moved inland to its final destination. The annual consumption of steel in the 15 Western States in the prewar years amounted to some 3,000,000 tons, most of which was used by the Pacific Coast States. Some steel was also produced west of the Rockies before the war, but total productive capacity was only about 1,000,000 tons. By 1944, western steel capacity had expanded more than four times, attaining a level estimated at some 4,700,000 tons, which is the equivalent of 3,300,000 tons of finished mill products. This new production is considerably in excess of the annual consumption of steel by Western States up to 1940.

To say the least, there are some real difficulties ahead in seeking to maintain a new steel industry in the West. There is no question, however, of the desirability of a western steel industry, both from the point of view of competition and of the western market. There is one aspect of this problem which merits attention because it underscores a difficulty with which all western industry has had to contend for many years. This is the prevalence of the basing-point system of pricing in the steel industry.

Under this system, in the past the prices of the various steel products have been quoted at a few base mills, all of which are east of the Mississippi River. To these base prices the cost of freight to the point of consumption is then added. By means of this formula the price of steel at any delivery point in the United States is set at exactly the same figure. Thus, if a contractor in Omaha asks for quotations on steel, he will get under the basing-point system exactly the same figure from all suppliers whether they are located in Chicago, Kansas City, or Pueblo, Colo. He then discovers that the price of steel products produced by a mill in, let us say, Pueblo, is not a mill price, but rather a Chicago price to which is added the cost of transport by rail from Chicago to the Pueblo mill. Because Pueblo is not a basing point its prices are governed by the nearest base in the Chicago area. Even though the steel may be shipped from Colorado, its cost to the ultimate consumer will include a "phantom freight" charge as though it had been shipped from Chicago. One result of this system has been that the Intermountain States have had to pay a higher price for steel than any other section of the country.

It is obvious that there is no glib solution to western steel problems. Strong support by western interests will be required to sustain the western mills until a variety of steel products can be produced in sufficient quantity and an ample market developed in competition with eastern mills. It will require determined effort and intelligent management to attain these objectives, but there is much ground for hope that the West can, if it will, acquire a successful steel industry of its own.

It may be remarked that the fate of western steel rests almost as much with the railroads as it does with the decisions of steel producers or the ability of management. Unless freight rates on finished steel products are sharply reduced, it will prove extremely difficult to overcome the handicap of transportation costs. In this respect the western steel problem is another illustration of that persistent dilemma which the West has faced for so many years, resulting from discrimination in freight rates. In fact, the growth of all of western industry is dependent and contingent upon the eradication of arbitrary and unreasonable differences in freight rates.

As in so many other fields, the chemical industries of the West have been greatly enlarged during the war and new chemical facilities have been established. All of us are aware to some extent of the ways in which chemical discovery is constantly enlarging industrial horizons. Some have compared the advancement made in the field of chemicals to the industrial revolution of the eighteenth century. All sectors of technology are today in a process of dynamic and rapid change but it is not an exaggeration to describe this era as the age of synthetic chemistry. Literally hundreds of new chemical products have come onto the market within the last decade, and during the war, chemical production in this country reached unparalleled heights.

One example may be cited which will indicate why chemical industries can be especially significant in western development. In one Western State there is a nitrogen plant. It cost $30,000,000 and it turned out thousands of tons of nitrogen for making war explosives. Now that the war is over the operating company is faced with a problem of closing or making nitrogen fertilizer for the farmers. Given half a chance, this plant and two or three others in the West and South will make all the nitrogen the farmers will need literally for a thousand miles around. What is more, they will be able to make and sell it much cheaper than the old plants of the East.

The basic raw materials for the synthetic nitrogen operations are hydrocarbons in various forms. The older plants of the East get them from coal gas and the new plants of the West from the much cheaper natural gas. In addition to the cheaper raw material, the western plants seem to have developed an efficiency of manufacture which has astonished the established eastern producers. At the beginning of the process the older plant advisers said, "You can't do this or that and you must do it the other way," but the western management went ahead, put the plant in operation, and exceeded capacity production practically from the first day it began to function. It turned out nitrogen products at a cost so low that it has caused much consternation among the eastern monopoly interests. They do not yet believe the cost figures which the new western plants are able to show. As one executive of this plant said in discussing his experience, "We were not handicapped by a generation of tradition as to how nitrogen should not be made, so we went ahead and made it."

The West possesses many other new chemical industries. It possesses also many sources of raw materials other than hydrocarbons for a strong and competitive chemical industry. We know that the chemical industry in the past, both in this country and in the international market, has been thoroughly carterized. We know also that major branches of chemical production have been dominated by huge patent pools and patent cartels. It would be difficult, if not impossible, to estimate at this time exactly what situations will be encountered by western chemical producers with respect to their patent position. To the extent that major abuses of patents can be eliminated and to the degree that advances in chemical technology made in recent years can be preserved from domination by monopoly groups, it will be possible for western producers to enter chemical industries. If the obstacles to its development can be overcome, there are few limits which could be placed upon chemical production in the West. New industries and new products in great numbers would flow from a competitive western chemical industry in a continuously greater array.

I have stated elsewhere that I believe air transport and shipping can have the same meaning for the West in the years to come that railroads had in the nineteenth century. The expansion of manufacturing facilities for planes and ships on the west coast constituted one of the outstanding achievements of the war. They can have even greater significance for the West in peacetime, not only because they will provide markets for western materials and employment for western workers, and investment for western capital, but because they will enable all of western industry to overcome in large measure the barriers of distance which have constituted so great a handicap to western development. Not only will eastern markets in this country become far more accessible, but new routes for international trade can be developed. Western air transport and shipping can serve the immense areas of the Pacific with marked advantage.

There are, of course, numerous other fields of industrial expansion which have not been touched. Throughout all of them the difficulties encountered are much the same in character. In some cases there are natural handicaps which can only gradually be overcome. In many more, however, it is the pattern of artificial hindrances, of restraints and discriminations, of monopolistic practices and cartel controls which must be fought. Discrimination in transport costs has an adverse effect upon all western industry. Basing-point systems, patent abuses, and cartel restrictions have made it almost impossible in the past for the initiative and skill of western enterprise and labor to enter such fields as chemicals, light metals, and electrical equipment.

If we view the problems of western industry as a whole, it is apparent that constant vigilance and unceasing effort will be necessary to free western industry from the pattern of restraints inherited from the past. The rewards of such effort will make themselves felt immediately, not only in terms of opportunity for employment and freedom for enterprise, but also in an increasing rate of growth in western population, higher standards of living, new outlets for capital investment, and accelerated economic activity in all fields.

The tremendous resources, the energetic outlook of westerners, and the variety of opportunities which are present represent the greatest combination of assets that an area can have. If the same virility of competition which was responsible for America's industrial growth is maintained, the West will have its chance. There is no question that the West will know what to do with it.

---

THE ECONOMIC FUTURE OF THE WEST

(By Wendell Berge, Assistant Attorney General of the United States)

When we think of the pioneer age of the United States, we think of the West. It is with the exploration and the settlement of the West that we associate many of the most stirring episodes of our history. It is the spirit of the western frontier which we identify most directly with the growth of the American Nation to continental size. The lives and experience of the people who tamed a wilderness and finally reached the Pacific have left a legend and a heritage which symbolize the essence of America's adventure in freedom.

No better criterion of the continued vigor of democracy could be found than the economic contributions which the Western States have made to victory in the war. The energy and initiative of western industrialists in creating and expanding plants and facilities to produce armaments, ships, planes, and numerous other war supplies, aroused national admiration. The zest, skill, and determination with which western workers and technicians performed their tasks set a pace for the entire country. The great storehouse of raw materials in this area opened and poured out its wealth of mineral, forest, farm, and other products to supply a large part of our war needs. From all points of view the war effort of the West is a record of splendid achievement. It can also be the herald of even more impressive performance in the years of peace.

Now that the war is over, all areas of our economy are confronted by problems of reconversion second in their urgency and importance only to the necessities which followed Pearl Harbor. In many respects there is no section of the country where the difficulties involved in redirecting industry from war to peace are as challenging as they are on the west coast. The scope and speed with which war production here sprang into being have an inevitable sequel in the sudden cessation of demands immediately related to the prosecution of the war.

In the aftermath of war it may seem at times as though the economic problems are baffling and insuperable. Reconversion, however, is only a partial and temporary phase of transition. The dislocations and readjustments which inescapably follow war are immediate and pressing, and they understandably occupy the major place in our attention. But in a broader and deeper perspective it is apparent that there are certain fundamental considerations which must be taken into account that will affect both the success of reconversion efforts and the economic position of the West in the years ahead. It is in the light of basic principles and clear objectives that the West, as well as the East, must approach issues of economic policy and economic development.

Certain questions at once stand out: What is the economic future of the West to be? How can the West transform its natural endowment and its rich potential capacities into economic accomplishment? What role is the West able and entitled to play in an expanding and balanced national economy, and beyond that, in the world economy? What obstacles must be met in order for the West to achieve its fullest desirable growth? What measures are available to surmount these hazards?

Obviously no one can pretend to know all the answers to these queries, nor to have smooth solutions to all of the intricate problems which will be encountered. I believe it is possible, however, to define some of the elements involved and to obtain a rather accurate indication of the direction which must be sought if the West is to reach its rightful economic stature and to acquire full partnership in the national economy.

It is always somewhat astounding to contemplate the possibilities of this region. In terms of space, the West is an empire within itself. Some of the States are larger than entire sections of the East. Many western States are larger than whole nations of Europe. These great spaces and the distances they represent set the scale upon which economic activity must be measured. Hence, transportation is a vital and recurring theme in western history. Both as a production center and as a market, the West had had to contend in the past with transportation monopolies and resulting discrimination which did much to retard its evolution. It has been a pattern of artificial restraints and monopoly practices in transport as much as any other single factor that has prevented some industries from coming into existence here and has inhibited the growth of many more. Inequities in transportation costs have held the West down almost to the status of an economic colony. Because the conditions of transportation will influence the success or failure of all other programs intended to stimulate western industry, the removal of arbitrary and unreasonable differentials is an absolute prerequisite to continued advancement. At the same time it is hopeful to recognize that in the era of air transport which has now begun in earnest, mountains, deserts, and seas are traversed with equal facility, and from this standpoint the West has many advantages. It is perhaps not too much to say that air transport can have the same significance for the West tomorrow that railroads had two generations ago. The great expansion of western shipping will also constitute an invaluable asset to industries located on the coast.

The resources of the West correspond to its dimensions. The diversity and extent of natural wealth in this section make it the great reservoir of the Nation for many of the most essential materials of American industry. Agricultural products ranging from fruits and vegetables to sheep and cattle provide sustenance for national markets. Minerals, such as gold, silver, copper, and lead, are primarily the products of the West. Industrially necessary ores and strategic metals, such as tungsten, molybdenum, vanadium, and manganese, are all found here. Many other special types of minerals may become even more important in the future. Among these are radioactive ores scattered throughout the West which have been or may be used in the development of atomic energy and power. Should this occur, these substances would rank among the most important raw materials in the world. The lumber and timber resources of the West are calculated in astronomical figures, and, with reasonable care of the forests, they are capable of supplying wide markets for generations.

If we add to this roster the vast energy resources which the West possesses in coal, water power, oil, and natural gas, it is evident that only by taxing our imaginations can we comprehend more than a fragment of the total wealth which is present. After more than 50 years of western growth, we realize that we have only begun to see what developments could occur. We realize that in terms of opportunity for enterprise, for capital, and for employment, the West is still a frontier.

Because the West is in so many ways still a frontier one of the principal question marks of its future is population. Although 15 Western States contain 50 percent of the land area of the country, in 1940 they had only 14 percent of the national population. Here again the war has brought about rapid increase, especially in the metropolitan centers of the coast, some of which now have more than one and one-half times as many people as they did a few years ago. Nevertheless, it must be recognized that over the general area there are both underpopulation and very uneven distribution. The West needs people if it is to have large industries; it needs large industries if it is to attract and hold an adequate population. Some idea of the room for growth in this respect is given by the opinion of experts in such matters that 50,000,000 people would be needed within the next half century for the optimum development of western resources. In other words the West needs symmetry and growth in population as well as industrial expansion if its capacities are to be translated into economic reality.

The swift construction and amazing productivity of war industries in the West have given us a glimpse of what this economic reality can be like. In concrete terms the total war supplies produced represent huge quantities of ships, airplanes, foodstuffs, mineral products, chemicals, light metals, and a host of other goods which before the war were produced in moderate amounts or not at all. The war plants and facilities which have been built here can provide an excellent foundation for the industrialization of the West. They will not in the main continue to produce war supplies. While a few of them may perhaps prove inconvertible, the majority can be turned to peacetime production.

What is important, however, is that these plants and their enormous output have demonstrated beyond argument what the West can do. The same qualities of creative imagination and enterprise, managerial ability, and craftsmanship, which successfully constructed and operated entirely new industries for war purposes, can certainly unite to produce goods for peaceful commerce. Many industrial organizations which were born during the war years will be able to use their equipment and know-how to enter new fields. This is true not only of the great war plants; it is true also of the numerous smaller factories and going concerns which the war called into being. They will have the support of a trained and intelligent working population. It is the initial impetus to activity which is most necessary to industrial development, and in this respect the war has telescoped years of change into a comparatively short period.

For the West as for our national economy, the aims of full production and full employment must guide our thinking and our policies in this post-war period. As a people we cannot be content with any less than the highest standard of living which our industrial system has shown can be ours. We cannot permit a repetition of the inflated, hollow prosperity which collapsed into depression after the last war. We cannot tolerate mass unemployment and lack of opportunity for individuals and for enterprise. It is our determination to prove that political democracy and free enterprise can function as effectively in peace as they have under the stress of conflict.

It is at this point that the economic future of the West assumes a special significance for the country as a whole. The war has made

us aware more than ever before that all sections of the Nation are economically interdependent. It is not possible for prosperity to continue very long in one part of the economy if other parts are depressed, unable to expand their output, and consequently unable to increase their volume of consumption and raise their standards of living. The national volume of production and the national income cannot rise to higher levels unless the potential output of the West is turned to account. The national market cannot be firmly sustained unless the ability of the West to obtain the things it needs and wants is also sustained. It is not on any narrow sectional basis, therefore, that the problems of the West must be considered. Rather the basis of approach is the consciousness that henceforth we must strive for a balanced national economy in which the West shall participate in accordance with its capabilities.

There are further equally important considerations which merit attention. The United States now has responsibilities in shaping and maintaining a healthy world economy. A firm economic basis is needed for our participation in world affairs. We cannot allow our industrial strength to be diluted. On the contrary, our industrial power which provided the winning margin in the battle of production against the Axis must be continued, and even increased, to correspond to our role in making peace secure. From this standpoint the western industries are a major addition to our industrial potential. Aside from the beneficial effects on the national economy of decentralizing some basic industries, it is in the foremost national interest to preserve the productive power of the West as an asset of freedom. It would be tragic irony, as well as a blunder, if these facilities built for the purpose of defending democracy against aggression were not utilized to promote the welfare and security of democracy in peace.

The conditions which are necessary to the attainment of an enduring prosperity in the West are more sharply visible, in some ways, than in any other part of the country. Similarly, the threats and obstacles to development are more apparent. If the inherent wealth which the West possesses is to be utilized in production, not only must the adaptable war industries be transferred to a sound peacetime basis, but new industries must emerge. To bring this development about will not be easy. It will require foresight, energy, resourcefulness, and cooperation. Moreover, constant vigilance will be necessary to keep the avenues of opportunity and the channels of distribution free from artificial restraints and controls imposed by monopolistic practices on the part of entrenched groups. These barriers are formidable and should not be underestimated. Their consideration brings us very close to the root problem which the West must face.

Monopoly is not a novelty, but the events of recent years have increasingly underscored the fact that there is a direct and profound association between the presence and power of monopoly in American economic life and the failure of western industry to expand as it could and should. The effects of monopoly on the West have been in some cases remote and subtle, and in others immediate and obvious. But they have been everywhere persistent and extensive, when judged by the degree to which western enterprise has been discouraged or stifled. From this standpoint the West has been almost continuously subjected in one way or another to the effects of monopoly in all its modes and forms.

Both as a producing and consuming area, the West has felt the consequences of monopoly domination of the market. Characteristically, raw materials of the West have been shipped to the East for fabrication and then shipped back to western markets. In consequence a vicious circle has operated to limit opportunities for employment of industry and labor in the Western States, at the same time that westerners have been compelled to pay higher prices for the commodities they consume.

How could local enterprise and capital enter such fields as chemicals, aluminum, magnesium, steel, or electrical equipment when these industries, like so many others, were ruled by national monopolies and even governed by the remote control of international cartels? In numerous instances in the years before the war, efforts of western businessmen to get started in various sectors of production encountered an impenetrable wall of monopoly or cartel control.

On frequent occasions, it was the decision of cartel groups to prevent the establishment of industries in the West, and the power which such groups wielded rendered their decisions notoriously effective. Because cartel regulations were as final as they were secret, independent action contrary to their dictates was practically impossible. No matter how much vision or initiative or technological skill and capital were available they could not engage in production unless monopoly was willing. In effect this meant that only in special circumstances and at rare intervals could new concerns in the West arise in an industry ruled by cartels. Even if a new concern were established, its survival was contingent upon the whim of monopoly or the calculated restrictions by which cartels attempt to preserve their privileges. Indeed, if we consider the extent to which monopoly prevailed before the war over whole spheres of technology and over world markets it is remarkable that the West was able to progress as far as it did.

Some of these bottlenecks have been broken by the necessities of war. To a much more considerable degree, however, the enforcement of the antitrust laws in recent years has loosened the grip of monopoly from many of the most important sectors of industry.

If a reasonable proportion of the war plants can be continued in operation on terms of independence from monopolistic control and freedom from selective attack by cartels, there is every ground for belief that the West can compete on its merit in these branches of production.

The revolution in technology which is now in progress can open brilliant prospects for the West. The inventions and discoveries which have come out of the war have thrust before us manifold opportunities for adding to the array of goods and services which American industry can place on the market. New raw materials, new processes of manufacture, and entirely new fields of production have been explored. It is readily appreciated that as yet only a small beginning has been made in this direction, and that immense and intriguing advances are yet to come. It is hardly necessary to emphasize what this could mean in terms of opportunity for investment by western capital, enterprise by western businessmen, and employment for western workers. Every industry and every type of service from transportation and communication to health, housing, and recreation will be ultimately influenced by these changes. In such fields, freedom for initiative is at its maximum in the West and will continue to be at a maximum for years to come.

In this regard it is particularly important that as far as possible we shall prevent the new technology from becoming the preserve of monopoly groups. We know what the effects of the domination of research and technology by cartel interests have been in the past. We cannot risk a repetition of the restriction and suppression of invention by secret agreements among industrial giants here and abroad, or by the short-sighted action of monopolists in our domestic economy who fear competition and who seek to protect vested position by preventing the appearance of rival producers or the introduction of improved processes. Much progress has been made in eliminating the worst abuses of patent pools and other devices by which monopoly endeavors to control technological change. Nevertheless, to keep technology free will require alertness and active support on the part of western industry.

The United States, along with the other United Nations, recently met in San Francisco to prepare the political basis of international cooperation. The United Nations Organization, which had its inception at that time, is now an established fact. On the same level this country is engaged in cooperative efforts to bring about the reconstruction of world trade. For the West there is a direct connection between the success of these efforts and its own industrial future. The American West is on the border of the great Pacific Basin, and a revival of world trade will open 10,000 miles of markets in the Orient to western producers. The countries of Asia which have been stricken by war will need innumerable commodities in great quantities to restore their shattered economic life. Industrially backward regions seeking to develop their own resources will ultimately prove to be eager purchasers of every type of commodity which the West can make. Western shipping and air transport have a definite advantage as well as a genuine responsibility in opening up new trade routes to the East and providing transportation service for a large part of the Pacific area.

The possibilities which have been sketched cannot come into being overnight nor without resolute cooperation. There are many things that Government can do in assisting and expediting the industrial development of the West. There are many things that business and labor and capital can do, and, indeed, must do, if the advances which have been made in the last few years are to be carried over into peace and promoted in the future.

Like other parts of our economy, the West would suffer if we permit inflation to overtake us. Similarly, the West has a stake and a positive interest in efforts of the Government to establish taxation incentives to investment in new enterprise. One type of Government activity has special significance for the West. This is the development of public power projects of the TVA variety, not as emergency or relief measures, but as a proper contribution to the conditions necessary for industrial investment and expansion.

Above all, the promotion of western industry hinges upon the maintenance of competitive freedom. The development of the West would be completely jeopardized if enterprise and initiative were not free to function in the market or if monopoly succeeded in limiting the scope of competition. The enforcement of the antitrust laws is, therefore, a primary concern to the people of the West if they are to achieve full economic independence. All the means of action, all the incentives, and all the opportunities necessary to the realization of this goal are present. I believe that the flexibility and vigor of the West are the best possible guaranty of its successful attainment.

## The Future of Italy

EXTENSION OF REMARKS
OF
**HON. BENJAMIN J. RABIN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 29, 1945*

**Mr. RABIN.** Mr. Speaker, Col. Charles Poletti, who has recently returned after 2½ years of service in Italy as Allied Military Government Administrator, delivered a timely address entitled "The

Future of Italy." This address was broadcast over a national hook-up of the Columbia Broadcasting Corp. on Saturday, November 24, 1945.

Colonel Poletti is most qualified to talk on the subject of the future of Italy. He entered Sicily as a member of the general staff of Gen. George Patton. Went in with the troops on D-day, July 10, 1943. Administered Sicily until February 1944, when Sicily was transferred to the Italian Government, which the Allies had just recognized. Then went to Naples to administer that city and southern Italy provinces. Had many difficulties there, including the eruption unexpectedly of Vesuvius. Moved to Rome when it was liberated, and administered Rome and central Italy from June 1944 until April 1945. Then established headquarters in Milan where he administered military government for Lombardy in northern Italy.

He was decorated by the American and British Armies, Italian Government, the Vatican, and the National Committee of Liberation.

I believe that this address will be of great interest to the Members of the House, and, therefore, under unanimous consent of the House to extend my remarks, I insert this address in the RECORD, as follows:

Italy—the new democratic Italy—faces a trying winter. The lives of 45,000,000 men, women, and children are at stake. They look to Americans for help. There is a crying need for food, clothing, medicines, and fuel.

During the past summer, Italy had a terrific drought—one of the worst droughts in its history. The production of wheat alone fell off 2,250,000 tons. That is not a large amount in relation to the total wheat production of the United States or Canada. But for the Italian who finds in bread and macaroni the basic staple of his meager daily rations, it represents a loss of one-third. In simple terms, if we are not to allow the Italians to starve, we must furnish them with more than 2,000,000 tons of wheat during the next 6 or 7 months. And when we do that, you and I should not get the impression that the Italians will have an abundance of food. Each person will be getting only 200 grams per day—four small slices of bread.

In Italy, as you know, there has been tremendous destruction of homes, apartment houses and other buildings. A good bit of the destruction was done by our bombs and shells. Then the Nazis added their bombings and their methodic, ruthless mining on the heels of their retreat. Now the country must have large quantities of cement, bricks, and tiles for roofing. Of course, it makes no sense to import such materials at excessive cost. Italy can make them—provided it has coal.

In northern Italy especially there are wonderfully efficient manufacturing plants. Some of them function with hydroelectric power. Others need coal. Millions of men and women are dependent on these industries.

In cities of the north, large industrial populations have been distressed not only by two decades of fascism in which they did not believe, but they have also suffered from brutal Nazi occupation. With liberation and democracy, these workers expect a better life. If they remain idle, risks of social unrest and even upheaval are intensified. They become cynical and distrustful of the liberation and democracy of which they have long dreamed.

During the first winter we administered Naples city we obtained firewood by salvaging the timber of bombed buildings. Wooden park benches disappeared during the night in Rome. And in Milan it took tremendous effort to produce the adequate supplies of wood which the bakeries needed to make the daily rationed supply of bread and to permit the people to cook their very humble meals. In general it was impossible to operate the gas plants because of utter lack of coal. In order to maintain public health and avoid epidemics a hot meal and hot water are essential.

With the exception of a small production of an inferior variety which is on the island of Sardinia, Italy has no coal. In normal times Italy imported 4,000,000 tons of coal each month. At this time Italy is forced to satisfy all its needs with 350,000 tons a month. America must send coal to Italy.

Only an insignificant amount of iron is found in its mountains. Italy has no colonies that can give it rubber or copper. There is frightful scarcity of consumer goods. Fine industrial plants are available in Italy to fill up the gaps if we send raw materials like cotton. Italy grows very little cotton. The warehouses of America are bulging with raw cotton.

Italy will survive this harassing winter. It will do so because the men and women of America as well as the people of other nations stand ready to give substantial assistance to preserve the lives of 45,000,000 Italians. We Americans can help by seeing to it that Congress gives UNRRA the funds to carry on its splendid, humanitarian work. Congress must act at once. Winter is here. Let us be realistic. Even after we give this help, Italy will only be enjoying a minimum standard of well-being. Italy will still have to suffer much hunger, endure biting cold, go without homes.

If we help Italy through this winter, can it then get on its feet? Will it pull through? Since my return many Americans have asked me this.

Let me say with deep conviction, and on the basis of intimate work with Italians in mitigating their hardships during the past 2½ years, that I have great faith in the future of Italy as a democratic, peace-loving nation. They will be able to take care of themselves if we give them a lift now.

An incredible amount of reconstruction has already been achieved since the liberation of Italy. Although Allied military government directed much of this reconstruction, we know that little could have been done without the efficient, hard-working collaboration of millions of Italians. Italy today is not a people dragging its feet in the mood of despair and discouragement through piles of war ruins. For those of us in Allied military government who have pushed north behind the advance of our victorious armies, the exciting experience, the one which most satisfied our souls, was to take an area with streets blocked by debris, houses tottering, destroyed water works, bridges demolished, with no motor or railway transportation, no electricity, no food, countless refugees without homes, and to transform that area into a living organism—to restore to it the breath of life. That was our job. It is not a simple task. No army can do it alone. The patience, courage, hard work, and resourcefulness of millions of Italians was needed. And the Italian people have all those qualities in abundance.

It seems to be not generally understood here in America that large masses of the Italian people never embraced fascism. During the years immediately preceding the war even the adherents of fascism diminished greatly. The command which forced Italy into war alongside Hitler was given by one man—Mussolini—against the wishes of the people. The fact that the Italian people did not want the war remains indisputable.

Throughout the 22 years of fascism there were substantial numbers who had the courage to oppose the dictatorship at the risk of death or concentration camp on the island of Lipari. Italy always had an active underground movement.

When the Allied soldiers reached any part of Italy, we invariably found splendid anti-Fascists who were ready to go to work with us. These men and women understood democracy. They had refused to corrupt their consciences with fascism. All they asked us was the chance to aid in establishing the democratic way of life. And they must now have that chance.

While general elections will not be held until this spring, Italy is well on the road to the fulfillment of the democratic ideals. There is unrestricted freedom of the press. Scores of newspapers and magazines of all shades of political opinion are published. Foreign correspondents are at liberty to go anywhere they desire, to investigate any matter, to interview any person.

The political parties enjoy complete freedom of speech. And, of course, there is total freedom of religion. And now there is freedom from fear. Secret police no longer lurk around every corner to overhear opinions. Merciless Fascist thugs, cloaked with the authority of government, no longer break into a home to snatch away the father before the eyes of his wife and children and cause him to disappear forever.

In Rome a few weeks ago we attended the first sessions of the National Assembly. Anti-Fascist men and women from all over Italy, and of all parties, met in the Parliament Hall of Montecitorio. They are beginning to hold local elections in the areas first liberated by the Allied armies.

The Italians have given proof that they understand the principles of democracy and that they have the courage to fight and die to maintain democracy. In my opinion, it can be safely stated that the Italians are determined not to permit the return of a dictatorship in Italy—whether it is of the right or the left. And I believe the Italians will succeed. However, should countries like America disregard Italy and fail to give it the material and moral assistance it needs, anything may happen.

The National Government was until this morning headed by a first-rate man—Prime Minister Ferruccio Parri. He never appeased fascism. During the war, Parri became the leader of the partisans who fought the Nazis in northern Italy. Parri and Foreign Minister De Gasperi understand the role Italy should play in this atomic age. Again and again they have implored the Allies to treat Italy justly. Italy has not asserted unreasonable demands. The country desires to become an independent, peace-loving member in the international family of nations.

This basic right has not been granted. The rehabilitation of Italy has been handicapped and delayed by the failure on the part of the Allies to treat the new Italy as a peace-loving, independent nation. It is time to remove the heavy shackles. It is time to recognize Italy as a member of the United Nations.

The armistice terms were signed in the late summer of 1943. They have just been made public. This should have been done long ago. There is no desire on my part to criticize any particular nation. I am merely pointing out the net results on the relations between the Allies, and more particularly America, and Italy. We Americans really want Italy to get back on its feet. That has been the policy of our Government.

Today Italy is still treated as an enemy nation. We do not deal with it as an independent, free country. Some of us who were in Italy realized more than a year ago that it was unfair and unjust to Italy, and unintelligent policy on the part of the Allies, to continue to shackle Italy with the armistice terms. They no longer fitted the situation. They were an affront to the anti-Fascist forces we were encouraging. So more than a year ago we began recommending that the United States and its allies wipe out the armistice terms and conclude a preliminary peace treaty with Italy. Last December I flew to Washington from Rome to

support the recommendation. Conferences with the British representatives went on for several weeks in Washington. It is most regrettable that we could not agree a year ago to abolish the armistice and to sign a peace treaty with Italy.

Why was it so important in December 1944? And why even more vital in December 1945?

The abolition of the armistice terms and the substitution of a peace treaty will serve to remove the heavy shackles which still seriously impede the rehabilitation of Italy.

The Italian Government is not free to take steps to restore its international trade. Italy is not now permitted to act without the specific approval of the Allies. Take just one instance. During this summer, Switzerland offered a substantial loan to Italy and desired to make a new trade agreement with it. The Italian and Swiss Governments discussed the matter and reached an agreement perfectly satisfactory to both. A few days ago we were advised by a report from Rome that the Allies have prohibited Italy from doing it. Are Americans or the British to presume that Italy, which in normal times carries on substantial trade with Switzerland, does not know what is in the interests of the Italian people? Why should an outside nation still be in a position to dictate to Italy with respect to its trade?

The short of it is that neither the Italian Government nor Italian businessmen can resume proper commercial transactions with industrial and commercial interests of the United States or of any other country until a peace treaty is signed with the new Italy.

Remember that commencing in 1943 we recognized the existence of an anti-Fascist government in Italy. Later on the Allies sent ambassadors to Rome. Nor should it ever be forgotten that Italian troops fought and died as part of the Allied armies in Italy. The Italian Air Force fought on our side. The Italian Navy performed distinguished services in the war against Hitler. Two hundred thousand partisans in northern Italy were carrying out risky sabotage missions and battling the Nazis under the orders of the Allied command and with arms and ammunition which we sent in to them. Still the new Italy remains shackled with the armistice terms. Italy remains an enemy nation until we sign a peace treaty. On the basis of their splendid performances, the democratic forces of the new Italy have merited a peace treaty for more than a year.

America has been generous. Italians like Americans. They consider us their real friends. They are counting on our help to rebuild Italy as a democratic, peace-loving, stable country in the midst of the turmoil and confusion of European political strife. The Italians appreciate not only the food and clothing we have sent to them, but they look to us for moral and spiritual assistance. There is no doubt that a democratic, economically prosperous Italy will serve as a stabilizing factor in the peace of Europe and of the world. Italians are looking to us to remove their shackles and to give them real independence. It is my earnest hope that we Americans will do so promptly.

## Mayflower Compact Day Address by Maurice H. Thatcher

EXTENSION OF REMARKS

OF

### HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Friday, November 30 (legislative day of Monday, October 29) 1945*

Mr. WILLIS. Mr. President, recently in an extension of my remarks I included an address delivered by me at the Compact Day Dinner of the Society of Mayflower Descendants in the District of Columbia, in the city of Washington. The dinner was held on the evening of November 23, 1945, in celebration of the three hundred and twenty-fifth anniversary of the signing of the famous document. Another feature of this celebration was a radio address delivered on the evening of Thanksgiving Day, November 22, by the governor of the society, Hon. Maurice H. Thatcher, formerly a Member of Congress from Kentucky. I ask unanimous consent to have his address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor THATCHER. Permit me to thank WINX for the courtesy, again accorded me, to speak over its station upon an anniversary of the signing of the world-famed Mayflower Compact. This simple, but comprehensive document, was drafted and signed on board the gallant little ship, the *Mayflower*, in Cape Cod waters on November 21 (old style, November 11), 1620. Circumstances arose which made it necessary for the Pilgrims who had made the fateful voyage from the Old to the New World to adopt a plan for their colonization and government when they should land on the wintry Cape Cod coast. This landing followed one month later; that is to say, on December 21, 1620, at the spot known as Plymouth Rock.

Under the instrument, thus formulated, the colony was founded, and long and wisely ruled. The language of the Compact was that of the period, but it was broad and ample in its scope. For generations it has been acclaimed as the first authoritative document promulgating, in the Western Hemisphere, the purpose and plan of free and representative government. It contained the seeds of the Declaration of Independence and our Federal Constitution. In his third inaugural the late President Roosevelt bracketed together Magna Carta, the Mayflower Compact, the Declaration of Independence, the Constitution of the United States, and the Gettysburg Address as milestones in the development of free institutions. Let me read the Compact:

"In ye name of God, Amen. We whose names are underwritten, the loyale subjects of our dread Soveraigne Lord King James, by ye grace of God of Great Britaine, Franc & Ireland King, Defender of the Faith, &c.

"Having undertaken for ye glorie of God, and advancemente of ye Christian faith, and honour of our King & Countrie, a voyage to plant ye first colonie in ye northerne parts of Virginia, doe by these presents solemnly & mutually in ye presence of God and one another, covenant & combine our selves togeather into a civill body politick, for our better ordering and preservation, and furtherance of ye ends aforesaid: and by vertue hearof to enact constitute and frame such just and equall lawes, ordinances, acts, constitutions & offices from time to time, as shall be thought most meete & convenient for ye generall good of ye Colonie, unto which we promise all due submission and obedience.

"In witness whereof we have hereunder subscribed our names at Cape Cod ye 11 day of November, in ye year of ye raigne of our Soveraigne Lord King James of England, Franc & Ireland ye eighteenth, and of Scotland ye fifty-fourth, Ano. Dom. 1620."

This ends the reading. There were 41 signers of the Compact, or a little less than half of the total number of passengers—men, women, and children—on the *Mayflower*.

The story of the persecution of the Pilgrims, because of their religious beliefs, of their long exile from England, in Holland; of their difficult preparation for the venture into the New World; of their stormy voyage across the Atlantic seas; of their founding and maintenance—under fearful hardship and loss—of the Plymouth colony; and of its success and splendid example in the early and formative days of American life and character—the story of all this constitutes an epic in world history which yet remains adequately to be written. The Pilgrims brought with them the concepts of freedom of conscience and free government; they brought with them the Christian home; and all these were established and maintained at Plymouth. There is the record. It is imperishable, immortal. Not only the United States of America, but, as well, all lands and peoples, are the everlasting debtors of this heroic little band of men and women whose achievement and example have meant so much to the cause of liberty. The postwar chaos that today fills the earth can be lifted only by the application of the simple principles set forth in the *Mayflower* Compact, and practiced in the Plymouth colony. On this Thanksgiving Day—itself a Pilgrim institution—we have, in America, much for which to be thankful, though we have serious problems—domestic and foreign—to face. Let us give thanks for the glorious triumph of the Allied forces in the great struggle just ended; and let us approach the difficult tasks which lie ahead, in the spirit and character of the Pilgrim fathers and mothers, who, under great trial and tribulation, wrought so mightily for good at the dawn of American history.

On tomorrow evening, at Hotel 2400—Sixteenth Street, in Washington, our society, following its established custom, will celebrate the signing of the Compact 325 years ago, by a dinner meeting. The speakers will be United States Senator RAYMOND E. WILLIS, of Indiana, and Mrs. James H. Doolittle, wife of the famous flier and aviation commander, the United States Marine Band orchestra, as heretofore, will furnish music for the occasion.

Permit me to conclude by reading some lines I have written for this anniversary occasion.

O little ship of troubled yester-time,
What precious burthen you were called to bear
From old-world wrongs, unto a virgin clime
Within the west, ordained to be the heir,
For all the ages, of the dream and hope
For freedom of man's conscience, thought, and deed;
For all that widens spirit and its scope,
And yields largess for vital human need!
O sacred ark, you were divinely sent,
To bring across the stormy wastes of sea,
The humble group, which was the instrument
To found a new concept of liberty!
In Voyage, Compact, Plymouth there was wrought
The Goal, itself, which man, through God, had sought!

## Situation at Yukosuka Naval Base

EXTENSION OF REMARKS

OF

### HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NOVEMBER 27, 1945.

Hon EDITH N. ROGERS,
*House of Representatives,*
*Washington, D. C.*

MY DEAR MRS. ROGERS: In accordance with telephone conversation with you, I am glad

to give you the following information on the situation at Yokosuka Naval Base, concerning which an article first appeared in the Des Moines Register on November 1.

First, let me assure you that the problems involved are matters of genuine and deep concern to us. This bureau considers it vital that the men we return to their homes after discharge are fit, and reflect credit upon the naval service. The situation as presented in the article in the Register does not represent the policy of the United States Navy, nor does it have our approval.

Instructions stating that the aim of the Navy Department is "suppression" were issued on March 25, 1941. Upon receipt of information concerning the situation at Yokosuka, Japan, on September 27, 1945, action was initiated that day, and on October 31, further steps were taken by the Secretary of the Navy to insure strict and effective compliance with this policy. The commander in chief of the United States Pacific Fleet and Pacific Ocean areas on November 2 published the directive of the Secretary of the Navy.

You will be interested to know that all places of prostitution in Yokosuka have now been closed, and the policy of the Navy is being effectively carried out.

With warm appreciation of your interest in the welfare of our naval personnel, I am,

Sincerely yours,

LOUIS DENFELD.
*Vice Admiral, United States Navy,*
*Chief of Naval Personnel.*

## Cotton Problems

EXTENSION OF REMARKS
OF
### HON. STEPHEN PACE
OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. PACE. Mr. Speaker, under the consent granted, I present for the RECORD a copy of my address before the Cotton Textile Institute on Wednesday, November 28:

From the program I observe I have been assigned as my subject "The Trend of Legislative Thinking."

Of course, no single Member is privileged or capable of speaking for the Congress, but I have tried to be helpful in working out farm programs and have some knowledge of the views of those who have the responsibility of fixing policies.

It is agreed that cotton offers the most serious and difficult problems of any agricultural commodity. It relates directly to the economic welfare of more people and has greater bearing upon the economy of the Nation than any other crop grown. The solution of the problems is most difficult on account of (1) the enormous surplus of cotton at home and abroad, (2) the cost of production in this country, (3) the price at home and on the world market, (4) the possibility of increased foreign production, and (5) the increasing competition of synthetics and other fibers.

Until these difficulties are overcome and a sound and sensible long-time program for the future can be agreed upon, it is my opinion the Congress will maintain in general the program now authorized by law.

As you all know, we assembled in Washington last December a national cotton conference. It was the greatest meeting of its kind I have ever attended. For the first time in the history of the Nation we assembled at one place at one time every group and interest concerned with the production, handling, marketing, and processing of cotton. While this meeting did not produce the answer, it did, through the assembling of all the facts, through the clash of views and the numerous suggestions, thoroughly and completely develop the problem. And certainly that must be the first step in finding the remedy or working out the solution.

After that meeting it was clearly understood by all that the solution to our cotton problem is going to require many steps and will not be found in some simple or single proposal. We cannot solve it through price alone. Nor just with or without an export subsidy, or with or without payments from the United States Treasury, or merely with a domestic allotment plan or a mechanical cotton picker. The problem is too complex and there are many things that need be done to assure the welfare of those who grow cotton, those who handle cotton, and those who process cotton.

And strange as it may sound, the Congress and the Department of Agriculture need more facts than are now available before a sound long-time solution of the cotton problem can be formulated.

Following the December meeting another conference was held last May. Again, all the groups were represented. Time had been given for everyone to study and digest all the facts and the numerous problems and proposals presented at the December conference. We had hope that we could at least make a start in formulating definite recommendations for the future. Many of us had ideas and there were a few proposals upon which we were in complete accord. But in every instance when the time came to set up the details we found there were certain facts we needed to have and which no one—either in or out of Government could give us.

As a simple example. There was unanimous agreement at the May meeting that the one-variety program was proving most beneficial, both to the producers, the mills, and the users. It resulted in increased yields, in a better sample, in a higher price and the mills could turn out a better product. We all agreed that this one-variety program should be encouraged, that it should be greatly expanded on a Nation-wide basis.

But such a program does not work out itself. The varieties must be determined, the staple lengths must be selected, the necessary seed must be made available. This all meant we had to know what varieties, what types, what staple lengths the American mills and the export trade was taking and would want in the future.

Did you know such information is not now available—nowhere in this country? We encountered the same lack of facts on every proposal considered. You will recall the suggestion was made at the December conference that cotton production should be shifted from the high-cost production areas to the low-cost areas. But no living person could tell us how much cotton was produced in the high-cost areas or how much cotton land was available for low-cost mechanized production.

Certainly it is common sense to have all the facts before we undertake to recommend policy decisions on a problem as big and complex, and involving as many millions of people, as the cotton problem. So our May meeting had to abandon its effort to reach decisions and turn to the task of finding the facts we must have to reach intelligent decisions.

Our committee immediately requested that every organization in this country which was conducting or planning any economic research on cotton, including both public and private agencies, hold a joint meeting and combine their efforts in a well-organized, short-term fact-finding program. The idea was received with considerable enthusiasm. A total of 45 research executives, representing almost as many different agencies, met for 2 days, on May 30 and 31, and agreed upon a cooperative investigation which will give us within a few months, we hope, the best available answers as to the present competitive position and the future outlook of cotton. The Cotton-Textile Institute was represented at this meeting. The National Cotton Council and officials of the Department of Agriculture were most helpful in setting up the program. The work was divided into the following projects:

1. PRODUCTION ADJUSTMENTS TO IMPROVE FARMING OPPORTUNITIES

In this project we are trying to find out how much can be saved on the cost of growing cotton by the use of the latest and best scientific methods. We want to know what can be done to produce a stronger, cleaner, more uniform, more spinnable fiber. And we also want to know what other crops might offer the farmer a better income in the parts of the South where the cost of growing cotton is high.

2. COTTON HANDLING AND MARKETING PROBLEMS

This requires a survey of what the mills and the export trade want in the way of cotton and how those wants can be filled more satisfactorily. We need to know what qualities of cotton to push in a rapidly expanding one-variety program. We want to know how to make the ginning, the warehousing, and the merchandising of cotton more efficient and economical.

3. COTTON GOODS PRODUCTION AND DISTRIBUTION TECHNIQUE, COSTS, AND MARGINS

In this project we are following cotton on its whole journey through the spinning, the weaving, the knitting, the finishing, the fabricating, the wholesaling, and the retailing. It is in these processes that the real costs of producing a cotton article are to be found. We want to take a look at the chances of making any of these processes more efficient, so that the final consumer will get a cheaper and a better product.

4. THE COMPETITIVE POSITION OF FIBERS AND SUBSTITUTE PRODUCTS IN SPECIFIC END-USE MARKETS

Here we are trying to find out why cotton is selected for each of its important end uses, such as shirts, sheets, bags, and towels. How much of each end-use market is governed chiefly by fiber price, by fiber quality, by merchandising, and by other things. We want to know the same thing about the end uses of other fibers. We need to put all this information together in order to find out how much market cotton might gain or lose because of price, quality, merchandising, and other influences.

5. PRODUCTION STUDIES OF SYNTHETIC AND OTHER SUBSTITUTE PRODUCTS

What does it cost to make rayon, nylon, and the other synthetics? What facts do we have that will show what to expect in the future price trends of these fibers? What about costs and price trends in the paper industry? How much expansion are we going to get in the production of all these things, and what can we foresee about further improvements in the quality of each of them?

6. FOREIGN MARKET OUTLETS FOR AMERICAN COTTON AND COTTON PRODUCTS

How cheap and how plentiful can we expect foreign cotton to be? How cheap and how plentiful can we expect foreign rayon to be? How much can we learn about the influence of exchange rates, Government loans, and international trade barriers upon the foreign markets for cotton? In a word, how much foreign market do we have a right to expect for American cotton and cotton textile products?

7. AGRICULTURAL PROGRAMS AND POLICIES

We are reviewing, in a matter-of-fact and unbiased way, the effects of all the Government's efforts of recent years to help the cotton farmer.

8. PROBLEMS OF INDUSTRIAL DEVELOPMENT IN THE COTTON BELT

We want to know what it will take to get enough industry in the South to give useful employment to the people who no longer have any real opportunities in the cotton fields.

9. EDUCATION PROBLEMS

The Cotton Belt, with the lowest per capita farm income, has been gravely handicapped in the field of education. How can we make the people happier and more productive by improving educational standards?

10. HEALTH PROBLEMS

The Cotton Belt is likewise handicapped in the field of health. How can we raise its health standards?

These investigations are now well under way. They will be completed some time next year. They will be presented to the committee as the combined work of some of the most respected research agencies, both public and private, in this country. They will be prepared and edited in such a way that the accuracy of the facts cannot be challenged and that the differences of opinion, where differences exist among outstanding experts in the field, are clearly set forth.

The Cotton Textile Institute has an essential part to play in this program. Your expert knowledge and opinions are needed. The members of your staff have given us some splendid cooperation already, and we are anxious to have your participation continued and increased.

In considering the importance of this fact-finding program, let us take as an illustration project 4 which deals with the competitive position of cotton in its end-use markets. I have chosen this illustration because project 4 is one in which the institute can supply a great deal of helpful information and guidance. In this project we have selected the 45 biggest end uses of cotton, such as shirts, dresses, bags, and automobile tires, and we have begun a study of the factors and influences which are responsible for cotton's competitive position in each use. Only in this way can we get a fair picture of the total market which cotton holds primarily on the basis of the price of the fiber, and of the amount of market which cotton might gain or lose as a result of changes in its price. Only in this way can we find out how much of the market is governed primarily by advertising and merchandising policies. Only in this way can we determine how much market cotton holds by virtue of its various quality characteristics, how much market it might lose if the quality of other fibers were improved in specific ways, and how much market cotton might gain if its own quality were improved in specific ways. We need to study the influence of price, quality, and merchandising not only upon the choices of the final consumers, but also upon the choices of the spinners, the weavers, the knitters, the converters, the fabricators, the wholesalers, and the retailers. Before we undertake to make basic decisions on the cotton problem, we owe it to this Nation's millions of cotton farmers to get the whole picture in the clearest possible perspective.

The argument over cotton and rayon tire cord is in a highly technical field, which I am not qualified to discuss in any detail; but I have received enough information from experts in the Department of Agriculture to become convinced that the sweeping claims of rayon superiority which have been made in recent advertisements are utterly unwarranted. In the passenger tires, the Government tests which have recently been released show that regular commercial cord made of cotton is good enough to outlast the rubber in the original tire plus the rubber in the recap. In tests conducted by the Rubber Reserve Company at Normoyle, Tex., tires made of cotton cord were run at a speed of 60 miles an hour, and no failures whatever had occurred as a result of cord weaknesses when the tests were brought to an end after about 68,000 miles of driving. In the important 7.00–20 truck-tire field, the test results were most complicated. Experts have been able to single out points on which both cotton and rayon proved superior. There are strong indications that cotton would have given a better performance if a lower-gage cord had been used, and there are also strong indications that cotton cord far better than any yet tested can be made available. The Department of Agriculture is preparing for our committee a summary report of this whole subject.

There are some people in this country who believe that the price of cotton is too high and who say that all of our cotton problems can be solved simply by striking down all supports and leave the producers to accept whatever price is offered them. There are some people who question whether the farmer should be able to purchase with the proceeds from the sale of a pound of cotton as much as he could purchase 35 years ago, even though the amount of cotton produced with an hour's labor has seen no sharp increase, while the productivity of labor in other fields has gone forward by leaps and bounds under the influence of technological progress.

There are some people who question whether parity price—the price which would give a pound of cotton the same real value that it possessed in 1909–14—should be calculated so as to take into account the largest item of cost in the production of cotton—namely, the labor cost. But to anyone who states that the problems of the Cotton Belt can be solved merely by a low price for cotton, let me say in all sincerity that he is taking upon himself a grave and a dreadful responsibility. It is a serious thing to tell any man that the way to solve his problems is to cut his income. It is more serious to tell the man who is already at the bottom of the economic ladder that the way to solve his problems is to drop down lower. There are 2,500,000 families on the cotton farms of this Nation. Cotton provides half the farm income in nine of our great agricultural States.

For this reason I feel that the cotton farmer and the entire Nation are entitled to have the whole market for cotton studied in the most thorough possible way. The subject is most complicated. There are hundreds of important uses for cotton, and each is different from the others in the factors that influence fiber selection. I have found that a man can justify almost any attitude he chooses about the price of cotton by concentrating attention upon that part of the market which suits his purpose. We cannot accept any biased or piece-meal or superficial answers. We are bound to study the whole market and study it most thoroughly. With the stakes so high in terms of human welfare, we can afford to do no less.

Now, in addition to this short-term study of the cotton problem there are other fundamental things that have to be done if we are to put cotton on a permanently sound basis. The fundamental problems are those of supply and demand. On the supply side, we must learn how to produce cotton more efficiently and economically and improve its quality. On the demand side, we must learn how to make cotton more useful and increase its uses.

In both of these objectives we come face to face with the need for scientific research on cotton. Any product which competes in the fiber market has the choice of moving forward technologically or losing out to its competitors. The fundamental trouble with cotton is that in the generation which is just past—a generation of tremendous scientific progress in many fields, including the field of fibers—cotton technology has failed to keep pace. This failure cannot be attributed to the inherent nature of the cotton fiber. The problems of growing and processing cotton lie in the same fields of scientific research which have yielded miraculous results for other commodities. I refer to the fields of biology, chemistry, physics, and engineering. The possibilities for improving cotton's competitive position through research are sensational and unlimited. We have seen an inkling of these possibilities in the mechanical cotton picker, in the flame chopper, in the improvements in fiber strength through seed breeding and selection, and in improved methods of fertilization and soil building. We realize the possibilities for improving the quality and attractiveness of cotton to both the manufacturers and the final consumers if we approach the problem with the necessary amount of scientific skill, imagination—and money.

The trouble in the past has been the unwillingness of anybody to invest in cotton research an amount of money commensurate with the size and scope of the problem. The two groups most deeply concerned have been the producers and the textile manufacturers. I am sure you will agree with me that the textile manufacturers on the whole have been somewhat indifferent to research. Their general policy has been to leave the burden of research to the Government and the producers of their raw materials. This policy has militated greatly to the advantage of rayon, because the rayon producers are a few large corporations with ample funds, while the cotton producers are millions of farmers without any funds for such purposes. I am glad to note that the textile manufacturers in recent years have taken an increased interest in scientific research. I hope that your efforts in this line will continue to multiply very rapidly.

What man can guess the many secrets still hidden away in the cotton fiber. For example, by testing methods recently developed, specifically X-ray diffraction and the Pressley breaker, it is found that the present leading improved varieties of cotton may not have the particular fiber properties most suitable for individual use. The X-ray diffraction photographs show the cellulose structure of the individual fibers. The more nearly parallel the cellulose elements are to the main axis of the fiber the stronger the yarn.

This may mean a complete change in fiber selection and buying methods. Heretofore cotton has been bought entirely on grade and staple lengths. But now we are learning that the angle of growth of the cellulose element inside of the fiber wall may be far more important than the length of the fiber. Of the varieties classified 1 inch in staple length, some given yarn strengths equivalent to thirty-one thirty-seconds of an inch, while others are equivalent to $1\frac{3}{32}$. And some varieties of seven-eighths inch staples show tensile strength higher than those of some 1-inch varieties.

Anyone, I think, will agree that the cotton producers are in no position to conduct their own research. They operate very small units, they are financially weak as individuals, and they have never been able to form an organization capable of doing the job on the right scale. A great part of the responsibility for cotton research therefore rests squarely upon you. It is my personal conviction that, while the Government has done some good things in the field of cotton research, these activities have been on too small a scale for the size of the job to be done. The inadequacy of the Government's cotton research budget has been partially responsible for cotton's backwardness in technology, which in turn is the very core of the

whole cotton problem today. I feel very strongly that this situation ought to be corrected.

If we give cotton the research program that it needs and deserves, I can see no fundamental reason for pessimism about the future of this fiber. It is still the most popular and useful fiber in the world. The people of the whole world have come to appreciate the good properties of cotton more strongly during the long war years, when they were obliged to rely on other fibers. If we give cotton a chance, it will become as dynamic and progressive as any fiber on the market today—constantly improving its usefulness to mankind and its attractiveness to the people who grow and process it. There is no cause or excuse for defeatism among the friends of cotton. If we will give it the aggressive support that it should have in the laboratories of research, it will become evident that in the heightening competition among fibers that tough old warrior, King Cotton, tested in the battles of many centuries, has only just begun to fight.

## The Radio-Proximity Fuze Stopped the Germans and the Japs

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. McDONOUGH. Mr. Speaker, the employees of the Sylvania Electric Products, Inc., are entitled to justifiable pride and satisfaction in helping to bring victory over the Japs and Germans and a speedy end to the war. Next to the atomic bomb, the radio proximity fuse was the most effective secret weapon used by the Army and the Navy against our enemies.

Here is an account of this unbelievable weapon, the production of which is a tribute to the ingenuity and resourcefulness of American initiative and determination to win the war as quickly as possible, as published in the October issue of the Sylvania Beam:

The first Japanese plane to be shot down by a radio proximity fuze projectile was destroyed by the cruiser *Helena* January 5, 1943. During the siege of Okinawa, the destroyers *Hadley* and *Evans* used the fuze in standing off 156 enemy planes including Kamikaze suicide craft.

An official report describing the defense by six destroyers with radio proximity fuze projectiles against Jap planes gives a typical picture. "The horizon," it says, "was filled with burning planes from east to northwest. There were too many to count."

Hundreds, in fact thousands, of Jap planes attacking United States battleships, carriers and other naval vessels were shot down by radio fuzed projectiles.

It would be impossible to estimate the number of American lives that were thus saved by the improvement in effectiveness due solely to the use of the radio fuze as compared with previous equipment.

The radio proximity fuze was America's answer to the dive bomber, most deadly and terrifying weapon of the Axis in World War II.

The strategic military importance of the radio fuze, coming as it did at a highly critical moment of the war, is absolutely second to none.

At the heart of this outstanding device, gravely written off by Nazi scientists as "impossible," is the tiny radio tube designed and built by the men and women of Sylvania Electric Products, Inc. Not only did Sylvanians make a large share of the complete fuzes, but they manufactured every fuze tube used by the Navy from January, 1944 until victory. The Germans had concluded that even if such a tube could be made in the laboratory it never could be manufactured in sufficient quantities to be an effective war weapon.

Sylvania scientists in cooperation with members of the OSRD staff were the ones who achieved the goal of a tube that would work under the conditions demanded of the fuze. They contributed with associates in the industry to the invention of the fuze itself; and Sylvania's production men and women achieved the production rate of a million tubes every $2\frac{1}{2}$ days, two-thirds the rate of tube production of America's entire peacetime radio industry.

TUBE VERSUS BOMBER

In material terms, a tube one-third the size of a cigarette was thrown into battle January 5, 1943,[1] against the screaming Axis dive bomber, the hitherto irresistible blitzkrieg weapon that had already destroyed the French Army, routed the British at Dunkirk, scuttled a United States Fleet at Pearl Harbor, and sunk the British Navy's mighty dreadnaughts *Prince of Wales* and *Repulse*—a tiny tube against the dive bomber; and the tiny, titanic tube won.

At Sylvania, there were miracles of imaginative creation, miracles of invention and design, and miracles of production and management. Every experienced production manager was working as never before on war projects, but more were needed. Men who had been foremen or accountants were enabled by intensive training to take responsible positions in plants employing hundreds or even thousands of employees.

Thousands upon thousands of women who had never performed such work—many who had never been inside a factory before—rallied to the call for help on essential war work and in a space of time that before the war would have seemed impossible had learned to assemble the intricate tubes and fuzes.

Highest job priority ratings were given to the work. Housewives, schoolgirls, secretaries, women from almost every walk of life streamed into Sylvania plants from the hills of Kentucky to the seacoast of Maine.

* * * * *

History alone can determine what weapon won the war, and even history's verdict may be indecisive. There is credit enough for all. In judging the importance of the radio proximity fuze, it is necessary only to consider five facts:

1. It provided decisive help in winning the Battle of the Bulge.

2. It helped neutralize the V-1 over Britain and made it possible to keep the port of Antwerp from destruction by this weapon. If the Germans had put Antwerp out, Allied offensives would have been stalled for lack of regular supplies.

3. It checkmated Japanese planes and dive bombers, and was the factor that permitted Admiral Halsey's fleet to steam off the Japanese shore in relative security.

4. Because of the timeliness of its perfection and Sylvania's ability to supply it in needed quantities, it proved to be of superlative strategic importance.

5. The radio proximity fuze by paralyzing the activities of Japanese air power permitted American naval and army forces to set the stage for the application of the final treatment—the atomic bomb.

[1] The U. S. S. *Helena* used it in the Pacific.

## Favoritism in the Discharge of Servicemen

REMARKS
OF
### HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. SPRINGER. Mr. Speaker, there is little wonder that our boys who are still in the service, but who are entitled to release and discharge, are greatly discouraged and despondent because they cannot come home. Many of the GI's have more than enough points for discharge, but they are not being sent home. Many others who have less than enough points for discharge, or who appear to have some unknown preference or priority, are being sent home ahead of those eligible for discharge.

Recently it was discovered that 54 football players, of the Hawaiian football team, many of whom lacked many points for discharge, were flown back to this country just as soon as the football season closed. These football players were flown back ahead of 13,400 veterans, all of whom had high points sufficient for discharge. This preferential treatment is entirely unfair.

Pfc Jack MacNider, a son of Gen. Hanford MacNider, was flown back home, although he had only 38 points, while 50 points are required for discharge. This was done, it is said, at the request of General MacNider in order that his son can continue his medical studies. Young MacNider is returned, while untold thousands of our boys, with more than 50 points, and who desire to continue their education, both in high school and college, are forced to await transportation. When our boys ask their superior officers, "when they will get to return home," the usual response is, "There is no transportation available." This preferential treatment of a few of these men in the service is breaking the morale of our boys who are still waiting for a chance to get home and who are entitled by all of the rules of the game to come home.

Today I read in the daily papers that S2c Paul T. Stewart, the son of Senator STEWART, of Tennessee, who has but 18 points, and has been overseas less than 9 months, has been returned to this country. The servicemen's newspaper has reported that young Stewart "bragged to all hands about his connections that swung the deal." This 18-year-old boy, the son of a United States Senator, is brought back to his homeland while the real veterans of this war, with points far in excess of the number required for discharge, have to remain on foreign soil—some of them separated from their wives and families, and all of them entitled to be returned, under the point system, to this country. It is my considered judgment that this discharge system has been terribly bungled. This preferential treatment must be stopped. Is there any wonder that the morale of our veterans with high points is low and that they are disgusted over this very unfair treatment?

Mr. Speaker, I urge—yes; I demand—that this very unfair preferential treatment of the boys "with a pull" be discontinued, and that our boys be returned to their homeland and to their homes in an orderly manner and in the manner indicated by the War Department under the point system, and with hardship cases standing on the merit each one deserves from the evidence presented. Any further favoritism shown in the matter of discharging our boys from the service must be entirely eliminated. Such a policy is entirely revolting and unfair.

Mr. Speaker, with my remarks herein, I ask unanimous consent to include three newspaper articles bearing upon this same subject, which read as follows:

ONLY 13 WERE ELIGIBLE—WAR DEPARTMENT PROBES RETURN OF 54 FOOTBALL PLAYERS—CONGRESS TOLD LOW-POINT ATHLETES WERE FLOWN AHEAD OF 13,400 VETERANS

The War Department disclosed last night that it is investigating the return to this country of 54 members of the Army Air Forces Hawaiian football team, many of whom lacked sufficient points for discharge.

The action followed blistering congressional criticism of the players' reported return.

QUOTES STARS AND STRIPES

Representative MONRONEY, Democrat, of Oklahoma, quoting from the mid-Pacific edition of the Army newspaper Stars and Stripes, charged in the House Wednesday that the men were flown back to this country just as soon as the football season ended in Hawaii November 12. He said only 13 of the players had enough points for discharge.

MONRONEY said that at the time the men were flown back 5,154 high-point veterans were awaiting transportation in Hawaii and 8,313 in Saipan and New Caledonia.

Sid Carroll, general manager of the Washington Redskins, told the Times-Herald yesterday that Bob De Fruiter, halfback now playing with the Redskins, had been a member of the Army Air Forces Hawaiian team, which recently was returned by air from Hawaii.

DE FRUITER'S CASE EXPLAINED

He added: "De Fruiter was flown to Hawaii in December 1944 to play in a military bowl game there for the Army. Some of the 54 players were returned to the States after the game and some were ordered stationed in Hawaii." Carroll added that De Fruiter would be eligible for discharge from the Army in January under the point system.

The War Department said in a statement that the theater commander, Lt. Gen. Robert C. Richardson, had been asked for a report on the matter.

---

MACNIDER FLIGHT HOME OFFERED BY MACARTHUR

TOKYO, November 28.—Gen. Douglas MacArthur offered to arrange air transportation to the United States for Marine Pfc Jack MacNider, 18-year-old son of Brig. Gen. Hanford MacNider, but had no knowledge of his subsequent discharge, a spokesman said today. MacNider had 38 points, although 50 are required for discharge.

The spokesman's statement was made in response to queries prompted by a Marine Corps announcement in Washington that young MacNider was returned from Tokyo and discharged at the request of General MacArthur.

The MacArthur spokesman said the supreme commander's only part in the matter was to send the following radiogram to Marine Commandant Lt. Gen. A. A. Vandegrift at the father's request:

"MacNider very anxious to bring his son, Pfc Jack MacNider, Fifth Marine Division, now on furlough Tokyo, back with him to the United States to continue medical schooling. If you can authorize such procedure, I'll be glad to arrange air transportation for return with his father to United States where he will report to any station you may designate."

The spokesman said MacArthur "had no administration over Marine Corps personnel and the radiogram speaks for itself."

---

18-POINT SON OF SENATOR HOME—BOASTS FATHER IS STEWART, OF TENNESSEE

HONOLULU, November 29.—The Army newspaper Stars and Stripes said tonight that S2c Paul T. Stewart, 18, son of Senator STEWART, of Tennessee, has been ordered returned to the mainland from Hawaii, although he has only 18 points and has been overseas less than 9 months.

Stars and Stripes said young Stewart has been recommended for assignment to Norfolk, Va., although Navy policy has been not to reassign men to the States until they have been overseas 18 months.

The servicemen's newspaper said a letter to the paper said Stewart had been "bragging to all hands about his connections that swung the deal."

The commanding officer at the Waipio amphibious operating base where Stewart is stationed said, "Had I known all this sooner I'd sent him to a forward area."

---

## Mrs. Mabel T. Boardman Answers Mrs. Agnes Meyer's Attack on the American Red Cross

---

REMARKS

OF

## HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. RANKIN. Mr. Speaker, only a few days ago it was my privilege to rise on the floor of this House and defend the Daughters of the American Revolution against communistic attacks.

Today it becomes my duty to defend the American Red Cross against the attack by Mrs. Agnes Meyer, wife of the owner of the Washington Post. This attempt to discredit the Red Cross forcefully reminds us of those smear attacks made by this same Mrs. Meyer against the white people of the South a few months ago.

I know that these advocates of UNRRA want to discredit the American Red Cross, because many Americans—and I am one of them—want to turn these funds over to the Red Cross in order that we may not have the scandals of graft, fraud, and racketeering that are now coming out against UNRRA.

There will be no scandals, there will be no slander, there will be no graft or racketeering if this money is turned over to the American Red Cross, which organization would see to it that the hungry people of Europe are fed.

Remember that when disaster comes to your community, as it has come to mine, the Red Cross will be there, like angels of mercy, to minister to the sick or injured, and will remain until the last victim is cared for.

The following letter from Mrs. Mabel T. Boardman is a complete answer to Mrs. Meyer's attack:

The American Red Cross, since its reorganization, in 1905, has aided nearly 10,000,000 victims in approximately 6,000 disasters. For this purpose it has expended well over $100,000,000. This did not include the expenditure of local chapter funds for the same purpose. In addition, it expended in the First World War $273,000,000, and in the Second World War has expended considerably over $200,000,000 a year.

The American Red Cross has a membership of from 15,000,000 to 20,000,000 adults and approximately the same number of junior members. Considering these facts, it is difficult to take seriously the charge that it is undemocratic. It also seems slightly ridiculous to say that the Red Cross is afraid that labor may gain a foothold in its management, since the Red Cross years ago put labor-union leaders on its board of incorporators.

By its charter from Congress it is required that Red Cross receipts and expenditures be audited by the War Department.

The central committee, or governing body, consists of 18 members. Of these, the President of the United States, who is also president of the America Red Cross ex officio, appoints 6—the chairman, and representatives of the State, Treasury, War, Justice, and N vy Departments. Six are elected by the board of 65 incorporators, and 6 are elected by the delegates of its 3,757 chapters. The chairman of the central committee is chief executive officer.

The members of the governing body have lately been entitled by a writer as "old fuddy-duddy leaders." It will be interesting to note who these 18 "old fuddy-duddies" are: The chairman, Basil O'Connor, was appointed by the late President Roosevelt, of whom he was a former law partner, upon the death of Norman Davis, in July 1944. The members are Mr. William Clayton, Assistant Secretary of State; Hon. Daniel W. Bell, Under Secretary of the Treasury; Maj. Gen. Norman T. Kirk, Surgeon General of the Army; Hon. Tom C. Clark, Attorney General of the Department of Justice; Vice Adm. Ross T McIntire, Surgeon General of the Navy; James B. Forgan, vice president and director of the First National Bank, Chicago, Ill.; Arthur Hays Sulzberger, president and publisher of the New York Times; Edward Dana, railway executive and banker, Boston, Mass.; Lloyd B. Wilson, president of the Chesapeake & Potomac Telephone Co., Washington, D. C.; Mrs. Dwight Davis, former director of the Volunteer Special Services, American Red Cross; Mrs. Mason Colt, former deputy commissioner of the American Red Cross in London, World War II, now, director of Volunteer Special Services, American Red Cross; Dr. Oliver C. Carmichael, president of the Carnegie Foundation for the Advancement of Teaching; George L. Harrison, president and director, New York Life Insurance Co.; Charles H. Kellstadt, former chairman of the Cleveland (Ohio) chapter; Harry L. Hopkins, former Secretary of Commerce; Gurney Newlin, lawyer and banker, chairman of the Los Angeles chapter; Mrs. William O. Rowland, Jr., vice chairman of the Philadelphia chapter. The approximate average age of the present central committee is 55½ years.

The country is divided into five areas to facilitate rapid action in case of serious disasters, and in addition there are the insular and foreign operations departments. Under the regulations of the Red Cross, members of the Central Committee may be elected for only three terms, each term consisting of 3 years. Therefore, no member of this governing board has served over 9 years and the regulations do not permit anyone over 59 years of age being elected for the first term on the Central Committee.

As to the suggestion for State councils, this proposed organization was originally tried by the Red Cross and proved unsuccessful. In all larger States it was found impossible to secure meetings of the State groups. Annual meetings of chapter delegates with the Central Committee and other national representatives were arranged. These meetings have been held in Washington, D. C., Chicago, St. Louis, San Francisco and various other localities. During the war, because of governmental requests for limiting travel, the national convention has not convened, though State and regional meetings have been held.

The speaker I quote refers to the fact that labor assistance to the Red Cross has been presented in a "biased light." I see no foundation for this statement, as only the facts of the labor agreement were given.

As to the speaker's recommendation for the future reorganization of education, health, welfare services, that may be left to the consideration of those best qualified from experience to study and plan such reorganization to meet the needs of community, Nation and the world.

MABEL T. BOARDMAN.

WASHINGTON, *November 21.*

## Transportation Home for Military Personnel

REMARKS
OF
**HON. JOHN C. KUNKEL**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. KUNKEL. Mr. Speaker, conditions at Leyte in respect to the return of troops apparently are the same as those existing in Manila, Okinawa, Wakayama, and other ports all over the world. There seems to be a great deal of misinformation being given out officially regarding conditions there. Here is a quotation from a letter written November 9, 1945, by one young man now being held there. It was written to his parents, and given to me by his parents:

When I last wrote I told you that in the past week 250 men had been sent home from this outfit. That was 2 weeks ago. Since then 550 additional men have gone. Our battalion receives 25 percent of all shipping space leaving the island of Leyte, so you can see for yourself how many soldiers have been repatriated in the last month. To rub salt into this wound—read in a news clipping that in one of those weeks military authorities announced that 17,000 men had left this island. Even counting the men who left with the Thirty-first Division, I don't see how this amount of shipping could come anywhere close to that figure. The Thirty-first Division, I had better say, is supposed to have been shipped as such, and not through any of the replacement units.

Yet every day almost, and we have this from members of the ships' crews, ships leave the harbor at Tagloban with comfortable berths for 40 or 50 additional men.

Why then should it be that one out of nine Liberty ships being counted in this harbor is scheduled to return personnel to the United States, while the others are to be used for prisoners-of-war transports? You should see the Japs on this island, incidentally. They live better and do less work than we do.

Mr. Speaker, it is time for the President, who is still the Commander in Chief of the Army and Navy, just as much as he was last summer and fall, to show at least a little interest in executing the laws of the land by requiring the Army and the Navy to obey their own rules and regulations. Legislation will not fill boats with American soldiers, nor will it bring them across the ocean unless those charged with the duty of carrying out the will of Congress actually do the job.

## Well-Timed Award

EXTENSION OF REMARKS
OF
**HON. RAY J. MADDEN**
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. MADDEN. Mr. Speaker, the Congress and the Nation fully appreciate the great service rendered by ex-Secretary of State Cordell Hull toward future world peace. Mr. Hull's name takes a place in American history toward the top of the long list of outstanding American statesmen who helped place this country as the world's most powerful Nation.

We heartily endorse the sentiments set out in the following editorial by H. B. Snyder, editor of the Gary Post-Tribune, Gary, Ind.

WELL-TIMED AWARD

It is not always that public homage is as nicely timed as it was in the Nobel peace prize award to Cordell Hull. The honor comes to him soon after the close of an active, distinguished career that included more than 50 years of public service. It also comes at a time when the United Nations Organization, for which Mr. Hull deserves major credit, is assuming new importance.

It is generally conceded that Mr. Hull took the United Nations over the first and highest hurdle in the path of world organization when he went to Moscow 2 years ago. His diplomatic success there especially with the somewhat reluctant Foreign Commissar Molotov and Premier Stalin paved the way for Dumbarton Oaks and San Francisco.

The actual ratification by the United Nations of the Charter drawn up at San Francisco came at a time of strained relations among the Big Three, and aroused little enthusiasm. Since then, however, it is becoming more and more apparent that the threat of atomic destruction must be solved within the framework of the United Nations Organizatio. which Mr. Hull fathered.

Thus the Nobel award comes near the flood tide of world appreciation for Mr. Hull's work. We hope that the award will serve as a tonic to speed his convalescence from the long illness that forced him to leave public life, and that his wise counsel will long be available to those who carry on the work that he began.

## Saving Our Precious Soil

EXTENSION OF REMARKS
OF
**HON. BEN F. JENSEN**
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I include a letter from Mr. T. J. Powell, a most able and conscientious district conservationist, also newspaper clippings relative to prizes won by farmers in my district for proper soil conservation practiced in cooperation with Mr. Powell and his able staff of district commissioners. Being a stanch advocate of soil conservation myself, it goes without saying that I am proud of the fact that farmers in my district won these prizes. All of the 14 counties in the Seventh Iowa District, which I have the honor to represent in Congress, are organized into soil-conservation districts, and the very effective work to conserve our precious soil by the farmers and the men in the Soil Conservation Service deserve the highest commendation by every American who wants our rich soil preserved for posterity.

UNITED STATES
DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
*Shenandoah, Iowa.*

Hon. EEN JENSEN,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. JENSEN: In September I sent you the story about the World-Herald soil conservation contest. All the districts in Nebraska were eligible to enter the contest. The 15 districts in southwest Iowa were eligible and all 15 of them entered the contest. The premium money is $500 to two winning districts in Iowa and to eight districts in Nebraska. The contest is about closed.

The awards will be made and released to the press within the next 10 days. * * * Page County and Mills County are the winners in Iowa. You will note that both of these districts are in your congressional district, also in my work group.

The award is $500 to each winning county for the commissioners to use as they see fit in promoting soil conservation in their respective districts. When the World-Herald makes the announcement I will send you a copy of the release.

The district commissioners in Page County are Joe O'Hara, Jr., Shenandoah, Iowa; V. E. Lewis, Villisca, Iowa; and Dave Cutter, Shenandoah, Iowa; and the three farmers who made the county a winner are John S. Snyder, Shenandoah, Iowa; Paul G. Williams, Villisca, Iowa; and Verne E. Lewis, Villisca, Iowa.

In Mills County the commissioners are J. F. Wearin, Jr., Hastings, Iowa; Dallas N. McGrew, Henderson, Iowa; J. M. Steele, Malvern, Iowa; and the winners' names in Mills County are Harry F. Clark, Malvern, Iowa; Reuel T. Harman, Tabor, Iowa; and J. F. Wearin, Jr., Hastings, Iowa.

It is interesting to me to note that a commissioner in each of the counties is also the man whose farm was used in the contest. I am very proud of having these awards won in my work group. No doubt you will want to show this information to some of your friends in Congress.

Hoping to see you during the holidays, I am,

Very truly yours,

T. J. POWELL,
*District Conservationist.*

IOWA COUNTY FIRST TO PICK SOIL LEADERS

(By Carl Deitemeyer)

The first district to announce its three leaders in the World-Herald $5,000 soil-conservation contest is Mills County, Iowa.

The leaders are Harry F. Clark, Malvern; Reuel T. Harmon, Tabor, and J. F. Wearin, Jr., Hastings.

Mr. Clark is the dean of the soil conservationists in Mills County. At 75, he is actively working the farm he purchased 57 years ago.

His farm is representative of the rougher land of the county. Mr. Clark has constructed 6½ miles of terraces to hold moisture and prevent soil erosion.

ACCOMPLISHMENTS LISTED

His soil-conservation accomplishments are: Crop rotation on 107 acres; terraces on 75,500 feet of waterway, 14 acres of permanent seeding, contouring 50 acres a year until farm is completed, 50 acres of crop-residue management, 39 acres of rotation hay and pasture, 80 acres on lime application, 35 acres in which livestock harvest the crop; fence construction, removal, and field arrangement.

The cost has been $1,473.

Mr. Clark says, "Sure soil conservation pays." During the first years he farmed his place corn yields ran from 25 to 40 bushels per acre. Corn yields the last few years have run from 75 to 80 bushels. His other crop yields also have been boosted.

"On my farm I can prove to any man that conservation pays," he says. "If all farmers in the Missouri River watershed would practice conservation, there would be but little need for extensive flood-control work."

NINETY-EIGHT PERCENT COMPLETE

Mr. Harmon has completed 98 percent of his soil conservation work since January 1945. He first became interested in 1942, and planned his first contouring. The results were so good that he decided to go all out this year.

His soil conservation accomplishments are: Constructed 6½ miles of terrace, removed 400 feet of fence and constructed 400 feet more; changed field arrangement on 127 acres; seeded down 33 acres; contoured 127 acres; practiced crop residue management on 127 acres; 45 acres in rotation hay and pasture.

His total cost was $1,174.

All feed he raises is marketed on the hoof. He finishes about 75 head of steers and 135 head of hogs each year. The livestock is fed on pasture and all rough forage is fed out. He takes pride in the fact that no crop residue has been burned on this farm since he purchased it.

WINNER IN OTHER FIELDS

Mr. Harmon has also won honors in other fields. In 1928 he was the Iowa State cornhusking champion, and he placed fifth in the national cornhusking contest that year. This year he placed third in the Cass County terrace building contest.

Mr. Wearin was born in Mills County in 1913, and spent his boyhood there. He holds a degree from Chicago University.

He has been farming on a bottom-land farm since 1937. Since 1942 he has developed a soil-conservation program. This meant changing the type of farming, field divisions, and cropping practices.

His accomplishments: Five and one-half miles of terraces on 30 acres of land; 2,600 feet of grassed waterway; 1,050 feet of diversion ditch; 500 feet of drainage ditch, 365 acres contoured and crop-residue managed; lime applied on 55 acres; 280 rods of fence removed, and 420 rods constructed.

His total cost, $1,381.

DISTRICT COMMISSIONER

Because of his interest in soil conservation, he was elected district commissioner of the Mills County District in 1941 and reelected in 1945. At present he is serving his fifth year as chairman of commissioners.

In the spring of 1945, Mr. Wearin was elected chairman of the Southwest Iowa Association of Conservation Districts. He was also a pioneer in developing the Mills County method of terrace construction.

State judging committees of Iowa and Nebraska have urged all districts to submit their winners as soon as possible. The dead line is October 15. The State committees will make their selections immediately after that.

Ten awards will be given. Two Iowa districts will receive $500 each, and eight districts in Nebraska a like amount each.

---

CONSERVATION GAINS IN IOWA—59 DISTRICTS EXIST; 9 BEING FORMED

Iowans are fast becoming more soil-saving conscious.

To date there are 59 soil-conservation districts in the 99 counties of the State. State Conservationist Frank Mendell, Ames, reports that landowners in nine other counties are circulating petitions for formation of districts.

Fifteen of the 59 districts in southwest Iowa are competing in the World-Herald's soil-conservation contest. Prizes of $500 each will go to 2 of the 15 districts whose members have done the best job of soil and moisture saving this year.

VETERANS IN WORK

Tuesday the Page County District commissioners announced their leaders in the World-Herald contest. Named were Paul G. Williams, Villisca; John S. Snyder, Shenandoah; and Verne E. Lewis, Villisca—all veterans in soil-saving operations.

Mr. Williams got his start when he was county agent of Shelby County. He started farming for himself in 1929.

His farm was rough. Straight farming was suicide, he said. Since 1932 he has performed all of his tillage operations on the contour.

In 1933 he built his first terrace with a Texas terracer. In recent years he has switched to the moldboard plow.

CCC CAMP HELPS

In 1936 Mr. Williams, aided by CCC camp workers, did some gully-control work by planting trees. In another field a pasture gully was controlled with a concrete drop inlet dam. Control of erosion is now 100 percent.

There are over 16 miles of terraces on his 580-acre farm.

To build up soil fertility, over 700 tons of lime have been spread. Practically all waterways are seeded to bromegrass.

The farm is essentially for livestock. He raises over 500 head of hogs a year, has never sold a bushel of corn.

Mr. Snyder started his conservation program in 1934. His farm of 160 acres now has more conservation practices, both in number and amount, than any other farm in southwestern Iowa.

BUILT TERRACES HIMSELF

Eleven miles of terraces have been built by Mr. Snyder himself. He has built 160 rods of contour fencing to facilitate the livestock-grazing program.

All waterways are sodded and no gullies exist anywhere. A wildlife area of about 2 acres was planted along a drainageway. It has become a good wildlife refuge.

One slope on the farm was considered too steep for regular rotated crops. It was terraced and seeded to permanent pasture.

Lime has been an important part of the program. Over 320 tons have been spread in the past 10 years.

Mr. Lewis started his program in 1935. The farm covers only 120 acres, but erosion problems were all out of proportion to the size of the farm.

GULLY CONTROLLED

There was one bad gully which had forked and eroded for several hundred yards up two drainage ways. Fourteen acres were fenced for a planting of black locust trees in 1937. Since then the banks of these gullies have sodded completely over. Erosion is under control. Last winter part of this stand of trees was harvested for posts.

There is a stock water pond near the buildings where part of the terrace system empties. Along with the terrace system, a strip-cropping program is used.

Contour pasture furrows were installed in the permanent pasture in 1937.

During the last 10 years he has spread 225 tons of lime on all crop and pasture land.

---

GOOD CORN DRYING WEATHER IN IOWA

DES MOINES, IOWA.—Good weather conditions for drying the wettest corn crop in many years prevailed throughout the week ended Sunday.

The Weather Bureau reported Wednesday that temperatures and sunshine averaged near normal and winds helped dry the crop.

## Mr. Hurley's Charges

EXTENSION OF REMARKS
OF
## HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of November 28, 1945:

MR. HURLEY'S CHARGES

The gist of Mr. Hurley's charges, in announcing his resignation as Ambassador to China, is that a Roosevelt-Hull-Truman-Byrnes foreign policy which he heartily endorses is being sabotaged in Asia, and particularly in China, by officials in the lower ranks of the State Department and the diplomatic service, and that the result is to encourage simultaneously both "colonial imperialism and Communist imperialism." This charge covers a good deal of ground, and in view of the gravity of his accusations it seems to us that Mr. Hurley ought to be more specific than he has permitted himself to be in most of what he has to say. He is, however, entirely specific on one point. This is his charge that while he was attempting, on official instructions, to help negotiate a settlement between the Chinese Nationalists and the Chinese Communists "our professional diplomats continuously advised" the Communists that his efforts to prevent a collapse of the Nationalist Government "did not represent the policy of the United States," and that the same diplomats further advised the Communists "to decline unification of the Chinese Communist Army with the Nationalist Army unless the Chinese Communists were given control." On this point Secretary Byrnes will doubtless wish to look into the record, and in due course give assurance to the country, by one means or another, that policy adopted at the top is actually followed faithfully down the line.

For the present, the net effect of Mr. Hurley's statement must be to increase current confusion about our policy in China, and at the same time emphasize the need of a new statement, either by the President himself or by Mr. Byrnes, which will clear the air. The prompt appointment of General Marshall as Mr. Hurley's successor provides the occasion for such a statement. And certainly the fundamentals of our policy, as shaped by our pledged word, by our long friendship for China and by considerations of our own self-interest, can be stated plainly.

We are committed to the unification of the whole of China, Manchuria included. We are pledged to the abolition of all spheres of foreign influence within China, and of extraterritoriality and all other special foreign

privileges. We hope for a fair and generous settlement of the long dispute between the Nationalists and Communists, but we do not believe it is possible to have a unified China with two independent armies in the field. As between Nationalists and the Communists we have recognized, and we shall continue to recognize and to support, the Nationalists as the legitimate Government of China. A limited number of American troops are now in China, not to aid that government in fighting the Communists, or to take part in Chinese civil war, but to complete the Japanese surrender there in conformity with obligations formally assumed by the American Government. In the performance of that duty they are entitled to understanding and support at home.

## Refund of Retirement Deductions

EXTENSION OF REMARKS
OF
**HON. JOHN W. McCORMACK**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

UNITED STATES CIVIL
SERVICE COMMISSION,
*Washington, D. C., November 19, 1945.*

Hon. JOHN W. McCORMACK,
*House of Representatives.*

DEAR MR. MCCORMACK: You have been receiving an increasing volume of letters and calls from your constituents regarding delays in obtaining refunds of retirement deductions.

Naturally, the Commission is concerned over this increased correspondence, and it has been endeavoring to find out what it can do about it. It has already taken steps so far as its own force is concerned; but in order for these refund claims to be paid promptly, it will be necessary to get more expeditious reporting of them from the places of employment.

To get at the root of the problem, our Retirement Division has carefully analyzed the 23,000 claims certified to the Treasury Department during the second and fourth weeks of October. This analysis clearly reflects that there are two significant time factors in processing refund claims. These are:

(a) The time required by the employing agency to furnish the Commission with the record of pay-roll deductions and the application for refund following the date of separation of the employee;

(b) The time required by the Commission to examine the claim for its validity and to certify the claim to the Treasury Department for payment.

The analysis of the 23,000 claims shows that 58 percent were received in the Commission from the agencies 3 months or more after separation; that 22 percent were received in the Commission 6 months or more after separation; and that 6 percent were received 1 year or more after separation.

The same record shows that 66 percent of the claims were paid during the same calendar month that the claims were received in the Commission, and that 27 percent were paid in the first calendar month following the date the claims were received in the Commission. We have recently installed an assembly line operation which completely processes 80 percent of the claims received from the agencies within four working days. The remaining 20 percent take a somewhat longer period depending upon the need for obtaining additional information, offsetting Government claims, locating prior records, etc. This improved procedure will have the effect of greatly accelerating processing time within the Commission.

The necessity for paying refund claims with greater promptness becomes more significant as each month passes when we consider it is anticipated that 900,000 employees will leave the Federal service throughout this fiscal year because of reductions in force. Separated employees will need the refunds due them to tide them over between loss of Federal employment and reestablishment in private industry. It is most important that each agency of the Government, including the Civil Service Commission, handle applications for refund with the realization that they owe these separated employees an obligation to process their claims with maximum speed.

It needs to be pointed out that regardless of how rapidly we in the Commission do our share of the load, you will continue to receive an unduly large volume of complaints from your constituents unless the agencies forward the applications for refund and the pay-roll deduction records to us much more promptly than is reflected in this study of claims.

This letter is being sent to each Member of Congress, and a copy is being sent to each department and agency head with a letter showing the precise record made by each agency in the handling of applications for refund.

Sincerely,

HARRY B. MITCHELL,
*President.*

NOVEMBER 29, 1945.

Hon. HARRY B. MITCHELL,
*President, Civil Service Commission,*
*Washington, D. C.*

DEAR MR. MITCHELL: I am in receipt of your most interesting and informative letter of November 19, 1945, relative to the efforts of the Civil Service Commission to expedite consideration of the payment of refunds of retirement deductions.

I want you to know that I consider your letter to be excellent because it conveys to me the information that the Commission is acting upon these applications for refunds as soon as possible and that the delay is caused elsewhere than at the Civil Service Commission.

I believe your letter contains much information of value and if it is not already a part of the CONGRESSIONAL RECORD I shall insert it therein.

With kind regards, I am,

Sincerely yours,

JOHN W. McCORMACK,
*Majority Leader.*

## The News Behind the News

EXTENSION OF REMARKS
OF
**HON. ROY O. WOODRUFF**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend by remarks in the RECORD, I include the following newspaper article by Paul Mallon:

THE NEWS BEHIND THE NEWS
(By Paul Mallon)

WASHINGTON, November 29.—A photographically nosey weekly magazine is out currently with a yarn that Washington and Congress have begun to turn against President Truman; that the Truman policy of getting good men and letting them have their heads in the Cabinet and sub-Cabinet is not working out efficiently, presumably because the men are not good enough; that the departure of Judge Rosenman, the Rooseveltian fixer and the arrival at the Presidential right hand of George Allen, a fine democratic fellow, presages trouble; that the Republicans have awakened to expectations of victory—and so on.

That is not the way I get it. Such a picture presents merely the visible froth of a boiling internal condition of the Government; true as far as it penetrates, but not penetrating. More thorough digging would reveal the matter something like this:

A tremendous inner struggle for direction of President Truman is going on between the old Roosevelt crowd and the party people; it ebbs and flows from week to week, day to day, and has not been concluded.

The Ickes-Wallace wing in the Cabinet, together with the old New Deal clique in Congress, view with alarm the fact that the Roosevelt policies are not popular in the country and they are inclined to blame Truman. When they dare not express themselves openly, they spread their viewpoint in private and it reaches print in forms like the above-mentioned magazine story.

It is customary in politics for parties to follow their great beyond the grave. The Republicans ran on Abraham Lincoln for more than 50 years. The Rooseveltian associates would like to build up a political legend like that for the Democrats.

Unfortunately the times today do not fit the Roosevelt labor and spending doctrines, which were contrived for an era of depression and seem foolish in a postwar era of inflation.

Now Mr. Truman has followed and fought for every one of those policies from unemployment insurance and full employment (while there are still many more jobs than workers) up to spending (keeping his budget more than double Roosevelt's greatest peacetime expenditure). And he is maintaining expenditure at a time when purchasing power is much too strong for the amount of goods available.

He wanted to give labor a tremendous wage increase, and permitted the issue to go to negotiations, only when associates convinced him such a boost would add to purchasing power during the shortage of goods and surely bring inflationary ruin.

Thus he has doggedly stuck to a losing game, the Roosevelt game, and with normal human perversity, the New Dealers blame him because their program failed to hold water. He did not "fight enough," they say.

Rosenman has now gone home for the final time, they also say. (He worked up the Roosevelt CIO-labor-spending program for Truman.) But Ickes, Wallace, and the New Dealers are still around, and as for the political angle, Democratic Chairman Bob Hannegan is heavily and exclusively playing the Roosevelt game, trying to save the Pearl Harbor inquiry from too much inquisitiveness, lauding Mrs. Roosevelt, etc.

Now Congress is scared of this, which it sees. Congress faces the polls next year, long before Truman. Congressmen are preponderantly against the program and would take leadership openly to face the economic facts of the hour, but they feel the necessity for political caution. They are trimming expenditures, delaying the CIO bills—but quietly.

The worst of the matter is labor picked a bad time to strike. With people panting for automobiles, and the Nation eager for humming production in all lines; high prices going higher and higher, money, money, money everywhere anxious to be spent—the unions stop production.

Their strikes, therefore, developed the nature of revolt against the public, the Government, and postwar success of the Nation. If

they had waited until purchasing power started to lag, and the goods shortage was absorbed by production, they would have had a better case, and would have gained public support.

This is the long running inner condition, which, as I said, fluctuates from week to week. Published political prophesies about Mr. Truman, then, merely represent pressure to force him to act one way or another.

## Veterans Given Greater Opportunities To Buy Surplus Goods

EXTENSION OF REMARKS
OF
### HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. HAGEN. Mr. Speaker, in a recent issue of the CONGRESSIONAL RECORD I reprinted a statement relative to veterans buying of war surplus, made at the recent American Legion convention in Chicago, by Mr. Joseph Leib, a service officer of the Legion Post No. 15, Department of the District of Columbia.

I was prompted to do so by the many letters which I have received from veterans of World War II who have been frustrated in their efforts to secure surplus property, even though they were given priorities.

Some criticisms would appear to be partly justified, but not altogether so. Although the veterans are not getting the break they are entitled to, it is not the fault of the Surplus Property Administration, according to a letter received by me this morning from Mr. W. Stuart Symington, Administrator.

In fairness to the Surplus Property Administration, I am reprinting his excellent letter addressed to me under date of November 30. It follows:

SURPLUS PROPERTY ADMINISTRATION,
*Washington, D. C., November 29, 1945.*
Hon. HAROLD C. HAGEN,
*Congress of the United States,*
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN HAGEN: Our attention has been called to the extension of your remarks in the CONGRESSIONAL RECORD of November 20 entitled, "Workable Plan Necessary to Sell Surpluses to Veterans," in which you incorporated a statement by Mr. Joseph Leib, past vice commander and present service officer of the Vincent B. Costello Post, No. 15, of the American Legion, District of Columbia.

There are several points in Mr. Leib's letter on which we should like to comment.

Devising a workable plan to insure veterans being able to purchase surplus property has been the most difficult problem faced by the Surplus Property Administration and its predecessor, the Surplus Property Board. Mr. Leib has stated "the high priority which the United States Government solemnly promised the veteran of World War II * * * has become * * * a mirage."

Specifically, the Surplus Property Act of 1944, section 16, prescribed "The Board shall prescribe regulations to effectuate the objectives of this act to aid veterans to establish and maintain their own small business, professional, or agricultural enteprises, by affording veterans suitable preferences to the extent feasible and consistent with the policies of this act in the acquisition of the types of surplus property useful in such enterprises."

The act also prescribed in section 12 and in section 13 that priorities in the purchase of surplus property be set up by regulation giving priority to (1) the Federal agencies and (2) State and local governments and their instrumentalities. Thus it can be seen that the "high priority" mentioned by Mr. Leib is, in fact, a No. 3 preference. Also, when you consider that there are approximately 285,000 claimant agencies, either Federal, State, or local Governments and their instrumentalities, which exercise priorities ahead of the veteran, it can be readily seen why the veteran has his difficulties under this act.

This problem of priority was one of the difficulties we faced several months ago when we sat down to work out a revision of Surplus Property Board regulation 7, the veterans' preference regulation. On October 10 the revised regulation implementing the Surplus Property Act of 1944 in respect to veterans' preferences was announced.

This new regulation contained many liberalized provisions to help the veteran. Directly to the point erroneously made by Mr. Leib in his letter to you, this new regulation removed the $2,500 limit on the veterans' purchase.

The statute and new regulation 7 give the veteran the following rights:

1. The statute authorizes SWPC to buy for small business when, in the judgment of SWPC, such purchase will strengthen the competitive position of small business. If a veteran is a small businessman, SWPC can purchase under its No. 1 Federal priority for resale to the veteran under such circumstances.

(Under the old SPB regulation, veterans could acquire property only in this way. The new regulation has not taken away this right under the statute, and also gives additional methods to purchase.)

2. Under the new regulation the veteran as a veteran can buy directly from the disposal agency, this after he has been certified by SWPC as a veteran and shows that he needs the property for business, professional or agricultural use. This right to purchase direct is given a preference, as Congress specified, immediately following the priorities of the Federal agencies and State and local governments.

3. Under the new regulation SWPC may act as an agent in making purchases for veterans, but in doing so it does not exercise its Federal priority. It employs the veteran's money, not SWPC money, and the sale is made directly to the veteran by the disposal agency.

That such purchases are being made is demonstrated by the recent announcement that SWPC will buy 2,500 of the first 9,100 surplus jeeps placed on the market, using their top priority as a Federal agency, and will then resell them to veterans.

As for Mr. Leib's complaint that the veterans must buy from a Federal agency, the Surplus Property Act of 1944 specifically declares that surplus goods shall be disposed of by Federal agencies named by the Administration.

Complaint is also made that "restrictions are placed upon the use of such goods. Veterans under existing regulations are not given priorities as far as clothing, furniture, food, or other types of consumer goods are concerned." In answer to this, let us cite the act which, in section 16, relating to disposition to veterans, states:

"The Administration shall prescribe regulations to effectuate the objectives of this act to aid veterans to establish and maintain their own small business, professional, or agricultural enterprises, by affording veterans suitable preferences to the extent feasible and consistent with the policies of this act in the acquisition of surplus property useful in such enterprises."

There is no provision in the act under which the Administration may sell consumer items to the ultimate consumer; to the contrary, we are specifically charged with utilizing, wherever possible, the normal channels of trade in the disposition of such items.

There is one final point of Mr. Leib's statement on which we should like to comment. This is his reference to the proposal to permit veterans to purchase surplus property from the Nation's wholesalers at lowest price made to retailers.

First, let us emphasize that this is proposed not as a substitute for, but as a supplement to, existing regulations.

One of the greatest difficulties facing veterans in purchasing surplus property is the limited number of outlets from which such purchases can be made. Even though RFC has taken over disposal of consumer goods, as well as capital and producers goods, there are still only 31 regional sales offices in the Nation through which their disposals can be made.

This means that in many cases the veteran is forced to travel considerable distances, at considerable expense, in order to examine and choose the property he needs. Sometimes such property is not exactly what the veteran wants and the expenses of his trip are lost.

An alternative solution would be the establishment by the Government of hundreds of other disposal agency sales outlets—in effect, a Nation-wide network of retail stores to sell to veterans direct at a cost of hundreds of millions of dollars to the Nation.

Another plan which we are now discussing with Members of Congress and other interested groups is the suggestion that veterans be permitted to purchase from wholesalers all over the Nation under the pricing classification of large dealers, or at the lowest price offered any retail group. This price would be offered by the wholesalers, even though the veteran's purchase was in far smaller lots than those of the large retailer.

Such a plan would tend to solve the problem of outlets, because it would offer to the veteran many thousands of points where he could purchase surplus property at a favorable price; this in comparison to the 31 outlets now available through RFC.

This plan has already been proposed to the Wholesalers Industry Advisory Committee, which has patriotically and enthusiastically agreed to cooperate with us in it.

But it should be remembered that the adoption of this plan will in no way affect existing veterans' preferences. The veteran will still be able to purchase directly from the disposal agency, or through SWPC, and at the lowest trade—or wholesale—price level. He will be permitted to exercise his choice. If it seems desirable to him to pay the profit which wholesalers regularly realize only on large lot sales, he may do so. He still has the right to travel to the regional office of a Government disposal agency and buy at the price to wholesalers himself.

This program is still only a proposal. While it offers a method of greatly expediting sales to veterans through the addition of thousands of new outlets, we realize that it still may be improved upon.

We have submitted the plan to Members of Congress and other interested groups, and are assured by Senator O'MAHONEY that his Senate committee will soon hold hearings to discuss its merits before a final decision is reached. We are anxious for such a discussion, and will welcome any comments, criticisms, or suggestions.

In conclusion, may we assure you that the Surplus Property Administration is thoroughly conscious of the veterans' problems and our obligations to these returning men and women. We have spent more time on this phase of surplus disposal than on any other, and have consulted widely with leading veterans' organizations, Members of Con-

gress, and many other people in an effort to come up with a workable plan under the provisions of the Surplus Property Act.

With appreciation for your interest,

Sincerely yours,

W. STUART SYMINGTON,
*Administrator.*

## President General of the Daughters of the American Revolution Answers Attack

EXTENSION OF REMARKS
OF
## HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. RANKIN. Mr. Speaker, one of the most gratuitous insults that has yet been hurled at the Daughters of the American Revolution was a statement made by one Judge Phillip Forman, judge of the United States district court, at Trenton, N. J., on November 13, 1945, in which he uses his power as a circuit court judge in New Jersey to try to coerce the Daughters of the American Revolution in Washington into abandoning their policy with reference to Constitution Hall.

Speaking of his letter to Mrs. Lyman Leavitt, chairman of the Americanization committee of the local chapters of the Daughters of the American Revolution, Judge Forman said:

> The action of the national body of the DAR in restricting the use of its hall in the Capital at Washington against Negroes was the kind of policy that could not be reconciled with the doctrines of American citizenship as expounded in the Declaration of Independence, wherein it is asserted that all men are created equal. That text embodies the spirit of naturalization in this court, and the reported action of the national body of the DAR was, in my opinion, diametrically opposed to it.
>
> I suggested that unless the chapters desiring to participate in these proceedings would repudiate the action of their national body, their introduction would be embarrassing to the new citizens, the court, and the Daughters of the American Revolution itself.

It is becoming more and more apparent that Congress is going to have to use the power of impeachment to protect the American people from the abuse of certain individuals who now occupy positions in the Federal judiciary.

If this arrogant occupant of the Federal bench can dictate to the Daughters of the American Revolution in Washington what they shall do with their own building, he can do the same thing with the American Legion, the Masonic Lodge, the public schools, and every religious organization in the city.

I repeat what I have said before, that there has never been a more patriotic organization of real American women in this country than the Daughters of the American Revolution.

The following letter from Mrs. Julius Y. Talmadge, president general of the Daughters of the American Revolution, to Judge Forman, is a complete and dignified answer which every real American should read.

The matter referred to follows:

NOVEMBER 28, 1945.

The Honorable PHILLIP FORMAN,
*United States Circuit Court of Appeals,*
*Federal Building, Trenton, N. J.*

MY DEAR MR. JUSTICE: This is an answer to your statement published in the Trenton Times of November 13.

When anyone strikes at the Americanization program of the Daughters of the American Revolution we must keep the record straight.

According to your published statement, you telephoned a DAR Americanization committee officer and "suggested" that the introduction of DAR members who distribute the DAR Manual of Citizenship to applicants for citizenship would be embarrassing to new citizens in your naturalization court.

Your reason for this is stated to be based on the action of the DAR in restricting use of Constitution Hall to white concert artists. Your statement said:

"I suggested that unless the chapters desiring to participate in these proceedings would repudiate the action of their national body, their introduction would be embarrassing to the new citizens, the court, and the Daughters of the American Revolution itself."

The reason why you injected yourself into the Hazel Scott controversy still appears unclear despite your explanation. As a member of the Federal bench, you are familiar with the rules and customs prevailing in the District of Columbia, where separate schools and playgrounds, separate restaurants, auditoriums, hotels, and theaters are provided for whites and colored.

The Daughters of the American Revolution, in spite of attacks by politicians, radicals, Communists, and other enemies, refuses to violate these customs. The DAR operates Constitution Hall as a cultural center in accordance with these prevailing customs. Moreover, since we own Constitution Hall, we do not permit its use by radicals, by propagandists, by those who do not measure up to true American ideals, and by those who cannot qualify to high cultural standards.

The DAR is not at all "embarrassed," as you suggest, in meeting newly naturalized citizens in your court or in any other naturalization court. And many letters of appreciation from new citizens are evidence they are not embarrassed to meet a DAR citizenship worker. Therefore, our Americanization work will continue in full force despite suggestions or objections from any source.

The help given new citizens by the DAR Manual for Citizenship has won widespread praise for years. The manual is recognized by many as the best handbook on American citizenship ever published. Its use is encouraged.

The manual was first published by the DAR in 1921. It is printed in English and in 17 other languages. To date over 7,000,000 copies have been distributed free of charge.

The DAR strives for better citizenship in other ways, aiding under-privileged youths of all race, creeds, and color. Our Junior American Citizens Clubs, our Girl Home Makers, our Good Citizenship Pilgrims, and our mountain schools, entirely supported by DAR funds, are examples.

The rules and regulations upon which prevailing customs in this city are based were formulated by the Senate and House of Representatives. For example, the Senate, as you know, does not permit Negro newspapermen to sit in the Senate Press Gallery. To use your own published words in regard to the DAR you might also declare that "kind of policy could not be reconciled with the doctrines of American citizenship as expounded in the Declaration of Independence wherein it is asserted that all men are created equal."

The Senate confirmed your appointment to the Federal bench. We do not suggest, however, that you are embarrassed.

The DAR has been most unfairly attacked. We expect this from some sources. However, we ask you to remain neutral in this controversy and to welcome DAR representatives in your naturalization court the same as they are welcomed in the other courts of the land.

A copy of this letter is being sent to the editor of the Trenton Times with a request that it be published in full. Another copy is being sent to the Attorney General of the United States for his information.

Sincerely,

Mrs. JULIUS Y. TALMADGE,
*President General, NSDAR.*

## UNRRA Criticism Answered

EXTENSION OF REMARKS
OF
## HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include the following statement in answer to certain criticisms of UNRRA and the conduct of hearings by the Foreign Affairs Committee:

In view of the fact that sharp criticisms have recently been directed on the floor of the House concerning the matter in which the House Foreign Affairs Committee has conducted the recent hearings on the second authorization to UNRRA, I believe it important to set the record straight. In what follows I want to address myself primarily to the attacks made by my distinguished colleague from Ohio as recorded in the CONGRESSIONAL RECORD of November 27 on page 11053.

1. The gentleman from Ohio implies that UNRRA refused access to the Army report on the alleged black-market operations at the UNRRA set-up at Granville, France. The chairman stated that since it was an Army report he would ask the Army for the material, and with its permission the report would be made available.

2. The gentleman from Ohio complains that we were not told why UNRRA had turned down a process for the use of soybeans. I had not thought this was a matter of major importance but I am informed that material on this question was forwarded to him on November 27 but naturally did not reach him until after he had made his speech. I am adding this material at the close of my statement.

3. The gentleman from Ohio makes much of the fact that we did not call 449 ex-employees of UNRRA to testify. The gentleman in question wanted us to delay action not only until we wrote each of these 449 persons and received their replies but also until these replies were collated and they testified before us. Obviously this would have dragged out the proceedings not only for weeks, but for months. In the meantime hundreds of thousands of innocent women and children would have starved. I should like to ask if it is seriously contended that it would have been useful for us to have delayed so long in order to obtain somewhat doubtful testimony.

In this connection it should be noted that Director Lehman stated that any member of the committee was free to examine the record of the exit interviews given to everyone who left the service of UNRRA. Certainly the doors of our committee were open to any witness who wished to come forward and testify.

4. The gentleman from Ohio accuses UNRRA of being inefficient because it is not

they had waited until purchasing power started to lag, and the goods shortage was absorbed by production, they would have had a better case, and would have gained public support.

This is the long running inner condition, which, as I said, fluctuates from week to week. Published political prophesies about Mr. Truman, then, merely represent pressure to force him to act one way or another.

## Veterans Given Greater Opportunities To Buy Surplus Goods

EXTENSION OF REMARKS
OF
### HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. HAGEN. Mr. Speaker, in a recent issue of the CONGRESSIONAL RECORD I reprinted a statement relative to veterans buying of war surplus, made at the recent American Legion convention in Chicago, by Mr. Joseph Leib, a service officer of the Legion Post No. 15, Department of the District of Columbia.

I was prompted to do so by the many letters which I have received from veterans of World War II who have been frustrated in their efforts to secure surplus property, even though they were given priorities.

Some criticisms would appear to be partly justified, but not altogether so. Although the veterans are not getting the break they are entitled to, it is not the fault of the Surplus Property Administration, according to a letter received by me this morning from Mr. W. Stuart Symington, Administrator.

In fairness to the Surplus Property Administration, I am reprinting his excellent letter addressed to me under date of November 30. It follows:

SURPLUS PROPERTY ADMINISTRATION,
*Washington, D. C., November 29, 1945.*
Hon. HAROLD C. HAGEN,
*Congress of the United States,*
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN HAGEN: Our attention has been called to the extension of your remarks in the CONGRESSIONAL RECORD of November 20 entitled, "Workable Plan Necessary to Sell Surpluses to Veterans," in which you incorporated a statement by Mr. Joseph Leib, past vice commander and present service officer of the Vincent B. Costello Post, No. 15, of the American Legion, District of Columbia.

There are several points in Mr. Leib's letter on which we should like to comment.

Devising a workable plan to insure veterans being able to purchase surplus property has been the most difficult problem faced by the Surplus Property Administration and its predecessor, the Surplus Property Board. Mr. Leib has stated "the high priority which the United States Government solemnly promised the veteran of World War II * * * has become * * * a mirage."

Specifically, the Surplus Property Act of 1944, section 16, prescribed "The Board shall prescribe regulations to effectuate the objectives of this act to aid veterans to establish and maintain their own small business, professional, or agricultural enteprises, by affording veterans suitable preferences to the extent feasible and consistent with the policies of this act in the acquisition of the types of surplus property useful in such enterprises."

The act also prescribed in section 12 and in section 13 that priorities in the purchase of surplus property be set up by regulation giving priority to (1) the Federal agencies and (2) State and local governments and their instrumentalities. Thus it can be seen that the "high priority" mentioned by Mr. Leib is, in fact, a No. 3 preference. Also, when you consider that there are approximately 285,000 claimant agencies, either Federal, State, or local Governments and their instrumentalities, which exercise priorities ahead of the veteran, it can be readily seen why the veteran has his difficulties under this act.

This problem of priority was one of the difficulties we faced several months ago when we sat down to work out a revision of Surplus Property Board regulation 7, the veterans' preference regulation. On October 10 the revised regulation implementing the Surplus Property Act of 1944 in respect to veterans' preferences was announced.

This new regulation contained many liberalized provisions to help the veteran. Directly to the point erroneously made by Mr. Leib in his letter to you, this new regulation removed the $2,500 limit on the veterans' purchase.

The statute and new regulation 7 give the veteran the following rights:

1. The statute authorizes SWPC to buy for small business when, in the judgment of SWPC, such purchase will strengthen the competitive position of small business. If a veteran is a small businessman, SWPC can purchase under its No. 1 Federal priority for resale to the veteran under such circumstances.

(Under the old SPB regulation, veterans could acquire property only in this way. The new regulation has not taken away this right under the statute, and also gives additional methods to purchase.)

2. Under the new regulation the veteran as a veteran can buy directly from the disposal agency, this after he has been certified by SWPC as a veteran and shows that he needs the property for business, professional or agricultural use. This right to purchase direct is given a preference, as Congress specified, immediately following the priorities of the Federal agencies and State and local governments.

3. Under the new regulation SWPC may act as an agent in making purchases for veterans, but in doing so it does not exercise its Federal priority. It employs the veteran's money, not SWPC money, and the sale is made directly to the veteran by the disposal agency.

That such purchases are being made is demonstrated by the recent announcement that SWPC will buy 2,500 of the first 9,100 surplus jeeps placed on the market, using their top priority as a Federal agency, and will then resell them to veterans.

As for Mr. Leib's complaint that the veterans must buy from a Federal agency, the Surplus Property Act of 1944 specifically declares that surplus goods shall be disposed of by Federal agencies named by the Administration.

Complaint is also made that "restrictions are placed upon the use of such goods. Veterans under existing regulations are not given priorities as far as clothing, furniture, food, or other types of consumer goods are concerned." In answer to this, let us cite the act which, in section 16, relating to disposition to veterans, states:

"The Administration shall prescribe regulations to effectuate the objectives of this act to aid veterans to establish and maintain their own small business, professional, or agricultural enterprises, by affording veterans suitable preferences to the extent feasible and consistent with the policies of this act in the acquisition of surplus property useful in such enterprises."

There is no provision in the act under which the Administration may sell consumer items to the ultimate consumer; to the contrary, we are specifically charged with utilizing, wherever possible, the normal channels of trade in the disposition of such items.

There is one final point of Mr. Leib's statement on which we should like to comment. This is his reference to the proposal to permit veterans to purchase surplus property from the Nation's wholesalers at lowest price made to retailers.

First, let us emphasize that this is proposed not as a substitute for, but as a supplement to, existing regulations.

One of the greatest difficulties facing veterans in purchasing surplus property is the limited number of outlets from which such purchases can be made. Even though RFC has taken over disposal of consumer goods, as well as capital and producers goods, there are still only 31 regional sales offices in the Nation through which their disposals can be made.

This means that in many cases the veteran is forced to travel considerable distances, at considerable expense, in order to examine and choose the property he needs. Sometimes such property is not exactly what the veteran wants and the expenses of his trip are lost.

An alternative solution would be the establishment by the Government of hundreds of other disposal agency sales outlets—in effect, a Nation-wide network of retail stores to sell to veterans direct at a cost of hundreds of millions of dollars to the Nation.

Another plan which we are now discussing with Members of Congress and other interested groups is the suggestion that veterans be permitted to purchase from wholesalers all over the Nation under the pricing classification of large dealers, or at the lowest price offered any retail group. This price would be offered by the wholesalers, even though the veteran's purchase was in far smaller lots than those of the large retailer.

Such a plan would tend to solve the problem of outlets, because it would offer to the veteran many thousands of points where he could purchase surplus property at a favorable price; this in comparison to the 31 outlets now available through RFC.

This plan has already been proposed to the Wholesalers Industry Advisory Committee, which has patriotically and enthusiastically agreed to cooperate with us in it.

But it should be remembered that the adoption of this plan will in no way affect existing veterans' preferences. The veteran will still be able to purchase directly from the disposal agency, or through SWPC, and at the lowest trade—or wholesale—price level. He will be permitted to exercise his choice. If it seems desirable to him to pay the profit which wholesalers regularly realize only on large lot sales, he may do so. He still has the right to travel to the regional office of a Government disposal agency and buy at the price to wholesalers himself.

This program is still only a proposal. While it offers a method of greatly expediting sales to veterans through the addition of thousands of new outlets, we realize that it still may be improved upon.

We have submitted the plan to Members of Congress and other interested groups, and are assured by Senator O'MAHONEY that his Senate committee will soon hold hearings to discuss its merits before a final decision is reached. We are anxious for such a discussion, and will welcome any comments, criticisms, or suggestions.

In conclusion, may we assure you that the Surplus Property Administration is thoroughly conscious of the veterans' problems and our obligations to these returning men and women. We have spent more time on this phase of surplus disposal than on any other, and have consulted widely with leading veterans' organizations, Members of Con-

gress, and many other people in an effort to come up with a workable plan under the provisions of the Surplus Property Act.

With appreciation for your interest,

Sincerely yours,

W. STUART SYMINGTON,
*Administrator.*

## President General of the Daughters of the American Revolution Answers Attack

EXTENSION OF REMARKS
OF
**HON. JOHN E. RANKIN**
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. RANKIN. Mr. Speaker, one of the most gratuitous insults that has yet been hurled at the Daughters of the American Revolution was a statement made by one Judge Phillip Forman, judge of the United States district court, at Trenton, N. J., on November 13, 1945, in which he uses his power as a circuit court judge in New Jersey to try to coerce the Daughters of the American Revolution in Washington into abandoning their policy with reference to Constitution Hall.

Speaking of his letter to Mrs. Lyman Leavitt, chairman of the Americanization committee of the local chapters of the Daughters of the American Revolution, Judge Forman said:

> The action of the national body of the DAR in restricting the use of its hall in the Capital at Washington against Negroes was the kind of policy that could not be reconciled with the doctrines of American citizenship as expounded in the Declaration of Independence, wherein it is asserted that all men are created equal. That text embodies the spirit of naturalization in this court, and the reported action of the national body of the DAR was, in my opinion, diametrically opposed to it.
>
> I suggested that unless the chapters desiring to participate in these proceedings would repudiate the action of their national body, their introduction would be embarrassing to the new citizens, the court, and the Daughters of the American Revolution itself.

It is becoming more and more apparent that Congress is going to have to use the power of impeachment to protect the American people from the abuse of certain individuals who now occupy positions in the Federal judiciary.

If this arrogant occupant of the Federal bench can dictate to the Daughters of the American Revolution in Washington what they shall do with their own building, he can do the same thing with the American Legion, the Masonic Lodge, the public schools, and every religious organization in the city.

I repeat what I have said before, that there has never been a more patriotic organization of real American women in this country than the Daughters of the American Revolution.

The following letter from Mrs. Julius Y. Talmadge, president general of the Daughters of the American Revolution, to Judge Forman, is a complete and dignified answer which every real American should read.

The matter referred to follows:

NOVEMBER 28, 1945.

The Honorable PHILLIP FORMAN,
*United States Circuit Court of Appeals,*
*Federal Building, Trenton, N. J.*

MY DEAR MR. JUSTICE: This is an answer to your statement published in the Trenton Times of November 13.

When anyone strikes at the Americanization program of the Daughters of the American Revolution we must keep the record straight.

According to your published statement, you telephoned a DAR Americanization committee officer and "suggested" that the introduction of DAR members who distribute the DAR Manual of Citizenship to applicants for citizenship would be embarrassing to new citizens in your naturalization court.

Your reason for this is stated to be based on the action of the DAR in restricting use of Constitution Hall to white concert artists. Your statement said:

"I suggested that unless the chapters desiring to participate in these proceedings would repudiate the action of their national body, their introduction would be embarrassing to the new citizens, the court, and the Daughters of the American Revolution itself."

The reason why you injected yourself into the Hazel Scott controversy still appears unclear despite your explanation. As a member of the Federal bench, you are familiar with the rules and customs prevailing in the District of Columbia, where separate schools and playgrounds, separate restaurants, auditoriums, hotels, and theaters are provided for whites and colored.

The Daughters of the American Revolution, in spite of attacks by politicians, radicals, Communists, and other enemies, refuses to violate these customs. The DAR operates Constitution Hall as a cultural center in accordance with these prevailing customs. Moreover, since we own Constitution Hall, we do not permit its use by radicals, by propagandists, by those who do not measure up to true American ideals, and by those who cannot qualify to high cultural standards.

The DAR is not at all "embarrassed," as you suggest, in meeting newly naturalized citizens in your court or in any other naturalization court. And many letters of appreciation from new citizens are evidence they are not embarrassed to meet a DAR citizenship worker. Therefore, our Americanization work will continue in full force despite suggestions or objections from any source.

The help given new citizens by the DAR Manual for Citizenship has won widespread praise for years. The manual is recognized by many as the best handbook on American citizenship ever published. Its use is encouraged.

The manual was first published by the DAR in 1921. It is printed in English and in 17 other languages. To date over 7,000,000 copies have been distributed free of charge.

The DAR strives for better citizenship in other ways, aiding under-privileged youths of all race, creeds, and color. Our Junior American Citizens Clubs, our Girl Home Makers, our Good Citizenship Pilgrims, and our mountain schools, entirely supported by DAR funds, are examples.

The rules and regulations upon which prevailing customs in this city are based were formulated by the Senate and House of Representatives. For example, the Senate, as you know, does not permit Negro newspapermen to sit in the Senate Press Gallery. To use your own published words in regard to the DAR you might also declare that "kind of policy could not be reconciled with the doctrines of American citizenship as expounded in the Declaration of Independence wherein it is asserted that all men are created equal."

The Senate confirmed your appointment to the Federal bench. We do not suggest, however, that you are embarrassed.

The DAR has been most unfairly attacked. We expect this from some sources. However, we ask you to remain neutral in this controversy and to welcome DAR representatives in your naturalization court the same as they are welcomed in the other courts of the land.

A copy of this letter is being sent to the editor of the Trenton Times with a request that it be published in full. Another copy is being sent to the Attorney General of the United States for his information.

Sincerely,

Mrs. JULIUS Y. TALMADGE,
*President General, NSDAR.*

## UNRRA Criticism Answered

EXTENSION OF REMARKS
OF
**HON. EMILY TAFT DOUGLAS**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include the following statement in answer to certain criticisms of UNRRA and the conduct of hearings by the Foreign Affairs Committee:

In view of the fact that sharp criticisms have recently been directed on the floor of the House concerning the matter in which the House Foreign Affairs Committee has conducted the recent hearings on the second authorization to UNRRA, I believe it important to set the record straight. In what follows I want to address myself primarily to the attacks made by my distinguished colleague from Ohio as recorded in the CONGRESSIONAL RECORD of November 27 on page 11053.

1. The gentleman from Ohio implies that UNRRA refused access to the Army report on the alleged black-market operations at the UNRRA set-up at Granville, France. The chairman stated that since it was an Army report he would ask the Army for the material, and with its permission the report would be made available.

2. The gentleman from Ohio complains that we were not told why UNRRA had turned down a process for the use of soybeans. I had not thought this was a matter of major importance but I am informed that material on this question was forwarded to him on November 27 but naturally did not reach him until after he had made his speech. I am adding this material at the close of my statement.

3. The gentleman from Ohio makes much of the fact that we did not call 449 ex-employees of UNRRA to testify. The gentleman in question wanted us to delay action not only until we wrote each of these 449 persons and received their replies but also until these replies were collated and they testified before us. Obviously this would have dragged out the proceedings not only for weeks, but for months. In the meantime hundreds of thousands of innocent women and children would have starved. I should like to ask if it is seriously contended that it would have been useful for us to have delayed so long in order to obtain somewhat doubtful testimony.

In this connection it should be noted that Director Lehman stated that any member of the committee was free to examine the record of the exit interviews given to everyone who left the service of UNRRA. Certainly the doors of our committee were open to any witness who wished to come forward and testify.

4. The gentleman from Ohio accuses UNRRA of being inefficient because it is not

uble to ship the goods immediately after it gets the necessary funds from us. It would be fine if we could have a magic wand which would sweep away time and space and enable grain, meats, fats, sugar, clothes, shoes, seed, and tractors to pour into ships at a moment's notice. But my distinguished colleague must realize that this only happens in fairy tales and not in a world of business. It is necessary to get the Central Committee of UNRRA to allocate the available funds for 1946 between the various countries. It then requires some time to place the necessary orders. For if abuses and wastes were to develop because of excessive waste on UNRRA's part I am extremely doubtful whether the critics of UNRRA would, on the basis of their past record, overflow with forgiveness. Businesses, moreover, in view of present shortages, need some time in which to make deliveries to the docks. If the gentleman in question and his minority colleagues are truly anxious to get the goods to the stricken countries in a hurry, may I invite them to have the bill brought up for debate quickly before the House and acted upon? Thus far the delay has been far more ours than it has been UNRRA's. It now lies within the power of the gentleman and his associates to remedy this uncertain situation. Until this is done, such criticism would seem to come from those who dwell in glass houses.

5. It is complained that the tentative allocations between the countries of the funds for 1946, while made out, have not yet been published. I have already suggested the reason for this. It is because they have not yet been submitted to the Central Committee of UNRRA upon which we of course are represented. To publish the figures in advance of such submission might start an open struggle between the various countries to increase their shares which to put it mildly would not be helpful. It is better to have this done within the body charged with that responsibility.

The gentleman in question admits that he was shown the proposed figures which it is planned to submit to the Central Committee of UNRRA and he is at liberty to use them if he so desires.

The gentleman from Ohio does not mention the fact that while our committee was ready to call any opposition witness which he or any other Member wished to bring forward that only one such individual appeared. He also does not mention the fact that representatives of the National Catholic Welfare Conference and the Friends Service Committee, which have had a great deal of experience in foreign relief, testified strongly in behalf of UNRRA, as did representatives of most of the public-spirited organizations of the country.

It would be much more forthright if the opponents of UNRRA were to come out in the open and state their opposition instead of sniping at it behind technicalities and conducting a delaying operation at this stage of a cold, grim winter. In any event, in order that the cause of UNRRA may not be unjustly prejudiced in advance of debate I believe these facts should in simple fairness be made a matter of public record.

---

STATEMENT BY THE DIRECTOR-GENERAL OF UNRRA, HERBERT H. LEHMAN, IN REPLY TO QUESTIONS RAISED ON NOVEMBER 20 BY CONGRESSMAN VORYS, OF OHIO, WITH RESPECT TO SOYA FLOUR

Question. Did UNRRA buy about 60,000,000 pounds of soya flour, all or part of which spoiled?

Answer. No. The War Food Administration and UNRRA agreed on March 22, 1945, to transfer from the inventory of the former to the inventory of the latter approximately 56,000,000 pounds of low-fat soya flour, and approximately 16,000,000 pounds of low-fat soya grits. On May 15, 1945, the WFA advised UNRRA of its intention to reduce the amount of the transfer of low-fat soya flour from about 56,000,000 to 22,000,000 pounds, because (a) about 18,500,000 pounds could not, on account of ODT restrictions, be moved east from the Pacific coast and had, therefore, been made available on the U. S. S. R. lend-lease program; and (b) about 14,000,000 pounds was found on inspection to be out of condition. UNRRA shipped to the countries receiving its assistance, the 22,000,000 pounds delivered to it by the WFA. The entire quantity arrived in good condition and every country to which part of it was sent requested more.

Question. Why did UNRRA refuse to purchase full-fat soya flour from the Soya Corporation of America which product (produced by a patented process which it is claimed removes all bitterness and prevents the development of rancidity) was approved by the Army, the Navy, and the Bureau of Standards?

Answer. UNRRA made no such refusal. UNRRA does not buy its supplies from vendors. The Department of Agriculture procures all the foods shipped by UNRRA from the United States. That Department is entirely free to place UNRRA's orders with whatever vendors it sees fit. Should that Department contract with the Soya Corp. of America, or with any other vendor, UNRRA would accept the product provided only that it passed official inspection.

Question. Why does not UNRRA specifically requisition the soy flour produced by the Soya Corp. of America?

Answer. UNRRA to date has not specifically requisitioned the full-fat soy flour produced by the Soya Corp. of America for the reason that it has not to date been convinced that this product differs so materially from that of other manufacturers of full-fat soy flour as to warrant the exclusion of other manufacturers from participation in orders placed by the Department of Agriculture on behalf of UNRRA. In this connection UNRRA has sought the views of technologists and Dr. L. S. Stuart, of the United States Department of Agriculture, has stated that "in our experience we have not found the full-fat soy flour produced by the Soya Corp. of America to be materially different in its properties from the full-fat soy flour produced by four or five other manufacturers of this product."

The requisition which UNRRA has recently placed for 4,000 tons of full-fat soy flour will be filled under the usual procedures of the United States Department of Agriculture in which all suppliers are given an opportunity to offer their product. Should the Agriculture Department purchase the product of the Soya Corp. of America, UNRRA will be more than happy to accept it.

It should perhaps be added that UNRRA's efforts over the past 2 years to encourage, in every one of the countries receiving its aid, greater use of soy products, as a substitute for scarce animal proteins, have met with great success. That encouragement has included (a) the circulation of literature emphasizing the high nutritional value of both full and low-fat soy flour, (b) extensive experiments incorporating up to 10 percent of soy flour in bread, and (c) the free, first-hand assistance in every country of an outstanding United States expert on a great range of uses of soy products. As a result UNRRA has been receiving for some months orders for soy products in excess of the quantities it is able to procure out of its meager available financial resources. UNRRA has programed for shipment, during December 1945, 4,000, 6,000, and 5,000 tons, respectively, of full fat (about 22 percent fat), expeller type (4 to 7 percent fat), and solvent type (about 1 percent fat) of soy flour. Every one of the countries (Albania, Czechoslovakia, Greece, Poland, and Yugoslavia) to which these soy flours are being sent would gladly accept much larger quantities if UNRRA had the funds with which to buy the amounts requested.

## Our Policy in China

EXTENSION OF REMARKS

OF

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan, from the Washington Post of November 30, 1945:

OUR POLICY IN CHINA

(By Mark Sullivan)

The outcry of Gen. Patrick J. Hurley, until this week Ambassador to China, covered substantially the whole of our foreign relations—our policies about Russia, Britain, China, the United Nations; and the administration of these policies, both by our ambassadors abroad and internally within the State Department. Within so large a field are many problems. One among them, China, which General Hurley emphasized, lends itself to comparatively simple statements. It is to China that the very capable Gen. George C. Marshall is being sent.

When we were drawn into the war, China was divided. There was a central government, headed by Chiang Kai-shek, covering much the larger part of the country and embracing much the larger part of the population. A dissident group consisted of Communists. Both groups fought the Japanese. The Communists demanded that we provide them with arms, the same as Chiang Kai-shek, and that we otherwise treat them on a basis of equality.

To handle the problems thus presented, and in general to try to bring about cooperation between the Communists and the central government, President Roosevelt sent General Hurley to China.

As to the demands for arms from us, General Hurley took the ground that on the broadest principles we could not give arms to a dissident group within a nation that was our ally. Further, it was clear that a gift of arms by us to the Communists, however it might help the Communists to fight Japan, would have a deadly effect of discouraging the central government, which was our main reliance. To keep the central government and its armed forces alive was our constant and extreme anxiety. This course by General Hurley accorded with the specific and direct instructions he had received from President Roosevelt.

After the war against Japan was won, the cleavage in China continued. What to do about it is our present problem. It is determinable by whatever is to be our future interest and policy about the Far East, especially China and Japan.

We fought the war to resist an aggression by Japan. Our principal future interest is to keep Japan incapable of another such aggression. We think of this as our responsibility, alone. But a strong and united China is a better assurance of keeping Japan down than large American forces kept in the Far East indefinitely.

In China the Communists and the central government continue to battle. What to do about this is our immediate problem. For us the answer is the same, it is to have a strong and united China. This cannot be, so long as there are within China's territory two governments with two armies. Diplomatically our task is to bring the two governments together. If that cannot be, we are led by our self-interest and bound by our pledged word to support the central government.

The situation brings up an immediate problem. In the territory covered by the

Communist government are American troops. They went there to aid in receiving the surrender of the Japanese. The Communists demand that we withdraw them. This demand has some support in our own country. Some of this support is motivated by the simple wish to get our soldiers home, to end involvement in foreign disputes. Some of this no doubt comes from sympathy with the Communists.

We want to bring about an orderly and peaceful world, everywhere. To that end we keep troops in Germany, and assume we may have to keep them there for decades.

The fact that Germany was a conquered country does not, in its bearing on the broad problem, make it different from China as an allied country. Without a unified China, there cannot be order in that country nor elsewhere in the Far East. If the attainment of a unified China and an orderly world will be furthered by presence of our troops in that country until order is restored, our world purpose calls for us to keep them there.

## Effect of Strikes on Veterans

REMARKS

OF

### HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. MICHENER. Mr. Speaker, it is estimated by the Michigan State Office of Veterans' Affairs, that 40,000 veterans are out of work in Michigan this morning because of labor strikes. It seems too bad that these returning veterans should be confronted with a situation of this kind. On October 19 I called the attention of the House to a new kind of strike, initiated in Michigan, in which World War I veterans were striking against World War II veterans because of union seniority rights. My remarks are found on page A4402 of the CONGRESSIONAL RECORD.

This morning my attention has been called to an article appearing in the Ann Arbor (Mich.) News which throws considerable light on the unemployment compensation law as it affects veterans who are presumed to be entitled to their jobs. The article is as follows:

STATE PREPARING TEST CASES OF VETERANS INVOLVED IN GM DISPUTE

(By William Kulsea)

LANSING.—The State office of veterans' affairs is preparing test cases of veterans involved in the GM-UAW (CIO) wage dispute for final adjudication before the Veterans' Administration in Washington, in order to clarify the right of ex-servicemen to unemployment benefits under the GI bill of rights.

Col. Philip C. Pack, of Ann Arbor, said two or three test cases will be chosen with the help of veterans' counselors in Detroit and Flint, and the results will be taken to Washington by special courier. He estimated that 40,000 veterans are involved in the present labor tie-up.

Pack has told veterans' counselors to tell every veteran involved to file a claim for unemployment benefits with the Michigan Unemployment Compensation Commission, the State agency that handles payments under the GI bill, and to appeal them to the readjustment agent if they are turned down.

Veterans cannot draw benefits under the State compensation law, because it states specifically that persons involved in labor disputes are not eligible for payments.

John Reid, of Lansing, member of the unemployment compensation commission, said that the GI bill contains almost the same clause as the Michigan statute in prohibiting payment of benefits to veterans interested in a labor dispute.

Pack asserted that his agency's interpretation is that the Federal act contains nothing relative to the current labor strife and the law should be further clarified by a ruling from the Veterans' Administration.

Pack said the Federal act disqualifies a veteran if he leaves "suitable work voluntarily, without good cause," but he went on to say that the same law also states this language shall not apply if it is shown that the veteran is "not participating in or directly interested in the labor dispute which causes the work stoppage.

The State law provides payment of up to $28 a week for 20 weeks, and the Federal law $20 a week up to a maximum of 52 weeks.

## The Army-Navy Football Game

REMARKS

OF

### HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. JOHNSON of California. Mr. Speaker, I want to take your mind off of the real serious problems for just a moment. Tomorrow many of us are going to the Army-Navy football game. It will be a classic. This year it will determine the national championship.

The boys on these teams come from all parts of the Nation. The teams and the activities which they represent are national teams and national institutions. They are not the team of any locality or any segment of our country. They represent all of us, and in the schools which they represent are men from every congressional district and every territory of the United States.

I believe that no part of the country should have a monopoly on this game. This is especially true now that we are in the air age and the country can be crossed in less than 10 hours by plane.

For this reason I seriously suggest that in the future the Army and Navy game be played in a different part of the country each year. One Army-Navy game was played in Chicago and one was played in Pittsburgh. Otherwise, they have all been played on the eastern seaboard.

I think, therefore, that if this program is inaugurated that the first game played away from the eastern seaboard should be on the Pacific coast. Also, I believe that the most appropriate place to play the first Army-Navy game on the Pacific coast would be in the memorial stadium of the University of California at Berkeley, Calif. This is centrally located and has a beautiful stadium, erected in the honor of the men who served in the First World War. It seats 90,000, and the capacity could be increased to over 100,000 very easily.

This is a practical suggestion. The Army and the Navy have planes available to carry the teams and even the entire student body to the Pacific coast. The trip could be an exercise in the rapid transport of troops across the continent. The cost would not be great because the equipment and personnel to handle the transportation problem are now, and will be in the future, in the armed forces. The mere job of transporting would be an excellent exercise in the training of the cadets.

Also, it would let the people get a view of the men who will be the future custodians of our national security. These men are the future guardians of our safety. They come from every segment of our population and every part of our country, and, therefore, all parts of the country should have a chance to see them and also to entertain them in their largest and most colorful athletic event. I do hope that the appropriate committees of Congress will take steps to implement this idea. I am presenting a resolution to carry out this idea.

## Furlough or Leave Time for Privates and Noncommissioned Officers

EXTENSION OF REMARKS

OF

### HON. JOHN S. GIBSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. GIBSON. Mr. Speaker, I am disappointed that more rapidity has not been exercised to bring H. R. 4051, introduced by the gentleman from Florida [Mr. ROGERS], and H. R. 4743, introduced by the gentleman from Georgia [Mr. PACE], to the floor of the House that the same may be enacted into law with the least delay possible.

The purpose of this legislation is to provide for enlisted men—that is, privates and noncommissioned officers—furlough or leave time equal to 2½ days per month, or 30 days per year; and further, on discharge, such private or noncommissioned officer would be entitled to receive reimbursement for full pay and allowances of accrued leave not used by him, at the pay of his rating at the time of discharge. In short, this legislation would place privates and noncommissioned officers on a par with commissioned officers.

The benefits flowing to such privates and noncommissioned officers cannot in any sense be considered a gratuity.

It is true at this time that commissioned officers receive leave equal to 30 days per year and the right to apply for all accrued leave just prior to discharge, which in many instances run to high salaries and constitutes an inexcusable and an abominable discrimination against the men, as a class, who have done the real fighting. For example: A major receives in salary and allowances approximately $420 per month, and in many instances he is discharged, free to go about his business, reestablish himself, and draw this pay for 3 or 4 months while he is so engaged. Majors in many

instances draw sums of twelve or fifteen hundred dollars for what is known as terminal leave after they are actually discharged and, of course, other officers in sums according to their rank. In no sense of the word can this discrimination against the privates and noncommissioned officers be justified. We all know, and it must be accepted as a fact, that the privates and noncommissioned officers are the ones who suffered the hardships, who fought in the mud and mire, and whose very souls were drenched in the blood of battle. Then, how can we as the representatives of this great mass of our fighting forces and their fathers and mothers, be derelict in our duty to the extent of permitting this grave injustice to be practiced on them.

If I may, I would like to suggest to the author of this legislation that he get out a discharge petition if the committee does not promptly bring this bill to the floor, and if such discharge petition is filed, then I request the membership of this House to sign it in sufficient numbers to bring the legislation to the floor for action.

## Who's Running This Government—Directive Government Has Succeeded Where the Democratic Legislative Process Has Failed

REMARKS

OF

## HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. McDONOUGH. Mr. Speaker, Mr. John W. Snyder, Director, Office of Mobilization and Reconversion, is to be congratulated for his wisdom and foresight in his recent order to General Hershey directing the deferment from military service of physicists and scientists at the draft-board level, and his directive to Army and Navy Staff Headquarters ordering release from the armed forces of physicists and scientists.

Mr. Snyder's keen perception of the value of scientific manpower supersedes that of the Military Affairs Committee who have had before them H. R. 2827 which I introduced April 2, 1945. This bill would have done the same thing, if approved by the committee and passed by the House, that Mr. Snyder's directive has done.

H. R. 2827 was endorsed by most of the leading scientists and universities of the Nation who fully realized the crying need of scientific manpower behind the lines during the war and the urgent necessity of their knowledge and talents during the postwar period. We have been very short-sighted in this Nation as compared with our allies in drafting men into the armed forces with scientific talent and not using their scientific abilities in the best interests of the Nation.

I have repeatedly appealed to the Military Affairs Committee to consider this bill which they have, up to date, refused to consider. This is an example of where government by directive has become necessary when a government by the democratic process has failed to act.

H. R. 2827, which I introduced April 2, 1945, would have provided the means for restoring to civilian life scientists which are badly needed for the development of peace and reconversion. Since I have introduced this bill, my mail has been flooded with urgent demands and requests that it be acted upon. With the discovery and revelation of atomic energy for military purposes which has stunned the world with its potentialities, it is now necessary that scientists be released from the monotony and inactivity of Army life so that they may continue to develop and expand the use of atomic energy for peacetime pursuits, and most important of all, to find ways and means for neutralizing, controlling, and making ineffective the unbelievable destructive powers of atomic energy for military purposes which was revealed in the atomic bombs dropped on Hiroshima and Nagasaki.

We must not, we cannot allow any other nation to move ahead of us scientifically by discovering how the atomic bomb operates without first discovering scientific counteraction which will make their bombs ineffective.

We have been permitting this to become possible by holding scientists in the armed services and drafting them through selective service while other nations, such as Great Britain, France, and Russia, have carefully preserved their scientists by keeping them at work in the laboratory instead of digging ditches and doing KP duty, even when they were threatened with defeat.

622.22-2
622.23

NATIONAL HEADQUARTERS,
SELECTIVE SERVICE SYSTEM,
*Washington, D. C.*

LOCAL BOARD MEMORANDUM No. 115-M, ISSUED: NOVEMBER 26, 1945

SUBJECT: SPECIAL CONSIDERATION FOR CERTAIN STUDENTS, TEACHERS, AND RESEARCH WORKERS IN THE PHYSICAL SCIENCES

*Part I—Statement of general policies and procedures*

1. General: The demands of the armed forces and industry during the emergency have resulted in a curtailment in advanced studies for men having high technical and scientific qualifications. Since the cessation of active fighting, the demand of long-range national interest require a resumption of these studies in order to fully develop the technical and scientific skills which have been acquired and to provide adequate teaching facilities for returning veterans who desire to resume their studies in these fields.

2. Reconversion Working Committee on Deferment and Selective Release: (a) Pursuant to a request from the Director of War Mobilization and Reconversion, the Reconversion Working Committee on Deferment and Selective Release has been established to assist in the accomplishment of this purpose. The Committee is composed of representatives of the (1) Office of Scientific Research and Development, (2) Civilian Production Administration, (3) Office of Rubber Reserve, (4) Petroleum Administration for War, (5) War Department, (6) Navy Department, (7) United States Employment Service, (8) Office of Education, (9) National Roster of Scientific and Specialized Personnel, and (10) the Selective Service System. The Chairman of the Committee will be the Director of War Mobilization and Reconversion, or a staff member designed by him. The functions of the Committee are to:

(1) Indicate to the Director of War Mobilization and Reconversion the specific occupations in which shortages of personnel threaten to interfere with the national health, safety, or interest.

(2) Formulate the specific standards indicating that a man is qualified to engage in a selected occupation.

(3) Certify to the Director of the Selective Service System those individuals meeting the standards established by the Committee.

(4) Indicate to the War and Navy Departments the categories of occupations in which shortages detrimental to the national interest could be relieved by release of men from the armed forces.

*Part II—Certification Plan*

1. Operation of plan: The Director of the Office of War Mobilization and Reconversion will examine all proposals by the committee relating to deferment and release, and shall transmit to the Selective Service System and the War and Navy Departments all approved proposals. The Director of Selective Service will transmit the recommendations for deferment to local boards through the appropriate State directors.

2. Classification policies: Pursuant to the provisions of this memorandum and under the general authority contained in paragraph 5 of part II of Local Board Memorandum No. 115, as amended, local boards will give serious consideration to the occupational deferment of registrants engaged in the technical and scientific fields set forth in part III of this memorandum.

*Part III—Standards and Procedures*

1. Advanced studies in the physical sciences or engineering: (a) Any registrant who is accepted by an accredited college or university as a candidate for a master's or doctor's degree in the physical sciences or engineering may be certified by the Office of War Mobilization and Reconversion to the Director of Selective Service as essential to the national interest in a civilian capacity.

(b) The fact that a candidate for a master's or a doctor's degree may engage in part-time employment or other activities will not affect his certification under this paragraph so long as his academic standing is satisfactory.

2. University teaching in the physical sciences or engineering: Any registrant who is to be employed by an accredited college or university as a teacher of physical sciences or engineering may be certified by the Office of War Mobilization and Reconversion to the Director of Selective Service as essential to the national interest in a civilian capacity.

3. University research in the physical sciences or engineering: (a) Any registrant (1) who is to be employed by or attached to the staff of an accredited college or university for research in the physical sciences or engineering, and (2) who signifies his intention to engage in such an activity may be certified to the Director of Selective Service as essential to the national interest in a civilian capacity.

(b) Such a registrant will be certified only if (1) the research to be undertaken by the registrant contributes significantly to the national interest, and (2) inability of the individual registrant to undertake the research will result in its delay.

4. Submission of information in certain cases: Any registrant who wishes to be certified under the provisions of paragraphs 1, 2, and 3 above, must present to the Office of War Mobilization and Reconversion, Washington, D. C., the following documents in triplicate:

(a) A notarized statement of his intention:

(1) To undertake graduate studies leading to a master's or doctor's degree in the physical sciences or engineering; or

(2) To engage in the teaching of physical sciences or engineering; or

(3) To undertake advanced research in the physical sciences or engineering on the staff of or attached to a college or university.

(b) A statement from an accredited college or university signed by a responsible official of the college or university, indicating that the registrant:

(1) Has been accepted as a candidate for a master's or doctor's degree in the physical sciences or engineering; or

(2) Has been accepted as a teacher of a physical sciences or engineering; or

(3) Is to be employed by or attached to the staff of the college or university for research in the physical sciences or engineering, together with a statement indicating in detail the nature of the research to be performed by the registrant, the scope of the registrant's responsibilities for the research, and the necessity for securing the individual registrant for the work.

(c) A statement showing the registrant's name, address, age, selective service local board number and address, classification, and educational qualifications.

5. Study leading to a B. S. or B. A. degree in physical sciences or engineering: (a) Any registrant who has satisfactorily completed at least 3 years of work leading to a bachelor's degree in the physical sciences or engineering may be certified by the Office of War Mobilization and Reconversion to the Director of Selective Service as essential to the national interest in a civilian capacity, provided such registrant has served for a period of not less than 2 years in a project directly connected with the war effort.

(b) Any registrant who wishes to be certified under the provisions of this paragraph must present to the Office of War Mobilization and Reconversion, Washington, D. C., the following documents in triplicate:

(1) A notarized statement of his intention to continue undergraduate studies leading to a B. S. or B. A. degree in the physical sciences or engineering.

(2) A statement from an accredited college or university, signed by a responsible official of the college or university, indicating that the registrant has been accepted for the fourth year of study in a course leading to a B. S. or B. A. degree in the physical sciences or engineering.

(3) A statement showing the registrant's name, address, age, selective service local board number and address, classification, and educational qualifications.

(4) A statement from the registrant's employer that he has been engaged for at least 2 years in scientific war work.

LEWIS B. HERSHEY,
*Director.*

---

H. R. 2827

A bill to authorize the release of persons from active military service and the deferment of persons from military service, in order to aid in making possible the education and training and utilization of scientific and technological manpower to meet essential needs both in war and in peace

*Be it enacted, etc.*, That (1) in order to make possible the training, education, and availability of such numbers of persons as are necessary for the health, safety, and welfare of the Nation in the sciences of fundamental importance to the conclusion of the war, the safe reconversion of the national life to the ways of peace, and the Nation's potency in the world's future economy, the President shall, under such rules and regulations as he may prescribe, provide for the deferment from military service of—

(a) not to exceed 20,000 young men annually for training to meet essential needs in the physical sciences and in their application to technology and engineering, and of teachers to conduct said training program; and

(b) 15,000 trained scientists and engineers now employed in research or by industry in work essential to the health, safety, and welfare of the Nation.

SEC. 2. The discharge or assignment to essential civilian pursuits of—

(a) not to exceed 20,000 technically trained enlisted men, especially chemists, chemical engineers, physicists, and mathematicians, not utilizing their highest skills in the practice of their professions in the Army or Navy, to industries and educational institutions urgently in need of such men; and

(b) not to exceed 15,000 enlisted men partially trained in those branches of science and engineering in which shortages exist, but whose collegiate training was interrupted by military service and who had shown promise of completing with distinction their preparation for professional work; providing they undertake to immediately resume and continue their collegiate training to graduation.

SEC. 3. No provision of law in force on the date of enactment of this act shall be construed to authorize any action inconsistent with the provisions and purposes of this act.

---

## Disposition of Displaced Polish Nationals

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herein a portion of a letter received from Brig. Gen. Miles Reber, Deputy Chief, Legislative and Liaison Division of the War Department, regarding the disposition of displaced Polish nationals, conveying to me information which I believe is of interest to many persons in the United States:

As you perhaps know, our forces have, in the past few months, assisted several million displaced persons in their return to their homelands, and among this number were many Polish people.

Under our present policy, no Polish nationals found in the United States zone of occupation in Germany are being repatriated against their will. Included in our interpretation of the term "Polish nationals" are those persons who formerly resided in that part of Poland which was east of the Curzon line. This policy has been communicated to the commanding general of our forces in the European theater, and all information that has been received by the War Department indicates that it is being fully carried out.

---

## One More Difficult Problem

EXTENSION OF REMARKS
OF
### HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. MADDEN. Mr. Speaker, I wish to submit for the attention of the Congress some timely thoughts set out in an editorial on the Palestine question by H. B. Snyder, editor of the Gary Post-Tribune, Gary, Ind.:

ONE MORE DIFFICULT PROBLEM

In accepting a place on the Anglo-American committee of inquiry on Palestine, this Government has taken on another difficult problem. It also has accepted the role which America's strength and influence make inevitable. We are perhaps the biggest of the Big Three, when all the assets are counted. Any trouble in the world concerns us, for it will affect us in the end whether we ignore it or not.

Thus far we have not done too well in the world's sorry aftermath of war. We run the risk of dangerous involvements in China. We have remained diplomatically aloof from the struggle in Indonesia and Indochina, while allowing our arms to be used in the fighting there. Let us hope we shall do better with the problem of Palestine.

The British can use some help. They have handled the problem rather badly, though it is doubtful that any power could have handled it well. But Britain's delays and inconsistencies of the past 25 years, intensified from 1939 to the present, can't be said to represent the happiest efforts to solve a sorry situation.

It was only natural that Foreign Minister Bevin's statement on Palestine should have proved unsatisfactory to both parties. Zionists are angry because he backed down on previous British promises of a national Jewish homeland in Palestine and proposed a Jewish community there. They foresee only trouble if the Jews are to be a minority in Palestine as they are in the rest of the world, abiding in the ancient homeland only by the majority's consent.

The Arabs are displeased because they view Zionism as an imperialistic movement which is perverting the humanitarian aim of finding a haven for the victims of Axis persecution. Their more extreme politicans favor an immediate and total ban of Jewish immigration into Palestine.

To reconcile these opposing views Bevin proposes a thorough inquiry in Europe and Palestine leading to interim recommendations and a permament solution to be presented to the United Nations Conference, which Bevin would have assume trusteeship of a Palestinian state.

Bevin seems convinced, even before the inquiry, that Palestine itself does not provide opportunity for grappling with the whole problem of Europe's surviving Jews. Such authorities as Dr. Walter C. Lowdermilk of the United States Department of Agriculture, however, hold that an intelligent program of soil conservation, reforestation and power development (such as Palestinian Jews have begun already) would make the country capable of supporting as many Jews as wished to live there, and the Arab population besides.

It may be hoped that American members of the new inquiry committee will consider the possibilities of this long-range program, and that they will also give more immediate attention to the desperate plight of the ill, hungry and homeless survivors of Nazi-Fascist pogroms than Bevin apparently has planned.

---

## Compulsory Health Insurance

EXTENSION OF REMARKS
OF
### HON. FADJO CRAVENS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by C. F. Byrns, from the Fort Smith Times-Record:

TAKING A LOOK AT THAT HEALTH INSURANCE PROPOSAL

(By C. F. Byrns)

Compulsory health insurance as proposed by President Truman this week is a long way off, if indeed it is ever adopted in this country.

The President's proposal fits in perfectly with the social ideas of a considerable segment of Americans. They believe that Government should undertake to protect all humanity against all the ills of existence, at public expense—and collect the cost off somebody else

It will be opposed by a large number of people who believe that compulsory health insurance and Government control of medical care will produce less health at more cost.

The medical profession will oppose the President's proposal, I think, practically to a man. The reasons were admirably presented in a statement prepared by Dr. W. R. Brooksher, of Fort Smith, at the request of these newspapers, and published immediately after the President's proposal was made. Dr. Brooksher is secretary of the Arkansas Medical Society and his views may be accepted as an accurate reflection of the opinion of most if not all his colleagues.

It seems to me there are two things fundamentally wrong with the proposal for compulsory health insurance and governmental supervision of medical care.

One is that the nations which have had it for many years have made materially less progress in health than the United States has made under its system of free enterprise in medical practice.

Another is that the cost of medical care as proposed by the President is materially higher than the average cost now paid by the people who have the very best of care.

Aside from these two basic objections, which ought to be enough, there are other reasons for opposing the President's plan.

Among them is the fact, demonstrated on a thousand fronts, that bureaucracy tends to produce mediocre performance, to discourage inventiveness, risk taking, and new ideas and to encourage strict conformity with a set pattern of behavior. If you don't believe that, ask anyone you know who is now and has been for sometime an employee of a far-flung Government bureau. They'll tell you, off the record. They won't tell you for publication. That very fact demonstrates what I'm saying—bureaucracy constantly exerts pressure on everybody to conform to the rules and regulations and never, on any account, say or do anything which a superior may disapprove because he didn't think of it first.

American medicine has achieved tremendously for a great variety of reasons. An important one is that every medical man is stimulated to do his very best by the prodding of his own conscience, by the constant competition within his own profession, by the knowledge that his earnings from his practice are not guaranteed by anybody and must be earned by his own initiative and skill.

The record of achievement in health improvement in this country of free-enterprise medicine and in the older countries with their socialized medicine is available to anyone who wants to trail it down. I have read considerably on the subject. It is clear to me that government-controlled medicine has fallen short of the American system in results.

The President proposed a tax of 4 percent on all incomes up to $3,600 a year to pay the cost. That's $144 a year or $12 a month. Relatively few families pay that much for medical care, even if they use all they need of the best available.

Everyone recognizes that we need to make competent medical care available for more people on a cost they can afford. We are making definite progress in that direction through prepayment medical care plans, Blue Cross hospital plans, free clinics, and free hospital care for the indigent, and through a large and growing public health service. We have yet much to do. It is my own opinion that we shall be wiser to push these means for spreading medical care to more people, preserve the undoubted virtues of our present system of private medical practice, and avoid the excessive cost and deadening influence of political medicine.

## Indian Students Get GI Space on United States-Bound Ships

EXTENSION OF REMARKS

OF

### HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mr. SHAFER. Mr. Speaker, how much longer will this Congress ignore the increasing demand for a square deal for our servicemen? How much longer are we going to take what the War and Navy Departments are throwing at us? They feed us sop about the point system. They keep high-point men in and release low-point favorites. Now they are assigning shipping space intended for war-weary, homesick veterans to Indian students.

I am beginning to wonder if the War and Navy Departments are not conspiring to defeat the Members of this Congress at the polls next year. They most certainly know that we are being blamed for bungling and broken promises in relation to demobilization.

I have asked the War Department for an explanation of this latest GI insult. Kicking homeward bound boys off our boats to make room for some 266 Indian students, some of them 45 years old, is, in my opinion, one of the rankest deals that could be perpetrated on our servicemen.

Under permission to extend my remarks I include a short article which appeared in the November 30 editions of the Washington Times Herald.

INDIAN STUDENTS REPLACE GI'S ON AMERICAN-BOUND BOATS

(By Ed Sullivan)

From Karachi, India: GI publication The Gateway bitterly tells why hundreds of American soldiers won't spend Christmas with their families. The paper documents its charges that 50 GI's were put off the *Stet* to make way for 50 Indian students en route to United States schools, and records the current Karachi rumor that 200 Indian students sailed on the *Santa Rosa*, 59 on the *Meigo*, 68 on the *Richardson*, 37 on the *McCrea* * * *. "Let the brass hats explain this dirtiest trick ever played," says The Gateway. "But the guy sitting on his barracks bag, watching the young Indian civilians walk up the gangplank, and dreaming of Christmas won't be listening."

I understand, too, Mr. Speaker, that Chinese students are now being brought to America on transports sailing out of Calcutta, all occupying spaces that had been intended for returning American GI's. I have no proof of this, but you can be sure I shall demand the truth from the War Department.

## We Should Have an Import Quota on Eggs

EXTENSION OF REMARKS

OF

### HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. JENSEN. Mr. Speaker, I have introduced a bill to put a quota on the imports of eggs. This appears to be a desirable and a necessary approach. We are going to have considerable difficulty in maintaining the 90-percent floor price for eggs if we do not have a quota on imports of eggs.

I wish to include the following article from the November Farm Journal that gives a picture of the serious situation that exists in regard to eggs:

WHAT'LL WE DO WITH THE EGGS?—THIRTY-FOUR MILLION CASES TOO MANY WILL GIVE FIRST REAL TEST TO PRICE SUPPORT

An egg surplus that may make all previous surpluses look like chicken feed is likely to begin in December. It may come earlier.

Already some Midwest egg prices have fallen below 90 percent of parity. On the east coast, however, they still push against the ceiling.

This surplus will be the first real challenge the Government has had to make good on its promise to support post-war farm prices.

Under the Steagall amendment, prices of eggs and other war-needed commodities are to be maintained at not less than 90 percent of parity until 2 years after the end of hostilities has been declared. The end has not yet been declared. What happens to eggs will give farmers some idea of what may happen to other product prices.

The simple mathematics of the egg outlook are these: United States citizens will have eaten 385 eggs apiece in 1945. They had more money and bigger appetites while doing war work than when working on peacetime jobs, and they were able to get less meat than they wanted.

Next year there will be more meat and less money. Egg consumption is expected to drop to 330 eggs apiece.

If poultrymen produce at the same rate next year as this, that will mean about 34,000,000 cases of surplus eggs for the Government to buy. The bill for that many eggs will be about $400,000,000. Present support prices are 27 cents a dozen for candled eggs, and 24 cents a dozen for ungraded eggs.

The Doane Agricultural Service, biggest farm-management organization in the country, says that by March, "when even the crows are laying eggs," the egg market will be absolutely dependent on Government support prices, unless production is cut.

The United States Department of Agriculture probably will announce 1946 egg goals soon. They will be put out in the hopes that last year's history won't be repeated. A year ago, when it looked like feed was going to be tight and the war would end soon, USDA asked hatcheries to shut down, and urged poultrymen to cull to the bone. Poultrymen figured that if some cutting was good, more would be better.

The result was last summer's egg shortage and the poultry freeze orders. Planners don't want another egg famine on top of this winter's surplus.

A committee of the National Poultry Producers Federation last week found out how seriously Washington regards the situation.

Secretary of Agriculture Anderson not only sent his top poultry experts to meet with the committee, but his executive assistant, Nathan Koenig. Two days after the meeting, the Department appointed Hobart Creighton, nationally known poultry breeder of Warsaw, Ind., to head the poultry branch of the Production and Marketing Administration. (Creighton is a life-long Republican, and Speaker of the Indiana House of Representatives.)

The Marketing Subcommittee of the House Agriculture Committee met with the poultrymen, and Chairman Flannagan promptly appointed a poultry committee to hold a special hearing. It was the first time a special congressional committee ever was appointed to work with the poultry industry.

The poultry delegation thinks its 3-point program stands a good chance of adoption. These points are:

1. An orderly program of Government purchase of surplus eggs.

2. Government support for poultry (including broilers) which was raised in expectation that it would be needed to fill Government orders.

3. Removal of ceiling prices on eggs and poultry as soon as prices paid to farmers drop below ceilings.

## Letter of Japanese Residents of Minnesota

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following interesting letter and my reply:

UNITED CHRISTIAN MINISTRY,
MINNEAPOLIS CHURCH FEDERATION,
*Minneapolis, Minn., November 14, 1945.*
The Honorable WALTER H. JUDD,
*The House of Representatives,*
*Washington, D. C.*

DEAR DR. JUDD: We Japanese people, who happen to have settled in Minnesota as the result of the War Relocation Authority's program, met at the St. Paul International Institute on November 11 for a monthly social gathering.

We wish to express our sincere appreciation for the most cordial and friendly way in which the residents of this State have received us into their midst. In spite of the fact that we had to go through a great deal of affliction and material loss by the mass evacuation and life in the relocation centers, we feel we have been richly rewarded by coming here. It is our feeling that the State of Minnesota, and the Midwest on the whole, with its population of numerous national and racial backgrounds, is the place from which real American and democratic life is developed. In view of the privilege of sharing in this magnificent experience, the hardship of the past few years can easily be forgotten.

During the course of the afternoon, our conversation turned to the subject of our homeland. We felt that the only way to save Japan and a wholesome relationship between this country and Japan is to have General MacArthur continue his present policy of occupation, which has more than proved his deep understanding of not only the problems involved but the people and their needs. We are not in a position politically to raise our voices, but as people who are familiar with the situation of that country we would like to express our wholehearted endorsement of his policy. We sincerely hope he will be able to continue in his present capacity without interference either from his fellow citizens at home or from any other nation.

We are writing to you, as a Congressman from this State, because your name has been mentioned in the public press most frequently; and we feel that you, with your background, would best appreciate our feeling. Please convey our sentiments to your fellow Congressmen.

Respectfully yours,

THE JAPANESE RESIDENTS OF MINNESOTA,
By Rev. DAISUKE KITAGAWA.

NOVEMBER 27, 1945.

Rev. DAISUKE KITAGAWA,
*Minneapolis, Minn.*

DEAR MR. KITAGAWA: It was with great pleasure that I received your letter of November 14th, expressing your appreciation of the way in which the people of Minnesota have on the whole welcomed you into their midst and helped you find useful and happy places in our society. I was privileged to have a small part in setting up the original committee of Minneapolis citizens when you were first being transferred to our State in considerable numbers. The fact that so extensive a readjustment could be made in a time when feelings were high is a tribute to the understanding and good sense both of your people and of ours.

I agree wholeheartedly with your estimate of the remarkable way in which General MacArthur has handled the very delicate task of the occupation of Japan. Surely it has been done with a maximum of benefit to all concerned. We have defeated the Japanese militarists. Now we must so behave as to win the Japanese people to a more democratic way of life than was previously possible for them.

Very sincerely yours.

## Vengeance Legislation

EXTENSION OF REMARKS
OF
### HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes:

VENGEANCE LEGISLATION
(By Thomas L. Stokes)

There's a right way and a wrong way to do things—including legislating.

An example of the wrong way may be seen currently in the attempt to rush drastic penalties against labor through the House of Representatives. They are contained in a bill prepared by the Military Affairs Committee. The measure has been ordered to the floor by the Rules Committee for early consideration.

The effort is to exploit the present strike situation. That offers provocation for labor-law reform, certainly, but not through such hasty and ill-considered legislation whipped up hurriedly in a spirit of vengeance. Long-time changes in labor law should be considered carefully and soberly.

The penalizing provisions were inserted in a bill that originally was designed only to repeal the wartime Smith-Connally anti-strike law, so-called. Repeal of that act meets general approval. But the provisions added by the Military Affairs Committee do not. Labor is complaining bitterly, and with reason.

One provision would punish any labor union which struck in violation of a no-strike clause in its contract by suspending its collective bargaining provisions for a year and making it subject to suits for damages incurred by work stoppages.

The obvious effect would be refusal by labor unions thereafter to accept no-strike clauses. Further, it would open the way for employers, so inclined, to provoke strikes themselves and drain union treasuries. There is no penalty for employers who might themselves induce strikes by their conduct.

Another provision would prohibit contributions by labor unions for political convention and primary election campaigns. This would extend the ban already imposed by the Smith-Connally Act against such contributions for general election campaigns, which is to be retained. The latter somewhat restricted the scope of CIO's Political Action Committee in last year's general election campaign, though it did not interfere much with its ultimate effectiveness. It operated under the exception permitting use of union funds for educational purposes. Former Attorney General Biddle, over protests from some Members of Congress, held that PAC was not violating the law.

The purpose of the prohibition in the case of conventions and primary elections is clear. Members with anti-labor records fear CIO attempts to eliminate them in next year's primaries, and with reason. The CIO had some primary successes last year, even in the South. That served as a warning.

Aside from the injustices and the dubious constitutionality of these provisions, and the hasty method of legislating, there is something else wrong with this whole procedure.

This is the matter of jurisdiction. All this was done by the Military Affairs Committee and not the regularly constituted House Labor Committee. The Military Affairs Committee proved its ineptness and lack of experience and judgment in framing labor legislation when it handled the original Connally bill, 2 years ago.

Administration leaders sought in vain to get the Rules Committee to withhold report of the bill for House action until the Labor-Management Conference here had finished its work. But the Republic-southern conservative Democrat coalition in the committee, which holds the whip-hand, seized the second streetcar and bus strike here and beginning of the General Motors strike to shove the measure to the floor.

## Let's Keep the Discharge System Fair

EXTENSION OF REMARKS
OF
### HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, I am very much perturbed by the favoritism shown in certain cases to sons of generals and legislators in facilitating their discharges from the service. I am also against the idea of athletes being given special consideration in this respect.

I would like to urge, Mr. Speaker, that the point system for discharge from the service be operated on an equitable basis

so that all men may be given the same consideration. There should be no favoritism shown to anyone. It is my hope also that the number of points necessary for discharge will be lowered and, in a short while, done away with completely so that these men who have done their full share will be allowed to return to their country and their loved ones. It is imperative that we continue to exert all our efforts toward this end.

## The British Loans

EXTENSION OF REMARKS
OF
### HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial:

THE BRITISH LOANS

The Government of the United States is mobilizing all its propaganda resources, according to a recent article in the Wall Street Journal, in support of a purported postwar loan of $4,000,000,000 to Great Britain—a proposition which the people of the United States definitely and almost unanimously do not approve.

This is an amazing situation.

Why should the Government of the United States, which is not the master of the American people but only their servant, be so anxious and determined to make a disposition of the resources of the country contrary to the wishes of the people?

The Government does not have any money in its own right, to loan to foreign governments or even to spend for its own purposes.

The only money available to the Government is that which it exacts from the people in taxes, or borrows against future taxes.

In all matters, but especially in matters pertaining to the expenditure or other disposition of money, the Government should respect and abide by the wishes of the people, and not impose its own contrary wishes upon the people.

In the matter of the proposed British loans, the American people have clearly indicated their overwhelming opposition—as many as 7 persons in 10 having declared their opposition in comprehensive polls of public opinion.

Nevertheless, as the Wall Street Journal reports:

"Five top Government agencies are mobilizing their opinion-manufacturing machinery for a campaign which will start soon and which officials say will be running at full tilt by December when Members of Congress will be home listening to constituents.

"The pay-off will be legislative action in January.

"Between now and then the pressure will pile up * * *.

"The American strategy is all drawn up.

"It is incorporated in a State Department document bulking 100 pages or so which has been distributed to key officials in the Treasury Department, Commerce Department, Federal Reserve Board, and Agriculture Department."

But of course the truly amazing factor in this situation is not alone in the Government's efforts to influence the people against their own wishes and interest.

It is also in the Government's deliberate and callous effort to deceive the people.

The so-called British "loans" are not in fact loans at all.

They are intended to be and are going to be outright gifts.

The British Government frankly does not want and will not accept loans, for the very substantial reason that it does not want to pay them back and knows very well it would never be able to pay them back.

An editorial in the trans-Atlantic edition of the London Daily Mail makes this point perfectly clear when it says that, however badly Britain wants and needs the money:

"There is a limit beyond which Britain will not go.

"The British people are determined not to enter the postwar world with a millstone of foreign debt around their necks.

"That could only mean one of two things.

"Either we should become a dependency of the United States or we should have to incur the odium of repudiating a debt which we should be unable to carry.

"The United States should propose some means of assisting Britain which would not confront us with such a dilemma."

This is far nearer the truth of the matter than American propaganda in support of the loans to Britain has ever come.

If the American people must be deluged with propaganda by the Government of the United States, at least it should be as truthfully presented as the British propaganda relating to the same subject.

## Continue Small Business Committee

EXTENSION OF REMARKS
OF
### HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include a letter which I have received from Mr. Louis W. Oswald, of Naperville, Ill., secretary of the DuPage County Retail Druggists' Association, and a member of the national committee on legislation of the National Association of Retail Druggists. The letter follows:

DEAR MRS. DOUGLAS: There are other problems before the Congress besides the atomic bomb and the investigation of the Pearl Harbor disaster.

One of these is the plight of the small businessman, with the threat of extinction by monopolistic interests. Today there is a concerted under-cover move in Congress to scuttle the Small Business Committee, of which WRIGHT PATMAN is chairman, by denying sufficient funds to carry on.

Says WRIGHT PATMAN, "There is a sinister force in this country that is trying to break down any sincere efforts to help small business during the transition period, thereby aiding big business and monopoly."

We must not permit the congressional saboteurs to scuttle this committee under any pretense whatsoever and should expose those charlatans who masquerade as representatives of the people.

The matter is urgent. We ask that you take immediate action to save our cause and that of all small business. I will anticipate your cooperation, in the interests of true democracy and American free enterprise.

Sincerely yours,

LOUIS WILLIAM OSWALD.

## Robert Ramspeck

EXTENSION OF REMARKS
OF
### HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. BROWN of Georgia. Mr. Speaker, under leave to revise and extend my remarks, I include in the RECORD an editorial appearing in the Atlanta Journal on November 27, and an editorial appearing in The Atlanta Constitution on November 28, in eulogy of our colleague, ROBERT RAMSPECK:

[From the Atlanta (Ga.) Journal of November 27, 1945]

ROBERT RAMSPECK RESIGNS

The Journal shares a widespread regret over the announcement that Representative ROBERT RAMSPECK of the Fifth Georgia District is to resign. His 16 years in Congress are a record of growing usefulness to his constituents, his State, his party and his country. He earned the confidence of them all, and they are all losers by his resignation. Good sense, hard work and high integrity, combined with a native aptitude for dealing with men and affairs, carried "Bob" RAMSPECK to the foreranks of the House of Representatives and of Democratic leadership. The hope was that many more years of his increasingly valuable experience would be given to such service.

It is peculiarly regrettable that the office of Congressman is not sufficiently rewardful or attractive to compete with private enterprise for a man of his caliber. His new post as executive vice president of the Air Transport Association of America insures him a salary several times larger than that he has received and also releases him from the petty worries and uncertainties of a political job. He felt, as we can well understand, that in justice to his family and his future he could not afford to reject so inviting an offer. Is it not equally true, however, that the public cannot afford less than the highest order of ability in the business of Government? Something should be done to attract to the public office, and to hold, more men of the efficiency and character of ROBERT RAMSPECK.

We wish him a full measure of success in his new and important field, and trust that the voters of the fifth district will be thoughtful and vigilant in choosing his successor

[From The Atlanta (Ga.) Constitution of November 28, 1945]

RAMSPECK WORTH MORE TO US

After 16 years in Congress, Representative ROBERT RAMSPECK, is resigning.

Representative RAMSPECK has served this district—and the Nation—intelligently and untiringly.

He has made a record such as few have equaled.

As Democratic whip in the House, he has played a major role in the formulation of the momentous legislation enacted during the turbulent past decade and a half.

It is with genuine concern that we witness Representative RAMSPECK's departure from public life. For he is a valuable man.

Indeed, it is one of the anomalies of our system of government that men like RAMSPECK must be lost to public service: For, while his salary in his new connection will be several times his congressional pay, Representative RAMSPECK, by virtue of his ability and experience, is worth far more to the people of the Fifth District.

It is a tragedy that, because of the relative pittance we pay our Congressmen, we must ever go on losing good, experienced men from congressional halls.

Representative RAMSPECK, as many honest, conscientious Congressmen before him, has found it necessary—in the absence of an outside source of income—to turn to other fields to earn a living.

Moreover, fewer and fewer capable men are being attracted to Congress, with the result that more and more grossly incompetent ne'er-do-wells, usually of the demagogic type, are making successful bids for congressional posts.

Of course, we can never hope to compete, dollar for dollar, with private industry in the search for character and ability. But we can certainly close the gap between the remunerations offered by public and private life to the point that, while it may still be something of an economic sacrifice, Government service will at least pay a living wage.

Ten thousand dollars is a ridiculously inadequate compensation for Congressmen, considering all the demands which are made upon them.

Until such time as congressional pay is revised sharply upward, we shall go on losing capable, experienced men like BOB RAMSPECK.

And that we can ill afford.

## OPA's Cost-Absorption Policy

EXTENSION OF REMARKS
OF
**HON. CLARENCE CANNON**
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks I include a letter from Administrator Chester Bowles with accompanying questionnaire, as follows:

OFFICE OF PRICE ADMINISTRATION,
*November 28, 1945.*

DEAR MR. CANNON: I have been deeply disturbed during the last few weeks over the apparent misunderstanding of one of OPA's basic policies—the policy of cost absorption at the manufacturer and distributor levels.

From the many statements which have been made about this policy, it is apparent that most of the objections are due to confusion as to just what the policy is, how it is applied, and the necessity for its use.

In this letter I would like to sketch very briefly the most important points about this policy so that you may be familiar with it. I want also to point out the serious consequences were cost absorption abandoned.

This policy is, first of all, an old policy. It has been in effect during the entire period of price control. It has been discussed before congressional committees and debated on the floor of both the Senate and the House. It has been reviewed and affirmed by the courts.

On numerous occasions I have stated that this policy is the very cornerstone of effective price control. Without it we would surely face a substantially higher price level and the rapidly growing danger of runaway inflation.

Let me emphasize this by a brief outline of the direct result if the cost-absorption policy were eliminated at the distributive levels alone:

The public would be immediately forced to pay $700,000,000 a year more for food. Not one penny of this would go to the farmer.

The public would be forced to pay at least $300,000,000 more for apparel in the lower and medium-priced ranges. Clothing prices are already high.

The public would be forced to pay at least $400,000,000 additional for automobiles, radios, washing machines, refrigerators, vacuum cleaners, and other so-called reconversion products.

These sweeping price increases to the public would result solely from the elimination of cost absorption by distributors. It would be impossible, however, to eliminate this pricing standard for one group without eliminating it for others. This would mean sweeping increases in most manufacturers' prices totaling additional billions of dollars. These increases would be pyramided into still higher increases to the general public.

The two principal groups which have been opposed to this policy are the National Retail Dry Goods Association and the distributors of reconversion products. It is my belief that the great majority of merchants and dealers who have offered their protests have not thoroughly understood the distinctly limited effect which this policy has had and will have on their present and future profits.

Department stores, both large and small, are enjoying peak prosperity. Department store earnings, including both large and small companies, are estimated at 13 times their average 1936-39 profits.

Nineteen hundred and forty-four was the biggest year in their history. Sales at present are running 12 percent above 1944 levels, with the prospect of the greatest Christmas business in all time. The outlook for 1946 is excellent.

Dealers in electrical appliances, automobiles, and other reconversion goods, should look forward during the next 2 or 3 years to a period of unprecedented prosperity. The country is hungry for the goods which they will sell.

The War Production Board—now the Civilian Production Administration—estimates that production of automobiles, electric refrigerators, washing machines, vacuum cleaners, radios, and other such products will by June 30, 1946, exceed average 1939 monthly shipments by from 70 to 300 percent.

In no instance will our cost-absorption policy allow the dealers less than their actually realized profit margin on each unit in 1941 (their biggest prewar year). With few exceptions this policy will in practice allow them a profit per unit far in excess of that which they secured in 1941. Thus, with very few exceptions, they can look forward to higher profit margins per unit with a tremendous increase in the number of units sold.

I have never been more alarmed by the inflationary danger confronting us than I am at present. It is not the fantastic total of liquid assets alone that frightens me, although they could easily cause an inflationary explosion if the public ever loses confidence that the price line would be held. The inflationary psychology that has now taken hold of the country is at least equally dangerous.

The real-estate market is booming, with prices already way out of line with what the market can sustain. Nonetheless, these prices move up week by week.

The stock market is spurting and the "inside" speculative dope being passed on by the taxi drivers and elevator boys is reminiscent of 1928 and 1929.

And all over the country sober businessmen are writing escalator clauses into their contracts.

It's going to take everything we've got to keep prices from tearing loose.

The administration of the price control program has never been an easy task. It is much more difficult today. Although we shall strive with every possible means to ease hardships, to eliminate inequities, and to make sure that price control in no sense stands in the way of production, I cannot guarantee a wholly painless operation.

During the 2½ years in which I have been in Washington I have tried to keep Congress thoroughly informed about what we are doing and why we are doing it. Congress is in a sense our board of directors—the group which sets the basic policies on which we operate. I believe that all the Members of Congress—whether they agree with us or not—are entitled to full, frank, and complete information on the progress of this program and the dangers which we see ahead.

I am writing you this letter now because we need your help and I want to have you see the situation at least as we see it—particularly on this widely misunderstood question of manufacturer and distributor absorption.

For your further information on this question of cost absorption and to aid you in answering constituents' letters, I am attaching a "question and answer" memorandum which may be helpful to you.

Sincerely,

CHESTER BOWLES,
*Administrator.*

---

SIX QUESTIONS AND ANSWERS ON OPA'S COST-ABSORPTION POLICY

Question 1. Exactly what is this policy?

Answer. Cost absorption is the balancing of cost decreases against cost increases in the determination of prices, with no increase when decreases and other benefits of war-economy volume exceed cost increases.

Business itself in peacetime generally has absorbed cost increases without price increases when there were offsetting cost decreases to cover them. This is clearly seen if one studies what happened to wages, costs, and prices between the two World Wars. The average hourly earnings of industrial workers went up 37 percent between 1923 and 1941. But did industrial prices go up? They did not. They declined 15 percent. How could this be? Because better machines and techniques increased output per man-hour 88 percent, reducing labor cost per unit of output 27 percent. Industry balanced cost decreases against cost increases, and gave the public much more for its money.

During World War II wage rates went up 73 percent (1944 over average 1936-39); raw material prices went up 53 percent. The prices of finished manufactured goods rose only 21 percent, yet manufacturing profits rose 450 percent. How could this be? Because industrial output rose 126 percent, greatly reducing overhead costs. There were, also, in many cases improved methods. Cost decreases, over-all, far exceeded cost increases. Cost absorption saved billions on the cost of the war; billions in living costs to consumers, yet business earned more than ever in history.

That is all there is to OPA's cost absorption policy: a balancing of cost decreases against cost increases and the benefits of war—economy volume—with maintenance of existing prices so long as—

(1) Industries and trades make not less than their normal—usually their 1936-39 profits before taxes.

(2) Industries making multiple products recover at least their out-of-pocket costs on all individual products, even when their over-all earnings exceed prewar profits.

(3) Trades recover at least their expense rates on the sale of all individual products, even when their over-all earnings exceed their prewar earnings (save where traditionally the margin has been lower).

(4) Distributive trades handling such products as automobiles and electrical household appliances receive not less than their actually realized prewar gross margins.

During the war we also made increases to stimulate the production of goods essential to prosecution of the war.

That is all there is to OPA's much debated cost-absorption policy.

Question 2. Does this policy apply to everyone?

Answer. The policy has been applied in general to every industry and every distributive trade since price control was adopted. In all cases cost absorption ends if and when cost increases—

(1) Reduce over-all industry or trade profits before taxes below prewar levels.

(2) Cuts a multiple product industry's prices on an individual product below out-of-pocket expense for the bulk of the output.

(3) Cuts a distributive trade's price on any article below its expense rate.

(4) Cuts a reconversion goods distributive trade's gross margin (on such as automobiles and appliances) below its actually realized prewar gross margin.

Question 3. Just what is the legal basis of the policy?

Answer. The Emergency Price Control Act, passed in January 1942, left the Administrator with considerable leeway in adjusting price ceilings upward, so long as the purposes of the act were achieved. These were to "stabilize prices and to prevent speculative and unwarranted increases in prices, to protect persons with relatively fixed and limited incomes, and to prevent post-emergency collapse of values," etc. Ceiling prices fixed, however, were to be "generally fair and equitable."

The Stabilization Act which became law in October 1942 removed much of the Administrator's discretion. It directed the President to stabilize prices affecting the cost of living on the basis of September 15, 1942, levels. Authority was given for upward adjustments only to aid in the effective prosecution of the war or to correct gross inequities.

Reading the two acts together it is apparent that September 15, 1942, price levels must not be exceeded, save in the above-named instances, so long as they are "generally fair and equitable."

Congress thus ruled out cost increases as grounds for price increases except in certain specified circumstances. Accordingly, OPA is required by law to apply its cost-absorption policy.

That OPA is correct in its views as to the law has been sustained by the Emergency Court of Appeals. See *Gillespie, Rogers, Pyatt Co.* v. *Bowles* 144 F. (2d) 361 (1944) and *Philadelphia Coke Co.* v. *Bowles* 139 F. (2d) 349 (1943).

In the Philadelphia coke case mentioned above the court said that when producers' prices have to be increased to meet the standards of the act, "it is the duty of the Administrator, so far as possible, to require them to be absorbed at some appropriate intermediate stage in the process of production or distribution at which there may be an existing margin of profit reasonably sufficient to absorb it."

Cost absorption at retail occurs when retail prices are not increased to offset manufacturers' increases. Under the standards of the original Price Control Act, retail increases are not required by law merely because manufacturers' prices are increased. They are required only when over-all earnings of the retail trade groups affected are reduced below peacetime levels (the earnings standard) or when retail prices on individual products become unreasonably low in relation to operating expenses (the product standard). Under the standard covering price increases to aid in the effective prosecution of the war or to remove gross inequities, increases in retail prices to offset manufacturers' increases are not proper. Consequently, Congress has clearly directed that retail ceilings are to be held even when manufacturer's increases are granted, provided that the standards of the original Price Control Act are at all times met.

Furthermore, failure to apply the cost-absorption policy at retail would conflict with Executive Order 9599, promulgated by President Truman on August 18, 1945, which states that one of the guiding policies of the reconversion period shall be "To continue the stabilization of the economy as authorized and directed by the Emergency Price Control Act of 1942, as amended, and the Stabilization Act of 1942, as amended," and directs the Price Administrator to "take all necessary steps to assure that the cost of living and the general level of prices shall not rise." Even where a price increase is necessary to correct a gross inequity or a maladjustment interfering with effective transition to a peacetime economy, President Truman's Executive order directs the Price Administrator "so far as is reasonable, practicable, and necessary for this purpose, to see that such price increases do not cause price increases at later levels of production or distribution."

Question 4. What has been gained through the policy?

Answer. By using some of the benefits of large, war-created volume to absorb cost increases without price increases, the Government has held the price line far better than otherwise would have been possible.

Living costs in World War II rose 31 percent from September 1939. Only 3 percent of the rise came after May 1943, when the hold-the-line order was issued. In the World War I inflation—when pressures were far less powerful—they rose 108 percent. The difference is due in great degree to the fact that when Congress passed the Price Control Act it made possible the cost-absorption policy in establishing maximum prices.

Had every cost increase been translated into a price increase, billions would have been added to the public's cost of living; tens of billions would have been added to the cost of the war. Prices would be far above present levels. There would be no effective check on a spiral of wage-price rises.

Question 5. Has this policy unfairly curbed the profits of industry or distributors?

Answer. The facts tell the story. Industry profits in 1944—after cost absorption—were 4½ times average 1936-39 profits; 1½ times 1941 profits. They would have been far greater under a policy of cost-plus pricing; but greater profits would have resulted in widespread charges of profiteering and demands for compensating increases by persons whose incomes were subject to stabilization.

Profit figures for the distributive trades are less readily available. The published figures of the National Retail Drygoods Association, the most persistent critic of cost absorption, show profits for 1944—after cost absorption—13 times the average 1936–39 profits.

Other gains in trade profits after cost absorption are as follows:

*1944 over average 1936–39 earnings*

| | *Percent* |
|---|---|
| Hardware retailers | 464 |
| Small furniture stores | 185 |
| Variety chain stores | 339 |
| Men's apparel stores | 398 |
| Chain grocery stores | 152 |
| Independent grocery stores | 117 |
| Music stores | 210 |

Lest anyone imagine that small business has suffered, we cite the following figures from the Department of Commerce:

*Profits of unincorporated firms*

[In millions of dollars]

| | *1939* | *1944 (after cost absorption)* |
|---|---|---|
| Manufacturers | 315 | 712 |
| Wholesale | 723 | 1,507 |
| Retail | 1,517 | 3,416 |

Total corporation profits have risen as follows:

*Corporation profits*

[In billions of dollars]

| Year: | *Before taxes* | *After taxes* |
|---|---|---|
| 1939 | 5.3 | 4.0 |
| 1944 (after cost absorption) | 24.8 | 10.0 |

In peacetime as in wartimes there always are some high-cost firms experiencing hardship. That these have been abnormally few during the period of price control is shown by Dun & Bradstreet's reports of business failures as shown below:

| Year: | *Failures* |
|---|---|
| 1929 | 22,909 |
| 1939 | 14,768 |
| 1941 | 11,848 |
| 1944 (with cost absorption) | 1,222 |

Recent complaint has come from wholesale and retail distributors of automobiles, electrical appliances, and other reconversion goods, to whom it has come as a new idea that under price control business has not been assured its prewar gross percentage margins before mark-downs and other allowances. Lacking recent cost and profit figures to establish limitations upon cost absorption by wholesale and retail distributors of reconversion goods, OPA has earmarked for absorption, where necessary, the difference between prewar list price percentage margins and the prewar percentage margins they actually realized. The list price margins never were realized because of mark-downs, losses on trade-ins and various other margin-reducing practices that will not be necessary in order to make sales in the months ahead. Under any and all conditions, however, and whatever are their cost increases, these trades will be protected in their prewar realized percentage margins.

Actually, in very few cases are increases in manufacturers' prices sufficiently large to reduce unit realized margins of reconversion trades to prewar levels. And with manufacturers predicting to the War Production Board that 1946 volume will exceed all previous records, distributors of reconversion goods seem certain in 1946 to enjoy one of their most profitable years. Cost-absorption requirements under these conditions cannot possibly prove a hardship.

Question 6. What would happen if this policy were abandoned?

Answer. Abandonment of the policy at wholesale and retail would have these results:

The cost of foods to the public would increase by $700,000,000, not one cent of which would go to the farmers.

The public would be forced to pay at least $300,000,000 more for lower- and medium-priced clothing

The public would have to pay at least $400,000,000 more for automobiles, radios, washing machines, refrigerators, and other reconversion products.

Several percentage points would be added in the retail prices of furniture and dozens of other less-important groups of commodities.

Abolition of cost absorption by manufacturers would have even more far-reaching results. Rises in prices of hundreds of industrial materials and parts would become cost increases to producers of finished goods. Thus, one price increase would be pyramided upon another, setting an inflationary spiral into motion. This would be accentuated when wholesalers' and retailers' margins were added to these increased prices.

Still more tinder would be added to the inflationary fire when labor demanded compensating increases to offset rises in living costs and farmers demanded higher support prices and other increased compensation to counteract increases in prices of industrial goods.

What would be the final result no one can predict. We know, however, that when prices soared after World War I the public began to spend its twenty-seven billions of wartime savings, seeking to satisfy future needs ahead of price increases. The mad scramble for goods that followed sent living costs to a peak 108 percent above prewar levels.

This time wartime savings of the people total not twenty-seven but $145,000,000,000—

a sum equal to the total spendable income of the public in our two most prosperous prewar years. Should people, whether consumers or businessmen, once lose confidence that the price line will be held and rush to meet future needs ahead of anticipated price increases, these vast wartime savings could throw the Nation into a wild inflationary scramble, exceeding any this Nation ever has experienced.

Raw material production rose so sharply during the war that we hoped for an early balancing of supply and demand that would permit the lifting of price ceilings. On November 6, however, Business Week reported to its readers that "without any question" but for OPA restraints, "the lid would blow" on materials and parts prices. "Expectations of a general upward revision of prices," the magazine said, "have more to do with today's markets than have the ordinary supply-demand factors."

In other fields, too, recent tendencies are menacing. Speculation has replaced investment in the stock market, sending security prices to a 14-year high and with the peak of the rise not yet in sight. Small people are taking fliers in a way reminiscent of 1928 and 1929. Uncontrolled commercial, residential and farm real estate prices also are rising sharply without controls.

In view of these conditions this does not appear to be a propitious time to substitute cost plus for cost-absorption pricing. To do so would be to run unwarranted and dangerous risks with the welfare of the American people.

With final victory over inflation in sight, but with this dangerous situation immediately ahead, the Office of Price Administration will take no step to weaken price controls or the confidence of the people that the price line will be held.

## Hurley's Resignation—The Muddle

EXTENSION OF REMARKS
OF
### HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein two editorials, one from the Manchester Union, Manchester, N. H., of November 29 entitled "Hurley's Resignation," and the other from the New York Herald Tribune of November 30 entitled "The Muddle":

[From the Manchester (N. H.) Union of November 29, 1945]

HURLEY'S RESIGNATION

Brigadier General Hurley's dramatic outburst accompanying his resignation as Ambassador to China brings to light a situation that merits attention. General Hurley's charge is that a group of professional career men in the State Department are wrecking American foreign policy by working secretly against it. High officials, he declares, shape that policy, and this clique within the State Department renders it impotent.

Referring specifically to the Chinese situation, General Hurley states that while he was trying to carry out the instructions of the United States Government, professional career men deliberately sided with the Chinese Communists, advising them that he did not represent the true policy of the United States. This they did to keep China divided against itself so that it might be a more easy prey to exploitation. Thus, he says, the principles of the Atlantic Charter are being frustrated, and "in diplomacy today we are permitting ourselves to be sucked into a power bloc on the side of colonial imperialism against Communist imperialism."

This is one of the frankest resignation statements made in a long time. It obviously demands fuller explanation by General Hurley. When the Ambassador came home from China, it is understood, he told President Truman he was tired and would like to be relieved of his position. The President persuaded him that his continued services were still needed, and he agreed to return to China. Whereupon a group of leftists in Congress introduced a resolution against him, and he suddenly decided to resign and delivered his blast against subversive elements.

The situation in China is most perplexing to most Americans. Our official policy is said to be to support Chiang Kai-shek's government as the established governmental authority in China until the Chinese people are able to decide what government they want. American troops, we are told, still remain in China to carry out our pledge to disarm the Japs and send them home. But this policy is not working out favorably.

Now General Hurley has added to the confusion. President Truman has taken a forthright step in asking General Marshall to go to China as his special envoy. Here would seem to be the right man for the job. General Marshall's ability has been attested not only as a military leader but as a man of judgment and diplomacy. He is one of the great Americans of all time. If any man can bring order out of the present chaos in China, it is he.

Incidentally, if the leftists in Congress or in the State Department hoped to gain anything by slugging General Hurley, they would seem to have failed. They will get no sympathy from General Marshall. He knows Chiang Kai-shek personally and is acquainted with the situation in China. He has little confidence in communism. Obviously, then, the leftists have gained nothing by the shift in ambassadors to China. In any case it would seem that the situation demands a clarification of American policy in the Far East. If the Hurley charges are correct, there should also be a housecleaning in the State Department. It will not be forgotten that General Stilwell came home from China in disgust before Hurley went there. Now Hurley returns in disgust. Something must be wrong, and the American people have a right to demand that they be given a clearer understanding of what it is all about.

[From the New York Herald Tribune of November 30, 1945]

THE MUDDLE

Just as the Hurley explosion over American far eastern policy is reverberating through the country Mr. Byron Price returns from a special mission to Germany to set off a bomb under our European policy. What we are doing in Germany is all wrong; there must immediately be a whole set of new decisions. Mr. Price castigates the French with severity; he thinks the denazification program should be slowed down, that more food must at once be shipped in to the Germans, that censorship and educational policies should be revised and that the basic directive to the military government should be re-revised and boiled down. These criticisms no doubt deserve attention on their merits. But the episode, like that of the vehement Mr. Hurley, adds up to an overall criticism of the present conduct of American foreign policy too searching to be longer neglected.

They add up to the fact that in Germany, as in the Far East, there is no American foreign policy. There is a tangled legacy from all sorts of conflicting policies and personalities, being administered by an equal tangle of conflicting agencies and authorities. It is a muddle which cannot be cleared up, on the one hand, by simply grabbing some able and politically impressive figure, like General Marshall, and throwing him into the middle of it. It cannot be cleared up, on the other, by sending even the most expert of observers, like Mr. Price, to criticize the conduct of operations for which the observer has no responsibility.

The fact is that the United States has simply failed to develop the agencies of policy formation and administration in the field of foreign affairs which are absolutely essential if we are to meet the staggering problems before us. To take only one example, raised by the price report. It may be true that French intransigence over the Rhineland question is the one great obstacle to satisfactory solutions in Germany. If that is true, then the French attitude should be the primary present concern of American policy. To the lay observer it is not immediately obvious that the French are wrong in their position; but it is obvious that, whether the French are right or wrong, there is no agency of American policy which can meet the challenge thus raised, win the French to an agreed Anglo-Russian-American view or modify our views to accord with the French position. At half a dozen other points in German as in Chinese affairs it is not that the policy is mistaken but that there simply is no policy of any kind, only the inevitably conflicting views of many different subordinate officers wanting clear direction from the top.

To win the war we were compelled completely to remake our Military Establishment, to expand it enormously, to provide it with innumerable complex agencies of research, intelligence, planning, coordination, administration, and policy formation. Something of the same kind, if on a lesser scale, will have to be done in the field of civilian foreign affairs. President Truman cannot be in Berlin on one day and in Chungking on the next, especially when he should at the same time be in Washington or Detroit. Mr. Byrnes cannot be in six places or think with six different brains at the same time. Still more, the United States cannot indefinitely leave its foreign policies to the accidental interplay of the brilliant amateur, the opinionated eccentric, the bureaucratic intriguer. We need adequate planning and administrative staffs at the top; we need a much greater professional expertness, discipline, and sense of responsibility all down the line. We shall not get these things easily. But get them we must, if our whole foreign policy and with it many of the hopes of the world are not to sink into a muddle of hopeless cynicism and frustration.

## Price Controls Disrupting Paper Distribution

EXTENSION OF REMARKS
OF
### HON. SHERMAN ADAMS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 30, 1945*

Mr. ADAMS. Mr. Speaker, the production of pulp and paper is one of the most important industries in the Northeast. As a result of OPA's pricing policies, the industry finds itself in a most difficult situation. At a recent meeting of the representatives of the industry and of OPA, the industry made certain statements concerning serious changes in production brought about by present pricing policies. In order to meet the demand for low-priced papers, which comprise a large percentage of total paper production, price levels for the lower grades must be such as to induce

their production as against higher-priced grades.

The textile industry has been in much the same situation and the Price Administrator has already recognized that essential changes must be made in order to provide for the continuation of certain essential production lines.

The present pricing policy is well illustrated in a statement made by the paper industry which, under leave to extend my remarks, I include herewith:

AMERICAN PAPER AND PULP ASSOCIATION,
*New York, N. Y.*

PRICE CONTROLS DISRUPTING PAPER DISTRIBUTION

At a recent meeting between representatives of the pulp and paper industry and representatives of OPA, consideration was given to the outlook for pulp and paper production under existing price controls. The views expressed by the industry's representatives may be summarized as follows:

With regard to the supply and demand situation, it was the consensus of opinion that they would never be in balance until the present rigid OPA policies and procedures were brought into alinement with present day economic conditions, or until natural economic laws are permitted to operate without price regulation. In fact the conditions as between a balanced supply and demand situation promise to get rapidly worse unless OPA will recognize the inevitable grade shifting that is taking place as a result of the impact of increased production costs particularly on items in the low-priced field. Several illustrations of this situation were cited, including the current shift from the production of unprofitable grocery bag paper which, in the final analysis, involves the question of public sanitation, to more expensive lines upon which a reasonable profit can be realized.

Present OPA pricing policies, by denying adjustments in the price of unprofitable low-priced grades of paper that normally constitute an important percentage of total paper production, will, if continued, bring about to an increasing extent a situation where surpluses will exist in higher priced items and acute shortages in low-priced items. This problem of grade shifting is one that is inherent in the character of the paper industry. Industry representatives were unanimously of the opinion that current OPA policies were forcing the industry to resort to this device in order to protect itself against inordinate profit declines. The result is a serious unbalancing of paper production, with resulting inflation and economic disruption in the channels of consumption.

With regard to the effect of shortages of fibre supply, it was the consensus of opinion of the industry representatives that here again this was incident to the unrealistic approach of OPA in not adopting pricing practices suitable to the character of the industry. It was the general belief that production would be maintained at maximum levels if reasonable profit incentives were offered to stimulate this production. Lacking such incentives essential production is bound to decline, as operating conditions become more difficult and as fibre continues to remain scarce. The issue was raised that with the elimination of the War Production Board, whose interests lay in production, OPA must recognize in a realistic way the effect of its pricing policies on production. The chaotic condition that now exists within the industry in its production schedule is bound to become more aggravated unless recognition is had in OPA of the character of the industry and the effect of the inflexible application of its rules and practices as now applied.

With regard to new capacity that will be brought in with new machines installed or machinery built, it was the general opinion of the industry representatives present that this capacity could not be in production in sufficient time to materially affect the present situation. If mills could give their sole attention to more output instead of having to schedule mill operations with profit margins in mind, it was felt that the output of existing capacity could be increased approximately 10 percent.

While the impact of the labor situation was not discussed as thoroughly as it probably deserved, the general opinion of the industry representatives was to the effect that with skyrocketing wages many mills would be forced to curtail operations and return to a 40-hour workweek in order to survive at all. Even under the best of conditions, with the rapidly narrowing margin between costs and the existing price ceilings, marginal capacity in the industry will operate under great difficulties and there is little doubt if conditions continue to follow the trends that now exist, much of this capacity will disappear from the picture. Unfortunately, this loss of production will occur chiefly in the field of low-cost grades where the resulting injury to the consumer will be most serious.

With regard to the general effect of the criteria used as related to low-priced end products, it seemed to the industry representatives that this effect is distinctly inflationary in character. OPA is forcing customers of the industry to buy high-priced products when normally lower-priced products would be used. Customers are forced to this extreme by the fact that the paper mills of the country are forced out of the production of low end products in order to protect their economic position and survive. OPA has had some experience with a situation of this type in the textile industry. While the situation in the paper industry may not be equally dramatic, it certainly is comparable and carries the same implications.

E. W. TINKER,
*Executive Secretary.*

NOVEMBER 27, 1945.

## Letter From a Soldier

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 30, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein copy of a letter sent by one of my constituents to his mother from Heidelberg, Germany. This soldier, who is only 20 years of age, has participated in three major battles and has served 142 consecutive days in combat area. Evidently he is justified in his criticism of the conduct and actions of the officers toward the men as he states in his letter which reads as follows:

PFC JOHN C. WALSH, 31371036,
BATTERY A, 387 AAA, APO 758,
C/O POSTMASTER, NEW YORK, N. Y.
*Heidelberg, October 30, 1945.*

DEAR MOTHER: I thought I had been in some pretty poor outfits in this Army but this one has no equal. If it has I pity the men in it. We have a man, he looks like a man anyway, in command of this battery that must have taken his training under Simon Legree. Of all the 90-day "blunders" I've seen, he is by far the worst I've met. I once read in the paper that some Congressmen expect riots and mass desertions over here this winter. Well they will get them if these dogs continue to treat us the way they do. The officers over here have a life they have never had before or will have again—with as little work as they do. They have all the liquor they need; they all have a car or means to command a vehicle and the hotels and houses where tney live are nothing but houses of prostitution. Every last one of them leads the life of a big playboy. Yet they make life miserable for us. I won't bother to tell you how, for you wouldn't understand it too well and I'd have to write a sizeable book to cite every case I know. You'll have to take my word for it.

So don't be surprised if I land in a guardhouse. They worry about keeping the peace with other nations, yet they can't even keep it in their own Army. They make me sick, but they sure pull the wool over the people's noses.

Newsy letter isn't it? Maybe some day I'll be able to even score a little.

Give my regards to the rest of the family.

Love,

JOHN.

P. S.—I know you won't like this but that's how I feel.

## The Cost Absorption Policy

EXTENSION OF REMARKS
OF
### HON. ROBERT F. WAGNER
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Monday, December 3 (legislative day of Monday, October 29), 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by James G. Patton, president of the National Farmers Union, endorsing Administrator Chester Bowles' policy of cost absorption at the manufacturer and distributor levels. I also ask to have printed in the Appendix of the RECORD Mr. Bowles' letter to me, explaining his belief that this policy is the cornerstone of effective price control.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FARMERS EDUCATIONAL AND
COOPERATIVE UNION OF AMERICA,
*Washington, D. C., November 28, 1945.*

Senator ROBERT F. WAGNER,
*Senate Office Building,*
*Washington, D. C.*

DEAR SENATOR WAGNER: Members of the National Farmers Union have anxiously watched the reaction of Congress and the executive offices to recent pressure campaigns by manufacturers and distributors upon the Government's price control program. It is regrettable that a number of Congressmen have been actively supporting these campaigns.

Our farm families know from first-hand experience what price control has meant to them during the war and they know further what price control can mean to them—the difference between success and failure—during the reconversion period. In fact, as you know, the National Farmers Union was the first farm organization to put its full force behind the objective of the price-control program and has continued its full support each time the act has come up for renewal.

In order to help our farm people have a greater share of the good things of life, the National Farmers Union has consistently fought for lower costs and greater efficiency in the distribution of all goods and services. It seems to us that this goal is of major im-

portance if we are to reach full employment or anything like it in this country.

Farm families stand ready to buy huge quantities of business and household equipment and supplies if these items can be bought at reasonable prices. Since their farms were greatly worn in bringing to all America the benefit of record wartime production, it does not seem unreasonable to me to ask that they be able to rebuild their plant and reequip their farms at a reasonable cost.

The National Farmers Union agrees with Administrator Bowles, of the Office of Price Administration, in his statement that a genuine, vigorous cost absorption policy is the keystone of price control.

The only alternative as we see it is, as he indicated, cost-plus pricing. The cost absorption policy seeks to allow manufacturers, wholesalers, and retailers generally to operate at record profits even after income and excess profit taxes were paid.

We have given this policy very earnest consideration and find nothing unfair to business in it. Prewar realized margins and current costs of doing business do not appear to be interfered with, since costs are to be absorbed out of profits and margins greatly above anything these firms realized in peacetime.

For these reasons and since the absence of such a policy would be eminently unfair to millions of farmers and other consumers in the country—in that it would mean much higher prices for such things as clothing, automobiles, furniture, refrigerators, and even food sold in the grocery stores—as president of the National Farmers Union I respectfully urge that you and other members of Congress support the OPA and support principles of cost absorption.

Sincerely,

JAMES G. PATTON,
*President, National Farmers Union.*

---

OFFICE OF PRICE ADMINISTRATION,
*Washington, D. C., November 28, 1945.*

The Honorable ROBERT F. WAGNER,
*United States Senate,*
*Washington, D. C.*

DEAR SENATOR WAGNER: I have been deeply disturbed during the last few weeks over the apparent misunderstanding of one of OPA's basic policies—the policy of cost absorption at the manufacturer and distributor levels.

From the many statements which have been made about this policy, it is apparent that most of the objections are due to confusion as to just what the policy is, how it is applied, and the necessity for its use.

In this letter I would like to sketch very briefly the most important points about this policy so that you may be familiar with it. I want also to point out the serious consequences were cost absorption abandoned.

This policy is, first of all, an old policy. It has been in effect during the entire period of price control. It has been discussed before congressional committees, and debated on the floor of both the Senate and the House. It has been reviewed and affirmed by the courts.

On numerous occasions I have stated that this policy is the very cornerstone of effective price control. Without it we would surely face a substantially higher price level and the rapidly growing danger of runaway inflation.

Let me emphasize this by a brief outline of the direct result if the cost absorption policy were eliminated at the distributive levels alone:

The public would be immediately forced to pay $700,000,000 a year more for food. Not one penny of this would go to the farmer.

The public would be forced to pay at least $300,000,000 more for apparel in the lower and medium priced ranges. Clothing prices are already high.

The public would be forced to pay at least $400,000,000 additional for automobiles, radios, washing machines, refrigerators, vacuum cleaners, and other so-called reconversion products.

These sweeping price increases to the public would result solely from the elimination of cost absorption by distributors. It would be impossible, however, to eliminate this pricing standard for one group without eliminating it for others. This would mean sweeping increases in most manufacturers' prices totaling additional billions of dollars. These increases would be pyramided into still higher increases to the general public.

The two principal groups which have been opposed to this policy are the National Retail Dry Goods Association and the distributors of reconversion products. It is my belief that the great majority of merchants and dealers who have offered their protests have not thoroughly understood the distinctly limited effect which this policy has had and will have on their present and future profits.

Department stores, both large and small, are enjoying peak prosperity. Department-store earnings, including both large and small companies, are estimated at 13 times their average 1936–39 profits.

Nineteen hundred and forty-four was the biggest year in their history. Sales at present are running 12 percent above 1944 levels, with the prospect of the greatest Christmas business in all time. The outlook for 1946 is excellent.

Dealers in electrical appliances, automobiles, and other reconversion goods, should look forward during the next 2 or 3 years to a period of unprecedented prosperity. The country is hungry for the goods which they will sell.

The War Production Board (now the Civilian Production Administration) estimates that production of automobiles, electric refrigerators, washing machines, vacuum cleaners, radios, and other such products will by June 30, 1946, exceed average 1939 monthly shipments by from 70 to 300 percent.

In no instance will our cost-absorption policy allow the dealers less than their actually realized profit margin on each unit in 1941 (their biggest prewar year). With few exceptions this policy will in practice allow them a profit per unit far in excess of that which they secured in 1941. Thus, with very few exceptions, they can look forward to higher profit margins per unit with a tremendous increase in the number of units sold.

I have never been more alarmed by the inflationary danger confronting us than I am at present. It is not the fantastic total of liquid assets alone that frightens me, although they could easily cause an inflationary explosion if the public ever loses confidence that the price line would be held. The inflationary psychology that has now taken hold of the country is at least equally dangerous.

The real-estate market is booming, with prices already way out of line with what the market can sustain. Nonetheless, these prices move up week by week.

The stock market is spurting and the "inside" speculative dope being passed on by the taxi drivers and elevator boys is reminiscent of 1928 and 1929.

And all over the country, sober businessmen are writing escalator clauses into their contracts.

It's going to take everything we've got to keep prices from tearing loose.

The administration of the price-control program has never been an easy task. It is much more difficult today. Although we shall strive with every possible means to ease hardships, to eliminate inequities, and to make sure that price control in no sense stands in the way of production, I cannot guarantee a wholly painless operation.

During the two and a half years in which I have been in Washington I have tried to keep Congress thoroughly informed about what we are doing and why we are doing it. Congress is in a sense our Board of Directors—the group which sets the basic policies on which we operate. I believe that all the Members of Congress—whether they agree with us or not—are entitled to full, frank, and complete information on the progress of this program and the dangers which we see ahead.

I am writing you this letter now because we need your help and I want to have you see the situation at least as we see it—particularly on this widely misunderstood question of manufacturer and distributor absorption.

For your further information on this question of cost absorption and to aid you in answering constituents' letters, I am attaching a "question and answer" memorandum which may be helpful to you.

Sincerely,

CHESTER BOWLES,
*Administrator.*

[Enclosure]

SIX QUESTIONS AND ANSWERS ON OPA'S COST-ABSORPTION POLICY

Question 1. Exactly what is this policy?

Answer. Cost absorption is the balancing of cost decreases against cost increases in the determination of prices, with no increase when decreases and other benefits of war-economy volume exceed cost increases.

Business itself in peacetime generally has absorbed cost increases without price increases when there were offsetting cost decreases to cover them. This is clearly seen if one studies what happened to wages, costs, and prices between the two World Wars. The average hourly earnings of industrial workers went up 37 percent between 1923 and 1941. But did industrial prices go up? They did not. They declined 15 percent. How could this be? Because better machines and techniques increased output per man-hour 88 percent, reducing labor cost per unit of output 27 percent. Industry balanced cost decreases against cost increases, and gave the public much more for its money.

During World War II wage rates went up 73 percent (1944 over average 1936–39); raw material prices went up 53 percent. The prices of finished manufactured goods rose only 21 percent, yet manufacturing profits rose 450 percent. How could this be? Because industrial output rose 126 percent, greatly reducing overhead costs. There were, also, in many cases improved methods. Cost decreases, over-all, far exceeded cost increases. Cost absorption saved billions on the cost of the war; billions in living costs to consumers, yet business earned more than ever in history.

That is all there is to OPA's cost absorption policy; a balancing of cost decreases against cost increases and the benefits of war—economy volume—with maintenance of existing prices so long as—

(1) Industries and trades make not less than their normal—usually their 1936–39 profits before taxes.

(2) Industries making multiple products recover at least their out-of-pocket costs on all individual products, even when their over-all earnings exceed prewar profits.

(3) Trades recover at least their expense rates on the sale of all individual products, even when their over-all earnings exceed their prewar earnings (save where traditionally the margin has been lower).

(4) Distributive trades handling such products as automobiles and electrical household appliances receive not less than their actually realized prewar gross margins.

During the war we also made increases to stimulate the production of goods essential to prosecution of the war.

That is all there is to OPA's much debated cost absorption policy.

Question 2. Does this policy apply to everyone?

Answer. The policy has been applied in general to every industry and every distributive trade since price control was adopted.

In all cases cost absorption ends if and when cost increases—

(1) Reduce over-all industry or trade profit before taxes below prewar levels.

(2) Cuts a multiple product industry's prices on an individual product below out-of-pocket expense for the bulk of the output.

(3) Cuts a distributive trade's price on any article below its expense rate.

(4) Cuts a reconversion goods distributive trade's gross margin (on such as automobiles and appliances) below its actually realized prewar gross margin.

Question 3. Just what is the legal basis of the policy?

Answer. The Emergency Price Control Act, passed in January 1942, left the Administrator with considerable leeway in adjusting price ceilings upward, so long as the purposes of the act were achieved. These were to "stabilize prices and to prevent speculative and unwarranted increases in prices, to protect persons with relatively fixed and limited incomes, and to prevent post-emergency collapse of values," etc. Ceiling prices fixed, however, were to be "generally fair and equitable."

The Stabilization Act, which became law in October 1942 removed much of the Administrator's discretion. It directed the President to stabilize prices affecting the cost of living on the basis of September 15, 1942, levels. Authority was given for upward adjustments only to aid in the effective prosecution of the war or to correct gross inequities.

Reading the two acts together it is apparent that September 15, 1942, price levels must not be exceeded, save in the above-named instances, so long as they are "generally fair and equitable."

Congress thus ruled out cost increases as grounds for price increases except in certain specified circumstances. Accordingly, OPA is required by law to apply its cost-absorption policy.

That OPA is correct in its views as to the law has been sustained by the Emergency Court of Appeals. See *Gillespie, Rogers, Pyatt Co.* v. *Bowles* (144 F. (2d) 361 (1944)) and *Philadelphia Coke Co.* v. *Bowles* (139 F. (2d) 349 (1943)).

In the Philadelphia coke case mentioned above the court said that when producers' prices have to be increased to met the standards of the act, "it is the duty of the Administrator, so far as possible, to require them to be absorbed at some appropriate intermediate stage in the process of production or distribution at which there may be an existing margin of profit reasonably sufficient to absorb it."

Cost absorption at retail occurs when retail prices are not increased to offset manufacturers' increases. Under the standards of the original Price Control Act, retail increases are not required by law merely because manufacturers' prices are increased. They are required only when over-all earnings of the retail trade groups affected are reduced below peacetime level (the earnings standard) or when retail prices on individual products become unreasonably low in relation to operating expenses (the product standard). Under the standard covering price increases to aid in the effective prosecution of the war or to remove gross inequities, increases in retail prices to offset manufacturers' increases are not proper. Consequently, Congress has clearly directed that retail ceilings are to be held even when manufacturers' increases are granted, provided that the standards of the original Price Control Act are at all times met.

Furthermore, failure to apply the cost-absorption policy at retail would conflict with Executive Order 9599, promulgated by President Truman on August 18, 1945, which states that one of the guiding policies of the reconversion period shall be "To continue the stabilization of the economy as authorized and directed by the Emergency Price Control Act of 1942, as amended, and the Stabilization Act of 1942, as amended" and directs the Price Administrator to "take all necessary steps to assure that the cost of living and the general level of prices shall not rise." Even where a price increase is necessary to correct a gross inequity or a maladjustment interfering with effective transition to a peactime economy, President Truman's Executive order directs the Price Administrator "so far as is reasonable, practicable, and necessary for this purpose, to see that such price increases do not cause price increases at later levels of production or distribution."

Question 4. What has been gained through the policy?

Answer. By using some of the benefits of large, war-created volume to absorb cost increases without price increases, the Government has held the price line far better than otherwise would have been possible.

Living costs in World War II rose 31 percent from September 1939. Only 3 percent of the rise came after May 1943, when the hold-the-line order was issued. In the World War I inflation—when pressures were far less powerful—they rose 103 percent. The difference is due in great degree to the fact that when Congress passed the Price Control Act it made possible the cost-absorption policy in establishing maximum prices.

Had every cost increase been translated into a price increase, billions would have been added to the public's cost of living; tens of billions would have been added to the cost of the war. Prices would be far above present levels. There would be no effective check on a spiral of wage-price rises.

Question 5. Has this policy entirely curbed the profits of industry or distributors?

Answer. The facts tell the story. Industry profits in 1944—after cost absorption—were 4½ times average 1936-39 profits; 1½ times 1941 profits. They would have been far greater under a policy of cost-plus pricing; but greater profits would have resulted in widespread charges of profiteering and demands for compensating increases by persons whose incomes were subject to stabilization.

Profit figures for the distributive trades are less readily available. The published figures of the National Retail Drygoods Association, the most persistent critic of cost absorption, show profits for 1944—after cost absorption—13 times the average 1936-39 profits.

Other gains in trade profits after cost absorption are as follows:

*1944 over average 1936-39 earnings*

| | *Percent* |
|---|---|
| Hardware retailers | 464 |
| Small furniture stores | 185 |
| Variety chain stores | 339 |
| Men's apparel stores | 398 |
| Chain grocery stores | 152 |
| Independent grocery stores | 117 |
| Music stores | 210 |

Lest anyone imagine that small business has suffered, we cite the following figures from the Department of Commerce:

*Profits of unincorporated firms*

[In millions of dollars]

| | *1939* | *1944 (After cost absorption)* |
|---|---|---|
| Manufacturers | 315 | 712 |
| Wholesale | 723 | 1,507 |
| Retail | 1,517 | 3,416 |

Total corporation profits have risen as follows:

*Corporation profits*

[In billions of dollars]

| Year: | *Before taxes* | *After taxes* |
|---|---|---|
| 1939 | 5.3 | 4.0 |
| 1944 (after cost absorption) | 24.8 | 10.0 |

In peacetime as in wartimes there always are some high-cost firms experiencing hardship. That these have been abnormally few during the period of price control is shown by Dun & Bradstreet's reports of business failures as shown below:

| Year: | *Failures* |
|---|---|
| 1929 | 22,909 |
| 1939 | 14,768 |
| 1941 | 11,848 |
| 1944 (with cost absorption) | 1,222 |

Recent complaint has come from wholesale and retail distributors of automobiles, electrical appliances, and other reconversion goods, to whom it has come as a new idea that under price control business has not been assured its prewar gross percentage margins before mark-downs and other allowances. Lacking recent cost and profit figures to establish limitations upon cost absorption by wholesale and retail distributors of reconversion goods, OPA has earmarked for absorption, where necessary, the difference between prewar list price percentage margins and the prewar percentage margins they actually realized. The list price margins never were realized because of mark-downs, losses on trade-ins, and various other margin-reducing practices that will not be necessary in order to make sales in the months ahead. Under any and all conditions, however, and whatever are their cost increases, these trades will be protected in their prewar realized percentage margins.

Actually, in very few cases are increases in manufacturers' prices sufficiently large to reduce unit realized margins of reconversion trades to prewar levels. And with manufacturers predicting to the War Production Board that 1946 volume will exceed all previous records, distributors of reconversion goods seem certain in 1946 to enjoy one of their most profitable years. Cost-absorption requirements under these conditions cannot possibly prove a hardship.

Question 6. What would happen if this policy were abandoned?

Answer. Abandonment of the policy at wholesale and retail would have these results:

The cost of foods to the public would increase by $700,000,000, not one cent of which would go to the farmers.

The public would be forced to pay at least $300,000,000 more for lower- and medium-priced clothing.

The public would have to pay at least $400,000,000 more for automobiles, radios, washing machines, refrigerators, and other reconversion products.

Several percentage points would be added in the retail prices of furniture and dozens of other less-important groups of commodities.

Abolition of cost absorption by manufacturers would have even more far-reaching results. Rises in prices of hundreds of industrial materials and parts would become cost increases to producers of finished goods. Thus, one price increase would be pyramided upon another, setting an inflationary spiral into motion. This would be accentuated when wholesalers' and retailers' margins were added to these increased prices.

Still more tinder would be added to the inflationary fire when labor demanded compensating increases to offset rises in living costs and farmers demanded higher support prices and other increased compensation to counteract increases in prices of industrial goods.

What would be the final result no one can predict. We know, however, that when prices soared after World War I the public began to spend its twenty-seven billions of wartime savings, seeking to satisfy future needs ahead of price increases. The mad scramble for goods that followed sent living costs to a peak 108 percent above prewar levels.

This time wartime savings of the people total not twenty-seven but $145,000,000,000—a sum equal to the total spendable income of the public in our two most prosperous prewar years. Should people, whether consumers or businessmen, once lose confidence that the price line will be held and rush to meet future needs ahead of anticipated price increases, these vast wartime savings could throw the Nation into a wild inflationary scramble, exceeding any this Nation ever has experienced.

Raw material production rose so sharply during the war that we hoped for an early balancing of supply and demand that would permit the lifting of price ceilings. On November 6, however, Business Week reported to its readers that, "without any question" but for OPA restraints, "the lid would blow" on materials and parts prices. "Expectations of a general upward revision of prices," the magazine said, "have more to do with today's markets than have the ordinary supply-demand factors."

In other fields, too, recent tendencies are menacing. Speculation has replaced investment in the stock market, sending security prices to a 14-year high and with the peak of the rise not yet in sight. Small people are taking fliers in a way reminiscent of 1928 and 1929. Uncontrolled commercial, residential and farm real estate prices also are rising sharply without controls.

In view of these conditions this does not appear to be a propitious time to substitute cost-plus for cost-absorption pricing. To do so would be to run unwarranted and dangerous risks with the welfare of the American people.

With final victory over inflation in sight, but with this dangerous situation immediately ahead, the Office of Price Administration will take no step to weaken price controls or the confidence of the people that the price line will be held.

## History and Program of Amvets

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. DOYLE. Mr. Speaker and my colleagues, heretofore I have had the privilege and honor of inserting in the CONGRESSIONAL RECORD, by reason of your approval and the unanimous consent of this great legislative body, the articles of incorporation and statement of purposes of the Amvets.

Now having been furnished with further important data with reference to this recently formed veterans' organization, I am pleased to ask that this also be inserted in the CONGRESSIONAL RECORD. I think it highly important and in the interests of sound public opinion that this and every other veterans' organization let the general public know of their high purposes and program. This is good for these war veterans. It is also good for those who are not members of these organizations.

The matter follows:

BACKGROUND AND HISTORY OF AMVETS

(By Jack W. Hardy, national commander)

Our present organization was established on December 9–10, 1944, at Kansas City, Mo., by a merger of a representative group of independent veterans' organizations which covered practically every section of the country. Our name was adopted from the American Veterans of World War II, Inc., Washington, D. C., which called the Kansas City conference. The popular title "Amvets" was first given the organization by a newspaper reporter.

THE AMVETS PROGRAM

We believe that no group has a greater stake in the present and future of America than the 13,500,000 or more men and women who served in the armed forces in World War II. A large percentage of our local and national leadership will undoubtedly come from this group. The character of that leadership in terms of integrity and ability will have much to do with the advancement of the finest that can and must be America.

Veterans and nonveterans alike have become cynical of persons, ideas, ideals, and things. There is a deep common need for a new faith in ourselves and in the America for which we fought. Amvets are determined to renew that faith by building and justifying the confidence of all veterans and the American people. We propose to do this firstly by implementing our declaration of principles by action.

We believe that the combined voice of the veteran should be known and made articulate; that in matters of national importance the veteran should be an informed citizen, and that by actual poll his opinion should be known and made publicly available; thus, when the national commander speaks for Amvets he speaks as their true representative.

A national service officer and service organization shall serve the veteran in the practical problems connected with his military service. Legislative council will keep close liaison with all legislative matters of interest to veterans, and reports and analysis of these matters will be distributed to posts and the membership.

American Veterans of World War II have a deep interest in the peace and in the preservation of the peace. To that end a peace division has been established in the Amvets organization to keep abreast world conditions and all matters relative to the peace and its preservation. The veteran wants and demands an informed voice in both making and keeping the international peace.

Local posts and State departments will serve as a working center to assist local veterans in their problems of housing, employment, reorientation as well as a social center and forum where old acquaintances will be renewed and new ones made, and problems of common interest met and solved.

It is the overwhelming choice of veterans of World War II to have their own organization. Following each war the veterans of that war naturally formed an organization of those who had fought and served together—theirs was a community of interest, age, and experiences, and those of earlier wars had their interest together.

Amvets will, of course, cooperate with all legitimate veterans' organizations of all wars in matters relating to the welfare of veterans, provided such matters do not operate to the detriment of the people as a whole, for Amvets believe that nothing which operates to the harm of all the American people can be of ultimate value to the veteran. We will insist that veterans' affairs be administered competently and fairly, and that the wounded veteran have the best facilities and appliances this great Nation can provide.

The benefits to which the veteran is entitled under present laws, or may have under later legislation must be workable and fair, and present conflicts and ambiguities in the law must be eliminated. The people have granted veterans certain rights, and these should not be lost or ineffective because of faulty administration. Amvets propose to keep their members advised of such rights and benefits and the simplest means by which they can be realized upon.

As an active and interested member of his community, the returned veteran should affiliate himself with organizations which have as its sincere objective the betterment of the community, State, and Nation. Amvets should be interested in politics, for by political means our country is governed. It is of utmost importance that the most competent and unselfish representatives be elected to public office. Amvets, as individuals, should aid their community, State, and Nation in accomplishing this end.

Amvets is your organization—it reflects your opinions, aims, and aspirations. Through polls of opinion, posts, State departments, and elected representatives and officers, your ideas are made known to national headquarters and the Nation. The slogan, "We fought together—now let's build together" best expresses the goal of Amvets.

Other members of the official family of Amvets include Frank Dee Scriven, 756 Crenshaw Boulevard, Los Angeles, Calif., national executive secretary; Raymond Sawyer, 609 South Walter Reed Drive, Arlington, Va., national service officer; J. H. Leib, 3908 North Fourth Street, Arlington, Va., national legislative director; and Commander J. T. O'Callahan, care of U. S. S. *Franklin D. Roosevelt*, Brooklyn, N. Y., national chaplain.

APPLICATION FOR MEMBERSHIP—AMERICAN VETERANS OF WORLD WAR II—AMVETS—1507 M STREET NW., WASHINGTON, D. C.

Annual dues, $4.

"We fought together—now let's build together."

## Religious and Racial Intolerance

EXTENSION OF REMARKS
OF
### HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

*Monday, December 3 (legislative day of Monday, October 29), 1945*

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Chicago on December 1, on the question of religious and racial intolerance.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, ladies, and gentleman, of all the issues confronting our country today, the issue of racial and religious discrimination is at once the most neglected and the most critical. There is no

victory over Hitler and Tojo which by itself will erase the injustice of economic discrimination practiced against the minority groups among our people. Full employment without fair employment means the fastening of religious and racial minorities to the bottom rung of the economic ladder regardless of their education, abilities, and skills. Unemployment compensation will not break down the barrier of prejudice. There is nothing in the so-called GI bill of rights which will protect the returning two millions of minority veterans from the pattern of job discrimination which exists in this country.

We in this Nation stand at a crossroads in history. Either we will take the road which will lead us past another goalpost of human progress or we will be forced into the path riddled with the pitfalls of human hatreds which led Europe into World War II. We shall not be permitted to stand still. Whichever road we take will be for you, the people, to choose.

Every great crisis in American history has thus far had the moral result of increased protection and increased liberty for the individual. This country's first great crisis—the American Revolution—gave us political and religious independence. The crisis which was the Civil War gave us freedom from bondage for all men and women. Out of the crisis of the First World War came women's suffrage. Out of this World War II, with all its terrifying implications, comes: What?

This present-day crisis must at least give us true democracy, and the kernel of that is equality of economic opportunity. We must pluck down from the thin air the Atlantic Charter's "freedom from fear" and "freedom from want" and ground those freedoms not on the Government dole, but upon the right to work and the opportunity to work for every man and every woman according to his skill, his experience, and his ability.

This is no new ideal in the development of American life. It is common knowledge that the struggle for that ideal began when the first paths were cut through the virgin wilderness by the first settlers—victims of religious and economic persecution themselves—who came to these shores. The Pilgrims in Massachusetts, the English Catholics of Maryland, the French Huguenots of the Carolinas, the Scotch Presbyterians of Georgia, the Quakers of Pennsylvania, the Jews, the Irish, the Dutch, the Germans, and even the poverty-stricken debtors of the English prisons came to this country as to a refuge, to a haven of new, unshackled opportunity.

The translation into law of the new concepts of religious and economic liberty was not easily achieved any more than the enactment of fair-employment legislation will be easily won. Rigid religious conformity was woven into the law of some of the separate colonies, and rebellious sects were driven forth to found new colonies where religious freedom could flourish. At one point, Catholics and Jews were not allowed to vote. For many years people without property were denied the franchise. But the ideal of freedom was not to be downed, and when the crisis which precipitated the American Revolution came about, the cornerstone of liberty upon which our country was founded was given deathless voice in the Declaration of Independence:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from among the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

These words of the great leader of humanistic democracy, Thomas Jefferson, have captured the philosophy of the American ideal. Indeed, they are reechoed and restated in the American creed—the Constitution's Bill of Rights. I often think, humbly, of the prophetic recognition Jefferson gave to the three basics from which this country draws so much of its strength—political independence, religious tolerance, and public education—when I remember the simple epitaph he ordered engraved upon his tombstone:

"Here was buried Thomas Jefferson, author of the Declaration of Independence, of the Statute of Virginia for Religious Freedom, and Father of the University of Virginia."

The people's determination to cling to this heritage of the protection of human rights under law was challenged in the ratification of the Constitution itself when it was discovered that that original document failed to guarantee them. It was only after amendments, constituting the so-called Bill of Rights, were agreed to that the Constitution was finally adopted. It is no accident that the first of these amendments pledged this Government's protection of the individual's freedom of worship, freedom of speech and of press, and "the right of the people peaceably to assemble and to petition the Government for a redress of grievance." Need I remind you that it is under that right you are now here assembled?

These were rights such as the Old World had never known, and the lack of which blocked the forward march of civilization. As this country flourished and grew strong on roots fed by all its people, in other lands struggling people took them for their own and mankind moved up and onward. Nevertheless, the freedom-loving people of this Nation were not yet satisfied. They saw the horror, the injustice, and the inhumanity of the institution of slavery and rose against it. Then one of them, a Kentucky rail splitter, an Illinois and Indiana farmer, a country lawyer who was way ahead of his time, came and enunciated to the whole world that this country could not exist "half slave and half free." A great war which rocked the new Nation was fought between the citizens of this country to decide that question. The answer was written in the thirteenth, fourteenth, and fifteenth amendments to our Constitution—this Nation's second bill of rights.

These rights are now in our care to preserve and to strengthen for our children, and our children's children. How well our citizenry appreciated those rights and those freedoms was proved by their willingness to fight for them when they became endangered. Even during the memory of the living, two great wars have been fought. And while those wars were fought, it was proved conclusively that on the battlefield where suffering takes place, where men are mutilated, where men die, you do not see the attempts that are made in normal times within our own country to set aside those principles for which the soldier and the sailor have suffered.

No discrimination was shown by the Japanese enemy in his treatment of the Negro or the Jew or the Mexican or the so-called Anglo-Saxon stock—he murdered them all irrespective of their religion, color, or politics. On the beachheads of Tarawa, Okinawa, or Guam there was no discrimination. Along the sandbanks of Anzio no discrimination was shown by the German or any other common enemy. But here in our own country by people who should know better, and do know better, discrimination at times becomes rampant. Even now, the ugly head of racial and religious prejudice shows itself too vividly to be ignored.

To outlaw the discriminatory employment practices stemming from racial and religious bigotry is the new task which must now engage us. We have seen, in wartime, the effectiveness of a Fair Employment Practice Committee. It gave hope and courage to those on the battlefields and new opportunities for those at home to test their mettle on the production lines. Aircraft plants were persuaded to upgrade Mexican-Americans; white workers to cooperate with colored workers. Government agencies accepted in new positions qualified minority workers referred by Civil Service. Tradeunions policed their own nondiscrimination policy among their locals. Employers rearranged work schedules to permit Sabbatarians and orthodox Jews opportunity to observe religious customs. The theory of fair employment became a successful practice.

For that reason, some of us in Congress have determined that now we must have a basic law to carry out the purport of the Declaration of Independence and the Constitution. That is why Senate bill 101 and House bill 2232 were introduced. The bill to establish a permanent Fair Employment Practice Commission is designed to have but one function—to eliminate unfair employment practices based on discrimination on grounds of race, color, creed, national origin, or ancestry. Under the bill, management continues free to set its own hiring, training, and upgrading practices; to adjust its internal plant policy; and to discharge according to any standard it may adopt so long as there is no arbitrary discrimination because of race, color, creed, national origin, or ancestry. In the same way, organized labor continues free to manage its internal affairs according to its own lights, except that it cannot deny any of the advantages or opportunities of union organization and collective bargaining to any person because of race, color, creed, national origin, or ancestry. The bill covers all Federal agencies, firms having Federal contracts, and firms in or affecting interstate commerce having six or more employees. The agency cannot enforce its own orders, but it is empowered to go to the courts to request enforcement when firms or unions coming under its jurisdiction refuse to discontinue discriminatory employment policies.

Of course, there are those who say, "Why not just investigate discrimination and educate those who persist in erecting barriers of prejudice?" But experience has shown that education is not enough. Even on the basic principles of nature and the Mosaic laws, murder is denounced, but nevertheless, every civilized nation in the world has laws against murder. We are instructed to love our fellow men, but we still take the precaution of establishing laws to protect them from fraud or violence.

It was my privilege to serve as chairman of the subcommittee which held hearings on S. 101. Representatives of every faith, every race, every walk of life testified on this measure. I think I lean to the side of conservatism when I estimate that 60,000,000 Americans were represented in those hearings. That is an amazing expression of popular interest in any legislation. To me, the most encouraging thing that was developed at these hearings was that the representatives of all the different faiths of our American people—Protestant, Catholic, and Jewish—have been unanimous in coming before the Senate committee to plead for the enactment of the bill to establish a permanent Fair Employment Practice Commission with enforcement powers. The position of the church leadership on this question is very clear. So, too, has been the supporting role played by the two leading houses of labor—the American Federation of Labor and the Congress of Industrial Organizations.

After those hearings, the Senate Committee on Education and Labor recommended S. 101 to the full Senate for favorable action by a 12-to-6 vote. This bill is now high on the Senate calendar ready for debate and vote. It is also on the President's "must" list of legislation. I think I am safe in saying that the majority of the Senate body is favorably disposed toward this legislation. What, then, keeps the bill from the Senate floor? Unfortunately, there are men in the Senate who are adamant and, I believe, mistaken in their opposition to the enactment of this measure. These Senators, recognizing that the tide of human progress has outpaced them, would try to stem its onrush by the extreme tactic of filibustering the bill. To meet that kind of opposition we need not only a majority of Senators to support the bill—we must have, in addition, the cloture vote of two-thirds of the entire Senate to successfully counterattack the threatened filibuster.

Because of the nature of these parliamentary obstacles, it is my considered opinion that only by efforts of an alert and vigilant people will we be able to get successful action on this legislation. In other words, this is the time to let your elected representatives in the Senate know of your wishes regarding their actions both on the bill and on cloture. The Senate is made up of men who will understand your concern once they are informed and who always give a sympathetic ear to the voting public. If there is one thing which is certain about the outcome of this struggle for equal job opportunity, it is that its success depends upon the people. This is a people's bill and a people's fight.

What we want most now is action. We know that practices growing out of discrimination and intolerance, which are thoroughly un-American, must not be allowed to continue. The American way of protecting human rights against such practices is by law. We have the backing of our President. We have the commitment of the Republican Party. Therefore, whether you are a Democrat or a Republican, you have the right and the responsibility to remind your leadership that these promises are yet to be fulfilled. You have it in your hands to get such a law. Make your voices heard.

In doing this you will be promoting Americanism. You will perform a service to your country by eradicating an evil that is foreign and un-American, an evil that smacks of the racial theories of Hitler and Goebbels and not of the "four freedoms" of the Atlantic Charter. You will be performing further service to our country by thus furnishing proof to fellow peoples throughout the world that we mean to live the letter and the spirit of our American creed and that our Nation is sincere in championing the cause of the democracies and the rights of man.

We have just fought a great war to a successful conclusion. It would be a national disaster and humiliation if those who have fought valiantly abroad to defend the freedom and dignity of the individual against racial barbarism should now come home to find that the bringing of peace meant a wiping out of the antidiscrimination policy that we achieved in wartime. Today we stand embarked upon the task of reconversion for peace. Shall we reconvert to racial prejudice, national bigotry, and religious discrimination, or shall we reconvert to full peacetime employment based on the American principle of equality of human rights?

Let me give you an example of what I mean. During this war, 245 Congressional Medals of Honor—the highest honor our Nation can give its war heroes—were awarded. Six of these were given to servicemen who in ordinary times would be referred to as "these Mexicans." They were Joe Martinez, who died from Japanese bullets at Attu; Ysmael Vellegas, who gave his life at Luzon; Jose Calugas, who distinguished himself at Bataan; Joe Lopez, who saved his entire company in Belgium; Cleto Rodriguez, who with one other overcame 300 Japanese soldiers at Manila; and Marcario Garcia, who singlehanded assaulted two enemy machine-gun emplacements in Germany. Honors and awards of every description—the Distinguished Flying Cross, the Purple Heart, the Silver Star, the Air Medal, etc.—were given to members of all the minorities who make up the American people. Would it be their just due, when these heroes apply for a job, to have them turned down on account of the accident of their birth or their religious belief?

Do you remember the timeless words uttered by Lincoln at Gettysburg at the close of the Civil War? Let me repeat just two sentences to you, for they epitomize the spirit in which we must put our shoulders to the wheel if we are to move forward:

"It is rather for us (the living) to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not had died in vain—that this Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people shall not perish from the earth."

## A Simple Money System That Built America

EXTENSION OF REMARKS

OF

### HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. WHITE. Mr. Speaker, so much confusion appears to exist in the public mind concerning the present money system that in reading the diverse opinions in monetary plans presented in the daily Congressional mail, I am reminded of Ella Wheeler Wilcox's couplet which I quote from memory:

So many creeds and so many minds,
  With religions that wind and wind;
When all this old world needs,
  Is the simple art of being kind.

We are told money is a complex subject and the shelves of our libraries are loaded down with books on money when the principles of sound money are so simple and apparently were well understood by our Nation's founders as stated in a recent letter which I have written to one of the numerous contributors to the Congressional mail on this subject, submitted herewith:

NOVEMBER 26, 1945.

DEAR COMPTON I.: Under the law (ch. 8, title 31, U. S. C. A.) our silver money is nothing but the obligation of the United States coined on a piece of metal containing 412½ grains of silver. The market value of the silver in foreign countries is worth less than 32 cents. The legal tender value of the coin is 100 cents in the payment of debts, public and private. As a lawyer I am telling you this; I will not argue any further about it.

ANDREW N. HILDEBRAND,
*South Bend, Ind.*

HOUSE OF REPRESENTATIVES,
COMMITTEE ON COINAGE,
WEIGHTS, AND MEASURES,
*Washington, D. C., November 28, 1945.*

Mr. ANDREW N. HILDEBRAND,
*South Bend, Ind.*

Listen ANDREW: Speaking of price of the money metals—did it ever occur to you that money is a function and is as indispensable to the health of any national economy as the blood stream is to a healthy animal body? We might prate about the value of the rare chemical that is contained in our blood but the fact remains that function of the blood stream in bearing the various materials used by nature in upbuilding, repairing, and keeping the body alive and healthy is the thing; not the value of the ingredients in the blood. Blood that conveys the materials in our food to build up and restore body tissues, the material in our eyes, our bones, our hair, and fingernails—all of which may be diverse in commercial value—but nevertheless are indispensable in a healthy body, just as money is indispensable in inducing labor to plow and plant the fields of wheat, to harvest the grain, to transport it to the mill, and grind it into flour, to bring flour to the bakery and the bread to your table.

It isn't the price of silver or gold with which we are chiefly concerned—any more than the price of gold and silver was the objective of the Congress that established our monetary system and set up the first mint in 1792. When Congress decreed by law that 27 grains of standard gold and 416 grains of standard silver was the dollar and proceeded to levy taxes, duties on imports, and set Government salaries in dollars, no price was set on gold and no price was set on silver. The price of all commodities and service was adjusted to the value of the dollar as established by Congress—gold and silver thus became money of ultimate redemption and the increase in production and mintage of both metals into lawful money kept pace with money needs of growing population and commerce—the best plan yet devised, a plan which the world will have to readopt and reestablish if we are ever to have a sound, stable, adequate, workable money system—the sound kind of money you, no doubt, advocated from the hustings in the days of McKinley and Bryan.

It is too bad for the American people that yours and the Nation's efforts to achieve a sound money system were misdirected in that memorable campaign.

Sincerely yours,

COMPTON I. WHITE,
*Member of Congress.*

## Control of Barbiturates

EXTENSION OF REMARKS

OF

### HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Samuel Hopkins Adams, in the American Weekly of November 25, 1945:

SLAVES OF THE DEVIL'S CAPSULES

(By Samuel Hopkins Adams)

ARTICLE II

They are so easy to get, so easy to take, these mild little sleeping pills. You have only to go to your physician and complain of

insomnia or "nerves," to secure a prescription. If he is careless or overworked he may not even warn you that you are playing with a subtle fire.

In many parts of the country the original prescription can be refilled as often as you wish, and within the present laws. Many States do not even require a prescription.

In these days of strain, worry, uncertainty, there is special temptation to the artificial and pernicious relief of drugs. Though these barbiturates are called "sedatives" they often give a deceptive lift to the spirits.

For example, you may be feeling "down," you lack poise and assurance to meet some business or social test. You would not think of indulging in a drink at midmorning. But you take a little tablet as a bracer. Then, at night, you take another tablet, or two.

There is no disagreeable aftermath; nothing like the hang-over of liquor; nothing that you can notice next day. So why not repeat? For such indulgence there is always a payoff, and it may be a tragic one. For you may have started a habit. The habit becomes a vice; the vice a peril.

Increasing use of this drug—of any sedative drug, in fact—will eventually damage both mind and body. At the end of that road lie shattered nerves, a weakened mind, a depressed spirit and perhaps total wreckage or suicide.

These are, of course, the extreme cases. No responsible physician would pretend that such moderate use as a daily pill brings about any such results. But how long does the use continue to be moderate? The official Federal figures, showing a rise in sales over a period of 5 years from 4,500,000 to 2,500,000,000 grains are not exactly reassuring.

. A majority of those who take sleeping pills are unaware of their poisonous potentialities, but some know all about the venom that lies in those little tablets and use the knowledge to advantage. Such a one was Charles E. Bedaux, the French-born ex-sandhog who became a world-famous "speed up" engineer and an intimate of the Duke of Windsor.

[The Duke of Windsor and Mrs. Wallis Simpson were married in 1937 in Bedaux's Chateau de Cande, near Tours, France, and later that year Bedaux prepared to sponsor an American tour for them. Widespread opposition to the visit developed in the United States because of Bedaux's speed-up labor system, which made him a millionaire at the expense of the workers. The Windsors later canceled the United States tour.]

Arrested in north Africa, Bedaux was brought to Miami and held incommunicado in a detention home while awaiting a decision by the Immigration and Naturalization Service on whether he was a citizen of the United States and could be tried for treason. It was charged that he had hobnobbed with Nazi and Vichy leaders and had prepared plans for the Germans, despite the fact that he was naturalized in Grand Rapids, Mich., in 1917.

On February 14, 1944, he was informed that his citizenship had been established and that his case would go before a grand jury. That night, according to John E. Burling, an immigration agent, the 58-year-old industrialist took a large overdose of sleeping pills in his bedroom.

"These had been issued to him from time to time when he complained about sleeplessness," Burling said, "and it is clear he had been hoarding them. A note indicated he had been retaining the tablets, apparently with suicide in mind."

He was found unconscious and died a few hours later.

Even more sensational, because of the circumstances, was the death from poisoning of the Mexican motion picture star, Lupe Velez, a few months later. It was officially determined to be suicide. Lupe had for years been taking sleeping pills to pacify her high-strung nerves. Mercurial, intense, living always on the heights or in the depths of emotional stress, she was the type to which drug relief is most dangerous.

Late in November 1944 she had announced her engagement to the handsome Austrian-born actor, Harald Ramond, the "only man who is able to control Lupe, so naturally I am going to marry him." There was reason for her to marry, since she was an expectant mother.

She was found dead in bed in her luxurious Beverly Hills home. Several seconal capsules were scattered upon the satin coverlet. On the bed table was a vial bearing a Mexican label. She had written this note:

"Harald: May God forgive you and forgive me, too, but I prefer to take my life away and our baby's before I bring him in shame or kill him. How could you, Harald, fake such great love for me and our baby when all the time you didn't want us? I see no other way for me, so good-by and good luck to you.

"Love,

"LUPE."

Unquestionably the convenience of these potentially deadly drugs may be an incentive to suicide. Nobody would think of leaving a loaded pistol or a bottle of carbolic acid handy to the bedside of a person racked with nervousness or suffering from depression. Yet a handful of sleeping pills will do the work with far less harrowing accompaniments.

How simple it is to obtain these drugs even in preposterous quantities is illustrated in the case of a woman brought, unconscious and apparently at the point of death, into a New York City hospital. Emergency treatment saved her life, by the thinnest margin.

She had been supplying herself for nearly 3 years on an original prescription calling for a normal barbiturate dosage, as relief from insomnia. She gained the relief, but at the high price of drug habituation.

Soon her original dose was not enough. She doubled it. A year later she doubled it again. At the time of her collapse, she had taken, in all, 4,640 capsules on a single prescription calling for 10. The $288.50 expenditure on the drug was a small part of it. The real cost was the damage to her health, which may never be wholly repaired.

A minor corporation official began the use of barbiturates to bolster his spirits and give him confidence when he had to present a report to his superiors, or address the board of directors. They did the work, and presently he found himself dependent upon the use of the drug.

When at the age of 60 he retired and moved to a Los Angeles suburb, he was in the grip of it. He became nervous and sleepless, lost 25 pounds—and kept right on poisoning himself, until he had a convulsion and the alarmed nurse who was looking after him, since he was no longer fit to take care of himself, called a doctor.

The physician found that the patient had brought back with him from a trip to the east what would be, for a normal user, a year's supply of barbiturates. The victim's life was saved, but he continues his use of the drug which he gets without a prescription from a local druggist.

Other known addicts in the locality whose sources of supply are illegal, are a schoolteacher, a clergyman, a motion-picture director, a prominent racing man, and a number of war-plant executives and workers who have been driven by overstrain into use of the drugs. One local source is an obliging dentist in Beverly Hills.

The most difficult cases for the physician to handle are those where alcohol and the drug are alternated. The aftermath of drink leaves the victim shaky. He goes to sleeping pills for relief.

True addiction is comparately rare, though becoming commoner. The barbiturates do not enslave their victims as easily or as completely as the opiates. Medical men draw a distinction between merely taking a pill at bedtime, even though this be done regularly, and forming a dependence upon the drug through using it night and day.

The pill-swallower who sticks to a prescribed dosage is in no danger of becoming an addict, even a habituate. No case of habituation, and certainly no death, so far as the records show, has ever been the result of a daily pill. But how many sufferers from insomnia stick to the safe and moderate dose? It is so easy, if one pellet fails to do the business, to reach for another, or two more—or three.

Wartime and its sequel of economic and emotional readjustment tend to increase the use of sedatives, and to render a nerve-strained people peculiarly susceptible to these insidious "pacifiers." Dr. Clinton R. Thienes of the College of Medicine, University of Southern California, foresaw this danger and warned of it while the war was still in progress. He said:

"It is my anticipation that soldiers returning from the front, who are in a highly nervous state because of shock, noise, fatigue, and harrowing experiences relating to the war, will seek aid in such depressant drugs as the barbituric acid derivatives. This will become, no doubt, a very serious problem."

An Army nurse, 33 years old, honorably discharged, came back from the Pacific with her nerves wrecked. Service on Guadalcanal had left her with memories which she could not dismiss from her mind. Working sometimes 24 hours on end, she lost the faculty of normal sleep.

Experience had familiarized her with barbituric acid medicines. They offered relief to her tortured hours of insomnia. Beginning with normal doses, she increased them. Soon she had a fixed sleeping pill habit. It culminated in collapse. She was rushed to a hospital and died there without regaining consciousness.

Cases like these are to be found in all sections of the country. They will continue until the law steps in and takes control.

## Report on State of the Union to the American People Concerning the St. Lawrence Project

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. PITTENGER. Mr. Speaker, it has been my practice to report to the American people each week as to the progress made in connection with the development of the St. Lawrence seaway and power project. Last Monday, I made a report and today I am talking again to let the American people know the facts.

Christmas will soon be here, Mr. Speaker, and by the way, I do not mean December 25, 1945. I am talking about December 25 in the year of our Lord 1946, with relation to the St. Lawrence seaway and power project. Evidently those people in the administration circles who allegedly are in favor of the project look upon it is an engineering proposition like building the pyramids of Egypt. Building the pyramids was a matter that ran over the lifetime of several of the Pharaohs.

I had the impression that the State Department was interested in this project

but it has done nothing since the days of Adolph Augustus Berle, Jr., who was Assistant Secretary of State in 1941 and who evidently got so good that they decided to ship him to Brazil. I noticed in the newspapers that he is referred to as a fair-haired boy and likely to come back to the United States. That is the wrong color scheme. Adolph has black hair. If they need a new color scheme in the State Department and that great American citizen, Patrick J. Hurley, cannot help them out, then somebody down there better dye his hair red because if we cannot get a man like Adolph Augustus Berle, Jr., then a redhead would do.

Anyhow, may I suggest meekly and with a spirit of humility to the State Department, that someplace, somewhere, somebody has fallen down on the job. Let us have some action on the St. Lawrence project.

Mr. Speaker, as of December 3, 1945, we find no progress made on the St. Lawrence matter since January 3, 1945, when the new Congress convened. A bill was introduced on that date, but speaking in the language of the present this is what we find:

Senate Joint Resolution 104 authorizing construction, introduced by Senator BARKLEY and others, October 2, 1945, and referred to the Foreign Relations Committee.

October 3, 1945, President Truman sent a message to Congress calling for construction of the St. Lawrence project.

October 4, 1945, I called for immediate action on the Barkley resolution, Senate Joint Resolution 104. See CONGRESSIONAL RECORD Appendix, page A4170.

On November 12, 1945, I called attention to delay, and no action on the Barkley resolution. See CONGRESSIONAL RECORD, page 10601; also Appendix, page A4835.

On November 19, 1945, I called attention to delay. See CONGRESSIONAL RECORD, page 10811; also Appendix, page A4988; RECORD for November 19.

On November 20, 1945, this matter was discussed in the Rivers and Harbors Committee of the House of Representatives. (See proceedings hereinafter set forth).

On November 26, 1945, I called attention to continued delay. See CONGRESSIONAL RECORD for November 26, page 10985; also CONGRESSIONAL RECORD Appendix, page A5109.

DIFFICULTY IN SPELLING THE WORD "AGREEMENT"

Very frankly, Mr. Speaker, the delay may be partially explained by reason of the failure to properly spell the word "agreement." Some folks want to spell it "t-r-e-a-t-y." To my way of thinking, that is just jumbling up words and we will never get anywhere until somebody conducts some classes in spelling. I do not refer to simplified spelling, because that is the trouble. Somebody wants to simplify the spelling of "agreement," which has nine letters, and substitute only six letters in the English alphabet. Now, I am for the English alphabet—all of its 26 letters. You simply cannot spell "agreement" using only the six little letters "t-r-e-a-t-y." You might do it if you used some international alphabet—but just the good old plain American spelling is sufficient for me. This difficulty in spelling the word "agreement" is very clearly set forth in the proceedings before the Rivers and Harbors Committee on November 20, and so that I may be eminently fair and 100 percent accurate I quote those proceedings which are as follows:

RIVERS AND HARBORS COMMITTEE,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., November 20, 1945.*

Hon. JOSEPH J. MANSFIELD, chairman, presiding.

Mr. PITTENGER. Mr. Chairman, I would like to inquire what the committee plan is, if there is any plan, with reference to the legislation in relation to the Great Lakes and St. Lawrence seaway project.

I understand there is legislation pending, but I was under the impression that it was the thought of the committee that the proposed legislation would be taken up after the Senate acted on it. I wanted to find out whether my impression was correct and what the ideas of the members might be.

The CHAIRMAN. A resolution of the House was introduced by Mr. SABATH, of Chicago, the chairman of the Committee on Rules, and he has urged that a hearing be held on it.

I will read a copy of a letter I wrote to him last week and see if it meets with your approval.

The letter is as follows:

NOVEMBER 17, 1945.

Hon. A. J. SABATH,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. SABATH: I am in receipt of your letter of November 13 inquiring as to when you can be heard on your resolution (248) to approve the agreement between the United States and Canada relating to the Great Lakes-St. Lawrence Basin.

In reply will say that the Senate has not yet determined whether the matter will be considered as a joint resolution or treaty. If they decide it is a treaty, then, of course, the matter will be considered by the Senate only.

I understand the Senate Foreign Relations Committee has authorized its chairman to appoint a subcommittee to decide the question, but that the subcommittee has not yet been appointed.

It occurs to me that it is useless for us to go through with hearings until we first know what is to be its legal status.

I will be glad to give you a hearing at any time after we get through with the stream pollution bill now before the committee, but I thought the logical way to proceed would be to let the Senate act first, as they have the final say as to whether it is a treaty.

Awaiting your further wishes, I am,

Yours sincerely,

J. J. MANSFIELD,
*Chairman.*

Mr. PITTENGER. What date was that letter?

The CHAIRMAN. November 17, 1945.

Mr. PITTENGER. Of course, Mr. Chairman, for the purpose of the record, without in any way undertaking to raise any question about the wisdom of the chairman or the propriety of what the committee may do, I want to say, as a member from the Great Lakes Basin, I am very much interested in the Great Lakes and St. Lawrence seaway project. I had hoped it would be considered a long time ago, and I am still hoping.

Last December the matter was brought up again in the Senate. It was tacked on to another bill and a record vote was had there, without any hearings. A great deal of progress was made at that time by friends of the project because it so happened that some men who were United States Senators then went on record as favoring this project. One of them in particular has since become an international character. That was very helpful and very hopeful, and very encouraging, to read the names of those distinguished friends of civilization and progress who cast their votes for this measure in December.

Of course, every President of the United States since time immemorial has endorsed this project, in spite of the railroads and the utilities of Boston, Philadelphia, and New York.

The CHAIRMAN. You might say the Atlantic coast.

Mr. PITTENGER. Yes, that is true. You can get their letters against the seaway for a dime a dozen, and they have all got about the same language saying they are opposed to this project. They go ahead and talk about the benefit of ocean commerce and they are terribly afraid of other people in the land-locked empire of the Great Lakes, and they don't want them to get the benefit of ocean commerce. If we dig this channel to a depth of 27 feet it will help the people in Duluth, Chicago, Detroit, and a number of other cities.

So they have always been able to use the old-fashioned brakes like those we used to have on the old-fashioned four-wheel wagon that our farmers used, and the ports put the brakes on even when the wagon is not going down hill. They have blocked the path of progress and worked a real injury to the American people.

I recognize the great economic value and the great service that the railroads and utilities have rendered to the citizens and particularly the value of ports like the port of New York. They are all giving us great economic aid and help and have contributed to the welfare of the people. But when they try to stand in the way of progress, they undo all the good they have done.

They remind me of the fellows on the farms when they used to cut wheat with a scythe, and then the binder was invented, and that put the boys operating scythes out of business, when the binders were put in. The scythes were in the way of progress, but these fellows who used them did more harm than good. They put charges of dynamite in the binders and wrecked them so the boys could go back to the old-fashioned way.

The outfits opposing the St. Lawrence seaway are pretty much in a position of the fellows who put the dynamite into the binders.

Water transportation the world over, Mr. Chairman, has always contributed to the wealth of the country, to the wealth of a people, and to the wealth of a nation, and to their taxes, and their prosperity.

Everybody who has no ax to grind, who has looked over the St. Lawrence River, and the possibilities that would come about by this great development—everybody says it is a project that should be constructed.

General Markham testified before the Senate committee a number of years ago that the benefits which would go to the American people in the first year when this project would be in operation would be $80,000,000. This was in peacetime.

Of course, we spent in the way of freight rates, and in time and money and in other ways for the hauling of materials for our war projects from the East to the West—and back again—we spent hundreds of millions of dollars that would not have had to be spent on this war effort if the Great Lakes seaway and power project had been completed.

I do not want to go into details, but we are losing $1,000 of electric energy every hour that the construction of this project is delayed, $24,000 a day—that is about the amount of money that the American people are losing. This is the great hydroelectric power project that is held up by these delays.

I wanted to take this moment to emphasize to the committee the tremendous need of this project and the urgency of this project.

I recognize, as the able chairman of the committee pointed out—and I might say

that there has never been a more fair and able chairman than Congressman MANSFIELD—I recognize that until the Senate takes up the thread where they left off last December—and that was an effective procedure last December even in its defeat; you never get anything unless you keep fighting for it; so it is unfortunate that almost 11 months have been wasted since January 1, 1945, and not another bridge crossed.

The quicker they take up the threads the quicker it will take them back again and the quicker they can get action in the Senate.

Of course, if the House is held back by the Senate, with the Senate taking the position that this has to be a treaty, we would be wasting the time of the committee to hold hearings, because a treaty never comes to the House of Representatives.

I thank you, Mr. Chairman.

The CHAIRMAN. You have made a very eloquent speech, and I judge you are in favor of this project. [Laughter.]

Mr. PITTENGER. I am very much in favor of it.

I want the record to show that I am sorry the Senate hearings have been delayed so long, and I hope they will get some action there.

Mr. MCDONOUGH. I would like to ask Mr. PITTENGER how much Canada contributed.

Mr. PITTENGER. Canada contributed 50 percent. That was carefully worked out by the Army engineers. If you will read Gen. Thomas Robins' statement you will find out how that was done. There is no more distinguished engineer in the world than General Robins.

The CHAIRMAN. Unfortunately, he retires next Friday.

Mr. PITTENGER. But he can still talk right on. He is a man of courage, and is one of the finest public servants in America. He will give you the figures on the cost.

I want to say you will be ashamed of what these lobbyists against the seaway have done if you read what these lobbyists have circulated, all of this dirty, damnable rot, saying that the St. Lawrence seaway is going to bankrupt the United States. I am ashamed of them; they know they are not telling you the truth.

I am glad you asked me that question, Mr. MCDONOUGH. It was a friendly question and my answer is a most friendly answer, and I hope enlightening. For the price we paid to carry on the World War II for 1 day we could build our share of the St. Lawrence seaway and power project.

Mr. MCDONOUGH. I would like to say to the gentleman I appreciate what Mr. PITTENGER said about this measure being in the Senate.

We discovered, in connection with the Mexican water treaty, so far as California is concerned, that the House slept on its rights, that there is a privilege which the House did not exercise in connection with the depreciation of property, and we believe that the effect on the transfer of property and resources are the same and that the House has a right to say something about it.

Mr. PITTENGER. Mr. Chairman, I am sorry to take so much of the committee's time, but with your indulgence I would like to say I do not agree that the ratification of this agreement with Canada has to be done by treaty. I think that the agreement method of ratification by the House and Senate by concurrent resolution is perfectly legal, and I think it is perfectly proper and the point that the chairman was trying to make was that the question as to whether it could be a treaty or an agreement has already been raised in the Senate, and until the Senate settles that we do not know whether we will get this measure up for consideration.

The House committee did have hearings in 1941 on a proposed agreement, and this committee by a vote of 2 to 1 took the position that the treaty method was not needed, and that the agreement method was proper. This committee acted at that time, but there was no action on the floor of the House because the leaders never permitted the concurrent resolution to be brought up.

I agree with you, Mr. MCDONOUGH, and there are thousands of convincing reasons.

Mr. MCDONOUGH. Your position is correct and my position is also correct.

Mr. PITTENGER. They do not need to suggest things about the need for a treaty in connection with the building of the St. Lawrence waterway and power project.

The CHAIRMAN. You will find it discussed by Mr. Berle, now our Ambassador to Brazil, in the hearings held in 1941. He was then the Assistant Secretary of State and he discussed that legal question very thoroughly.

Mr. PITTENGER. I very well remember the testimony given by Mr. Berle at that time, and if you have an opportunity to read Mr. Berle's testimony in the 1941 hearings, you will find it is very conclusive on the subject.

Mr. MCDONOUGH. If, for instance, the Senate were to take the position that a treaty is necessary, in that event the House still would have a position in the matter inasmuch as it has to deal with the question of the disposal of the property of the United States.

Mr. PITTENGER. I hope your optimism is justified but I am afraid if the Senate took the position that a treaty was necessary, I fear if the House did pass a concurrent resolution, it would not be passed upon in the Senate and we would not get anywhere.

Mr. MCDONOUGH. If the Senate decided it was a treaty and sent it back to the House, I doubt if the House would act contrary to the treaty opinion; but if the Senate acted contrary to the opinion of the House, there might be some way that the House could still act. That is what I am thinking. For example, the Mexican water treaty is not settled insofar as California is concerned because in the treaty there is the disposal of certain property rights of the United States, and under the Constitution the House still has the right to step in and have something to say; and we have something to say about the Mexican water.

Mr. PITTENGER. Is California taking legal steps to try out that question in the Supreme Court of the United States?

Mr. MCDONOUGH. We have not gone as far as that. We are proceeding to appear before the Appropriations Committee of the House to contest certain appropriations that will come within this session of Congress in connection with the Mexican water treaty. It is the first step where the rights of property of the United States is being disposed of in the interests of a foreign country and the House has nothing to say about it. If we fail in the Appropriations Committee hearings why then we may go further. Yes.

Mr. PITTENGER. I certainly am glad to get that information.

Mr. MCDONOUGH. It is the same thing.

Mr. PITTENGER. Yes; the two cases appear to be analogous.

Mr. MCDONOUGH. It relates to the same subject matter along the St. Lawrence.

The CHAIRMAN. If there is nothing further to come before us, we will stand adjourned.

(Thereupon the hearing was concluded.)

IN CONCLUSION

Mr. Speaker, I am giving a verbatim record of the hearings on November 20, so that every sincere friend of the St. Lawrence project may know exactly the correct situation from a parliamentary standpoint. I do not care to add to or subtract from anything contained in this record before the Committee on Rivers and Harbors on November 20. I leave it up to the friends of the project to study this matter and then use their own best judgment as to what we can do toward this problem of proper spelling of the word "agreement." That is where our trouble starts. That is where our trouble is at the present time. That is where our trouble is going to be in the future. It is really funny what tremendous import a simple little word can have when someone thinks it appropriate.

---

## Trade Groups Pass Strong Resolutions Favoring Air-Power Development and Research

EXTENSION OF REMARKS

OF

### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. RANDOLPH. Mr. Speaker, there has come to my attention two resolutions which clearly indicate that citizens of the United States, through their appropriate trade organizations, are thinking constructively about the need for the maintenance of aeronautical research and development as the primary ingredient of continued American leadership in civil and military aviation.

Because of the decisive character of air power in the victory just won, its importance to maintenance of the peace and to our economic welfare, the responsibility of maintaining our air power falls on the country as a whole. This responsibility is well expressed in the following resolutions by the National Grange and the International Association of Machinists, which, under leave to extend my remarks, I include herewith.

Resolution adopted by the National Grange in national convention, November 14, 1945, at Kansas City, Mo.:

In technical proficiency and production capacity in both the military and transportation fields, American aviation today leads the world. In order to maintain this leadership for the benefit of our country and preservation of world peace, we recommend that the National Grange support all sound programs directed toward the advancement of American aviation. Such programs should include adequate research and development of the most modern designs of commercial and military aircraft made possible by the latest scientific discoveries.

Resolution adopted by the International Association of Machinists, in national convention, October 29, 1945, at New York, N. Y.:

Whereas the airplane has proven throughout the war to be the most powerful instrument, both for offense and defense; and

Whereas there has developed in the United States the greatest aircraft industry in the world; and

Whereas this industry is now in the process of reconversion, and it is generally recognized that it is necessary to retain the aircraft industry as a major industry; and

Whereas there is now developing within the country a sentiment contrary to the best interests of the Nation, and

Whereas we recognize that there is now no program developed nor legislation enacted to enable the air forces to proceed on a postwar program.

Whereas we recognize the necessity for a well-planned and full program for the maintenance of world peace: Be it therefore

*Resolved*, That the delegates to the International Association of Machinists Convention in session in New York City on October 29, 1945, do in the interest of national prosperity, unity, and defense call upon our congressional delegations to immediately enact legislation to allow the air forces to proceed with a postwar program embodying full experimental and continuing technological improvements in the latest type aircraft to keep this Nation always ahead in air power and to assure continued peace; and be it further

*Resolved*, That we unalterably oppose the sale or transfer of surplus military aircraft for use of private air lines.

## Confusing

EXTENSION OF REMARKS
OF
## HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. HOFFMAN. Mr. Speaker, though the national debt is on its way to the $300,000,000,000 mark, with a prospective interest charge of $6,000,000,000 annually, demands for additional appropriations pour in on Congress. At the end of the World War there was some $5,000,000,000 in circulation in the hands of the people. Today we have some $27,000,000,000 in circulation. Everyone has more money, a pleasant fact to contemplate, but unfortunately it also means that prices are up.

It is a question whether the additional dollars which everyone has or is assumed to have in his pocket will buy more than the fewer dollars which we had after the last World War or prior thereto. There may be fun in spending, but if the dollar buys but half as much, little is gained. Most of us either forget or ignore that fact.

Notwithstanding the fact that ever since 1928 the Federal Government has each year spent several billion dollars than it was able to collect, today there is no tendency whatever upon the part of our people or of Congress to curtail our spending program. Almost everyone seems to have a pet project which he wants the Federal Government to finance, regardless of the fact that we must borrow the money, though we all know that that policy means disaster.

There are thousands of spending programs, for each of which some good reason can be advanced. Neither President Truman nor Congress has shown any disposition to practice economy. The national debt keeps piling up by the billion. To me it is confusing to have the home folks write in asking if I do not know that if the Congress continues to spend, to increase the number of Federal employees and their compensation, we will meet financial ruin; then to turn to the next page where the writer not only asks, but demands, that I vote an additional million or two for the pet activity of the writer.

MORE CONFUSING

More confusing yet is it when supposedly reliable and informed individuals tell us that we may have war with Russia within the year, and others insist that we now loan Russia an additional $6,000,000,000. We furnished Japan with the metal scrap which aided her in preparing for war. Shall we loan Russia money to prepare for a possible war? Will the American people, the mothers and the fathers and the wives permit the internationalists, the one worlders, the advocates of union now, to involve us in another world war? Where is our common sense?

STILL CONFUSING

We went into this war to enable people everywhere to select their own form of government. Yet munitions of war furnished by us are being used to suppress the rebellions of people seeking to establish their independence in more than one foreign land. We are being asked to send our troops to join the British troops in forcing the Arabs to admit to their country people they do not want. Our marines are fighting in China to aid one of the Big Five Nations in carrying on a civil war. No opinion is expressed as to the merits of any particular controversy. Reference is made to them only to point out the confusion of thought and action.

WORLD OBJECTIVE

The world objective is universal and enduring peace, but the Senate is passing legislation empowering a representative of the President to conscript young American men to fight anywhere and everywhere and as long as the Council of the United Nations Organization may direct. We all want peace. We are willing to try almost anything in the effort to get peace. But authorizing a representative of the President to use our men as world police and to carry on a war to impose peace seems to me a queer way of getting peace. Embarking and sailing on the UNO's ship may be, as one Senator put it, "the great adventure," but to me it looks something like the method under which Great Britain sends conscripted natives from India to fight wherever the British Empire wills.

UNRRA

I am asked to give UNRRA millions of the taxpayers' money to relieve suffering in Germany while 600 members of that organization are caught using UNRRA supplies in black-market operations and while, at the same time, the President's representative tells us we are following a policy in Germany which prevents the Germans helping and reestablishing themselves. Those seeking revenge insist that we destroy the German's ability to feed and clothe themselves, rebuild their homes, yet ask that we contribute billions of dollars to an organization which, in many instances, is corrupt, which prevents some of the supplies we furnish reaching the hungry, the starving.

To chart a true course, one must be guided by common sense, recognize facts, instead of following his emotions and theories.

## Alaska

EXTENSION OF REMARKS
OF
## HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. KELLEY of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include some recent correspondence I have had with the Secretary of the Navy. This correspondence is self-explanatory and has reference to the visit the Territories Committee made to Alaska this summer under a properly authorized resolution passed by the Congress.

The purpose of the visit was to study certain problems relating to the Territory, and part of the itinerary included a trip of a subcommittee to Point Barrow and to Nome. It was my privilege to be the chairman of this subcommittee.

SEPTEMBER 18, 1945.

Hon. JAMES FORRESTAL,
*The Secretary of the Navy,*
*Washington, D. C.*

MY DEAR MR. SECRETARY: During the month of August the House Territories Committee visited Alaska under authorization by the House of Representatives. While there, several members of the committee desired to make a trip to Point Barrow from Fairbanks and accordingly inquired of the Admiral of the Seventeenth Naval District if he could provide transportation on a given date.

I wish to call your attention to the fact that the admiral made no effort to assist us and replied very curtly that no transportation facilities were available. We knew that facilities were available, and I question why a committee authorized by Congress to make a trip should be refused Government facilities, whether Army or Navy, when they are available.

I think it might be well, also, to call your attention to the fact that sanitary facilities at the naval base at Point Barrow are entirely inadequate, and I would suggest that you determine for us what improvements should be made there.

Very truly yours,

AUGUSTINE B. KELLEY,
*Member of Congress.*

OCTOBER 20, 1945.

Hon. AUGUSTINE B. KELLEY,
*House of Representatives.*

MY DEAR MR. KELLEY: Reference is made to your letter of September 18, 1945, concerning the visit to Alaska in August 1945 of the House Territories Committee.

It is noted that you state that the commandant, Seventeenth Naval District, made no effort to assist several members of the committee who desired to visit Point Barrow, indicating that no transportation facilities were available, and that the committee knew facilities were available, and that you question why a committee authorized by Congress to make a trip should be refused Government facilities when they are available.

It is noted also that you state that sanitary facilities at the naval base at Point Barrow are entirely inadequate, and that you suggest that a determination concerning what improvements should be effected there be made for the committee.

I am inquiring into the above-mentioned matters and will advise you further as soon as I have the necessary information at hand.

Sincerely yours,

JAMES FORRESTAL.

NOVEMBER 9, 1945.

Hon. AUGUSTINE B. KELLEY,
*House of Representatives.*

MY DEAR MR. KELLEY: Reference is made to your letter of September 18, 1945, concerning the visit to Alaska in August 1945, of the House Territories Committee, and to my reply of October 2, 1945, informing you that I was inquiring into the matters discussed in your letter, notably a visit by certain members of the committee to Point Barrow and the adequacy of the sanitary facilities there.

Early in the summer the Navy Department gave consideration to the increasing activity at Naval Petroleum Reserve No. 4 and the demands being placed thereby on transportation to Point Barrow and the housing and other facilities in the area. Foreseeing even greater demands during the course of the summer months with added numbers of geologists, geophysicists, and drilling parties visiting the reserve in connection with operations there, the Navy Department, on July 5, 1945, ordered the commandant, Seventeenth Naval District, to place stringent restrictions on travel thereto.

On or about August 1, the War Department informed the Navy Department of the desire of certain members of the House Territories Committee to visit Point Barrow and inquired whether such a visit could be arranged. The Navy Department gave this inquiry serious consideration. It was found, however, that certain important operations were impending, including the hazardous delivery of yearly supplies from three cargo ships in icebound waters, and that these operations would severely tax all available personnel and facilities. The Navy Department, therefore, reluctantly informed the War Department that it was not practicable to comply with the desire of the members of the House Territories Committee to visit Point Barrow.

The foregoing indicates the basis of the position taken by the commandant, Seventeenth Naval District, in connection with the trip under discussion. I regret that any misunderstanding or inconvenience should have resulted in this matter and trust that you will appreciate that the action of the naval authorities was dictated by the exigencies of the local situation.

With regard to sanitary facilities at Point Barrow, it is pointed out that the naval activity there is an "advanced base" in every sense of the term. Many privations necessarily exist there as compared to regular naval establishments. The camp, however, has been inspected by naval authorities well versed in such matters and is considered to be satisfactory and as comfortable as the extremely difficult circumstances permit. At the same time, you may be sure that improvements will be made as they become practicable.

Sincerely yours,

JAMES FORRESTAL.

---

NOVEMBER 20, 1945.

The Honorable JAMES FORRESTAL,
*Secretary of the Navy,*
*Washington, D. C.*

MY DEAR MR. SECRETARY: Receipt is acknowledged of your letter of November 9 in reply to mine of September concerning the visit to Alaska of the House Territories Committee and the refusal of the commandant of the Seventeenth Naval District to provide transportation to a subcommittee wishing to travel to Point Barrow, and calling attention to the insanitary conditions prevailing at the naval base at Point Barrow.

The explanation in your letter certainly cannot be accepted as satisfactory. The Territories Committee was authorized by the Congress under House Resolution 236 to make an investigation and study in the Territory of Alaska. No possible excuse can be offered for interference with the performance of the duty imposed on the committee by the House of Representatives. The will of the House has precedence over any orders issued by an agency of the Federal Government which might forestall the carrying out of the will of the House. A principle is involved here, which is that the representatives of the people have a right to proceed anywhere to study and investigate when they are so authorized. That right should not be abridged or denied, even by the Navy Department.

I still maintain that the sanitary conditions at Point Barrow were gravely in need of correction. I am not writing this letter to continue the debate, but am simply setting forth my final position in the matter.

Very truly yours,

AUGUSTINE B. KELLEY,
*Member of Congress.*

---

## Critical Colonels

EXTENSION OF REMARKS
OF
## HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. REED of New York. Mr. Speaker, certain colonels in the Army seem to be greatly disturbed over the fact that there is a demand on the part of the people, now that peace is here, to have their boys returned home. A communication from one of these critical colonels recently came to the attention of a very distinguished editor, a serviceman in World War I, who has seen fit to write a very fine editorial relating to the subject of demobilization of our soldiers.

Under leave to extend, I am inserting the editorial which appeared in the Jamestown Post-Journal, Wednesday evening, November 28, 1945. I am also inserting, under leave to extend, the letter which Col. Robert O. Wright criticized so severely and to which the Post-Journal made reference:

GETTING THE BOYS HOME

For weeks complaints have trickled through to the news department of this paper hinting that the servicemen in the Pacific felt they were not getting home as rapidly as they should. The editor has received letters directly from soldiers—he has heard from parents.

Now comes an interesting Associated Press dispatch from Manila that a former California newsman now a sergeant may be demoted for issuing a circular giving details of the ship-conversion program, allegedly taken from Army records, and, incidentally, received by this newspaper from a soldier in the Pacific.

The Twenty-eighth Replacement Depot commander, Col. Robert O. Wright, is quoted as saying he deemed it "a personal affront for anyone to take it upon himself to inflame members of the Army. I can't let people stand up and rock the boat."

We do not presume to know the problems of the Army in getting the Army home. We assume the colonel should. Neither do we condemn soldiers far from home for becoming impatient, particularly when there is evidence, real or imagined, that would tend to indicate some laxity existed.

We hope the Army is just as much on the ball in getting soldiers home to their loved ones in peace as it was in getting them overseas to face Jap bullets. The Lord knows they nearly performed the impossible in that effort.

Certainly, if the complaint has enough grounds to demote a man for so declaring, it should be proven false and broadcast to those men who are still overseas, listening eagerly to the grapevine, as well as for the purpose of satisfying the millions of parents involved. It is well known that a great many, both in and out of the service, feel the complicated point system unfair—even if you forget entirely the charges that ships are coming into San Francisco from the Pacific empty.

The writer of this editorial, who served in France in the First World War and didn't get home until July 1919, knows exactly the mental reaction of those boys who would trade an arm to get home, even without the promise of a job or a future. He also remembers the time when his commanding officer called the entire battalion together and talked to the men like a father, and how it helped to quiet pent-up emotions—but only partially succeeded.

Maybe the lad who faces demotion was only partially right in his charges that nine ships went for carrying Jap prisoners home to Japan while only one was utilized to take Americans back to the good old U. S. A.

Maybe it's time Congress, always ready with lip service, prodded the Army a bit. Anyhow, the Post-Journal can say to the boys from Jamestown who are still away from home that we want you back just as much as you want to get back. We are even going to see that this editorial gets in the hands of Congressman DANIEL A. REED immediately. For, after all, all the folks at home can do at the moment is keep a light burning in the window—and we are sure doing that.

The following about reconversion of Liberty ships came direct from Tacloban, Leyte, P. I.:

It has been learned, authoritatively, that the conversion program for Liberty ships, has resulted in nine ships being converted for transportation for prisoners of war, while one converted ship only will be used for American troops. Although volunteers are not being used for this work, Army personnel is being used to remodel the ships.

Present plans call for conversion of five Liberty ships to be converted by the Army, and four Libertys by the Navy. The ships which are to be converted by the Army came from the port of Manila, and one from Batangas. One ship that the Army is converting came from Manila, and ships coming from Manila are shipping under the authorization of base X, and AFWESPAC, controlling the movement of troops in this area.

One ship to be converted by the Army is the *Chatten Lyons*, and will be used as a prisoner of war ship, according to orders issued for the conversion. The *Horace Lurton* will be converted for the use of transporting American troops Stateside. The other ships to be converted by the Army for prisoners of war ships are: *Ed. Everett*, *M. Stewart*, *R. L. Stevenson*, and the *Frank Sprague*

The Navy will convert the prisoner of war ships, *Harry Kirby*, *Stephen M. White*, *Keith Palmer*, and the *William H. Allen*.

The dates scheduled for completion of the ships are: *Chatten Lyons*, indefinite; *Horace Lurton*, indefinite; *Ed. Everett*, November 6; *M. Stewart*, November 10; *R. L. Stevenson*, November 15; and the *Frank Sprague*, indefinite.

The dates for the completion of the conversion of the Navy ships are all indefinite.

*Ed. Everett* and *Chatten Lyons* will carry 2,000 prisoners of war each. The *Stewart*, *Stevenson*, and *Sprague* will carry 1,500 prisoners of war each.

At this date, November 4, the *W. L. Gable* is awaiting Navy orders. This is a ship which has been converted to carry prisoners of war.

The foregoing article was prepared for print in the Homeward Herald, published at the Twenty-eighth Replacement Depot, but the permission to print the article was denied the editor by officers in charge. The foun-

dation for the article was taken directly from the daily port status report of the office of the base port command. It was suggested by the major in charge that some item be printed about the progress being made in the conversion of the *Horace Lurton*, but nothing must be printed about the conversion of ships for prisoners of war.

## Only Lip Service to Our Fighters

EXTENSION OF REMARKS
OF
### HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. WEICHEL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a letter received from a man in the armed forces showing the very poor treatment given to our men now stationed in France. This letter paints a picture of how the Army is merely giving lip service to the return of our men. It is no wonder that those who have long served and suffered are growing bitter because of the indifference of those in high places in the executive side of the Government. This boy has 74 points and represents only a small part of those who have long earned the right to be returned to their parents.

PARIS, FRANCE.

DEAREST MOM AND DAD: Well morale is really at a new low. As usual, the Army and its big shots have fouled up the works in big style. Here goes the latest redeployment news: Don't expect me home for Christmas. It looked like a sure bet before, but being misled as we usually are, we don't or didn't expect it. They decided to give Le Bourget Airfield back to the French, so that outfit we were in moved to Munich and sent us to another camp on the other side of Paris. The camp is terrible. It has absolutely nothing, and if you are lucky, you can get an evening pass to Paris about once a week. When they speak of concentration camps, the United States Army doesn't do bad. We live in tents, no floors, no heat, and the food is terrible. All in the middle of November, of course. Before we left Germany we were stripped to the base essentials in clothing. Luckily, I hid a fur jacket in my bag. Priority at the camp is given to all over 80 points and overage. They have no quotas for 70 points and have no prospects in the future. It adds up to this. I was talking to the inspector general yesterday and he gave us this. The only Air Corps men shipping out are the 80-pointers and overage. The Army can't decide what to do with the rest. Ship them as casuals or home in companies. The indecision delays us that much longer as it continues. We asked him if 70-pointers could expect to be home for Christmas. He laughed in our faces. They certainly made a nice mess of everything. Talk about bitterness, you should see it around here. We all are happy to know how they are taking care of us. Some of the big brass might lose their jobs if things are finished too quickly. The best thing a man could do now is reenlist, but that is just what they want us to do. Everybody knows that. If we didn't want to come home so badly, we certainly wouldn't take the running around we are getting. All the work, no matter how dirty the detail, is done by the men. Of all the kraut prisoners, they don't have them here. Here is a good one: We have no electricity in the tents. Here is the reason we were told: No bulbs. That's the limit.

You know, I have never complained about the Army before, but I think you should know the full details on how they are treating us over here and what they might be telling you at home. There are hundreds of other fellows here who are writing the same thing and would back up any statement I might make. The trouble is, we have no one to complain to over here. It is you at home that should know it. There are Negroes stationed in the camp and use all the same facilities. The bitterness and idleness has bred contempt, at least in two instances. There was a fight in the Red Cross on the field and on the same night a white soldier was stabbed by a Negro.

Just try and hand some of this stuff to the fellows when they finally get home and the mighties will find out what their position is.

When I think of them discharging all the 60-pointers in the States, it makes me think.

Enclosed are some of the articles we have to read or some of the stuff they give us to read. From the Stars and Stripes dated November 7, 1945. I could give you more details, but this is a good example.

I hope everything is well at home. I still can't receive mail as we have no permanent address. By the way, this place is the One Hundred and Thirty-fourth Reinforcement Battalion right on the outskirts of Paris. I wish some of the stuff these fellows write would get into the right hands. It may not help us while we are here, but it may help fellows coming in here in the future. That is all I have for now. Hope to see you soon. If you want to show this to mother, it's all right, but I will send it to the office. She might as well know how her's and the other mothers' sons are being treated. Take good care of yourselves, and I love you both.

All my love and kisses.

P. S.—Reminds me of another instance. We came to Paris from Frankfort in boxcars. Officers and enlisted men. The only passenger train we saw in Germany was comfortably occupied by German civilians.

## There Is Work To Be Done

EXTENSION OF REMARKS
OF
### HON. WILLIAM T. BYRNE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. BYRNE of New York. Under permission to extend my remarks, I include an article written by our colleague from Massachusetts [Mr. MCCORMACK], There Is Work To Be Done, appearing in the December issue of the Young Democrat, the official organ of the affiliated Young Democrats, Inc., of New York State:

THERE IS WORK TO BE DONE

(By JOHN W. MCCORMACK, United States Congressman from Massachusetts, majority leader)

The catastrophic destruction of World War II has ended. The horrors and desolation of those years of cannon and death may be the cornerstone of the peace with justice of tomorrow. We in America are far removed from the material rubble of man's bestiality which covers many of the capitals of the world. We are not, however, unconscious of the conditions which exist in those countries which felt the full fury of the armed conflict so recently stilled. We must never be forgetful of our obligation to those who have paid full sacrifice that we, in our homes and hearts, might enjoy the peace of God.

History will relate the causes of the past war. The madness which deprived mother of son, wife of husband, and millions of their natural rights as human beings, drove before it entire populations with intolerant ferocity and fiendish hate. Nations after nations fell before the gigantic machines of war of the now destroyed leaders of the Axis—enemies of mankind and partners with Satan. The youth of America must learn from this holocaust—and, having learned, must stand ready to lead their fellow man from the edge of chaos into a world where law, order, and justice will prevail. Statesmen of today in America carry high the ideals of our great country. But as daytime quickly fades into night, and as the stars in the heavens disappear with the rising sun, so will tomorrow call from the ranks of youth new faces for greater responsibilities. Youth must be prepared.

The story of the victory of Franklin D. Roosevelt over the Axis was never finished. Death prevented the writing of the last glorious chapter. The happiness which spread over the world with the submission of Germany, the unrestrained joy which engulfed America with the capitulation of Japan, planned, as they were, even to the atomic bomb, by that fearless, intrepid leader, the late President of the United States, came a little too late. He never lived to smile with those who, with him, won the victory over the enemies of man. Conqueror of the totalitarian destroyers, through the development of the greatest military force in history, aided by the miracle of American production under the guidance of American industrial genius and the patriotic devotion of labor to its duty, Roosevelt, world leader and hope of the man in the street, wherever the street, passed to his eternity. His earthly reward would now be smeared and stained, his honor blackened, his reputation besmirched, his family reviled, by those psychopathic harbingers of hate who gave nothing but reveled in the power of a dirty pen to cast coals of doubt and disturbance upon the fires of present-day postwar turbulence and unrest. Such is the fate of greatness. Thus may true leadership expect to be rewarded.

The Democratic Party during the past decade saved our system of free enterprise. Under its leadership, democracy was a living reality. The powers of government were utilized to provide employment for industry and agriculture under rules which gave labor new meaning and dignified being. Social security, old-age pensions, unemployment insurance, security for the disabled and the unseeing, Federal bank-deposit insurance, flood prevention, soil conservation, prevention of stock-market abuses, homeowners' loan protection are but part of the heritage the elders of the Democratic Party have given to the young Democrats. Before Pearl Harbor, ever mindful of the dangers to our national existence which lurked in the ideologies of our enemies, aware of the dark clouds of war which were gathering in the East and in the West, the Democratic administration, under inspired leadership, succeeded in building and maintaining the best trained and equipped army in the world, the most powerful Navy, and the greatest Air Force, as well as the largest merchant marine in the world. The result was triumph—conquest without vindictiveness, but with vindictive justice for the Axis and its satellites.

There remains great work to be done. The world must never again be subjected to possible annihilation by international gangsters and criminals. The rule of reason must prevail in future international differences. Bold, straight thinking is necessary. We have pledged "to join with other United Nations in the establishment of an international organization based on the principles of the sovereign equality of peace-loving states, open to the membership by all such states, large and small, for the prevention

of aggression and the maintenance of international peace and security." That pledge of the Democratic Party in 1944 can never become mere words more observed in negation than in action. One must realize that during the prevailing armistice between erstwhile warring countries, unrest is rampant, starvation threatens nations, death and pestilence walk hand in hand in many cities of the world. Revolutions are conceived under such conditions. Prevention is better than futile abortive measures when false philosophies have successfully appealed to the hungry body and the tired mind. World peace is essential. World peace can be maintained under a leadership cognizant of the problems, conscious of an ability to present a solution, confident in the success of the objectives of practical idealism sought to be obtained.

All is not quiet on the domestic front. Strikes and rumors of strikes by some, as well as lock-outs by some management, rising prices for necessaries, and clamors for increased wages to meet the ever-threatening inflation which, like the ground hog, with less wartime restrictions, has come out of its hole to see its shadow, confront America. The incalculable cost of war must be paid without confiscatory tax burden upon business and industry, or destroying tax obligation on those who do not enjoy a plentitude. Agriculture must be maintained on a parity with industry. Home ownership must be encouraged.

The returned veteran, deprived of home and family during the war, must be given his chance once again to enjoy the privilege and immunity of his castle among his family and friends. The veteran must be aided in readjustment and rehabilitation without paternalistic governmental interference in his daily life to the fullest power of a grateful America. Additional humanitarian measures for the aid and betterment of all our citizens should be adopted as time and experience indicate. Above all, racial and religious minorities must have the right to share the rights that are guaranteed by the Constitution of the United States.

Recovery and reconversion face us all. However, the success of each carries greater practical significance to those who will live the more years during its aftermath. And there falls upon the shoulders of the youths of today, joined by those who step out of the ranks of the military into civilian files, greater responsibilities with corresponding opportunities. It will be for the younger Democrats—nay, more—for the younger generation to carry the torch for domestic tranquillity and world peace. The will to accomplish will not suffice. The heart and the mind of the youth of today, educated to the problems and dedicated, under God, to their achievement, shall with intelligent effort, under competent leadership, bring about the fruition of those ideals for which, from Salerno to Berlin and from Bataan to Tokyo, the sons and daughters of America fought, died, and today live in hope, with hatred for none and charity for all—these American men and women of tomorrow.

## The Dumping of United States Gear at Sea

EXTENSION OF REMARKS
OF
### HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. WASIELEWSKI. Mr. Speaker, more than a year ago Congress provided laws for the disposition of surplus materials in order that the Federal Government and the taxpayers might recapture, so far as possible, some of the expenditures required during the war. However, according to reports which have been appearing in the press, it seems that our armed forces have completely ignored the attempt of Congress to salvage some of the war expenditures and have been wantonly "dumping into the sea or are burning millions of pounds worth of gear," according to C. A. Burley, correspondent for the Sydney Sun, in a dispatch from Rabaul, as published in the Milwaukee Journal of November 28, 1945.

Burley further says that Australian officers passing through Pacific areas called the destruction "staggering in scope and thoroughness."

The correspondent listed these incidents as having been reported by Australians:

In the Admiralties: Two hundred Hellcat fighters dumped into the sea.

Finschhafen: Complete dental outfits in the sea. Pontoons loaded with jeeps putting to sea with a bulldozer aboard to push them off. Mobile radio outfits in four-wheeled caravans dumped at sea. Small vessels burned in the harbor. Huge stocks of clothing, including windproof jackets, burned.

Jacquinto Bay: Bargeloads of jeeps tipped into the sea.

Nadzab: Outbreaks of drunkenness among the natives traced to dumping of tinned beer, which had been bulldozed into the earth.

Lae: Warehouses filled with photographic equipment abandoned.

Saigon: Tons of food dumped into the sea.

If anyone should think that this is mere propaganda, then there is the statement appearing in a report by Steffan Andrews, Milwaukee Journal Special correspondent, published on November 28, 1945:

Tons of ammunition, battle rockets, and reportedly, fighter planes, and bombers are being dumped into the Pacific in a wholesale junking of surplus military property. The equipment is being junked by Navy ships en route home from the Pacific on direct orders from naval commanders to get rid of "nonusable" property.

The fighters and patrol bombers reportedly are being dumped into the sea from aircraft carriers, because, it is alleged, the Navy doesn't know what to do with its vast accumulation of surplus property and because it is "easier and cheaper to do it that way."

Dumping of ammunition—largely of small arms and antiaircraft caliber—I have myself verified. I have seen copies of radioed orders to that effect and have talked with officers who have received such orders.

The dumping of planes from carriers—all supposedly still equipped with radios, compasses, gyroscopes, and navigation instruments—I have not myself verified. It is, however, the subject of persistent reports in ports from Tokyo to Pearl Harbor. These reports have been so numerous the last several weeks that in Okinawa Capt. John McCain, surplus disposal head of the Yonabaru naval base, has had to deny them flatly.

"We have never authorized destruction of equipment that has commercial value," he said, "We are exhausting every means to distribute the surplus among other military units here."

During the war we have greatly drained our natural resources and it is, therefore, important that we exercise every caution to conserve our metals and materials. Let us not delude ourselves that we are still so rich that we can be wasteful. The United States is no longer so rich that it can afford to scrap valuable metals or lose out on material which may be salvaged.

It is small wonder, with such reports coming to the attention of the people, that we are finding difficulty in meeting our quota in the Victory bond drive. Certainly this prodigal, wanton, and criminal waste of natural resources, does not inspire patriotism or a will to invest money in Government bonds. Our armed forces should make those responsible for this criminal waste answer for their actions.

## The Labor Situation

EXTENSION OF REMARKS
OF
### HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. JONKMAN. Mr. Speaker, I quite agree with President Truman that our labor legislation is in need of vital and fundamental correction.

A labor situation which reeks with disregard for law, flaunting of all human rights, and organized attack on law-abiding citizens to rob them of their property and livelihood by irresponsible labor leaders of the A. F. of L. International Teamsters Union, now exists in my district.

It concerns only a small company with 34 employees, but that makes the reprehensible conduct of the labor leaders all the more heinous for pouncing on this helpless little business, which is perfectly willing to cooperate with the unions, is willing that its employees shall be unionized with either the A. F. of L. or the CIO; but because its employees 100 percent refuse, it is being strangled by the union labor leaders.

I am speaking of the Standard Grocer Co., Inc., of Holland, Mich. This is a small wholesale grocer business, and operates branches and maintains warehouses in Grand Rapids, Mich., and Muskegon, Mich.

I will now read from a statement which the Holland Grocer Co., Inc., requested me to make to Congress and the people of the United States:

The union has been trying for several years to line up our truck drivers in the A. F. of L. truckers union. About 6 months ago one of the union men came into our office and asked that we sign a contract forcing our men to join the union, suggesting that that might be the only way of getting supplies. We informed him that we would not coerce our men to join any organization, that that was their privilege and choice. If the majority of our men chose the A. F. of L. we would be required to recognize the union.

Little was heard from them since that meeting until 5 weeks ago when they began picketing our Grand Rapids branch. After 3 weeks of picketing we telephoned Representative JONKMAN, at Washington, for relief and he sent in the National Labor Relations Board. After meeting with union officials on

Friday, November 2, at the suggestion of the Labor Board we agreed to post notices announcing a meeting to be held at the Warm Friend Tavern Monday evening, November 5, for the Holland employees, and Tuesday, November 6, at the Labor Hall in Grand Rapids for our Grand Rapids employees. With the endorsement of the Labor Board we called our men together on Friday afternoon, November 2, telling them of the union activity and desires. We expressed to the men our views, putting it squarely before the employees that if they desired to join the union we would have to recognize it and would do so willingly. The result of the union election was a 100-percent turn-down by our employees.

On Monday morning, November 12, the union began picketing our local main warehouse, tying up all truck freight shipments and insisting we would either operate under the union or we would not operate at all. It has been necessary for 4 weeks now to file suit to replevin our own merchandise at transfer companies. The union has been going to companies and threatening to tie up the home plant if they deliver merchandise to us. They threatened the General Foods representative with the boycotting of their merchandise in this area if they ship.

Since picketing began here at Holland, the union men carry a sign stating that this plant is unfair to organized labor. Our employees became so incensed that they had a counteracting sign made and placed on the front lawn stating:

"Union Unfair—We voted 100 percent against the A. F. of L.

"EMPLOYEES OF THE STANDARD GROCER CO."

We are wondering what has happened to justice and freedom. We trust that this case of injustice against our employees, as well as ourselves, is not the handwriting on the walls of American freedom.

Mr. Speaker, this statement, of course, speaks for itself. The American people has legislatively disarmed itself and handed all legal guns and ammunition to labor leaders for the protection of labor. Now we have come to a stage where power-drunk labor leaders are turning these guns on the public and on labor itself to extort dues for the enrichment of their treasury.

When, as recited in the statement, the Holland Grocer Co. wired me about their predicament, I immediately took it up with Mr. Howard Colvin of the Labor Conciliation Board. He sent an agent in to investigate, and take necessary action. And here we have an instance of the Holland Grocer Co. placing itself in the hands of the United States Conciliation Service in the Department of Labor, passively following its instructions to the letter, and meeting all its terms and instructions, with the result that in a few days Mr. Colvin notified me that the boycott had been stopped. However, such was not the case. After a few more interviews with Mr. Colvin, he finally told me that the union's action was without authority of law, in other words was lawless, and if they insisted on and persisted in their lawless conduct he was just as helpless as the Holland Grocer Co.

And so my constituents, the Holland Grocer Co., must engage the services of a lawyer and a costly replevin proceeding every time they want merchandise from their warehouses. Their truck service, railroad service, and even unloading service is all hamstrung by the International Teamsters Union.

Such high-handed brigandage by labor leaders places the duty in Congress to protect honest labor and the American public by legislation against labor-leader lawlessness without delay.

## Transportation of Soldiers From Overseas

EXTENSION OF REMARKS
OF
### HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. PATTERSON. Mr. Speaker, today, December 3, a great number of the Nation's maritime unions are participating in a 24-hour mass work stoppage, in protest to the slow shipment of our troops from overseas. All shipping, barring troop and legitimate relief ships, are being halted in American ports on this day, in order to call the attention of the Nation to the crying need for prompt action on the part of the military authorities to expedite the return of our men.

The Army, Navy, and Maritime Commission have tried to place the blame for their own incompetence in handling the shipping problem on the American workingman. Irresponsible statements have been made to excuse the unnecessary tying up of huge tonnages of shipping by the military, who have tried to pass the buck onto someone else's shoulders, and at the same time create antilabor sentiment. Our brass hats will not succeed in deterring our servicemen's fathers and brothers in the maritime unions from bringing their GI's home. These men, united in purpose as well as in their respective unions, are determined to see that every cubic inch of shipping is used for transporting troops back home. The merchant seamen, oilers, stevedores, longshoremen know just which ships are being used, and which are not. Only recently they saw to it that five ships, a total of 35,000 tons of shipping, were put back into service transporting GI's from the Pacific. I commend these men of our maritime industry for their courage in standing up for the rights of their fellows in the war effort.

I feel that the protest should be carried on. I am strongly opposed to the diversion of ships to foreign powers to help them suppress peoples' independence movements. I am opposed to tying up ships in American ports, harbors, and rivers until the last man is home from overseas. I protest the allocation of ships at this early date for commercial operations. Six thousand American boys lost their lives in the merchant marine during the war, and while their buddies sit and wait for ships to bring them home, our Government has allowed ships to be diverted into commercial trade with Fascist Spain. The steamship *Spofford* will arrive from a Spanish port in a few days. Why isn't she bringing men home for Christmas?

The answer given by the Maritime Commission regarding the time it takes to convert Liberty ships into transports is refuted by the action of the homesick GI's themselves. The Maritime Commission stated that it takes 2 months to convert these ships into transports; whereas, when given some Liberty ships to convert, the Mid-Pacifican, their paper, reports the GI's themselves in 2 days converted a Liberty into a ship to carry 500 of them home.

I do not mean these to be idle words. If something is not done immediately by the military and maritime authorities, I think Congress must take some action. I know that many of my colleagues here feel strongly on this subject too, and hope that the House will recommend to the authorities concerned that more prompt action be taken in returning our boys to their families by Christmas.

## Health Insurance

EXTENSION OF REMARKS
OF
### HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. BIEMILLER. Mr. Speaker, the President's recent message recommending the passage of a health program, including compulsory health insurance is one of the most important that has ever reached the Congress. The President has ably outlined the need for better facilities and for a modern system of medical economics. Medical science and research would gain immeasurably from the proposals. The President rightly insists there would be no interference with the practice of medicine.

However, the reactionary medical politicians are already trying to confuse the issue. Newspapers are being flooded with propaganda and sly hints about advertising revenue.

I desire to include with my remarks two editorials from the Capital Times, of Madison, Wis., one praising the President's plan, the other exposing the techniques of the opposition:

PRESIDENT TRUMAN CALLS THE MEDICAL POLITICIANS' BLUFF

A wild cry of horror can be expected to follow President Truman's recommendation that Congress adopt legislation providing for compulsory health insurance for people in low income groups. It will come full-throated from the medical politicians and the common, garden variety politicians who have fought relentlessly against any plan that would provide the mass of Americans the adequate medical care they need.

It will be denounced as communism, fascism, and most of all, as "socialized medicine." Of course, it is none of these and, as the President made clear, it is least of all "socialized medicine." It does not seek to bring the private practitioner into the employ of the Government to dispense medical service. It merely proposes a sound insurance principle for raising the health standards of this Nation—standards which the Pepper-La Follette committee has shown to be deplorably low at the present time.

It suggests no interference with medical science, but it does propose a sound, practical reform in our eighteenth century medical economics. Under its terms no one will be compelled to go to a doctor he or she does not want. And no doctor will be compelled to take a patient who comes under the insurance plan. It would merely provide

that the medical bills of the average American would be paid from funds raised in a manner similar to the present social security fund.

It is difficult to see what objection the medical politicians could find in the plan. But a considerable group has made known its opposition to similar proposals. This group urges that doctors refuse to treat the sick whose bills would be paid out of the insurance fund.

There is little prospect that legislation containing the President's proposals will be passed by the present reactionary Congress. The Wagner-Murray-Dingell bill, after which the President's plan is patterned, has been marked for perpetual care in a congressional committee dominated by tory Republicans and Democrats.

No doubt the President is aware of the hopeless chances for such legislation in a Congress which has ignored and scuttled his 21-point reconversion program. His strategy, no doubt, is to force the medical profession itself to take steps to improve health standards in the Nation.

The Wagner-Murray-Dingell bill has had some effect along these lines. It has forced the medical politicians away from their old position of opposing any and all types of prepaid medical care. Unfortunately, however, they have done little outside of dream up tricky propaganda stunts in a vain attempt to convince people that plans and programs are being formulated to provide more comprehensive care.

The much ballyhooed "Wisconsin plan," which was recently revealed by the Wisconsin Medical Society, is a good example of this fakery. Indeed, many of the doctors in this State are disgusted with the Medical Society's fiasco. Dr. Harry R. Foerster, president of the Milwaukee County Medical Society, recently characterized the Wisconsin plan as neither revolutionary nor evolutionary, but a plan to give insurance companies greater control over medical practice.

President Truman's proposal may or may not force a few more grudging steps out of the medical profession along the road to progress. Whether it does, seems to us to be of little significance as far as an adequate program of health insurance is concerned. Sooner or later the people are going to demand such a program and when they do they will send men to our National Legislature who will translate those demands into national policy.

---

A BROAD HINT FROM THE MEDICAL POLITICIANS TO NEWSPAPER EDITORS

A few days ago, when President Truman asked for a compulsory health insurance program for America, the Capital Times predicted that the medical politicians would let loose with a loud yelp that this was "communism," "socialism" and "totalitarianism." We have already been hit by the first broadside.

The National Physicians Committee, which proposes to keep medical economics in the Dark Ages, has favored us with a fat envelope full of antihealth-insurance propaganda. Among the various specimens of how to deceive and mislead people is one in which we think you will be especially interested.

A series of newspaper ads, already canned for reprinting, are included. There are no instructions directly telling the editors to whom these ads are sent how they can go about getting sponsors for them. But there are some powerful hints.

Each of the ads carries a list of fictitious sponsors across the bottom. In most cases the sponsors just happen to be druggists. We wonder if anyone will miss the implications of this none-too-subtle suggestion that druggists, to whom a doctor's good will means prescription business, should be shook down to pay for political advertising.

## Control of Atomic Energy

EXTENSION OF REMARKS
OF
## HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include a communication from Lawrence A. Kimpton, secretary of the faculties of the University of Chicago, and include a resolution by the council of the University of Chicago, which is the ruling body of that institution. The resolution, which was unanimously passed, expresses the serious concern of the university faculty over the implications of atomic energy control for the freedom and development of scientific research:

THE UNIVERSITY OF CHICAGO,
*November 16, 1945.*

DEAR REPRESENTATIVE: The council of the University of Chicago, which is the ruling body of the university, has unanimously passed a resolution which expresses the serious concern of the university faculty over the implications of atomic energy control for the freedom and development of scientific research.

Respectfully yours,
LAWRENCE A. KIMPTON,
*Secretary of the Faculty of the University of Chicago.*

RESOLUTION ON THE CONTROL OF ATOMIC ENERGY PASSED BY THE COUNCIL OF THE UNIVERSITY OF CHICAGO

The council of the University of Chicago (the supreme academic body) is deeply concerned with the maintenance of the freedom of research and the unrestricted dissemination of scientific knowledge.

The development of mankind requires that the freedom of inquiry and the dissemination of knowledge be protected in order to preserve and enrich our civilization. The enormous advances in our time in the sciences and arts have come about in large part because men have been free to pursue their researches and to publish freely their discoveries. The Constitution of the United States not only granted freedom of speech and of the press, but specifically recognized "the progress of science and useful arts" as a basic object of American government.

The successful application of scientific knowledge to the development of many devices of warfare, including the atomic bomb, under conditions of rigid control, has led to a widespread misconception that scientific research can and should be permanently organized in this way. It should be recognized that the growth of scientific knowledge before the war and the development of the men who were responsible for its wartime applications were only possible under conditions in which uncensored communication of ideas and unrestricted freedom of research prevailed, permitting the free play of scientific imagination. Progress in nuclear studies and the industrial and military applications of atomic energy will wither at the root if the constant influx of young men of the highest ability into the field is discouraged by such controls as have been suggested in Congress. National safety would be impaired, not conserved.

Moreover, nuclear studies occupy such a pivotal position in science today that discoveries in this field may be expected to revolutionize many collateral branches from astronomy to medicine. By controlling nuclear research all science may be shackled.

We therefore respectfully urge the Congress of the United States to impose no restrictions on teaching, research, or communication of the results of basic scientific research (other than those required to guard against hazards to personal safety), and to promote individual research by such measures as are necessary to provide access to essential materials.

Even if national control of atomic energy is restricted to industrial and military applications, we are concerned over the form of control proposed in the Johnson-May bill. We affirm our conviction that a public agency dealing with atomic energy should be subject to the usual control of the Chief Executive, the Congress, and the courts, and that the traditional predominance of the civil over the military authority should be jealously preserved.

Members of the council of the University of Chicago; Robert Maynard Hutchins, chancelor; Ernest C. Colwell, president; Reuben G. Gustavson, vice president; Wilbur C. Munnecke, vice president; Emmet B. Bay, professor of medicine; Ralph A. Beals, professor of library science; George G. Bogert, professor of law; Alexander Brunschwig, professor of surgery and roentgenology; Guy T. Buswell, professor of educational psychology; Charles C. Colby, chairman of the department of geography; Fay-Cooper Cole, chairman of the department of anthropology; Garfield V. Cox, acting dean of the school of business; Ronald S. Crane, professor of English; Avery O. Craven, professor of American history; Arthur J. Dempster, professor of physics; Lester R. Dragstedt, professor of surgery; Graham P. DuShane, assistant professor of zoology; Earl A. Evans, Jr., professor of biochemistry; Clarence H. Faust, dean of the college; Michael Ference, Jr., associate professor of meteorology; James Franck, professor of physical chemistry; Henri Frankfort, research professor of Oriental archeology; E. M. K. Geiling, professor of pharmacology; Lawrence M. Graves, professor of mathematics; Robert J. Havighurst, professor of education; Paul C. Hodges, professor of roentgenology (medicine); William A. Irwin, professor of Old Testament language and literature; Neil H. Jacoby; vice president; Wilber G. Katz, dean of the law school; Ezra J. Kraus, professor of botany; Maynard C. Krueger, assistant professor of economics; George K. K. Link, professor of plant pathology; Sidney E. Mead, assistant professor of the history of Christian thought in America; Richard P. McKeon, dean of the division of the humanities; Carl R. Moore, professor of zoology; Joseph F. Mullin, assistant professor of physiology; Walter L. Palmer, professor of medicine; Clarence E. Parmenter, chairman of the department of romance languages and literature; Wilhelm Pauck, professor of historical theology; Dallas B. Phemister, professor of surgery; Thelma Porter, professor of nutrition; Ernst W. Puttkammer, professor of law; Floyd W. Reeves, professor of administration; Hermann I. Schlesinger, professor of chemistry; Joseph J. Schwab, assistant professor of education; Gertrude E. Smith, professor of Greek; Otto Struve, professor of astrophysics; Ralph W. Tyler, chairman of the department of education; Jacob Viner, professor of economics;

Leonard D. White, professor of public administration, chairman of the administrative committee of the department of political science; John A. Wilson, director of the Oriental Institute; Napier Wilt, professor of English; Louis Wirth, professor of sociology; Helen R. Wright, professor of social service administration, dean of the school of social service administration; Sewall Wright, professor of zoology.

## General Housing Bill

EXTENSION OF REMARKS
OF
### HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. MADDEN. Mr. Speaker, during the debate on the deficiency appropriation bill, I called the attention of the Members of Congress to the highly critical housing shortage in the Calumet industrial region of Indiana.

Thousands of families moved into this area during the war period to aid in the work of our defense plants and factories.

Owing to the high cost of building materials and war restrictions today, these families were unable to secure homes.

Thousands of ex-servicemen are now returning from their military duties and are unable to find homes or shelter for themselves or their families.

I am herewith submitting a resolution adopted by the Common Council of the City of Gary, Ind., asking for immediate action on the Wagner-Ellender-Taft general housing bill:

Resolution 768

Resolution of support of Wagner-Ellender-Taft general housing bill

Whereas there exists an extreme shortage of housing accommodations throughout the Nation which will be intensified and aggravated as additional numbers of our veterans return to civilian life; and

Whereas it is imperative that prompt action be taken by the National Government to stop the spread of urban and rural blight, eliminate the slums, and provide decent homes for all our citizens; and

Whereas the immensity of the task requires the joint cooperation and assistance of all private and public agencies, local, State, and National; and

Whereas the Wagner-Ellender-Taft general housing bill, recently introduced in the Congress, provides for a unified national housing agency and a coordinated national attack on the housing problem through adequate research, active local planning, a liberal home-loan plan, the construction of homes for low-, medium-, and high-income families, and authorizes assistance to localities for public and private slum-clearance projects: Now, therefore, be it

*Resolved by the City Council of the City of Gary:*

SECTION 1. The city of Gary hereby endorses and supports the Wagner-Ellender-Taft general housing bill and urges its prompt enactment by the Congress.

SEC. 2. The city clerk is hereby directed to send copies of this resolution to the Members of the House of Representatives and the Senate of the United States, to the chairman of the appropriate Senate and House committees, Senators Wagner, Ellender, Taft, and President Truman, and to Congressman Ray Madden.

Passed by the Common Council of the City of Gary, Lake County, Ind., this 26th day of November 1945.

OSCAR L. CONWAY,
*Presiding Officer.*

Attest:

ANTHONY E. DOBIS, Jr.,
*City Clerk.*

Presented by me to the mayor for his approval and signature, this 28th day of November 1945.

ANTHONY E. DOBIS, Jr.,
*City Clerk.*

Approved and signed by me this 28th day of November 1945.

JOSEPH E. FINERTY,
*Mayor, City of Gary, Ind.*

## Homestead Lien Law

EXTENSION OF REMARKS
OF
### HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. H. CARL ANDERSEN. Mr. Speaker, my attention has been called to the fact that only 13 States in the Union have homestead lien laws, and require a lien upon the property of old-age assistance recipients. Under such a law, these States, upon the death of the old-age assistance recipient, sell his property and reimburse the State and Federal Treasury from such receipts.

When we consider that the State of Minnesota, on the one hand, returned to the Federal Government last year $321,765, there were on the other hand 35 States which did not return to the Federal Government a single dollar in connection with homestead liens. The question would naturally arise as to whether it is fair for these 13 States, including Minnesota, to have such a law in effect, and if such laws in these 13 States do not operate as class legislation against the people of these particular States. Such laws should either be national in scope or nonexistent.

The average payment this past year to old-age assistance recipients was $29.35. Three States paid above $40 a month, and these States were Washington, California, and Massachusetts. On the other hand, I am surprised to see that there are six States that pay less than $15 per month.

Mr. Speaker, when we consider how much our cost of living has risen during the past 5 years, it is difficult to see how we can in all good conscience expect the old-age assistance recipients of this Nation to exist on the small payments they receive. We hear a lot about social security, but if you will go back into the nonindustrial sections of the Nation, you will find that social security as such affects comparatively few people in those areas. Yet the taxpayers of those particular areas, mostly agricultural, small business, and white-collared workers, help pay their share of the social-security tax added to the manufacturers' cost of production, and get nothing whatsoever in the line of benefits therefrom. This, in my opinion, is not real social security, Mr. Speaker.

The figures that I have quoted above were compiled through the diligence of Mr. Charles Nelson, of Willmar, Minn., who took it upon himself to secure that information from the attorneys general of the 48 States of the Union. Personally, I have never agreed with the theory that we should take away from the family of these old-age assistance recipients at their death the little home they might have had, nor am I at all sympathetic with the manner in which the present social security provides for coverage for scarcely half of the people of America, and leaves the others with nothing whatsoever to depend upon in their old age.

Can we as a Nation in fairness uphold the theory that while one great segment of our population is protected by social security, an equally large segment is entirely disregarded and must, in case of need, go on the rolls as old-age assistance recipients?

It is my opinion, Mr. Speaker, that the only fair treatment of our old people is some form of a universal old-age pension, and until that day comes here in America injustices, such as homestead lien law, and the noncoverage of large segments of our population by the Social Security Act, will prevail. Such injustices are not my conception of the way in which our American way of life should operate.

## Italian Cardinal Stresses Civic Duty

EXTENSION OF REMARKS
OF
### HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I wish to insert an article from the Michigan Catholic, the weekly newspaper of the archdiocese of Detroit, containing an address delivered by Elia Cardinal Dalla Costa, archbishop of Florence, Italy. The advice is timely and should be heeded not only where it was delivered, but all over the world:

ASKS CHRISTIANS TO USE BALLOT—ITALIAN CARDINAL STRESSES CIVIC DUTY

ROME.—The duty of Christians to take part in the political life of their country was stressed by Elia Cardinal Della Costa, Archbishop of Florence, in an address at the opening session of the "Social Week" in Florence.

"Many peaceful, intelligent, modest Christians shun political life, thus abandoning their country to its own devices," he said. "Many abstain from voting because they consider politics a mass of jealousies and intrigues.

"The time has come to understand that such mistaken ideas keep the best citizens away from public interest, leaving power in the hands of a few who are perhaps, incapable and unworthy.

"Politics represent the government of the people; politics is the science necessary to promote the common good. Until worthy citizens take part in political life, especially through the ballot, the way will be left open

for abuse, violence, sectarianism, and dictatorship, with a resulting damage to religion, morality, family life, and the commonweal."

Referring to the need for a constitution, the cardinal said: "Owing to the religious spirit of our people there could never be a solid peace in Italy without a constitution with a Christian imprint."

## Statement on Behalf of the United Nations Relief and Rehabilitation Administration by the National Association for the Advancement of Colored People

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. VOORHIS of California. Mr. Speaker, I am glad to include with my remarks herewith a forthright statement on the need for appropriations for the United Nations Relief and Rehabilitation Administration recently issued by the District of Columbia branch of the National Association for the Advancement of Colored People:

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE,
DISTRICT OF COLUMBIA BRANCH,
*November 24, 1945*

STATEMENT ON UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION TO THE HOUSE FOREIGN AFFAIRS COMMITTEE

The District of Columbia Branch of the National Association for the Advancement of Colored People is seriously concerned over the plight of the persons in liberated areas. We feel that the United States should assume its full share of responsibility in helping these nations to adjust themselves for the following reasons:

1. In the interest of economic stability we should help these nations back to their feet as quickly as possible so that world trade may resume its normal channels and expected growth.

2. In the interest of political stability and world peace these people should be quickly brought up to some minimum standard of living, for masses of starving people provide a fertile field for the seeds of political unrest and revolution.

3. In the interest of human kindness we cannot allow the peoples of China, Austria, the Phillipines and other liberated countries to face starvation and complete annihilation while we enjoy prosperity. The war through which we have just come has shown that the world must be considered in the light of all its peoples, and in the peace which we are attempting to cement, a similar conception is evidenced. It is our responsibility therefore, as a necessary step to maintain world peace, to see that those less fortunate than we are supplied with at least the barest fundamentals for existence.

The job for which the United Nations Relief and Rehabilitation Administration was set up is just half done. Unless it is completed almost all that was previously given will, in effect, be thrown away—people have been tided over half the winter, but they are just as liable to starvation in the second half; they will need suplies until they can build their own economy.

We respectfully urge therefore, that you do everything in your power to approve authorization of the $1,350,000,000 requested by UNRRA and that this authorization be made in a democratic manner with no strings attached—such as the "free press amendment" so that we may demonstrate to all the world our sincerity and good faith as a world citizen.

DISTRICT OF COLUMBIA BRANCH OF THE NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE,
GEORGE E. C. HAYS, *President.*

## The Future of Inland Waterways

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks I include an editorial from the Calship News of Chicago:

THE FUTURE OF INLAND WATERWAYS

There can be no intelligent discussion or consideration of the future of inland waterways without a review of their development and progress during the past two and one-half decades. In World War I the railroads of the Nation were taken over and operated by the United States Government through an agency called the Railroad Administration, and in an effort to alleviate the congestion on the railroads during that period they organized a barge line. From then on the river barge lines became an increasingly important element in the transportation needed to support the peacetime economy of our Nation.

The new agency was mandated by Congress to join the railroads in through joint barge-rail, rail-barge and rail-barge-rail rates, so the benefits of low-cost transportation would not only be confined to industries, distributors, manufacturers, and communities located on the rivers and waterways, but would also benefit those in the interior regions. Since 1942, however, the railroads have resisted the establishment of such joint rates, with the result that those now in effect do not cover as much territory nor do they apply on as many commodities as could be desired.

Notwithstanding the resistance of a competing form of transportation, the barge lines have made much progress and are recognized as a most important factor in the areas served by them. Nearly all the major oil companies and many so-called independent oil companies own or use tank barges, towboats, and tugs for the movement of their products on the inland waterways. The reason for the establishment and growth of these private carriers is the low-cost transportation and in moving petroleum products only one other method is cheaper—the ocean-going tanker.

The service rendered the Nation by the inland water industry during the war has been outstanding and has fully justified its existence. Millions of tons of petroleum products have moved by river tank barge. The movement of this important war commodity in this way has spelled the difference between keeping industrial plants on the eastern seaboard as well as in the Middle West operating at full speed or curtailing operations; of keeping people warm or having them freeze; of using combat training planes or having them remain on the ground.

The Army, Navy, Maritime Commission, and War Shipping Administration found it absolutely imperative to use the vast productive capacity of the Great Lakes and the Mississippi and Ohio River Valley regions for the building of submarines, patrol cruisers, landing craft of all types and sizes, mine layers and sweepers as well as tugs and cargo vessels as produced by the Calumet Shipyard & Dry Dock Co. Many such craft had to be pontooned or otherwise floated and towed to deep water. There can be no doubt that the ships built in the "interior country," even in the cornfields of the Midwest away from the seaboards, were of tremendous help toward victory.

Certainly even the severest critics of the use of the inland waterways should admit that transportation thereon during the war alone has fully justified their development, and on the basis of this past performance the industry looks forward to the future with the utmost confidence, realizing full well that competition in postwar years will be keen. It may not be generally realized, but throughout the period of the war these carriers have been defending themselves before the courts and the Interstate Commerce Commission against deliberate attacks on their rate structures, their right to participate in transit arrangements, and to move ex-barge traffic on equal proportional rates.

All types of transportation have given exceptionally fine performance during the war. The railroads, barge lines, pipe lines, and motortrucks all stepped into the breech left open by the withdrawal of coastwise tankers, with the result that the industrial East never suffered a serious petroleum shortage. The barge lines operating on the inland rivers, intracoastal canals and waterways, bays, sounds, and harbors of the United States expect to retain much of this traffic. Freight carriage by this form of transportation is cheap and reliable and in the highly competitive postwar years it is believed that all traffic will seek the service provided at the lowest possible cost.

The inland water carrier industry is firmly of the belief that they must have the fullest cooperation and support of the shippers and public generally if low-cost water transportation is to be preserved. The shippers of freight and the general public must be made to fully realize that one agency must never again be permitted to hold an absolute monopoly on the transportation needs of this great Nation.

There must be competition, but it must be honest and fair if prosperity for all is to prevail in the years to come. There must be competition among the different modes of transportation if shippers and the public are to have an unrestricted choice of the type of transportation needed at fair rates. There must also be a coordination of these services so they will be in the interest of the public.

The inland water carriers have no criticism of the railroads, as they have given the Nation the best possible transportation during the war. We have the finest railroad system in the world and their magnificent performance has been accomplished under private management, as contrasted with World War I, when Government operation was not an outstanding success. However, these same railroads have been the severest critics of the development and use of the inland waterways as well as other forms of competing transportation.

The general public must be convinced of the necessity of preserving all forms of transportation and avoiding a monopoly of any one form. The unfair and unwarranted attacks on inland waterways transportation must cease and everyone interested in a prosperous nation should insist on fair treatment for all. Each such service should have the opportunity to do the job for which it is best fitted and equipped.

## Expedite Return of Medical Men

EXTENSION OF REMARKS
OF
**HON. CHARLES W. VURSELL**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. VURSELL. Mr. Speaker, I am inserting in the RECORD a letter from a representative group of medical officers now being detained in the medical service in France, which is sufficient proof to me, and should be sufficient proof for the Surgeon General of the Army that his department is not moving with sufficient speed for the return of medical men from overseas who are surplus and are not needed in their present positions.

I think when you Members of Congress read this letter you will be alarmed at its contents and the very serious effect the retaining of these men in foreign service who have little or nothing to do is having on their morale. I know it will cause you to redouble your efforts to cure this situation and your insistence on expediting demobilization so that they may return to their professions in their various home localities where their services are so urgently needed by our civilian population.

The letter is as follows:

FRANCE, *November 9, 1945.*

Hon. C. W. VURSELL,
*House of Representatives,*
*Washington, D. C.*

DEAR SIR: There are existing at this time in the European Theater of Operations, conditions which are the seedlings for planned changes in the future practice of medicine. They have been present all during the actual war and were the stimulus for many thousands of rightful "gripes" by the doctors in the service. Now that the war is over these injustices are still present, and it is high time that they be aired, so as to preserve our present standards of medical practice and thus continue to insure the American people the highest degree of health.

We are writing this letter to you to acquaint you with these conditions which are planned adjuncts to the collaring and slow choking of the American medical profession.

1. Much has already been said and written concerning the surplus of doctors in service, and the hoarding of this surplus by the military. This unnecessary disproportion was present, but tolerated, during the actual time of combat. At that time there was one doctor per 200 soldiers. From the available casualty figures published by the Army and Navy during the entire European and Pacific war, there was available one doctor for every 10 soldiers injured. Compare this figure with the civilian figures where one doctor serves 1,000 people of all ages and of both sexes. Now with the war over, combat casualties nonexisting, and redeployment of the troops "excluding medical officers," this disproportion grows even more alarming and ridiculous. We find ourselves with no work to do, sitting idly here, simply political prisoners. Is this not a sufficient contradiction to the plea of "necessity" to arouse in us a suspicion and fear of a sinister plot of the greedy social planners? Do we read socialized medicine in the offing? We are sure we do. We don't like it. We don't want it.

2. A second inciting factor of the present medical situation is the policy of the Army to refrain from inducting into the service those young men who were given a medical and dental education at the expense of the Government. These young men are not being sent overseas as replacements, while doctors with 15 to 24 months overseas service or 2 to 3 years total service are being kept here, many to serve in the army of occupation. This contradiction to logic, this breech of everything that is right, just, and holy is leaving a mark of bitterness in us doctors that even time will not erase. We ask, "Is the Army keeping the older men, those with long overseas service, away from the States to curry favor with the younger man in the hope and play of entwining him in their scheme of socialization?"

3. Along the same line, doctors at home, who have never left the States, are being discharged with fewer points than many doctors have who are overseas. They are being discharged, and we can't even get home. Again we ask ourselves a question, "Is this justice, or are we making a mistake by expecting justice?"

The result of these injustices is becoming very evident to us who are witnessing these experiences. The doctor has no work, he is loafing, he is losing his initiative, his desire for and interest in medicine. He is developing a mental attitude which if it continues to be nourished by instances as above, will solidify into a bloc, not only willing to accept, but encouraging socialized medicine. This is not an idle dream, this is now an everyday conversation and admission, spoken no longer with hesitancy, nor with shame, and with less and less regrets. The future is not rosy. Is it the desire of the representative leaders of our profession to see as a result of this neglect, an embittered bloc of medical people arise? A bloc so frustrated that the advent of socialized medicine would be a welcome refuge. We think not, and we hope not. Unless something is done immediately, these grave fears will come to pass.

In an effort to avoid this we offer the following suggestions:

1. Let there be adequate medical personnel for American soldiers in each theater—no more, no less.

2. Get the surplus of those overseas home immediately. There is an overwhelming surplus. Get those with long overseas service home now. They can't take much more now.

3. Let the ASTP and V-12 doctors earn their Government education by a tour of duty overseas, thereby allowing the poor, forgotten, disillusioned, lethargic doctor a chance to return home because he is now filled with ennui such that he doesn't know if he is coming or going.

4. The American Medical Association should pursue its function of protecting the rights of its members. Let us not again see the journal repeat, without criticism, the exorbitant demands of the Army. It nauseates us who know the true state of affairs, and is an insult to our intelligence.

5. We think, too, that after the cessation of hostilities there ought to be at least a degree of medical autonomy. A representative committee of the profession should have the power to decide how many doctors for the military and how many for the civilian population.

The future of individualistic American medicine is in the balance. You can tip the scales in the right direction, but it must be done now.

A REPRESENTATIVE GROUP
OF MEDICAL OFFICERS.

Distribution:
1. Deans of approved medical colleges.
2. Secretaries of the State medical societies.
3. Representative individual leaders of the medical profession.
4. Secretaries of the American College of Physicians and the American College of Surgeons.
5. Leading newspapers and periodicals.

## District Committee Chairman Expresses Appreciation for Cooperation of Fellow Members, Officials, and Citizens

EXTENSION OF REMARKS
OF
**HON. JENNINGS RANDOLPH**
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. RANDOLPH. Mr. Speaker, in relinquishing, in the near future, the chairmanship of the House District Committee, I especially appreciate and recall the cordial relationships with officials and residents of the National Capital.

It has been a privilege to work with the District of Columbia Commissioners, and other agency heads, including the National Capital Park and Planning Commission. Civic organizations and individual citizens have also aided in promoting legislative programs necessary to the growth of Washington and the well-being of the approximately one million persons who live in the metropolitan area.

I feel that it is important that the citizens who live here understand the prompt and helpful cooperation given to the consideration of District bills by the leadership of the House of Representatives, including the Speaker, majority and minority leaders. It is appropriate also to make public the fact that no partisanship has existed within our committee.

The Washington newspapers and radio stations have, in my opinion, cooperated with the committee chairman and members in behalf of a constantly improved metropolis.

By leaving the chairmanship of the District Committee, I shall not lack a continuing interest in the work of this group. It is my desire to remain a member and to aid the incoming chairman in his important duties.

There are many opportunities for local and national service on the District Committee. My efforts will be directed in the future, as in the past, to accomplish with the help of others those objectives so vital to this city's widening influence. Washington increasingly becomes the world capital because here are shaped so many policies which will determine the peace and security of mankind everywhere.

In assuming new and challenging duties with the Civil Service Committee I genuinely thank those friends and coworkers who have helped my staff and myself in our pleasant tasks.

## Veteran Red Tape Cut

EXTENSION OF REMARKS
OF
**HON. LOUIS C. RABAUT**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. RABAUT. Mr. Speaker, recently when Gen. Omar N. Bradley, Administrator of Veterans' Affairs, appeared before the Deficiencies Subcommittee on Appropriations, I took occasion to make known to him certain information that had been disclosed to me by men released from the services.

The complaint of some of the new veterans was that when they reported to a draft board in an endeavor to obtain DSS Form 57, Notice of Classification, they were requested to furnish the draft board with a photostatic copy of their discharge certificate at their own expense. This I felt to be positively wrong, and I so expressed myself on the occasion.

As a result, General Bradley presented the matter to the Director of the Selective Service System, Lewis B. Hershey, who has written to me as follows:

NATIONAL HEADQUARTERS,
SELECTIVE SERVICE SYSTEM,
*Washington, D. C., November 21, 1945.*
The Honorable LEWIS C. RABAUT,
*House of Representatives.*

DEAR MR. RABAUT: This headquarters has been advised of your statement before a recent congressional hearing relative to the requirement by certain local boards of selective service that the returning veteran, upon reporting to his local board, file a photostatic copy of his discharge. This matter was discussed with you by Colonel Renfrow, chief legislative officer of this headquarters, and the local board to which you referred was ascertained to be in the District of Columbia.

In reference to this information, inquiry was made of the director of selective service for the District of Columbia, and the attached Bulletin No. 738 (VAD-12), issued on November 5, 1945, was the action taken by the District of Columbia headquarters, to discontinue the practice of requiring photostatic copies of discharge.

In addition, you will find that the attached Bulletin No. 707 (VAD-6), dated August 5, 1945, will give the procedure previously outlined to the local boards for the District of Columbia for the assisting of veterans by local boards.

Also attached is form (VAD-6), which is completed at the time a discharged veteran reports to a local board in the District of Columbia, requesting assistance or notification of his local board of origin.

It is believed that this will clarify the situation and establish the fact that it was never the policy of the Selective Service System to require a photostatic copy of his discharge at the time the veteran reports to his local board upon discharge.

Your interest in this matter is appreciated.

Sincerely yours,
LEWIS B. HERSHEY,
*Director.*

---

DISTRICT OF COLUMBIA
HEADQUARTERS,
SELECTIVE SERVICE SYSTEM,
*Washington, D. C., November 5, 1945.*
Bulletin No. 738 (VAD-12).

Memorandum to local boards and reemployment committeemen:

It has been reported to this headquarters that certain of the District of Columbia local boards have been requiring veterans to present photostatic copies of their discharges either for their own use in connection with the issuance of classification cards (DSS Form 57) or duplicates of registration certificates (DSS Form 2) or for the use of other local boards either in or out of the District of Columbia. This requirement is felt to be wholly unnecessary and the practice should be discontinued.

District of Columbia Form VAD-6 was designed to obviate the necessity of requiring photostatic copies of discharges for any purpose and the use of this form to record pertinent data taken from discharge certificates was outlined in our VAD Bulletin No. 707 (VAD-6), dated August 20, 1945. Further, Instruction No. 1 for Form 14 issued August 20, 1945, very adequately covers the application for issuance of duplicate registration certificates (DSS Form 2) insofar as registrants who have been separated from the land or naval forces are concerned.

Very truly yours,
FRANK D. NORTON,
*Administrative Officer.*

## Women's Chance

EXTENSION OF REMARKS
OF
**HON. EDITH NOURSE ROGERS**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

WOMEN'S CHANCE

United States Representatives EDITH NOURSE ROGERS, of Massachusetts, plans to introduce in Congress a bill which would establish a veterans' job and integrated national program to provide the maximum amount of job opportunities and careers for veterans. Mrs. ROGERS' proposal would bring together present efforts being made on the behalf of veterans in agriculture, industry, labor, foreign trade, private agencies, State and local governments, and the Federal Government. The bill would not interfere with the jobs of nonveterans but would create new opportunities by using unused capacities and undeveloped resources of the United States.

It is pointed out by Mrs. ROGERS that we have now about 20,000,000 veterans of the last two wars, constituting a potential new power. To these 20,000,000 veterans may be added all their female relations of voting age, who are primarily interested in what these men must have to reenter civil life on a basis of opportunity to those men who didn't fight in either one of the wars. And it is clearly up to the women to make certain that such a bill for an integrated national program for veterans be passed by Congress.

It is an actual fact that women have a greater chance today than ever before to make sure there will be no World War III and build up bulwarks in this Nation against another depression and consequent unemployment. Educated women must strive to teach others not so well educated and, therefore, not so well informed, the power for good they can be if they will. If the women of this country, for instance, will put their full strength behind this veterans' bill to be proposed by Mrs. ROGERS, they will, in the Congresswoman's own words, "exert more power on the distaff side than all of the male warmongers combined."

Mrs. ROGERS said also: "Their (women's) courage and high-mindedness is now needed to help give birth to this veterans' job and integrated national program. The women of America can strike a new note in applying their abilities in the community centers, and by using the ballot to make this program successful."

The Lowell Congresswoman is by no means the only one who believes that the franchise gives the women of this Nation an opportunity to push through the kind of legislation needed to prevent war and bolster a poorly adjusted national economy. It is the women of the country who suffer the most when they see their husbands, sons, and brothers off to war, who in times of peace fear for their families while legislators fool around with silly and futile proposals and leave high on the shelf the bills which would save the United States and its people from much suffering. Let us hope that from many platforms, pulpits, and publications will come words of encouragement to women so that they will exercise this franchise for the most good.

Women should write their Representatives in Congress asking for support of Mrs. ROGERS' measure when it is introduced. If they are anxious to help matters along further, they should write to Mrs. ROGERS and ask her what they can do in their own communities to push through the legislation.

---

## San Francisco Favored as Permanent Home of United Nations

EXTENSION OF REMARKS
OF
**HON. FRANCK R. HAVENNER**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. HAVENNER. Mr. Speaker, a distinguished Indiana editor, writing in the Gary Post-Tribune of last Saturday, has presented a very interesting summary of the reasons which, in his impartial opinion, make San Francisco an "odds-on choice" to be selected as the permanent home of the United Nations.

The editorial follows:

London must be a busy place these days, with hotel rooms about as scarce as in some American cities we know, as our United States delegations arrive to press their offers of sites for the permanent home of the United Nations.

We didn't realize there were so many ideal American locations until the invitations began to take shape. Mayor Kelly has been across the Atlantic on a flying trip to urge Chicago's advantages; Philadelphia, Boston, and San Francisco have sent similar delegations to plead their cause.

Then there's a bid from New York, with the 1939 World's Fair site proposed, and other invitations from Poughkeepsie, the Black Hills of South Dakota and the Territory of Hawaii. We're not forgetting, either, Indiana's own proposal that the United Nations select a Hoosier site—most any site, just so long as it is in Indiana.

The choice will go to an American location. Preliminary discussions in London have indicated as much. There is some sentiment there for Geneva, home of the ill-fated League of Nations, but Russia probably never would consent to that; the Soviet recalls too well the assassination of its chief delegate to the Lausanne Conference in 1923 and its expulsion from the League in 1939. And there are other nations to whom the ghosts of Geneva's past are not attractive.

We'd like to have the United Nations come to Indiana, of course. Any State would be delighted to welcome the delegates of the world's nations. And our Hoosier hospitality probably would make them feel right at home among us.

But as best we can ascertain, San Francisco is the "odds on" choice to win the final selection. It has prestige as the birthplace of the UNO; it is nearer than Europe to most of the British dominions and to most of South America, and it faces both China and Siberia across the Pacific.

With its steep hills, Frisco has one of the most picturesque sites in the world. Its bay, entered from the Pacific through the deep and wide Golden Gate, is the best natural harbor between Puget Sound and San Diego. It is a city with a distinct international flavor. And, a factor that might be important, it is the width of the continent distant from Washington and the center of our domestic politics.

The converging of various delegations on London to urge rival sites may help to convince the UNO delegates that the new world league will have a hearty welcome in the United States. In that respect, a suggested Indiana delegation might be of some value. But otherwise we doubt that there's any good reason for sending a Hoosier committee to London. It would be a nice trip but that's about all. As loyal Hoosiers, we join in urging the UNO to come to Indiana but, thinking practically, we haven't much expectation that it's even a slight possibility.

## Flood Control

EXTENSION OF REMARKS

OF

### HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 29, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under leave to extend my own remarks, I wish to support the appropriation of $15,000,000 for flood control on the Mississippi River and its tributaries and the other appropriations for certain similar projects in southern Illinois.

We are losing each year a considerable fraction of our most fertile Illinois soil. It is being washed away into the Mississippi. Unless something effective is done to stop this waste, we shall be an agriculturally impoverished State by the end of the century. Combined Federal, State, and local action is needed if we are to save our land. Local and State governments can do much to help the farmers hold the rainfall in the soil and lessen its rate of run-off. Among these measures are, first, contour plowing and the use of sod strips; second, the development of small forests on low-grade land; third, the planting of nitrogen fixing plants to build up depleted soil and on the the banks of streams; fourth, the building of small rock dams on creeks and larger dams on rivers to hold back the spring floods and create lakes which will furnish needed water supplies and provide recreation.

I hope the Federal Government will help more actively in these projects. In the long run it will be a sound investment. In the meantime the proposed public works to control floods and promote navigation will be of distinct public benefit, and in my judgment should be carried through. But we need a larger plan to prevent floods, lessen erosion, and safeguard our soil on the tributaries of the Illinois, the Kaskaskia, and the Wabash, and I hope all our levels of government may work together to accomplish this.

## Low-Wage Policy Threatens Economy of Nation

EXTENSION OF REMARKS

OF

### HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. SADOWSKI. Mr. Speaker, up to this date the General Motors Corp. has refused to discuss profits or prices with the UAW-CIO. The officials of the corporation have stated flatly that it is none of the union's business. This reluctance on the part of General Motors to consider profits in relation to wages is understandable when one reads the Federal Trade Commission Report, which stated that the corporation averaged 35.5 percent in profits from 1927 through 1937, inclusive. It is well to point out that $1,000 invested in 10 shares of General Motors stock in 1917 have earned the investor $930 a year in dividends and increase in value. This is a 93-percent return.

Mr. Walter Reuther, vice president of the UAW-CIO, has pointed out that General Motors could have paid 30 percent greater wages than it did pay from 1936 to 1941 and would have earned an average net income after taxes of $132,000,000 a year. This is more than 12 percent a year on its investment. For every dollar paid to the workers from 1936 to 1941, inclusive, General Motors earned 91 cents in profits before taxes. Mr. Reuther points out that in its postwar production, General Motors can make as much profit before taxes as in the best profit year of its history which was in 1941—this in spite of the fact that even though it may be producing at less than capacity and even though it pays 30 percent higher wages rates than it now pays. Mr. Reuther seems to have the facts and statistics. General Motors' answer to all of this is simply "It's none of your doggone business."

How can we have a balanced economy in the Nation and avoid inflation and depression if we do not consider prices, profits, and wages jointly in connection with the whole problem? It appears to me that the UAW-CIO officials are talking plain horse-sense economics that every American can readily understand. One of the General Motors officials recently stated that he would not show his books even to his stockholders. The most simple-minded person will understand that you cannot have a balanced economy in the Nation by regulating wages only. It is like riding a tricycle on only one wheel.

Under leave to extend my remarks in the RECORD, I wish to include editorials by Mr. R. J. Thomas, president, UAW-CIO, and Mr. George F. Addes, secretary-treasurer, UAW-CIO, that appeared in this week's issue of the United Automobile Worker:

THE SHOW-DOWN IS HERE

(By R. J. Thomas, president, UAW-CIO)

I am writing this column as the showdown between your union and the Big Three in the automobile industry moves to a climax.

Just before the Auto Worker went to press, negotiations with General Motors were to be resumed, but there seemed little hope that anything worth while would result. The corporation, the largest, richest, money-making enterprise in the world, has refused utterly to grant any increase in wages without corresponding price increases, and treats our fully justified demands for wage increases to take care of the losses in take-home pay as something on which they will not negotiate. The company "negotiators" listen—but they laugh at the idea of paying the wage rates they can so well afford.

It is regrettable that an outfit which sets the pace for the whole auto industry should be operated by socially irresponsible men. The perfect illustration of that was GM vice president Harry Anderson's now classic remark a few days ago that they would not open their books, even to their own stockholders. The corporation is being operated, not by its owners, but by a managerial clique whose entire financial investment represents at best a minority of the stock. It is this little group, responsible only to themselves and entirely lacking in any consciousness of their obligations to society as the operators of the world's largest business, which is, in effect, forcing a costly and terrible strike upon us.

God knows the top leadership of the UAW-CIO has neither sought nor wanted a collision of this kind. But I think the people of America will agree with our own membership that we have been patient, we have been fair, we have sought to do no more than maintain the economic well-being of our people and of the country as a whole in our proposals to General Motors Corp. and to Chrysler and Ford.

Since the beginning of the present controversy, GM has never indicated in word or in deed its willingness to give an inch on wages. Its attitude is clear indication that the corporation is not only expecting a strike but welcomes the test of strength. No doubt this tough policy is because of the provisions of the Federal tax laws under which GM's strike losses would largely be repaid out of the Federal Treasury through tax refunds. The corporation is acting on the assumption that this is a fine time to decide the issues, when it will have the Treasury of the United States to finance it, and the workers will have to depend upon their limited resources.

Should there be a strike, it must be conducted on our part with complete and orderly discipline, and with full confidence that the du Pont family cannot successfully flout the just demands of the automobile workers.

SECRETARY ADDES SAYS

(By George F. Addes, secretary-treasurer, UAW-CIO)

Industrial unrest and discontent in the United States flow directly and inevitably from the economic situation in which the Nation and its workers find themselves.

The national income, we have been told by Government economists, will drop to only $130,000,000,000 in 1946, or $36,000,000,000 less than during the first 6 months of 1945. A national income of only $130,000,000,000 with a civilian labor force expanding rapidly because of the demobilization of the armed

forces means—and no statistical sleight-of-hand or mumbo-jumbo talk about collective bargaining procedures can deny it—unemployment for between 8 and 10 million workers. It means joblessness for returning veterans; it means a 20 to 25 percent drop in farm income; it means that our country has been sucked once again into the vicious downward spiral of deflation and depression.

The task of the Nation in this time of crisis is to find ways and means of compensating for the spectacular decline in Government war spending—from $87,000,000,000 to $25,000,000,000—and thereby to reduce the hazards of deflation and unemployment. It has been estimated that the total of Federal, business, and consumer expenditures, which amounted to $199,000,000,000 in the first half of 1945, will sink to only $155,000,000,000 in 1946. It will take an increase in expenditures of $44,000,000,000—or 28 percent—to fill this deflationary gap. Of the three components of total expenditures, only one—consumer expenditures—is subject to considerable increase, and this increase can come about only through raising wage rates.

A substantial wage increase is, therefore, a basic necessity not only for the reduction of industrial strife but for the partial offsetting of the shrinkage in the national pay envelope. It, and it alone, can lay the basis for the level of consumer expenditures necessary to replace dwindling Government spending for war.

It is obvious, however, that consumer expenditures cannot be increased when wage cuts are the order of the day. According to the United States Department of Commerce, restoration of the prewar workweek means that average weekly wages in manufacturing industries will decline from $46.35 (June 1945) to $35.60, a cut of almost one-fourth. For workers shifting from munitions industries to nondurable goods industries at prewar hours, the cut will be even greater, amounting at least to 45 percent.

With wage cuts of such magnitude, it will be impossible to increase consumer expenditures to compensate for the decline in Government spending.

With wage cuts of such magnitude, it will be impossible for the workers of this Nation to earn the $3,075 which the Heller Committee finds necessary for a minimum American health and decency standard of living at wartime price levels.

With wage cuts of such magnitude, it will be impossible for the American people, in the words of Mr. Vinson, to "learn to live 50 percent better than they have ever lived before."

Is it any wonder, then, that there is industrial discontent in the United States?

There is now and there can be no doubt that the basic reason underlying the great wave of resentment that permeates the minds of the American workers is that the wartime wage policy of the Government created injustices and inequities which threaten not only the living standards of the workers themselves but the economy of the entire Nation.

## Courts-Martial Review

EXTENSION OF REMARKS

OF

### HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Monday, December 3 (legislative day of Monday, October 29), 1945*

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Courts-Martial Review," from the San Francisco Chronicle. It is an editorial in complete support of a resolution now pending before a committee of the Senate providing for a senatorial investigation of the courts-martial systems and places of incarceration of those sentenced before Army and Navy courts martial.

Let me add that since my resolution was submitted I have received for my files ample evidence to satisfy me that there is rampant abuse of the courts-martial system in the Army and Navy, so that I stand ready to prove the charge I made.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COURTS-MARTIAL REVIEW

The Senate should not lose a moment's time in adopting the resolution of Senator MORSE, of Oregon, calling for a Senate investigation of Army and Navy courts martial. Simultaneously, the investigation should put a crusher on the harsh, war-excited sentences that Senator KNOWLAND says are still being carried out.

In addition to review of specific cases, Senator MORSE's resolution proposes examination of the whole court-martial tradition. That also is needed.

There is a natural lack of godlike uniformity in even the civil courts' dispensation of justice, but civil justice at least is dispensed by men trained in the law and men who are accountable to the public.

Against this, military judges are officers who may or may not have broad legal background; often they have very little. Serving in an organism dedicated to victory above all else, they understandably place a high premium upon discipline; consequently there develops a tendency in every war to use military courts as instruments of exemplary discipline instead of justice. In the main, proceedings are conducted without accountability to public opinion or conscience, and there is a corresponding lack of publicity at the appellate levels.

This is a general rule of war. It has happened in this one, and as a consequence countless sentences have been outrageously harsh. Not only is there a large number of wartime judgments crying loudly for review, but beyond a doubt there are thousands containing lesser miscarriages. It is a public right and duty to know the number of such cases and their nature—that is, to know what has been going on behind the wartime screen. And it is a public duty to remember that the sentence will stand unless they are reviewed in cool blood by authorities more experienced in the dispensation of justice than the authorities who passed them. Where injustice has been done, redress will come belatedly as it is; there is no excuse for further delay.

## Two Trials in Germany

EXTENSION OF REMARKS

OF

### HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

*Monday, December 3 (legislative day of Monday, October 29), 1945*

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Two Trials in Germany," published in the Memphis Press-Scimitar of December 1, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO TRIALS IN GERMANY

The trial at Nuremberg goes well. Evidence, shocking even to a world that thought it had plumbed the depths of Nazi devilishness, steadily unfolds. The trial is being conducted with fairness and dignity. Few doubt that the guilty will be punished and in measure proportioned to their guilt.

There is another trial going on in Germany—the trial of our ability to transform the German nation from a menace into a reliable member of the society of nations. A successful outcome of this other trial depends on our ability to save the innocent—to get Germany to running in such a way that the lives of today's children, and even children yet unborn, will not be warped by starvation and injustice so that they will be made into Nazis or Communists of tomorrow.

This other trial isn't going well. That we learn from Byron Price, former head of censorship, who was sent into Germany by President Truman to find out conditions and has reported to him that the situation is growing worse hourly.

Germans who live in unheated homes and must walk to work, aren't getting enough food to keep their bodies warm, much less enough to give them enough energy to work.

Mr. Price recommends that additional food be shipped to Germany on credit to provide at least the minimum ration which doctors say is necessary to prevent starvation.

For which starvation would come epidemics and probably riots.

Desperation, he says, might produce a new fuehrer, and embittered Germans would listen to him.

It is right and it is sensible for us to give food and hope to those Germans, however few or many they may be, who will turn to the western world and its democracy if we give them a chance. Food and hope, too, for the children who, if not molded by our kindness, will be molded by a future fuehrer's cruelty.

For the spirit in which to do this, we may turn to Justice Robert H. Jackson, prosecutor of the Nazis at Nuremberg.

In the great speech with which he opened the trial, at the same time that he was relentlessly indicting the Nazis, he made it clear that the United States was not incriminating the whole German people. He said:

"We know that the Nazi Party was not put in power by a majority of the German vote. We know it came to power by an evil alliance between the most extreme of the Nazi revolutionaries, the most unrestrained of the German reactionaries, and the most aggressive of the German militarists."

The German people cannot be absolved from the sin of yielding to this evil minority. But it is unlikely they would have yielded had they not been brought to an economic desperation by the triple disasters of defeat in World War I, a destructive inflation, and a depression.

Let us do what is necessary to prevent a greater economic desperation which would make Germany prey to a new crew of desperadoes.

Let's see that Byron Price's recommendations are carried out.

Let's punish the guilty and rescue the innocent.

Let neither of our great trials in Germany miscarry.

## Leave Privileges and Allowances of Enlisted Personnel

EXTENSION OF REMARKS
OF
**HON. JOSEPH R. BRYSON**
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. BRYSON. Mr. Speaker, as early as March 5, this year, I introduced H. R. 2454 which was referred to and is still pending before the House Committee on Military Affairs.

The title of the bill reads as follows: "To grant to enlisted personnel in the armed forces of the United States upon their separation from the service certain benefits with respect to accumulated leave."

The purpose of the bill is to extend leave privileges and or pay allowances to enlisted personnel on the same basis as is now granted to officers.

In campaigning for the passage of the measure, I have as yet found no opposition. Everyone seems favorable to the bill, but no one seems willing to press for its enactment. In view of the admitted discriminations against our enlisted men and women, the measure should pass without delay. On the Speaker's desk you will find Discharge Petition No. 13, which I hope you will sign and thus aid in the passage of this long-past-due law.

Attention is called to what I believe is a grave but unintentional error committed against the almost 15,000,000 men and women who have served as enlisted personnel in our Army, Navy, Marines, or Coast Guard. We have granted to the officers who commanded these men and women a highly deserved reward for faithful duty well performed, but we have failed to equally reward the equally deserving men and women who make up the rank and file of our national-defense force.

I am referring specifically to a bill recently passed by both this House and the Senate, and very recently signed by our President. This bill was intended to prevent an unjust hardship which had resulted upon the discharge of officers who had accumulated annual leave during their period of military service. Upon discharge, they were unable to accept civilian jobs until such time as they had expended this unused leave if that civilian job were with some other branch of Government. For the officer this meant choosing between losing the accumulated annual leave or postponing the acceptance of a civilian job until the leave had expired.

In some cases where the officer was badly needed in a civilian capacity and where a manpower shortage in that particular skill made the situation even more aggravated, we found that conversion was being handicapped by the failure of men to accept employment. In other cases we found the men actually accepting employment but working without salary until their leave had expired. Perhaps even more serious, many discharged officers were finding that by the time their leave had expired the good jobs were already filled.

To eliminate this problem Congress passed and the President signed a bill authorizing the payment of a lump sum to officers upon discharge, equivalent to the annual leave which they had acquired, thus permitting them to have the income from the unused annual leave and yet be eligible for employment to reconverting industry. I believe, with the majority of my colleagues, that it was a happy solution, and a well deserved one. Men who were too busy on the firing line to take the 2-day-a-month vacation which the Government service provides deserve to have it after they return to civilian ranks.

From these remarks I believe that you will all understand that I was a firm supporter of the earlier legislation, and am in no way attempting to detract from it or condemn it.

Yet, I would like to point out that in passing this legislation, we were discriminating against the enlisted personnel unless we offer them a similar advantage. To equalize this unintentional discrimination against our enlisted men and women I submitted early this year H. R. 2454, a bill to grant enlisted personnel in the armed forces of the United States upon their separation from the service certain benefits with respect to accumulated leave.

In preparing H. R. 2454 I discovered that it was necessary to go somewhat further before we could help enlisted personnel than was necessary with officers. For some—by me—misunderstood reason officers are entitled to receive annual leave at the rate of 2½ days for each calendar month of service in the armed forces, and may accumulate any unused leave; but enlisted personnel do not have this privilege. While it has been customary to grant enlisted men and women furloughs from duty upon frequent occasions, there has never been any provision whereby these men automatically received so many days each month as the officers do. Nor do enlisted personnel accumulate leave which is not used. It would be possible for an enlisted man to serve continuously without furlough from before Pearl Harbor until the present; and still not have a day of annual leave coming to him upon discharge.

Is that the extent of our gratitude to these real patriots who have battled through heat and mud and blizzard for us, who have faced enemy gunfire in order that this Nation might remain free and uninvaded, who have fought on seven seas and in seven times seven different nations to protect you and I?

Are we going to be satisfied to hand to these heroes a small button and say to him "Wear this, son, so that we can know a hero when we see one" and yet not offer to him the same rights which come by law to the officers who commanded him in those battles? Are we going to distinguish between the officer-pilot of a plane and the enlisted gunner on the same plane?

To correct these inequalities, H. R. 2454 does two things. It first creates a reward for enlisted personnel commensurate to that which the law already provides for their officers. Then, once created, this reward is treated in exactly the same manner as we have wisely decided to treat the similar reward which officers receive.

H. R. 2454 provides that each enlisted man or woman shall be entitled to 2½ days annual leave for each month of service, such eligibility to become effective upon their discharge. I do not believe that this is in any way different from the amount of annual leave now being given to officers.

H. R. 2454 further provides that enlisted personnel shall have charged against them such leave as they may have been formally granted while in service; and that any balance shall accumulate until their discharge. Again, this is comparable to the privileges extended to officers under existing regulations.

H. R. 2454 also provides that upon discharge the enlisted man shall receive a lump-sum payment equivalent to the number of days of accumulated leave, to be paid at the rate of pay and allowances of the enlisted personnel on his last day prior to discharge. This, too, is similar to the recently passed legislation for officers.

Finally H. R. 2454 is made retroactive so that enlisted personnel already discharged prior to the passage of this bill shall also be compensated. This feature of the bill specifies that such lump-sum payment shall be made within 90 days after date of enactment of this act. I am sure that you will all agree with the justice of this section of H. R. 2454, since none of us would want to discriminate between men simply because some were discharged before others. Because of our point discharge system the men who have already been released are, in many cases, the ones who have had the longest periods of service or have distinguished themselves in the most outstanding manner.

I call upon you to sign discharge petition No. 13 today.

## World Federation

EXTENSION OF REMARKS
OF
**HON. SHERMAN ADAMS**
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. ADAMS. Mr. Speaker, under leave to extend my remarks, I include a letter directed to the editor of Union-Leader of Manchester, N. H., written by Charles A. Holden, of Hanover, concerning world federation:

WORLD FEDERATION

Editor, Union-Leader—The increasing number of people who are saying that a world federal government must come soon is encouraging. Many other people say that ultimately it must come—some impose the limitation that it cannot come in the next 15 or 20 years. It well may be that a more

nearly accurate statement would be "We have only the next 15 or 20 years in which to form a world federal government."

We should realize that the people in the United States Confederation were just as sorely beset as are we today. When the Confederation was "descending into the vale of confusion and darkness" and "anarchy," a convention was called "for the sole and express purpose of revising the Articles of Confederation." Not all the accredited delegates attended, some left before the session was completed and only about one-half the number of delegates for which provision had been made, signed the proposed Constitution for the federation of the United States. The proposed constitution was adopted because the far-seeing statesmen in the convention had discerned that no revision of the Articles of Confederation could form an effective government and that a federation was required. During the consideration of the proposed Constitution heated arguments, pro and con, were advanced. Some of the States voted to adopt the Constitution by a very small margin—two did not do so until after Washington was inaugurated. Many of today's problems can be found duplicated in the years before and after 1787.

The Confederation of the United States failed, among other reasons because its fundamental concern was with purposes. The fundamental concern of the federation was with powers. When the United States Federal Government combined adequate powers with wise purposes, the Government changed from verging on anarchy to enjoying in the words of Washington, "a scene of prosperity and tranquillity under the new Government that could hardly have been hoped for."

Such a federation of the world is not something new or strange but is simply an extension to the world of the principles of the Government under which we live, the Federation of the United States, which has functioned well for over a century and one-half.

Each nation would be free to continue its form of government and to develop its culture without fear of foreign domination so long as it had the will, purpose, and determination to maintain peace in the world and to abide by the provisions of the world federation constitution.

Since there would be a world government, there could be international law; an international court; federal courts, officers, and enforcement agencies in each nation; the world federation could allocate to each nation for police uses the quantities of weapons, equipment, materials and manpower which it might have; the federal officers could have full right of access to determine whether any provisions of the licenses were being violated and thus prevent preparation for war by stealth; and, as in the United States, the world federation authorities could deal with individual violators and they only, not governments, would be punished. The latter is a fundamental and vital condition for the maintenance of peace.

Plans to stop aggression are plans to win wars; plans to prevent aggression are plans to maintain peace.

I think that the President and the Congress of the United States should do that which already has been proposed by the Legislature of New Hampshire and 12 other States: "* * * initiate the procedure necessary to formulate a constitution for the federation of the world" and do all that they can to bring about such a federation. Until there is a proposed constitution, no nation can decide whether it will or will not enter a federation. Nor can it effectively consider the subject.

I cannot believe that we have lost the pioneer spirit which says "It can be done" and not "It cannot be done." I cannot believe that we have lost the spirit of Washington and others who, in spite of the fact that it was "too probable no plan we propose will be adopted" and "perhaps another dreadful conflict is to be sustained," persisted in their efforts and today we are enjoying the fruits of their labors. Can we do less than attempt to have the benefits of our federation expanded to the world?

I believe that the vision of forward-looking people in the world, as did the vision of similar people in the 1787 Convention, can and will take action for a world federation which will bring peace to the United States and to the world.

CHARLES A. HOLDEN.

HANOVER, November 17.

## Former State Department Official Endorses Agreement Method of Ratifying St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

## HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. PITTENGER. Mr. Speaker, one of the objections which the railroads and utilities and the ports of Boston, New York, Philadelphia, Baltimore, Mobile, New Orleans, et cetera, raise against this project has to do with the method of procedure. I want to have an expert witness testify for the benefit of the American people. This witness will tell you that the agreement method is a perfectly proper method whereby we can ratify the agreement with Canada, and this witness will also tell you that it is not necessary to have this project considered as a treaty.

1941 HEARINGS

When hearings were held before the Rivers and Harbors Committee of the House of Representatives on June 17, 1941, one of the witnesses was the Honorable Adolph Augustus Berle, Jr., Assistant Secretary of State. Mr. Berle was then and still is one of our outstanding public officials. He is a man of wide learning, sound judgment, and knows how to reach correct conclusions on any problem that confronts him. His testimony before the committee was helpful in 1941, and is invaluable at this time when there is a discussion as to whether or not the treaty method is proper, rather than the agreement method of ratifying the agreement between the United States and Canada, on this subject. In the interests of accuracy, I quote from the printed hearings before the Rivers and Harbors Committee of the House of Representatives on Tuesday, June 17, 1941:

GREAT LAKES-ST. LAWRENCE BASIN

(Tuesday, June 17, 1941)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RIVERS AND HARBORS,
*Washington, D. C.*

The committee met, pursuant to call, at 10:30 a. m., in the committee room, New House Office Building, Hon. JOSEPH J. MANSFIELD (chairman) presiding.

The CHAIRMAN. The committee will come to order.

We have before us for consideration this morning H. R. 4927 to provide for the improvement of the Great Lakes-St. Lawrence Basin in the interest of national defense, and for other purposes. * * *

STATEMENT OF ADOLPH AUGUSTUS BERLE, JR., ASSISTANT SECRETARY OF STATE

The CHAIRMAN. Now, Mr. Berle, we will be glad to hear from you. Mr. Berle is from the Secretary of State's office and is here representing the Secretary of State. * * *

Mr. BERLE. * * * On January 3, the report which is in the record was made, and on March 19, 1941, an agreement was signed between Canada and the United States, providing for the utilization of this water. This agreement was sent by the President to the Congress of the United States on March 21, 1941, and that is the agreement in respect of which H. R. 4927 proposes approval.

On that point I should like to add that the agreement, by its terms, will go into force when it is approved by the legislative bodies of the two countries. That is to say, by the Congress of the United States and by the Parliament of the Dominion of Canada, respectively.

The question was very carefully considered as to whether or not it was legal to proceed by an agreement, and I should like to read into the record the opinion of the Attorney General obtained on that point. Without trying to read a lengthy legal argument, let me perhaps ask that it be inserted in the record. It consists of the letter of the Secretary of State to the Attorney General, dated March 13, 1941, and the question asked is:

I should appreciate it if you would advise me whether you agree that the arrangement may be effectuated by an agreement signed under the authority of the Executives of the two countries and approved by legislative enactments by the Congress and the Canadian Parliament. * * *

LETTER FROM THE ATTORNEY GENERAL TO THE SECRETARY OF STATE

MARCH 14, 1941.

MY DEAR MR. SECRETARY: I have your letter of March 13 and concur in the conclusion reached by your legal adviser that it is legally unobjectionable so far as this country is concerned for the Executives of the United States and Canada to enter into an agreement regarding the Great Lakes-St. Lawrence deep waterway project conditioned for its effectiveness upon the subsequent enactment of necessary legislation by the Congress and by the Canadian Parliament.

If an agreement is executed and approved in this manner, its provisions would be binding upon the United States as respects Canada.

Respectfully,

ROBERT H. JACKSON.

The problem as to whether this would be submitted in the form of an agreement or in the form of a treaty was a problem which engaged the most careful consideration of the Department of State.

This agreement differs from many treaties in that the effect of it is quite as great in terms of domestic matters as in terms of foreign affairs. It differs, for instance, from the kind of treaty which one might make, as, for instance, a treaty of alliance or a treaty regarding arms limitation, or things of that kind. It accordingly agreed that, in view of the fact that the issues were very largely domestic, the considered opinion of the House of Representatives, as well as of the Senate, was advisable and desirable, and that it was only fair that it should be submitted also to that tribunal.

I should like to add that that form of submission of agreement is in no way unusual in our history. The Texas agreement has been already adverted to here. One could cite a very, very long list of other precedents which I do not care to do here by reference unless someone is interested in that point. Eut I might note, among others, that there was a legislative authorization of agreement relating to reciprocal reductions of duties more than 30 years ago, and that this procedure was declared constitutional by the Supreme Court of the United States in the case of *Altman* v. *United States* (224 U. S. 583, especially p. 600). That, under like congressional approval an agreement was entered into by which the United States entered the International Labor Office in 1934, and that by like congressional authority agreements were entered into relating to the limitation of supplying arms to belligerent countries in this hemisphere.

An agreement on that point was upheld by the Supreme Court of the United States in what is, I suppose, the classic case on executive power—*United States* v. *Curtiss Wright Co.* (299 U. S. 304).

Mr. BELL. Pardon me, Mr. Berle, 299 United States Reports?

Mr. BERLE. Two Hundred and Ninety-ninth United States Reports Three Hundred and Four, which exempts such executive power.

For those who have a real scholarly interest in the question and are interested in a thorough statement of it, which I profess myself both unable to make and I think probably none of us would care to take the time, I should like to refer to the authoritative work on the subject which is a book entitled "International Executive Agreements," by Dr. Wallace McClure, published by the Columbia University Press, 1941, which takes in all of the long history beginning even in the days of the Continental Congress, and coming down to substantially the day of the date of these presents.

Mr. GAVAGAN. What is the name of it, Mr. Secretary?

Mr. BERLE. It is called International Executive Agreements, by Dr. Wallace McClure.

Mr. GAVAGAN. Yes.

Mr. BERLE. I merely mentioned this to indicate that this is not a new and casual idea. It is a thing which has been repeatedly done, and the United States Department of State functions now under a considerable number of agreements of that kind. One of them, for instance, the Finnish debt settlement, is familiar to you all, and the reciprocal trade agreements, of course, have been a part of the history of the past 8 years.

CONCLUSION

In conclusion, there is a great deal of other testimony on the part of Mr. Berle having to do with the discussion as to whether or not the agreement method is proper. If you are interested I commend to you the further reading of Mr. Berle's testimony found in the 1941 hearings.

## Why a Private Did Not Sign His Letter

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include a letter from a private in the Army who gives his reason for not attaching his signature to his complaint:

NOVEMBER 3, 1945.

Hon. WILL A. ROWAN,
*House of Representatives,*
*Congress of the United States of America, Washington, D. C.*

DEAR SIR: The prompt adjustment of complaints directed you in the past leads me to direct this appeal to you for consideration and for the information of the fellow Congressmen who seem to be unaware of the situation under which enlisted men are struggling for relief and assistance in correcting hardship situations as well as the other supplementary discharge cases General Marshall spoke so enthusiastically of in his appeal to Congress not to interfere in the discharge of men from the Army.

First, it is very apparent that the Army is not being so speedily reduced as the brass hats would have you believe. The draft boards are still drafting large numbers of men and they are not all under 26 years of age and single. The congestion in various training camps and fields is acute; so acute that men have been sent home on furlough from this field in order to provide housing facilities for others.

Secondly, there is no indication that the local Army commanders are willing to separate men who are deserving of discharge of necessity. Men who are desperately needed at home have the most difficult time convincing CO's that the necessary papers should be signed, and then the papers lay around on desks in the orderly rooms for weeks. The commander of this field enunciates his policy as being: No dependency discharges; that is the responsibility of the local board, and I won't have the buck shifted to me.

In the third instance, utilization of the men is criminal. At this time men 30 years old and more (young ones do it, too) are repeating their basic training, or simply marching about the streets, singing and shouting cadence, because there seems to be nothing for them to do and nowhere to send them. To the few men here who in college or civilian life had experiences which prepared them for some special skill this is destructive of every sane thought they have left, and those are too few. Their morale has long since departed, and with the feeling of waste and uselessness of their enforced separations from their wives and children, it is very evident that the Army is going to have to create some new disciplinary abuses to suppress the demands of these men.

You know, of course, why this letter is not signed, but the revenge of the Army is more powerful than the ability of a private to withstand. I hope you will be able to bring this to light soon.

Sincerely,

A DISGUSTED PRIVATE.

## Report on Riot at Honolulu

EXTENSION OF REMARKS

OF

### HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on riot in Honolulu:

NOVEMBER 15, 1945.

Hon. INGRAM M. STAINBACK,
*Governor of Hawaii, Honolulu, T. H.*

SIR: This report concerns the riot which occurred at the Damon Tract on the evening of Monday, November 12. The information below submitted was obtained from Chief of Police Gabrielson and Captain Kennedy of the detective bureau at a conference held November 14, at which were also present the public prosecutor, Mr. Corbett, and the undersigned.

On Thursday, November 8, Lieutenant Singer, public relations officer of naval air station, Honolulu, came to see Chief Gabrielson and said that several sailors had been beaten up by hoodlums in the Damon Tract area—one quite badly the night before and altogether four in the last 3 days. Lieutenant Singer then suggested that it would be a good idea to let the sailors go out and clean up that gang. Chief Gabrielson told him absolutely no, that when a gang goes out there are always innocent people hurt, that the best thing to do would be to let the police handle it.

On the same occasion Lieutenant Singer suggested that police be sent out into the Damon Tract area in Navy uniform. The chief of police said he would be glad to do it if permission could be obtained from the admiral, that there was a Federal statute prohibiting the unauthorized wearing of Navy uniform. Lieutenant Singer said he would see the commandant of the base about this. Nothing further was heard of this matter.

Chief Gabrielson told Lieutenant Singer that if there were any further incidents an immediate call should be put into the police station, and police detectives would be sent out to investigate the case immediately. With reference to the incident already occurred the chief of police made arrangements with Lieutenant Singer for the men concerned to come in and give their story to Captain Kennedy, of the detective bureau. Lieutenant Singer said he would do this. Captain Kennedy was called into the office and the matter of making this investigation was referred to him.

On Friday, November 9, shortly after 8 o'clock, Lieutenant Singer called Captain Kennedy and said that it would be no good to send the men in as they could not identify their assailants. Captain Kennedy told him that the police nevertheless wanted to interview the men and have a report made showing the location and the time and circumstances of the attacks made.

On the occasion of Lieutenant Singer's call on Chief Gabrielson on November 8 the chief told him that he would strengthen the force in the Damon Tract area. One extra patrolman was placed in the area on Friday, November 9, for the afternoon and early evening shift. The chief also checked in the Record Bureau relative to incidents in which servicemen were involved in the Damon Tract area and the last report which the police had was on September 9, 1945. Since that date no complaint had been made to the department relative to incidents in that area in which servicemen were involved, except to the extent indicated above concerning Lieutenant Singer's call.

The first knowledge the police had of the riot on Monday night, November 12, was about 10:15 p. m. As Officer Kaiser approached gate No. 2 of the naval air station he saw the street filled with sailors. They were armed with sticks, clubs, rocks, bars, and knives. This group consisted of about 250. At about the same time a call came in to the police station from Mrs. Nunes on Kaimana Road, another road, reporting the activities of another group which turned out to be about 500 men.

Immediately all available officers were sent into the Damon Tract area. The shore patrol responded with a detachment of shore patrolmen. The military police were not called out but some were present because they regularly ride with the police and shore patrol.

With the assistance of the officers of the day from the airport the men were gotten

back into the reservation. By 11:20 p. m. when the chief got there they were all back in the reservation.

There were approximately 45 enlisted men arrested, and a Lieutenant Coleman was arrested by Police Lieutenant Wilson on information that he told the sailors to go back to the airport, throw their identification cards away, and come out again with sticks and clubs. This was later denied by Lieutenant Coleman, but three military police heard some sailors say Lieutenant Coleman told them that. These sailors were not identified, although they were pointed out in the mob by the military police.

Officer Kaiser saw Lieutenant Coleman going up and down P Road in a jeep with a red signal light in the front of the jeep. He stopped Lieutenant Coleman and asked him for assistance in talking to the crowd and trying to get them back into the reservation. Lieutenant Coleman said that he was only junior officer of the day and that they would have to see the senior officer of the day. So far as the police know, it had never been the practice for the junior officer of the day to patrol outside the naval reservation.

After Lieutenant Coleman was arrested by Police Lieutenant Wilson, he was questioned, and a transcribed statement was taken by Officer Harry H. Phillips. He stated that the incident had been called to his attention while he was in the reservation, and he had come out through one of the other gates and worked his way back; that he was investigating. Coleman was not charged by the police; he was held for investigation and turned back to the Navy that night at approximately 2 a. m.

The sailors in the mob told the police officers that two sailors had been killed that night, which was not the truth. The source of that rumor was not discovered.

The mob got up as far as Kamehameha Highway; that is, about two blocks up from the naval reservation, a distance of about one-third of a mile. Generally speaking, they went into very few yards. Most of the damage was done by the throwing of rocks and other missiles from the street. A window was broken and screens were broken where rocks had been thrown through.

Two men riding by on motorcycles were yanked off and picked up and beaten. Paul Shaw, a defense worker, was pushed into his house. He bolted his door and turned his lights off (at the demand of the sailors). His screaming and shouting attracted Mrs. Nunes (who put in the call). A. D. Ortiz, Kaimana Road, was at the front gate of his yard when a group of 40 sailors got hold of him and said they were going to beat up all the men but they weren't going to molest the women. He told them that he was an ex-Navy man and has a son in the Navy now and that he was their friend. This group said two sailors had been murdered, which wasn't true. They let Ortiz go back into his house and told him to put out the lights.

One car was damaged, not to a great extent. The body was dented in spots. This car was in a private garage. Another car, on the street, was pushed along and left near the entrance to the reservation.

Police collected a large envelope full of knives. From one car a bayonet was recovered. This car was found at a gate of the reservation. Earlier, it had been stopped by civilian police who found it contained four sailors, each armed with a hammer. The driver of the car gunned it through the crowd and narrowly missed running over some police officers.

At 12 m. on Monday, November 12, another call came in reporting the sailors were throwing rocks from the naval area at civilian houses outside of the naval reservation. Another group of officers was sent out. That is when Mr. Gutheridge, a 74-year-old man died. They were throwing rocks at the house next to him and he was looking out the window and keeled over. The Navy got a detachment of marines from Camp Catlin and posted them to stop any further disturbance.

On November 13, at 11 a. m., a meeting was held with Admiral H. E. Overesch, chief of staff, Fourteenth Naval District. Present were senior shore patrol officer Commander Morris and several other Navy officers, Chief of Police Gabrielson, Captain Kennedy, and Lieutenant Wilson. Lieutenant Wilson told the admiral just what he saw. Admiral Overesch stated that he would convene a board of inquiry to go into the causes of the riot, and that further investigations were being made.

At the meeting with Admiral Overesch a lieutenant of the air base made a statement that there was a sailor who came back to the base before the riot and reported that he had been beaten up and robbed of $60, that this took place someplace near the civic auditorium. A shore patrol officer and a detective investigated this alleged robbery and it turned out that the man was drunk and doesn't know what happened, also that it happened after the riot instead of before.

There are 15 streets in Damon Tract. Only three lead to entrances into naval air station. There are no street lights. The area concerned consists of about three-fourths of a square mile, which includes the three streets leading to gates into the reservation. At this time the force in this area consists of a prowl car manned by two police officers, a Navy jeep with a shore patrol, and a police officer, and another car with a police sergeant. These three cars have nothing else to do but to prevent any disturbance in this area. There also is one marine jeep with two marines patrolling that area.

On Wednesday, November 14, Chief Gabrielson assigned two cars, one of them to work the area Ewa of Nuuanu as far out as Damon Tract, and the other Waikiki of Nuuanu out to Kaimuki. Each car has a police officer, a shore patrol, and a military police. Their duty is to watch out for hoodlums and break up fights. Also, a month ago, the evening watch was instructed to pay particular attention to any groups of these young fellows and to bust them up.

For months past police detectives have been assigned at night to investigate every assault case and the investigation shows that 50 percent of the time local men and 50 percent of the time men of the armed forces are causing fights. Generally, there have been no greater number of complaints of sailors from the naval air station being beaten up in the Damon Tract area than there have been complaints from other sections of the city.

Captain Kennedy states that of the complaints reported of assaults on members of the armed forces better than three-fourths of the cases have been cleared, that is, arrests have been made. When the cases come on for trial many of them are thrown out because the prosecution's witnesses, men of the armed forces, have left the islands. Mr. Fairbanks, the public prosecutor, concurred in this statement.

With reference to the incidents which Lieutenant Singer reported on November 8, although the men have not been sent in to make reports, the police department started investigations Tuesday night and has evidence as to the identity of four of the "residents" of Damon Tract involved, some of whom are former residents now in the Army. Detectives have been sent out to interview the sailors who reported the incidents Lieutenant Singer mentioned.

So far as investigation discloses in cases of similar incidents between sailors and so-called hoodlums the civilians have been between the ages of 14 and 20. There is no evidence of organized criminal gangs, nor of any grouping of racial lines.

In conclusion, it is my opinion that the police department is doing everything in its power to prevent fights between civilians and men of the armed forces or crimes against men of the armed forces and to apprehend the offenders; in short, that proper police protection is being furnished. Furthermore there is no evidence that, aside from the riot of the sailors in the Damon Tract, anything has occurred which is unusual, considering the size of the city, the large number of men as compared with women, the free availability of liquor, and the fact that since the surrender of Japan there has been a general let-down of morale and many men of the armed forces have little to do except await transportation home. The high degree of morale among men of the armed forces and civilians, present before the surrender of Japan, cannot be expected now.

Respectfully,

RHODA V. LEWIS,
*Acting Attorney General.*

## Proposed Acquisition of St. Johns College by the Navy

EXTENSION OF REMARKS

OF

## HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Monday, December 3 (legislative day of Monday, October 29), 1945*

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Annapolis Shadow," from the Washington Post. It pertains to the attempt on the part of the Navy to bring about the condemnation of St. John's College. The editorial speaks for itself, and makes perfectly clear, in my judgment, that the National Government should proceed without delay to notify the college in the immediate future whether it is going to be allowed to function as one of the little colleges of this country. It cannot do so with this constant shadow of destruction hanging over its head. I think the Navy should be big enough to inform the Government what its final plans are in regard to St. John's College, and to call upon the Congress of the United States to vote it up or down. As for me, I intend to cast my vote against the attempt to destroy the college.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANNAPOLIS SHADOW

The long, dark shadow of the United States Naval Academy continues to hang over the campus of St. John's College at Annapolis. It is a shadow which does serious injury to the college even if the ugly intent which casts it should never be realized. For the threat of the Naval Academy to take over St. John's—a threat which can be carried into execution if the Naval Affairs Committees of Congress authorize the Navy to undertake such arbitrary action—puts the college in a most unhappy and precarious position. Students who may wish to enroll in the institution have no way of knowing that it will remain at its present site long enough for them to complete their academic careers. The faculty and trustees have no way of planning for the future.

The shadow ought to have been removed long ago. The House Naval Affairs Committee which held extensive hearings on the Navy Department's request for power to ac-

quire St. John's has had ample time to reach a decision. It has complicated its deliberations on the subject by taking into account wholly extraneous considerations such as the nature of the Navy's postwar educational program. Whatever this program may be, it is absurd to pretend that its execution can depend upon the acquisition of a single small piece of land belonging to a neighboring seat of learning. The issue to be determined by the Naval Affairs Committee, so far as St. John's is concerned, is a very simple one—whether the existence of an old and honored academic institution is to be sacrificed to suit the convenience of a service school on the transparent pretext that such a seizure is essential to the national security.

The issue stated in this way answers itself. There is room enough in a free society for liberal arts colleges to exist along with training schools for the armed forces. Indeed, as independent experts have testified, there is room enough for the two to exist side by side even in Annapolis—at only a slight sacrifice of convenience and only a negligible added dollar cost. We cannot doubt that the House Naval Affairs Committee will think the preservation of St. John's worth this extra expense and this relatively trivial inconvenience to the Naval Academy. The committee ought to separate this simple problem from the larger problem of the Navy's postwar education program and render a verdict on it without any more delay. We hope that it will erase the shadow over St. John's—and erase it so definitely that it can never be cast again.

## American Chosen for Vatican Mission to Yugoslavia

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Boston Daily Globe of November 26, 1945:

AMERICAN CHOSEN FOR VATICAN MISSION TO YUGOSLAVIA

(By John G. Harris)

WASHINGTON, November 24.—Americans of all walks of life will follow with interest the unique mission on which Most Rev. Joseph P. Hurley, D. D., Catholic bishop of St. Augustine, Fla., internationally noted for his vigorous condemnation of Nazi inhumanities, will leave the United States soon for Yugoslavia.

The bishop will undertake a diplomatic service for the Pope, in that war-ravaged country. He will leave America, according to present preparations, early next month. En route to the scene of his endeavors he will stop at the Vatican for an audience.

Bishop Hurley will be the first Catholic clergyman to go officially to Europe on a postwar mission for the Pope. Only a few weeks ago he was named by the Pope as regent ad interim of the Apostolic Nunciature in Belgrade.

Friends and admirers of the bishop in America are numberless. During the war Bishop Hurley strenuously assailed Nazi tyranny and deplored consistently the shameful treatment of Poland. He devoted himself to the welfare of members of our armed forces and was indefatigable in his efforts on behalf of persecuted peoples all over the world. He is held in the highest regard by Americans regardless of creed. They will follow with interest his mission. Though no announcement has been made, the objective appears to be the reestablishment of the Catholic Church in Yugoslavia.

The importance of such a mission is understood fully in the United States. Bishop Hurley's progress will be closely observed. He has a singular background for his task. He was formerly secretary to the Most Reverend Edward Mooney, now Archbishop of Detroit, when the latter served as apostolic delegate to India from 1928 to 1931. In 1931 through 1933 he continued as secretary to Archbishop Mooney when the latter went to Japan as apostolic delegate to that country.

Bishop Hurley continued in Japan t the winter of 1933 as charge d'affaires of the apostolic delegation in Tokyo. From 1934 until his appointment as Bishop of St. Augustine in 1940 Bishop Hurley was an attaché of the secretariate of state of the Vatican.

The ceremony of his consecration as bishop on October 6, 1940, took place in the chapel of Propaganda College. The late Cardinal Luigi Maglione, then papal secretary of state, officiated. In attendance were three cardinals, eight archbishops, numerous prelates, members of the diplomatic corps, representatives of various ecclesiastical and missionary congregations.

Pope Pius XII received Bishop Hurley in private audience and give him a pectoral cross, a gold ring set with a topaz, and a gold cross engraved with eucharistic symbols. Many other gifts were presented the new bishop by the staff of the papal secretariate of state.

Bishop Hurley was born in Cleveland, Ohio, January 21, 1894. He attended Holy Name School and St. Ignatius High School there. He made his philosophical studies at St. Bernard's Seminary, Rochester, N. Y., and his theological studies at St. Mary's Seminary, Cleveland. He was ordained to the priesthood May 29, 1910, by Bishop John F. Farreley, fourth bishop of Cleveland. He served as assistant pastor at Youngstown and Cleveland and for a time was professor of psychology at the Ursuline College, Cleveland.

Bishop Hurley, the sixth Ordinary of St. Augustine, has found time to engage in many charitable endeavors. He is episcopal moderator of the family life conference, National Catholic Welfare Conference. It was under his guidance that two important national Catholic conferences on family life were conducted at the Catholic University of America.

His past life is grounds for the hope that his forthcoming mission will contribute to the firmer establishment of peace.

## Sympathetic Relief Tends To Encourage Peace

EXTENSION OF REMARKS
OF
### HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I am glad to submit for the RECORD an editorial which appeared in the Des Moines Tribune and which speaks for itself. I am proud that it compliments a committee of which I have the honor to be the chairman. It follows:

G. O. P. STATESMANSHIP

House Republicans appointed a food study committee not long ago to look into the matter of European relief policies and report back to the minority party.

The committee sent its conclusions to Floor Leader JOSEPH W. MARTIN, Jr., Sunday. It recommended that $550,000,000 of additional United States funds be appropriated to UNRRA immediately and that more be supplied during the coming winter if necessary.

Relief of the desperate peoples of Europe, so recently our allies, said the committee, is in "our own security and self-interest."

But what impresses us even more is the broad, statesmanlike reasons why the committee recommends these humanitarian, enlightened attitudes toward Europe's needs. Listen to this:

"The atomic bomb cannot be successfully outlawed, suppressed, or monopolized. We can prevent its use in warfare again only by building a world in which there will be no war.

"The seeds of peace do not thrive in an environment of hunger, disillusionment, and disease. Everything we can do, therefore, to alleviate suffering in Europe this winter will be a sound investment in peace for the world, security for ourselves, and control of the atomic bomb in the only way it can be controlled—by removing the desire to make war."

Now we're beginning to exercise some gray matter!

This is the most fundamental common sense about the interrelationship of hunger and security and war that we have seen in a long time, not excluding recent official pronouncements.

It is significant that it comes from members of the Republican side, which is frequently accused of isolationism and reaction.

What a difference it will make—what incalculable promise it will hold—if the G. O. P. "hooks on" to this thoughtful, reasoned line and really takes the leadership in implementing it!

## Bring the Marines Out of China

EXTENSION OF REMARKS
OF
### HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 3, 1945*

Mr. VURSELL. Mr. Speaker, today I want to insert a letter in the CONGRESSIONAL RECORD for the benefit of the Members, all of whom are deeply interested in conditions confronting our Government and, particularly, our troops who are still stationed in China.

This letter comes from a soldier of the First Marine Division, who has been through the Guadalcanal and Okinawa campaigns and who, after the surrender of Japan, was transferred to Peiping, China, in the middle of the Nationalist-Communist Chinese trouble.

His letter gives some interesting first-hand information and indicates the seriousness of the situation, and certainly indicates the necessity for the withdrawal of our troops from China.

The letter follows:

TANGKU, CHINA, *November 13, 1945.*

DEAR DAD: This letter is meant mainly for you. I'd like to have you pass on its contents to the St. Louis papers, or one of them and put your name on it, or the usual "officer's name withheld." Here's the scoop.

Today General Wedemeyer stated that the marines would remain in north China until the "unsettled affairs are settled." That means that we must repatriate the Japs at

the rate of 76,000 a month for 33 months as there are 2,500,000 of them here. That means we are protecting the Chinese nationalists from the Communists. That is the truth. We are preventing the Communists from controlling this area until the Nationalists get here. In short we're deciding what government China should have. We are doing exactly what we told Russia not to do. No wonder they don't trust us in Russia.

Third, today a Jap came up to one of our officers and asked, "I'm looking for some Standard Oil men to come in here. I want an inventory before they arrive." We're protecting their tanks against the Chinese Communists.

Fourth, we are protecting the Japs from the Chinese. Boy, what a set-up.

Now, then a few arguments that we out here feel are justified:

1. Are Americans repatriating Germans out of Russia? Or are Russians repatriating Japs out of China? Both answers are "No." China now has troops enough for repatriation. The Japs are disarmed and completely willing to obey their Emperor's order. My point is that the United States job is finished here. We accepted the Jap surrender, but we are in an Allied nation and they should take care of their own repatriation problems. Russia is doing it, so can China. A question: If Russia was threatened by civil war would we rush troops in there to prevent it? Well, that's just what we're doing here. Are Wedemeyer and Truman using the repatriation as a pretext for actually settling Chiang's revolution for him? The price for it is keeping a corps of marines here under an Army commander who will keep us here while sending his own troops home. Dad, if I could only impress you with the bitter hatred that exists among the marines over this, perhaps you could understand how we feel.

2. Is the foreign policy of America going to be that of preventing revolutions in other nations? We are following that policy now here in China. Soon this war will break and we'll be in the middle of it, unable to get out. We are protecting Chiang's men and cities now, but when the Communists start trouble we can't prevent them from taking over. We are being eased into war with these Communists because if they shoot at us, as they have and will, we must shoot back. It is rotten, Dad, and you people must act and act at once. The only thing to prevent the inevitable is for Chiang and the Communists to call off the war. It looks from here as though even that is too late.

3. Is our Navy to be used for ferrying supplies to the Dutch in Java or for getting our troops home? Sure, the Dutch are in trouble in Java, but the British have ships as do the Aussies and French. We have a great fleet, but when a group of ships carrying United States troops are stopped at Hollandia, the troops ordered off, and supplies for Java put aboard, then it is time to call a halt. That little story we got from our First Marine Division news sheet.

Well, Dad, there you have it. Am I griping too much, or am I asking the same things you are? What the hell is the trouble back there? * * * Byrnes says, "All marines in north China will leave immediately." Wedemeyer says a couple of days later, "All marines will remain in China until the unsettled affairs are settled." What the devil is coming off? We—yes, we—are the ones who should say: We're here, not in Washington. * * *

Today Wedemeyer says, "A few clashes between marines and Communists have taken place. It is regrettable." You are damn right it is regrettable. A few marines have been hurt. Sure, he'll keep the marines here while the Army goes home. * * *

Dad, I've written a lot. I've made my words and sentences strong. I don't like to swear in writing, but I'm boiling and so is everyone else. We've all been writing home. * * * We will assist other nations, but we will not run their governments. We can't do everything and we can't carry the whole world on our shoulders. So forgive me if I seem bitter or seditious, but this sort of thing must stop, and you people must force the withdrawal of marines from China before some of our men, possibly me or anyone, gets his Purple Heart for doing China's job for the Chinese for no purpose or reason.

Best of luck, Dad.

Your son.

## Resolutions of Wayne County Farm Bureau

EXTENSION OF REMARKS

OF

### HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. LECOMPTE. Mr. Speaker, timely and important resolutions were adopted by the Wayne County (Iowa) Farm Bureau Federation at its annual meeting.

Under leave to extend my remarks, I include therein this set of resolutions:

WAYNE COUNTY FARM BUREAU RESOLUTIONS FOR 1945–46

I. STATE INCOME TAX

We favor the return of 100 percent collection of the State income tax. Income and sales tax is the fair way of taxation.

II. REA

We favor the establishment of rural electric lines to furnish electricity for all farm homes in the county, and we believe that the REA serving farm families through nonprofit cooperatives should be exempt from taxation. We also favor the establishment of legislation to compel the public utilities to service all farms in a community or sell out to a company that will service all homes.

III. PERFECTING AND MAINTAINING WORLD ORDER

We know that war can and must be prevented. We believe that the work started at the San Francisco Conference by more than 50 different nations to maintain world order should be continued and given full support by our Government. We believe that our agricultural problem is international and should be treated as such. We favor military training in peacetime only when it is used to prepare a defense for our country and to train our young men for a vocation.

IV. NATIONAL AND DOMESTIC ECONOMY

We believe that in order to pay our high war debt that we must maintain a high economy. To accomplish this we believe labor, industry, and agriculture must work together in every way possible for a full production and full employment.

V. AGRICULTURAL PRODUCTION AND PRICING

We believe: (a) Retain parity as a permanent guide and work toward a program of "parity at the market place," which would include farm wages; (b) encourage full production with support prices; (c) retain commodity loans; (d) further develop foreign markets; and (e) crop insurance should be further studied.

VI. SOIL CONSERVATION AND FERTILITY

We believe that the Soil Conservation Service should be further developed and that a major part of AAA should be to develop soil conservation and more emphasis placed on the pasture-improvement project. We favor the national fertilizer program as has been outlined and suggested to Congress by the American Farm Bureau.

VII

We favor a school reorganization program which includes a maximum of local control consistent with equalization, taxing the wealth where it is, and spending it on children where they are.

VIII

We wish to commend the work of AAA, PCA, SCS, FSA, Extension Service, and REA, and especially wish to recommend that the REA be expanded as soon as possible as a postwar measure. We feel, however, that some of these credit agencies might be combined. We urge the continuation of AAA as a medium of balance between production and consumption and also favor an economy of abundance rather than one of scarcity. We recommend more Farm Bureau members avail themselves of the benefits of the Iowa Farm Mutual Insurance Co. and also those contemplating buying life insurance should investigate the new Iowa Farm Bureau Life Insurance Co.

IX

We urge the holding of township monthly Farm Bureau meetings and believe the Farm Bureau should be advertised by local newspapers and billboard and feel that the State office should stand a part of such expense. We believe the encouragement of 4-H Club work to be one of the best means of developing active, well-informed agricultural leadership; also group discussion of timely topics at township meetings. We believe it to be highly important to maintain an aggressive, militant nongovernmental organization of farmers to give united voice of agriculture during the postwar period of reconstruction. We reaffirm our commendation of the Wayne County newspapers, Chamber of Commerce and businessmen of Corydon, for their cooperation and financial aid in 4-H work, pasture improvement contest, and other Farm Bureau activities. We wish to thank all of those who have volunteered to take part in the program of work, membership drive, and this annual meeting.

X

We believe that the improvement of farm-to-market roads should be made a No. 1 postwar program, with emphasis being placed on rural mail routes and school-bus routes. We recommend that the State highway road law or routings and specifications in regard to width of grade, preparation of roadbed, etc., be changed in order to allow the use of State and Federal funds in the surfacing of the same. We believe that this should be done with a maximum of efficiency.

KENNEDY FENNELL,
*Chairman.*
Mrs. G. D. GARTON.
J. C. KURTZ.
HOWARD VINCENT.
Mrs. LOUDENE EMPEY.

## A Tribute To American Fairness

EXTENSION OF REMARKS

OF

### HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER FROM THE PHILIPPINE ISLANDS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. ROMULO. Mr. Speaker, the other day I included in the RECORD an editorial appearing in the November 9 issue of the Washington Post and also my reply to it published on November 13. The day following my insertion of these articles in the RECORD, the Washington Post printed an editorial entitled "Philippine Future"

which, under leave to extend my remarks, I am happy to insert herein.

The Washington Post once more shows that American sense of fairness which I have always admired and praised. In taking the stand that it does in this second editorial, it reveals how anxious it is to do us justice in the Philippines. And it touches on what I consider the core of Filipino-American relations when it stresses that Philippine independence on July 4, 1946, does not mean cutting us loose from the United States. As the editorial aptly says: "We shall only be entering upon another type of relationship which must remain intimate and cordial for the sake of both peoples and for the sake of world peace."

As we now undertake the task of adjusting the economic relations between the Philippines and the United States, I wish to call the attention of this Congress particularly to the reference in the editorial to the American air and naval bases in the Philippines after independence:

Powerful American bases are to be built in the Philippines for the purpose of keeping enemies more distant from our shores, for protection of the islands, and preservation of peace in the Pacific. Use of those bases will necessitate unity of action between the United States and the Philippines in any future war in the Pacific. In fact, the islands will continue to be dependent upon the United States for defense and the United States will be dependent upon them for support of our foreign policy in the Far East. The relationship might be described as that of associate nations.

It is most appropriate that on the same day, Saturday, December 1, the New York Times published an editorial entitled "In Memory of a Lost Battle," which recalls that the Filipinos and Americans fought together as brothers in arms for the same cause—a comradeship that will weld our two nations more strongly together as the years pass by, regardless of whatever political ties there may be between our two countries.

The two editorials I refer to follow:

[From the Washington Post]

PHILIPPINE FUTURE

One key to the future of the turbulent Far East is certain to be the relationship between the United States and the Philippine Islands. It follows that this relationship ought to be thoughtfully analyzed now that Congress is interesting itself in rehabilitation of the Philippines and readjustment of trade relations between the islands and the United States. We do not believe that either of these problems can be solved satisfactorily without a realistic understanding as to what the basic relation between the two countries will be.

It is well known that the Philippines will become independent next July 4. Some Filipinos and some Americans regret this fact, but it is unlikely that the law will be changed. The Filipinos still cherish the idea of independence. Certainly they have earned the right to manage their own affairs. The United States, for its part, is thoroughly committed to the principle of self-government for all peoples capable of it. That is the key to the policy which we have tried to establish through the Atlantic Charter and the United Nations Organization. The fact remains that the United States and the Philippines have mutual interests which continue to tie them together.

Powerful American bases are to be built in the Philippines for the purpose of keeping enemies more distant from our shores, for protection of the islands and preservation of peace in the Pacific. Use of those bases will necessitate unity of action between the United States and the Philippines in any future war in the Pacific. In fact, the islands will continue to be dependent upon the United States for defense and the United States will be dependent upon them for support of our foreign policy in the Far East. The relationship might be described as that of associate nations.

We think this overshadowing fact should guide Congress in adjusting our economic relations with the Philippines. The Bell bill before the Ways and Means Committee gives fleeting recognition of this fact by providing that free trade with the Philippines shall continue for 8 years after independence becomes effective. Such trade would then be gradually strangled by applying 4 percent of the normal duty and increasing it 4 percent each year. In short, this measure attempts to encourage the development of Philippine industries that could not be expected to continue operating after the full duties became effective. There would certainly be much confusion, too, from the annual shift in duty rates. If a staggered duty system is to be applied, we think it would be much better to start with a low rate of, say, 5 percent, with increases every 5 or 6 years. But the special relationship between the two countries makes it doubtful whether full duties should ever be applied.

We appreciate the fact that the United States is urging Great Britain and other countries to liberalize their preferential tariff systems. If this movement should succeed on a world-wide basis, the effect would be to ease the trade problem everywhere, including the Philippines. Meanwhile it appears essential to give special consideration to Philippine trade. Overextension of such industries as sugar and coconut oil can be prevented, as contemplated in the Bell bill, through the maintenance of quotas.

The rehabilitation bill, too, can be used to strengthen the islands economically. As reported to the Senate, it calls for $480,000,000 to pay Filipino claims for damages, for public works, and training of Filipinos to speed up reconstruction. Actual wartime damages in the Philippines, however, are variously estimated from $800,000,000 up. Why should not compensation be made in full, except to collaborators, with the proviso that funds granted because of industrial destruction be reinvested in Philippine industry? The United States clearly has a powerful interest in restoring the islands to economic health and in retaining the good will of the Filipino people. For we shall not be cutting them loose next July. We shall only be entering upon another type of relationship which must remain intimate and cordial for the sake of both peoples and for the sake of world peace.

---

[From the New York Times]

IN MEMORY OF A LOST BATTLE

While General Yamashita, the conqueror of 1942, sat in a Manila courtroom this week President Osmeña, of the Philippine Commonwealth, signed an order creating a national park on the Bataan Peninsula. No battleground more richly deserves to be set aside in this way. To the end of human time Bataan will speak of the common heroism of Filipinos fighting for the freedom of their islands and of Americans defending a soil to which the United States intended soon to relinquish all claim. About 5,000 Americans, including infantry, grounded airmen, Signal Corps men and engineers, and about 30,000 Filipinos, half of them recruits who learned war by waging it, held the lines on this peninsula for 3 months. They did not surrender until two out of every three were sick or wounded and Yamashita, riding high, was pounding them from planes they could not rise to meet and overwhelming them with fresh troops landed in their rear.

The times have changed. The Japanese tide has receded. Yamashita, who won at Bataan, may envy Homma, who failed. An episode in a war which engulfed millions might be forgotten. But it will not be. Bataan is sacred to something nobler than victory; to sacrifice in a battle that could not be won, to the mutual devotion of men from the east and men from the west shedding their blood for a cause that each, speaking his own dialect, understood.

---

## An American Soldier Writes Home

EXTENSION OF REMARKS
OF
## HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks, I include the following letter:

I wish there was some way that we, the American soldier, could get it across to the people of the United States that it is essential to keep drafting young men and to have a much larger Army, Navy, and Air Force from now on, than we did before this war started. If they would just sit down and think about it they would see for themselves. But, no, they have almost forgotten that nazism and fascism almost ruled the world. I am afraid people have been led to believe that the States were never in real danger. We were just lucky, that's all. The Germans were not in Norway and Denmark for training purposes alone. Congress had better get down to business and establish a draft law that will hold water for some time to come.

After redeployment is over, the Army had better be revamped, too. There are many reasons why I say this. First of all, there are too many officers, too much rank, and too many unnecessary jobs. There is too much red tape to have anything work freely. While we were at war smart officers did not wait for red tape to be cut. They went ahead and did what had been proven to be the best after being tested in combat. That is why Patton, Bradley, Eisenhower, were such wonderful leaders. You'd be surprised how many times the "book" was thrown away. Things we learned in tank classes in the States would have meant sudden death over here if we had followed them. Those men knew that.

You wonder why I write you this instead of waiting until I get home. Well, we know it can't wait. The soldiers coming over from the States to relieve the Army of Occupation don't have the slightest idea of what the basic reasons are. They think they are going to have fun, make friends, and influence people. They are partially right in their thinking. They will undoubtedly make friends, but the Germans, through the frauleins (our weakest spot), are going to influence them. I know. I saw it happen time and time again. GI's fighting among themselves, defending what each other's so-called girl friend said. Even some of the combat men forgot that these girls' brothers or fathers undoubtedly killed a good many of our boys. "It is hard to see," say the boys. The propoganda these German girls are putting across gripes me. At times I think the nonfraternization policy was too lenient. It is too late to try to enforce it now, but classes could be and should be open to the Army of Occupation men, combating this propaganda. The Army could put it across, I know.

The Germans are better fed than any other country. They aren't starving—that's for sure. When we were in Germany the waitresses were being better fed than the GI's, and they don't do housework and waiting on tables alone. It's disgusting. How can an enlisted man respect officers with this going on? The German prisoners of war are fed better than the Geneva Convention stipulates. I know this for a fact, too. If the people don't get on the ball back there we will lose the peace, just as we did the last time. The Germans haven't lost yet. They are still getting their sweet, innocent propaganda across. This might be a little contradictory to what I wrote you shortly after the surrender, but the poor (?) farmers had me starting to believe their stories of hatred for Hitler. Ha! The majority of the German people were behind nazism all the way through. Some still are, only they try to hide it. If they weren't they could have stopped Hitler any time.

The more articles printed in popular magazines, such as Reader's Digest, Coronet, and a few others, along with talks by men who know what they are saying—who give facts, examples—men who hold public attention and respect, will help much. Films produced and shown with popular pictures, that put across just what the people of Germany are trying to do now might open some eyes. The Germans are trying, and succeeding, too, in shortening the period of our occupation. The quicker, then, will they be able to start building toward another war.

The next war will be a dilly if the four great powers, United States, England, Russia, and China, don't keep up their military might. Russia and the United States will not fight each other. They are each afraid of the other. The Germans would love to see a war between them. I know that, as a fact, too. The Russians are great people. The people of the United States should know more about them. Basically they think the same. The only difference is in the methods they employ to make their ideas work. Well, that's enough of that for now.

## False Teaching Shown Cause of Atrocities

EXTENSION OF REMARKS

OF

### HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. ROBERTSON of Virginia, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by C. H. Rutherford from the Morristown (N. J.) Daily Record of November 28, 1945:

FALSE TEACHING SHOWN CAUSE OF ATROCITIES

(By C. H. Rutherford, minister, Little Church in the Wildwood)

Japanese atrocity stories, now being released from Manila, are almost too cruel to believe. Little 11-year-old Rosalinda Andoy with her mother and hundreds of other women and children were crowded into a church and grenades thrown in which killed the majority, including her mother. The rest were then bayoneted. Little Rosalinda has the scars of 38 bayonet wounds. When rescued, her intestines were protruding through these wounds. This same Jap commander crowded several hundred women and children into a large public room, placed food and candy upon a table in the center of the room and as they all rushed for the food, a huge bomb was exploded in their midst. He also ordered systematic rape among the best families in Manila. We explained these inhuman actions by saying, "The Japs are savages. These atrocities result from the lack of civilization."

We were just as greatly shocked and also puzzled when we read about the German atrocities and saw pictures of the prison camps in the movies. Many asked, "How is it possible for civilized people to do these things?" They referred to such things as the German girl leaders tying women's legs together at childbirth and laughing while they died in pain, or to the male attendants who deliberately killed thousands of women in gas chambers and starved many more thousands. When one stops to think of the atrocities that were practiced in Germany under the direction of highly educated leaders, we know that lack of civilization was not the reason why.

WHY BRUTALITY OF CIVILIZED GERMANS EQUALED CRUELTY OF BARBARIC JAPANESE

There is a reason, however, which explains why the German cruelty equaled that of the Japs—a reason why the actions of both were so similar. It is important for everyone to understand this reason, so that the United States in its race for higher educational standards will not make the same mistake which Germany and Japan made.

Students of history know that what happened in the German and Japanese prison camps was not abnormal or unnatural. What we, today, call inhuman treatment of prisoners of war was customary and expected, prior to the Christian era, and is still normal procedure where the teachings of Christ have not permeated. Those who have read Beau Geste and the other stories of Sir Christopher Wren regarding the activities of the French Foreign Legion in north Africa shuddered with horror as they read how some tribes treated captured Christians. One method was to lift up a live man and with great force impale his body upon a meat hook on an outside wall. He would not die rapidly but the hot sun, the thousands of flies, the muscular pain of his body hanging on the hook, as well as the infected wound, made him long for death. When our soldiers took part in the early battles of north Africa, they could not understand why free hospital and medical service was not given by the wealthy natives to their fellow citizens who lined the streets with open sores around their eyes and other parts of the body, begging, begging, begging. Our boys had forgotten that free hospitals, orphans' homes, public sanitation, and other evidences of real love for fellow men, progressed with Christianity and not with civilization. Our boys saw the same inhuman conditions in north Africa that existed there 2,000 years ago. There is just one reason why—and that is Christianity had not permeated that section of the country.

JAPANESE INHUMANITY ANTEDATED WAR

The same applies to Japan. Forty-five years ago, a friend of mine returned from Japan as a missionary and told a story which makes every nerve in my body tingle with horror. Along with others, he rushed to a building which was burning down and was told that it contained girls who had been sold, for immoral purposes, to the owner of the building. If he let the girls out, they might escape and he would lose valuable property. If he locked them in and the fire extinguished in time, he would save valuable property. If the fire was not extinguished in time he would, of course, lose the girls but would be no worse off than if they escaped, so he locked the girls in and my friend witnessed their enforced cremation. He was amazed at no one objecting or forcing the owner to liberate the girls. The bystanders all agreed that he had a perfect right to use this means of trying to protect his property.

The inhumanity of the Japs did not begin with this war and is not confined to their national enemies. It is one of the normal, natural qualities found among the majority of the people who have not been affected either directly or indirectly by the teachings of God.

ROME CIVILIZED BUT INHUMAN

For example, after Rome had reached a high degree of civilization, the Roman senate promised Carthage that its freedom and territorial integrity would be preserved provided Carthage turned over to the Roman consuls 300 children of the noblest families as hostages. The Carthaginians complied, relatives crowded the shores crying and screaming and some mothers committed suicide. After receiving the hostages Carthage was attacked, homes with their owners in them destroyed by fire and the survivors sold as slaves.

Yes; civilization, both ancient and modern, is filled with inhumanity, brutality and blood-spilling atrocities. On the other hand, national brutality is reduced in proportion to the degree in which Christianity controls the population. The more Christianity, the less brutality.

GERMAN LEADERS REPUDIATED CHRISTIANITY

One might well ask, "How, then do you account for the German brutality which equaled that of the Japanese?" "It is due to Christianity losing control in Germany." The fact that nazism attempted to replace Christianity with a new, pagan belief is known by all newspaper readers. Our general public, however, does not know that the Prussian militarists and intellectual leaders of Germany have for several generations repudiated Christ, denied the historic character of the Gospels and have referred to the entire New Testament as a collection of myths. The Prussian militarists and the intellectual leaders of Germany were more civilized than the Japanese and the fanatical Bedouins but they had no greater belief in the Bible, in Christ, and in the Christian religion than these pagans.

It is vitally important for us to follow from the beginning the progress of the atheistic teaching in Germany which finally controlled the thinking of more than 90 percent of the leaders because as it spread through their universities, it was taken over by a few of the educational leaders in England and the United States and later on under the title of "higher criticism," it permeated the postgraduate schools in this country, and then started on its course of saturating every educational organization—first the colleges, then the science and history teachers in high schools, and it is even heard today in upper grades of the public grammar schools throughout the entire United States.

MADE IN GERMANY AND TAUGHT IN OUR SCHOOLS

Many teachers who today are teaching our children that the miracles recorded in the New Testament, never happened; that the Old Testament stores are merely fables and folk lore; that Jesus Christ is no more God's son than you and I are; and that the Bible is no better than Shakespeare, do not realize that this teaching originated in Germany and was the cause of Germany's downfall, so I shall briefly trace from the beginning the history of this atheistic teaching which is called higher criticism.

In 1706 the University of Halle in Prussia appointed Christian Wolff professor of philosophy. In 1719 he published a book stating that either the doctrines and miracles claimed by Christianity are capable of demonstration or are not worthy of belief. In many state universities today students are being taught that if God cannot be seen, heard, felt, tasted, or smelt he does not exist, but they do not know that this teaching bears an unseen label, "Made in Germany." Acceptance by other German theologians of Professor Wolff's teachings resulted in a translation of the Bible to embody them and by 1740 many German philosophers had been won over to

his skeptical teachings. At that time a popular, keen-witted prince (Frederick the Great) ascended the throne and made Wolff his protégé. History says that this king contributed more than any other man of his day to the progress of skepticism.

GERMAN ATHEISTS' CLAIMS PROVEN FALSE

In 1745 Professor Reimarus at Hamburg wrote a 1,400-page manuscript criticizing the orthodox belief in Christ; in 1796 Herder, another German, made skeptical statements regarding the Four Gospels; and in 1828 Heinrich Paulus taught that there were no evidences of Christ having miraculous power. In 1835 Davis Strauss wrote massive volumes claiming the miracles were myths and that Jesus was a mere human. Ferdinand C. Baur likewise attacked the Epistles of St. Paul in 1836 and in 1840 Bruno Bauer wrote passionately trying to show that Jesus was a myth and that the doctrine regarding Him was devised in the second century from a fusion of Jewish, Greek, and Roman religion.

Other German educators who taught that the fundamental Christian doctrines were "superstitious folly" or who repudiated Christ or promoted anti-Christian thinking were J. G. Fichte, who lived from 1762 to 1814, Jocobi (1743-1819), Hegel (1770-1831), J. H. Rohr (court preacher and superintendent at Weimar, Wegscheider (1771-1849), J. E. G. Paulus (1761-1851).

The German skeptics who were called "higher critics" claimed falsely in hundreds of instances that certain Bible statements were not true. For example, the seventh verse of the thirteenth chapter of Acts refers to a proconsul named Sergius Paulus. The critics claimed that the title of the chief ruler of this island was not proconsul, that the Bible was not accurate and the writer of Acts therefore was not to be credited. Later on, however, coins of this epoch were found bearing the inscription "proconsul" and still later a coin was found on this island with the inscription "Paulus the Proconsul."

The faith of the great majority of the intellectual leaders of Germany was undermined by hundreds of instances in which these higher critics falsely claimed that statements in the Bible were historically incorrect, although time and time again in literally hundreds of cases, archeology has proven the questioned Bible statements to be correct.

Likewise many of our young people are today losing their faith in the Bible and in Christ because professors in our schools and universities have borrowed from German teachers a philosophy which destroyed, in German leaders, all the advances Christianity had made in almost 2,000 years and which replaced Christian ideals with the same kind of brutality and inhumanity that existed before Christ was born.

AND THEN CAME NIETZSCHE, THE MAD PHILOSOPHER

The seeds of this destructive teaching in Germany bore fruit in the life of a more recent philosopher whose philosophy was adopted by the Prussian militarists and who had a profound influence upon modern German spirit. I refer to Nietzsche who died only 45 years ago. He began the works for which he was noted in 1878. He denounced all religion and taught that might makes right. He claimed that anything that enables an individual to have victory over others is good and true. That anything which is useful to maintain the German people as a master race is true and right. This philosophy enabled the German leaders to starve and massacre millions of helpless individuals while maintaining clear consciences themselves. They reasoned that if by massacring the entire Jewish race they helped Germany maintain its position as a master race, they did no wrong. According to Nietzsche they did good. Nietzsche became insane and was confined in an insane asylum in 1895 but even so his teaching has dominated the thinking of the German militarists for about 50 years.

HITLER REPLACES CHRISTIANITY WITH NAZISM

Hitler's writing and actions were the natural outgrowth of the work of Germany's intellectual leaders during the last 200 years. The seeds of atheism which they sowed resulted in Hitler trying to establish a new pagan religion—a German religion—to replace Christianity. These same skeptical seeds which grew into the ruthless cruel teaching of Nietzsche enabled Hitler to kill millions of helpless people and enslave whole nations in the name of Truth and Goodness.

STOP PLANTING GERMANY'S ATHEISTIC SEEDS

When corn is planted we expect a crop of corn, and when thistle seed is planted we can expect to reap thistles. Unless something is done to counteract the German "higher criticism" ideology, which is being taught in the schools of this country, we can expect the same results here within a few generations. Just recently a mother wrote, "I have a son, finely educated, but his years in the university have undermined his faith. He confessed Christ Jesus as Saviour and was baptized and joined the church as a boy. When he came home last year, after being 8 years away, he called God's Holy Word 'twaddle,' taunting me for believing it. It has almost broken my heart. * * * We denied ourselves to send our boy to college, little dreaming what the result would be."

Fortunately, something is being done in America to counteract this atheistic teaching. I refer to the churches and church schools. The only place in this country where this destructive teaching is being counteracted today is in the parochial schools, the Sunday schools, and the church-affiliated colleges. When you send your children to Sunday school and to church, you are not only helping them to lead happier and more profitable lives but you are doing the most patriotic thing you can do. There is nothing you can do that will benefit the future of your country as much as sending your children to Sunday school every Sunday, unless it is going there with them.

## Housing in Southern California a First Problem—GI Boys Denied Prompt Enough GI Loans To Help—Thousands of Servicemen Being Discharged Daily and No Place To Live

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. DOYLE. Mr. Speaker and my colleagues, having frequently called your attention to the fact of the serious and tragic conditions which confront the returning GI boys as they land at the rate of about 100,000 a day at Long Beach and Los Angeles separation centers, I want to again say to you that it is absolutely imperative that ways and means be found—and immediately, too—whereby this housing stress and strain may be relieved.

It certainly is no fault of these single lads, nor was it the fault of these married men, that they were placed in uniform and sent overseas, leaving their wives and children behind them. Nor is it their fault, nor neglect of planning or preparation that they now return home to their own immediate home town and vicinity from which they were drafted, and find that they cannot now find a place to live, either by themselves or with their loved ones.

You can talk about the GI loan provisions all you want as being sufficient and adequate—but the fact is that they are not adequate and sufficient for the reason that it is taking an average of 45 days, I am told, for a boy in Los Angeles County to get his loan through. This amounts in practice as estoppel and denial of use of these GI loans for these distinguished lads.

Not having been in this Congress when the GI bill was written, I did not have the privilege of working in connection with same. But as hundreds and hundreds of just criticisms and complaints come in about it being inadequate in matters of loans, about its red-tape provisions, and about the inadequacy of its educational provisions and other similar benefits, I am constrained to say that I feel the fundamental policy and principle of this bill should immediately show it does as much as possible as promptly as possible for these distinguished lads. The fact that there was not adequate provision or speedy enough ways and means set up to anticipate the surrender of Germany and Japan is not the fault of these distinguished GI's who are now returning. I do not criticize anyone in connection therewith, but I am pleased to have the privilege to include in my remarks a letter from the able and respected clerk of the city of South Gate, Calif., which relates a typical example of how the GI bill is not functioning. And as the letter refers to a newspaper article dated from Santa Ana, Calif., on this subject, I am going to include that article also. For, Mr. Speaker, Santa Ana, Calif., is in Orange County, which is a few miles from Long Beach and South Gate, both of which are in the Eighteenth District of California, which I represent. My files are full of facts and evidence, all of which go to the point that everyone charged with any obligation and responsibility in connection therewith should immediately correct this tragic housing condition.

The letter and editorial follow:

CITY OF SOUTH GATE,
*South Gate, Calif., November 28, 1945.*

Hon. CLYDE DOYLE,
*Member of Congress, Washington, D. C.*

DEAR FRIEND: I am enclosing a clipping from the Los Angeles Times, issue of November 20, 1945, which correctly states the working of the GI bill in our city. Practically daily I am in contact with young veterans inquiring about the purchasing of tax-delinquent lots and only one out of the many has secured a GI loan, the others have given up in disgust. Also I am reliably informed that when the builders and contractors are approached by these fellows, they give them very cool treatment due to the long delay required to complete a deal.

Undoubtedly the Congress had good intentions when passing this bill but from practical experience, it has proved to be very impractical and is the cause of much embarrassment and disappointment on the part of these brave lads who, upon discharge from the Army, were given such optimistic statements about what the Government is doing for them.

Only recently I knew of a case of a distinguished boy who was transferred from the Great Lakes Naval Training Station to California and he has been unable, during a period of 2 months, to find any sort of apartment or house to fit his needs. He did find one moderately furnished five-room house at $80 per month but the tenant demanded $150 bonus before he would move out. There are thousands of servicemen being discharged in this immediate area daily, the majority of whom want to join their families but are unable to find any sort of place in which to live.

It does therefore seem to me that one of the urgent matters before our Congress should be to immediately provide living quarters for these young fellows so recently put on their own, practically without funds and apparently without friends.

Very sincerely,

HERBERT C. PEIFFER.

[From the Los Angeles Times of November 20, 1945]

RED TAPE BLAMED AS 30 GI'S FAIL TO GET LOANS—VETERANS FACE LOSS OF HOMES AS SANTA ANA FIRM DECLARES UNITED STATES AGENCY HAS BOGGED DOWN

SANTA ANA, November 19.—Because the Veterans' Administration "has bogged down and it is impossible to do business with them," the Santa Ana Building & Loan Co. today refused to complete GI loans. As a result 30 war veterans will go homeless.

This was the announcement today of George W. Cooper, secretary-manager of the association, who said his organization had made every effort to complete the loans for the veterans but was unable to do so because of the red tape involved.

HOMES ON MARKET

In several instances homes for the veterans were virtually completed, but because of the association's action they will be placed on the open market instead. The home of one former soldier, Charles L. Barr, at 215 East St. Gertrude Place, was completed and he already had bought linoleum and other furnishings when he found he was without a resident.

"We have gone all out for the veterans," Cooper said, "and have made every effort to process loans for the boys. Eleven have been completed and the 30 we had in the process would have made us 4 percent when we easily could have made 5 percent on other types of loans. That shows our sincerity."

VETERAN ACTION HOPED

In a letter to Col. L. C. Chapman, manager of the regional office of the Veterans' Administration in Los Angeles, Cooper said his association was forced to take the action and that he hoped the veterans would be so aroused they would force further action on the loans.

Local American Legion officials and Ben Liebermann, head of the county veterans' service center, aroused by protests of the servicemen, will meet here tomorrow with Paul J. Torelli, field administrator for the California Veterans Commission, to investigate the situation.

---

## Rehabilitation of Disabled Veterans

EXTENSION OF REMARKS

OF

## HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a resolution approved by Provo Post, No. 13, of the American Legion.

This resolution expresses the sincere desire of this organization that returning veterans, especially those suffering from nervous, mental, and physical disabilities, be given every opportunity for rehabilitation, and that a grateful Nation should see to it that all the necessary facilities are provided to bring about these desirable objectives. It follows:

Whereas the exigencies of war have made necessary the calling of millions of the young men and women of America to the defense of their country in the military and naval services of the United States; and

Whereas the training necessary to organize and make efficient defensive and offensive forces has required these millions of young people to make violent adjustment to regimented living, to rigid discipline, and to otherwise unnatural physical and social conditions, and these conditions, added to an unprecedented efficiency for violence and terror of modern methods of war, have placed extreme stress upon them for long and trying periods of time; and

Whereas the results of such tribulation upon the human body, mind, and nervous structure are becoming increasingly more apparent as our service people in increasingly greater numbers are being returned to civil life, many suffering complete and total nervous, mental, or physical collapse, and even greater numbers suffering nervous, mental, or physical disorders of lesser grade, but nevertheless to such an extent as to greatly handicap their rehabilitation into civil life; and

Whereas because of such conditions many of them are committing unsocial acts and are becoming involved in crime; and

Whereas the Government of the United States has provided, or is providing, facilities for the care and treatment of those who have suffered complete mental, physical, or nervous collapse, but has done nothing to provide for those who, though as definitely suffering from service disability, have not reached such a condition of mental, physical, or nervous disintegration as to entitle them to care and treatment in established facilities, under existing provision; and

Whereas the responsibility of society at large, under the representation of the Government of the United States, to this lesser but equally definite class of unfortunates, seems as manifest as its duty to those wholly disabled: Be it therefore

*Resolved*—

1. That we call upon the Government of the United States to make prompt and adequate provision for, and establishment of, facilities for the care and treatment of those persons whose service-connected affliction has not reached the stage where treatment may be had in present established facilities, but which has nevertheless so far afflicted them that they find difficulty in rehabilitating themselves into civil living, and thus are finding themselves involved in unsocial and illegal activity.

2. That copies of this resolution be forwarded to the Department of Utah delegation to the national convention of the American Legion, with the request that the subject matter contained herein be brought before the resolutions committee of the convention, for such action as it may deem advisable.

3. That copies of this resolution be forwarded to each member of the congressional delegation from Utah.

4. That this resolution be made a part of the minutes of the Veterans' Council of Provo, and of Provo Post, No. 13, of the American Legion, Department of Utah.

Dated at Provo, Utah County, Utah, this 14th day of November A. D. 1945.

VETERANS' COUNCIL OF PROVO,
By FRED ADAMSON, *Chairman.*
RUSSEL L. TRAHEN,
*Secretary.*

Attest:

PROVO POST, NO. 13, DEPARTMENT OF UTAH, AMERICAN LEGION,
By L. CRONEMAN, *Commander.*

Attest:

STANFORD W. CEASE,
*Adjutant.*

---

## Tribute to American Railroads

EXTENSION OF REMARKS

OF

## HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I wish to call attention of the Members of the House to the great wartime record of the transportation facilities of our Nation. The railroads, in particular, have done a great job hauling freight and troops since Pearl Harbor.

For most of American industry, the war now is over. Not so for the railroads. They still have the tremendous task of redeploying millions of returning troops and equipment and supplies. Their facilities will be taxed to capacity for many months to come.

For example, my attention has been called to a press statement issued recently by the Pullman Co. which shows that in the 4 years since Pearl Harbor, the Pullman Co. has carried approximately 125,000,000 passengers an average of 784 miles each at a net profit of about 25 cents on each passenger. The Pullman Co. has provided approximately 98,000,000,000 passenger-miles of service for troops and civilians—more than the total mileage for the 11-year period between 1930 and 1940.

So that you can better appreciate the contribution as well as the burden of the Nation's railroads and the Pullman Co. in this connection, I wish to include in the RECORD the complete text of the Pullman press statement, as follows:

In the last 4 years, the Pullman Co. has averaged only about 25 cents net profit on each of its 125,000,000 passengers who traveled an average of 784 miles each, a distance greater than from New York to Detroit, George A. Kelly, Pullman, vice president, reported today.

Since Pearl Harbor, Pullman has provided approximately 93,000,000,000 passenger-miles of service for troops and civilians, more than the total for the 11-year period from 1930 through 1940, he added. Of this total, approximately 44,000,000,000 passenger-miles were performed for 33,000,000 troops in military movements—an average trip of 1,300 miles for each GI moved. About two-thirds of all troops in organized travel since the start of the war have been handled in sleeping cars, and the peak concentrated load of military travel still is ahead.

Three months after VJ-day, Pullman's performance still is at or near the all-time records set in 1944, when revenue passengers numbered two and one-half times the 1940 peacetime total, with an average loading of 21.31 passengers per car, more than double the 1940 figure.

While other transportation agencies are reconverting to peacetime activities, Pullman and the railroads face their most critical period in the next 2 months. An estimated 2,000,000 veterans from Europe and the Pacific are scheduled to reach this country during November and December, according to military figures, and must be transported to their homes. During the early months of 1946, more than a half million veterans are scheduled to arrive monthly at west coast ports, and 90 percent of them are expected to ride Pullmans to their home stations.

This means fewer sleeping-car accommodations will be available for holiday travelers this year than in any previous Christmas season, with approximately 151,000 of the Nation's estimated 208,000 berths available exclusively to the military for organized troop travel.

Although the picture is not too encouraging for civilian travel, we urge that you check with your railroad passenger agent regarding Pullman accommodations if you must travel.

## Stoppage of Work on Ships To Be Used for Demobilization

EXTENSION OF REMARKS
OF
## HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Monday, December 3 (legislative day of Monday, October 29), 1945*

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the RECORD material in the form of a speech which I understand was delivered by Joseph Curran, president of the National Maritime Union, in which he sets forth the reasons for the stoppage of work on certain ships which he thinks should be used in the demobilization program.

I put this in the RECORD in order that Mr. Curran's views may be made a matter of record. My record is perfectly clear that I do not believe in the use of the strike for demonstration purposes. I believe there is only one legitimate field for the use of the strike weapon, and that is in the field where there is a deadlock between an employer and a union over hours, wages, and conditions of employment. I do not feel that any stoppage of work should be used for political purposes, or as a political demonstration, or as a demonstration in favor of any particular point of view in connection with demobilization or any other national issue; but I do think the union is entitled to have the record show its reasons for the stoppage that is called, so that those reasons may be judged by the Senate of the United States upon their merit.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to be here tonight to discuss a matter of vital concern to millions of American families—the problem of quickly bringing home the hundreds of thousands of troops overseas. I want to thank the Mutual Broadcasting System for making its facilities available to me for this purpose.

There has been a lot of confusion over the delays in bringing our boys home. Conflicting excuses and deliberate distortions have been coming out of Washington in a steady stream. For what purpose? The answer is simply that the agencies responsible for demobilization have been, and still are, trying to escape the justified anger of the GI's and the public over the shipping snafu. So Washington is blaming delays on a "shortage" of ships, on strikes, stoppages, lack of seamen, and any other handy excuse.

It is high time the American people were given the true facts. On VJ-day, we had about 4,500 ocean-going merchant ships. When the National Maritime Union started its campaign to help speed the return of our GI's, only 450 of those 4,500 ships were being used as troop transports. Early this month, the figure was increased to 470 ships, and a few days ago, a Deputy Administrator of the War Shipping Administration told the press it is now operating 551 troopships. That's an increase of 101 ships since we began our drive. Why weren't they used before? Where were the authorities long months ago when the GI's begged for ships from Manila to the Aleutians?

The Army is issuing statements that strikes on both coasts and shorter working hours are the reason why ships are being held up. The next thing we may expect is for the authorities to blame the striking auto workers for holding up our troops. No strikes have delayed the return of our troops. The longshore strike in New York, for example, held up no troopships. But the Army told our boys overseas, and it was published in Stars and Stripes, that the strike was responsible for holding up 400 troopships. Once the strike was over, however, the troops began to ask, "Where are those 400 ships?" The Army was put on a spot. They finally confessed to the GI's that no troopships were held up.

Because of the pressure and actions already exerted by the maritime unions upon the War and Navy Departments and WSA, five ships on the west coast have been kept out of private runs and reassigned to carry troops. They are the *Monterey, Lurline, Matsonia, President Johnson*, and *Brazil*. Those ships have a troop-carrying capacity of 35,000.

However, WSA has laid up over 300 ships in domestic ports while GI's are awaiting transportation home from foreign ports. When we criticized that policy, the WSA replied that it would take 2 months to properly refit Liberty ships to carry troops.

Well, the GI's answered that one, and in a pretty convincing manner. GI's in Manila converted the Liberty ship *Otto Mears* to a troopship. And they did it not in 2 months but in 2 days Furthermore, they put in a sick bay, post exchange, movies, and a radio in each of the four troop compartments. As a result, 500 happy troops aboard the *Otto Mears* arrived in San Francisco last Saturday.

These GI's did the same kind of job on two more Liberty ships, the *Carole Lombard* and the *Joseph Pulitzer*, and repaired two additional ships, the *Kent* and the *Wardell*.

If the GI's could do such quick conversions, why couldn't the Army, Navy, and War Shipping Administration? Our shipyard workers could do it. They have produced records showing that during the war ships were converted to troopships in less than one day. They have advised the War Shipping Administration that they could do the same thing now. But Washington turned a deaf ear to that proposal.

Here's a sample of the way Washington is thinking about this situation. Rear Admiral William Callaghan, who is Assistant Chief of Naval Operations, told a Senate Naval Affairs Committee, and I quote: "It's unprofitable, unsanitary, and sometimes hazardous to bring men home on freighters."

His concern for the welfare of our troops is commendable. But there was no talk of unprofitable, unsanitary, or hazardous conditions when our troops were transported on combat-loaded cargo ships to Pacific beachheads. Troops remained on those Liberty ships as long as 90 days. The men slept on the decks in rain and in hot, unventilated holds. Latrines and mess lines ran side by side on the open decks. The men endured those hardships because they knew it was war. They are willing to endure them again in order to come home. As one foreign correspondent put it, "The average soldier would happily go home lashed to the mast." I spoke to hundreds of GI's while in France last month, and that statement is no exaggeration.

You can imagine how our stranded GI's become demoralized when they see ships returning to the States with empty bunks; ships carrying civilian passenger, horses, and what not from overseas; ships debarking homeward-bound troops in a foreign port because the authorities suddenly ordered those ships turned over to another country. No wonder our boys feel they are the "forgotten men."

The facts show that the Joint Chiefs of Staff, the WSA, and other authorities involved have badly bungled the troop-return program up to the present time. We see continued evasions and broken promises to our GI's.

On October 23, for example, we charged that 55 fast Victory-type ships were being turned over to private companies for coastwise operations. In a New York Times article of November 18, a War Shipping Administration spokesman stated that: "No American vessels, either cargo or passenger, had been redelivered to private owners, 'despite propaganda to the contrary.'" That WSA spokesman on Saturday repeated that no ships "had been returned to private owners."

Well, I'm not interested, and I'm sure the GI's aren't, in whether ships are "delivered," "redelivered," or "returned" to private owners. The WSA is playing with words. For I'm holding here in my hand tonight a list of 14 Victory and C-type vessels which the War Shipping Administration did allocate for private intercoastal runs. It doesn't matter whether those ships are owned by private companies or operated for the WSA. But the fact is that they are assigned for commercial operations and not to carry troops. It is also a fact that those 14 ships have already made their initial coastwise voyages. I now give the names of those ships to you—the American people—for your information and action. They are the *Water Witch, Billings Victory, Baylor Victory, Archer, Pampero, Sioux Falls Victory, Ames Victory, Ocala, Victory, Pass Christian Victory, Malden Victory, Lynchburg Victory, Beaver Victory, Parkersburg Victory, Atlantic City Victory*.

If the WSA does not know it, here are the dates those vessels left east and west coast ports on their private-profit runs: The *Water Witch* and the *Billings* left Seattle on November 7. The *Baylor* left San Francisco on the 8th. The *Archer* left Seattle on the 8th. The *Pampero* left Seattle on the 10th. The *Sioux Falls* left Seattle the 14th. And the *Ames* sailed from San Francisco on the 15th.

The *Ocala* left Philadelphia on November 6. On the 7th, the *Pass Christian* left Baltimore, the *Malden* left New York, and the *Lynchburg* left Philadelphia. On the 8th, the *Beaver* sailed from Baltimore and the *Parkersburg* left from Philadelphia. On the 9th, the *Atlantic City* left New York.

The WSA also claims that there are not enough seamen to man the ships. If that is true, why did Admiral Land, of WSA, join with General Hershey, of selective service, to further aggravate the situation? Why did they issue a directive, effective November 15, stating that any seaman who had 32 months of substantial service could leave the industry and not be subject to the draft?

I have here a letter from a member of our union which he sent me from the South Pacific. It lists 87 ships, including Victory ships, which are idle in the Saipan-Tinian

harbor area and in the Carolines. Some of those 87 ships have been there since June 17—more than 5 months. Only 5 out of 41 ships in the Carolines had arrived there in October.

Among the 46 ships in Saipan-Tinian harbor, this NMU member writes, "are many which, after a long wait at another harbor, have arrived here for a further wait."

What are all those ships waiting for? The WSA tells us it expects to have 34,000 extra berths in the European run next month, and plans to send 50 Victory ships to the Pacific. That's good news. But thousands of our boys in the Pacific theater could have been home for Christmas if only some of those 87 ships had been used.

On the one hand the Army had told the GI's there is a shortage of ships. On the other hand the troops saw with their own eyes scores of ships that were doing absolutely nothing and costing American taxpayers millions of dollars.

I am turning this list over to the Army, Navy, and the War Shipping Administration for their information and action.

Now, as for the 300-odd American ships lying idle in domestic anchorages, the GI's have been told that those ships are "over-age, battle-damaged, or unsuitable for conversion to carry troops." It's strange how ships that were doing a job carrying troops and supplies suddenly became "useless" overnight.

I say, and organized labor says, let us use our cargo ships—let us use every vessel that can carry troops—to speed the return of our heroic fighting men. To do less would be to make a mockery of the outstanding services they have rendered to our Nation and to the world.

Look at Life magazine, dated November 26. Page 75 shows some of those ships that the War Shipping Administration decided are "useless." A number of those vessels were launched as late as May of this year.

Our campaign and public protests have succeeded in getting the WSA to speed up the troop-return program. It has announced that no more ships would be laid up on the Atlantic coast. A few ships have been brought out of the "boneyards," thanks to the support of our drive by the trade unions, the veterans' organizations, and many other groups. It is not clear whether those ships will be used for troops, however. But the fact is ships are being brought out.

I have received thousands of letters and cables protesting the disgraceful transportation delays and praising the stand taken by the National Maritime Union. But how many letters have been sent to Congress? How many have been sent to President Truman? More letters and telegrams must be sent to Congress and to the President to guarantee that the promises to our GI's will be kept.

The seamen alone cannot clear up the situation. This is a job for all the American people. Speaking for the National Maritime Union, and since the authorities have failed to allocate enough ships to speed demobilization, I have recommended to our members, as a first step, that on Monday, December 3, there is to be a 24-hour Nationwide work stoppage on all ships except certified troop ships and legitimate relief ships. In addition, I am authorized to say on behalf of the International Longshoremen and Warehousemen's Union, CIO, the Marine Firemen, Oilers and Watertenders, unaffiliated, the Marine Cooks and Stewards Association, CIO, and the Inland Boatmen's Union, CIO, that they are taking joint action with the National Maritime Union on this issue in all American ports.

We fought against the diversion of ships to foreign powers for use in suppressing people's independence movements. We sharply opposed the policy of sending ships to rust in American ports. We protested the allocation of ships for commercial operations. We did not do this for publicity. Nearly 6,000 of our shipmates died to "keep 'em sailing" during the war. We want to speed the return of our boys so that they may help to build the kind of America and the kind of world for which they fought and bled.

We are determined to fulfill our responsibilities to our servicemen. The continued active help and participation of the American people is urgently needed to make sure that our boys will be brought home quickly.

## S1c Paul T. Stewart

REMARKS
OF
### HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. REECE of Tennessee. Mr. Speaker, last Friday, the Washington papers carried news items that S1c Paul T. Stewart, an 18-year-old son of Senator TOM STEWART, of Tennessee, had been returned from the Pacific, which indicated that he is being returned for release. The inference was clearly drawn that this action was taken at the instance of his father.

His father never requested his transfer from the Pacific nor did he know anything about the order for his transfer. This dispatch does Senator STEWART a great injustice, and both the press and the Navy officials owe him an apology. Senator STEWART is a fine American, of profound loyalty and deep interest in his country and its institutions, and, although United States Senator, he has not in any way attempted to shield his boys or soften the blows of war for them.

The Senator has only three sons. All of them volunteered for the service. One of them has been in the service over 4 years, another 3½ years, and young Paul T. Steward joined the Navy with the consent of his father and mother when he was 17½ years of age. All of these boys have fine records in the service. He has never made a request of any kind for any of them. No family has displayed a more patriotic spirit. This family should be praised and not castigated by the press, whether it be the Stars and Stripes or the regular news services.

The news dispatch from Honolulu quotes the commanding officer at the Waipio amphibious operating base, where Paul was stationed, as having said, "Had I known all this sooner, I'd have sent him to a forward area." This is an outrageous statement. The position which a boy's father occupies should have no bearing upon his son's assignment, and for a commanding officer to say that he would send a boy to a forward station because his father happened to be a United States Senator should not be condoned.

If Paul Stewart was placed on orders in due course for return, I do not think that he should be removed merely because of the position which his father occupies, but to alleviate any embarrassment I understand he has requested his orders for return be canceled.

## World Free Press Urged by American Legion

EXTENSION OF REMARKS
OF
### HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. MASON. Mr. Speaker, the American Legion, during its deliberations at Chicago, Ill., on November 19, 1945, approved the principle of a world free press as one of the requisites in the maintenance of universal and lasting peace. The petition embodying this objective was submitted by Costello Post, of Washington, D. C.

History teaches that dictatorships and war lords live and prosper when protected by a stifled and corrupt press. As witness Germany under Hitler, Italy under Mussolini, and Russia under Stalin. Both Germany and Italy have paid the price of a stifled press but Stalin is still capitalizing upon one. When the newspapers of a nation are truly alert and free, tyrannical and domineering men of evil design find it difficult to exist.

The widespread demand for freedom of the public press—not only here in the United States—but throughout the entire globe is certainly encouraging and reassuring. Through the medium of an absolute free exchange of news we have an opportunity to bring about a thorough understanding among the peoples of the world. It is our duty and obligation to see to it that this objective is accomplished.

A copy of the resolution adopted by the American Legion in connection with this matter follows:

Resolution 122

Complete freedom of press

Whereas the American Legion has always supported freedom of speech, freedom of religion, and freedom of the press, as set forth in the Constitution of the United States; and

Whereas the American Legion wants a free and unhampered flow of news between nations: Now, therefore, be it

*Resolved*, That the American Legion, in National Convention assembled at Chicago, Illinois, these days of November 18, 19 and 20, 1945, does hereby demand complete freedom of the press and expresses itself as opposed to any movement which would make the press the instrument of the Government.

## Federal Reserve Banks

REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. VOORHIS of California. Mr. Speaker, in both France and England, the other two great western democracies beside our own, the central banks of issue are being made the property of all the people of the Nation.

For 9 years, ever since I first became a Member of the House, I have, along with certain other Members, continuously worked to bring about the ownership by the American people of our own bank of issue which is the 12 Federal Reserve banks. I believe it wrong to permit any private agency to usurp the essentially governmental power of creating the money of a great nation. I believe that whenever economic conditions justify the creation of a single new dollar of money, the whole people, not a privileged few, should benefit. I believe that not a dime of interest-bearing debt should be required as a condition of maintaining in circulation an amount of money which will always correspond correctly to the volume of production.

The moves being made by France and England will strengthen, not weaken, their democracy. They will make it possible for industry to operate more smoothly, and under far-sighted policies this move can mean in those countries or in this country a far greater stability, an effective avoidance of inflation and deflation and consequently greater hope for true private enterprise.

The governments of France and England are in my judgment committed to the principles of individual liberty—religious, political, and economic—and to the principles of democratic government. The approach of the British Government to the problems of the time would appear, judging from Prime Minister Attlee's speech, to be a fundamentally religious approach.

It is my earnest hope, Mr. Speaker, that the day is not far distant when we in the United States will have the vision and good judgment to make our central bank of issue likewise an institution belonging to the entire American people.

It is my sincere belief that this would lead to fewer governmental controls over the economic activities of our people rather than to more of them. There have been times when even my good friends have told me that my work in this field would never lead to success—that it was a matter for the dim and distant future. It is therefore encouraging to find the other great democracies of the world already taking this step.

The question will be raised by some whether in France they are not going considerably beyond the nationalization of the central bank of issue since four other huge banks in addition to the Bank of France are also being nationalized. To this I would reply that these other four banks in France have to a considerable extent shared with the Bank of France the power of money creation in that nation, particularly from the point of view of the creation of demand deposits for industrial investment purposes. This, however, should be a lesson to us for France failed to prevent the concentration of a major share of the banking business in her country in the hands of these four huge institutions. This is the reason some of us have so vigorously opposed the growth of bank-holding companies in our own country believing as we have in a system of small private banks as the best means of avoiding monopoly of this all-important line of business and thus avoiding the coming of the time when it would be necessary in the people's interest to go beyond the nationalization of the central bank of issue in our country. The right monetary system is one wherein the banks do the banking business and the Government does the Government's business. The banking business is the acceptance of deposits and the making of loans. The Government's business is the creation of money and the maintenance of a stable value in the monetary unit.

## Misuse of Barbiturates

REMARKS

OF

## HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mrs ROGERS of Massachusetts. Mr. Speaker, to show how alarmed the American Pharmaceutical Association is regarding the misuse of barbiturates, I am extending as a part of my remarks information regarding their conference which was held recently. They are very much disturbed, because doctors attempting to secure barbiturates from drug stores find difficulty sometimes in getting them; so they are convinced, as is proven by this statement, that a great many of the barbiturates are bought on the bootleg plan. The sale of them has increased enormously in the past months. This record shows that it has an effect on criminals. These barbiturate tablets sometimes are put into drinks such as soft drinks, and they are affecting the high school boys and girls most disastrously. They do not realize there is danger in putting these tablets in soft drinks.

AMERICAN PHARMACEUTICAL ASSOCIATION INAUGURATES PROGRAM TO CURB MISUSE OF BARBITURATES—HOLDS CONFERENCE OF HEALTH AUTHORITIES AS FIRST STEP

American pharmacy is coming to grips with the problems arising from promiscuous distribution of barbiturates. One of the most forward-looking steps in the direction of meeting these problems was taken by the American Pharmaceutical Association when it called a conference of representatives of medicine, pharmacy, public health, and government at its headquarters building in Washington on October 12 to discuss the regulation of use and distribution of barbiturates.

The discussions covered barbiturate habituation and tolerance, the degree of compliance with existing regulations on the part of physicians and pharmacists; the present status of barbiturate regulation by laws specifically directed toward regulation of distribution of barbiturates and by State pharmacy laws, State food and drug acts, the Federal Food, Drug, and Cosmetic Act, and other regulatory procedures.

Every aspect of the problem was explored and commented on in detail by a group of experts in the field of medical and pharmaceutical practice, law enforcement, and public health.

The conference was called by the Committee on Legislation of the American Pharmaceutical Association to whom the council of the association had referred the problem, with instructions to study the laws of the various States governing the dispensing of barbituric-acid compounds. In addition to studying legislation on the subject, the committee had also ascertained the opinions of pharmacists and physicians with respect to the type of regulation believed necessary to correct the evil of promiscuous use and distribution of hypnotic drugs.

In opening the conference, Chairman A. L. I. Winne, of the Committee on Legislation of the American Pharmaceutical Association, who presided, stated that various ideas had been expressed regarding the manner in which barbiturates are promiscuously distributed. He pointed out that careless prescribing and dispensing on the part of physicians and their office assistants may be a factor. He likewise called attention to the problem of uncontrolled renewal of prescriptions and "over-the-counter sales" in States where there is no law governing distribution of barbiturates and "bootleg" distribution where there is a law. Mr. Winne pointed out that the conference had been called to receive the comment and opinion of representatives of the profession and the industry involved in prescribing, dispensing, and distribution of barbiturates, and indicated that the American Pharmaceutical Association's committee on legislation will carefully review the factual data submitted and the opinions expressed, as a basis for recommendations to be made to the council of the American Pharmaceutical Association.

Leading off the discussion on the part of the medical experts present, Dr. Robert H. Felix, chief of the Mental Hygiene Division of the United States Public Health Service, discussed barbiturate habituation and tolerance. He was followed by Commissioner H. J. Anslinger, of the United States Bureau of Narcotics, who discussed the law-enforcement problem from the standpoint of his long experience in the control of distribution of narcotic drugs.

Dr. Austin Smith, secretary of the Council on Pharmacy and Chemistry of the American Medical Association, in discussing the medical aspects of the problem, pointed out the necessity for continuous education of both physicians and pharmacists on their responsibilities in connection with the distribution of all drugs. He indicated that physicians could be counted on to cooperate through their organizations in any procedure which will correct the difficulties of the prerent situation.

Dr. Robin C. Buerki, chairman of the Council on Professional Practice of the American Hospital Association, mentioned the importance of reducing record-keeping to a minimum in connection with the control of drugs, but expressed appreciation of the problem connected with barbiturate control, and indicated that hospitals would cooperate in any program which is soundly conceived to correct the evils arising from indiscriminate use of barbiturates.

Speaking for the dental profession, Dr. Donald A. Wallace, secretary of the Council on Dental Therapeutics of the American Dental Association, voiced the interest of dentists in proper control of habit-forming drugs, but indicated that promiscuous distribution could not be associated to any extent with dental practice because of the limited use of such products by that profession.

Prof. Robert C. Wilson, of the College of Pharmacy, University of Georgia, expressed great concern over the possible unfavorable public reaction toward the practice of pharmacy caused by derelictions of a few members of the profession. He pointed out that it was the underworld interest and traffic in these drugs which is the real menace. He voiced the opinion that control of the illicit distribution of these drugs involves more than regulation of the professions. It was his feeling

that a licensing system applied to manufacturers should be a part of any system of control that may be devised.

Mr. Carson P. Frailey, executive vice president of the American Drug Manufacturers' Association, attributed current interest in the regulation of the distribution of barbiturates to a wave of suicides and accidental deaths resulting from overdoses of these drugs. He advocated State, rather than Federal, legislation, and expressed the view that an investigation of the beneficial effects of barbiturates would offset much of the sentiment against the use of such products occasioned by sensational reports of their misuse.

Other participants in the conference on the pharmaceutical aspects of the problem included Mr. P. H. Costello, secretary of the National Association of Boards of Pharmacy, who pointed out the difficulties of adequate enforcement under pharmacy acts and barbiturate laws which are enforced by Boards of Pharmacy; Mr. George Frates, spoke in behalf of the National Association of Retail Druggists; Mr. H. M. Bingham represented the National Wholesale Druggists' Association, and Mr. John A. Crozier represented the Federal Wholesale Druggists' Association.

On the public-health aspects of the problem, Dr. Ernest L. Stebbins, Commissioner of Health of New York City drew attention to experiences in metropolitan centers where accidental deaths and suicides from misuse of barbiturates have apparently been on the increase, as compared with the legitimate use of these drugs. He also touched upon the effect of barbiturates on persons who are criminally inclined.

Dr. Robert P. Herwick, chief of the Division of Drug Control of the Food and Drug Administration, expressed the view that misuse of barbiturates is rather widespread, and he included over-the-counter sales in his definition of the term "misuse." He indicated that inspectors of the Food and Drug Administration have found it difficult to purchase barbiturates from most pharmacists, which is an indication that considerable quantities are obtained by the public through bootleg channels. He pointed out that the Food and Drug Administration cannot be expected to control the distribution of these drugs alone and, like Commissioner Anslinger, he explained that congressional appropriations are very difficult to obtain for enforcement purposes. This is responsible for the reduction in personnel for control work. It was his opinion that adequate enforcement of regulations governing the sale of barbiturates would have to be conducted at the State level for the present to be effective, and stressed the importance of concerted enforcement under all existing statutes.

Other comments on the legal and public-health aspects were made by Mr. Leslie C. Jayne, New York State Board of Pharmacy, Mr. Walter Scofield, chief of the Bureau of Food and Drugs of the New Jersey State Board of Health, Mr. W. A. Queen, chief of the Division of State Cooperation of the Food and Drug Administration, and Mr. J. W. Holloway of the American Medical Association.

Mr. Charles V. Imlay, representing the National Conference of Commissioners of Uniform State Laws, offered the cooperation of the conference in formulating and promoting uniform State legislation for control of the distribution of barbiturates.

At the conclusion of the conference the members of the committee on legislation of the American Pharmaceutical Association summarized the suggestions and views which had been presented, and Chairman Winne thanked the participants at the conference for their contribution in securing factual data for the preparation of a program of action in this field.

Dr. Robert P. Fischelis, secretary of the American Pharmaceutical Association, reviewed the present status of barbiturate regulation, summarizing the provisions of present State laws on the subject, and citing opinions of State officials and practicing pharmacists as to the proper method of control. He assured the conference that the American Pharmaceutical Association would concentrate on the completion of its study of the present situation and the need for future action.

Dr. R. L. Swain pointed out the importance of formulating a program, and perhaps drawing up a model bill which could be made available to the legislatures of the various States.

The committee on legislation of the American Pharmaceutical Association, which is continuing its study of this problem and will make its report to the council, consists of A. L. I. Winne, Richmond, Va., chairman; Martin E. Adamo, Boston, Mass.; A. G. DuMez, Baltimore; George A. Frates, Washington, D. C.; Nicholas S. Gesoalde, New York, N. Y.; John A. Goode, Asheville, N. C.; L. M. Kantner, Baltimore, Md.; H. H. Schaefer, Brooklyn, N. Y.; R. L. Swain, New York, N. Y.; and Robert P. Fischelis, Washington, D. C.

## St. Lawrence Waterway

REMARKS

OF

## HON. WILLIAM J. GALLAGHER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. GALLAGHER. Mr. Speaker, a minute ago we heard a phrase in the deliverance of the divine message about America's being liberty's wonderland. I thoroughly believe that statement. I want to see it made a wonderland and kept a wonderland by utilizing all our resources and labor to the best interest of all people. It is for that reason that I include in my remarks the following article by Dean Acheson appearing in the Democratic Digest:

THE ST. LAWRENCE WATERWAY

(By Dean Acheson, Under Secretary of State)

The development of the navigation and power resources of the Great Lakes-St. Lawrence waterway has been envisioned by the United States and Canada as a joint enterprise for half a century. The completion of this long-planned project will add a fourth coast line to the United States, thus opening the midlands of this continent to ocean shipping, and will create an annual capacity of 2,200,000 horsepower of hydroelectricity, to be shared equally by this country and Canada.

The economic value of the proposed project to this country promises to rival the TVA and the Panama Canal combined. On a comparative basis, the opening of the Midwest—which is the world's greatest production center both agriculturally and industrially—to ocean shipping holds even greater promise to this country than the opening of the Suez Canal or the Dardanelles held for the countries of the Old World. From the standpoint of power, there are only eight countries of the world that produce more electricity than will be produced by the St. Lawrence project.

There is legislation now before Congress providing for approval of the major portions of a 1941 agreement between the United States and Canada to develop the St. Lawrence seaway and power project.

This legislation has strong bipartisan sponsorship. In the Senate, Senate Joint Resolution 104 was introduced, on October 2, as a joint resolution, by Senator BARKLEY, Democrat, Kentucky, for himself and Senators WAGNER, Democrat, New York; HILL, Democrat, Alabama; TAYLOR, Democrat, Idaho; AIKEN, Republican, Vermont; FERGUSON, Republican, Michigan; LANGER, Republican, North Dakota; VANDENBERG, Republican, Michigan; SHIPSTEAD, Republican, Minnesota; and LA FOLLETTE, Progressive, Wisconsin. In the House, identical resolutions have been introduced by Representatives SABATH, Democrat, Illinois; DINGELL, Democrat, Michigan; WASIELEWSKI, Democrat, Wisconsin; ROBERTSON, Republican, North Dakota; and DONDERO, Republican, Michigan.

The United States Congress has shown a definite interest in the navigation and power aspects of the St. Lawrence Basin since 1916, when that body ordered an investigation into the project's possibilities. During the ensuing years not only the Congress but the executive branch of the Government and the public have displayed sustained interest in the development of this great undeveloped natural resource.

Every Chief Executive since Woodrow Wilson, irrespective of party affiliation, has supported the project. In a special message to Congress concerning the St. Lawrence project on October 3, President Truman said:

"As a part of our program of international cooperation, expanding foreign trade, and domestic progress in commerce and industry, I recommend the speedy approval by the Congress of the agreement of March 19, 1941, between the United States and Canada for the development of the Great Lakes-St. Lawrence Basin. When approved, the two countries will be able to harness for the public benefit one of the greatest natural resources of North America. * * *

"The Congress and the people of our country can take just pride and satisfaction in the foresight they showed by developing the Tennessee and Columbia Rivers and the rivers in the Central Valley of California. Without the power from these rivers, the goal of 50,000 airplanes a year—considered fantastic only five short years ago but actually surpassed twice over—would have been impossible. Nor could we have developed the atomic bomb as early as we did without the large blocks of power we used from the Tennessee and Columbia Rivers. The timely development of these rivers shortened the war by many years and saved countless American lives."

## Price Control

REMARKS

OF

## HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. BIEMILLER. Mr. Speaker, from time to time Members of this House have come down in the well and urged that the OPA be abolished and all price control lifted. I hope all of those Members are taking cognizance of what has happened to the price of citrus fruit in this country. Price control on lemons and

oranges was lifted recently by the OPA. The result has been increases on those items of from 50 to 100 percent in the various cities of this country. I think it is a good sample of what can happen to us if we are foolish enough to throw price control overboard.

I will include in my remarks a letter from a Milwaukee manufacturer protesting this situation and pointing out that if we let price control go overboard you can really look for an increase in the cost of living in the United States. In the event price control is beaten in this House the wrath of the people will justly descend on those responsible.

MILPRINT, INC.,
*Milwaukee, Wis., November 26, 1945.*

Hon. ANDREW J. BIEMILLER,
*House of Representatives,*
*Washington, D. C.*

MY DEAR SIR: Attached please find a newspaper clipping out of last night's Milwaukee Journal showing where oranges that were selling at $7.80 a case have jumped to $11.50 and $12 a case. Some of the men who own commission houses on Commission Row are charging as high as $15 a case.

This is serious inflation and must be retarded at once before it gets too strong a toe-hold, as it is apt to spread to other products as well.

For the many GI's who are coming back from the armed services, who have babies who must have orange juice—this is a very bad dose to give them.

Now, my dear sir, if there was an increase of 5 percent or something like that and if the cost had risen so that they had to get something more, there would be no fault to find—but when they go up almost 100 percent overnight—action should be taken in Congress. It seems like some people in Washington have forgotten the 1921 inflation and history will again repeat itself, if proper action is not taken.

We do hope that action will be taken at once to put the controls back again on food products and that you will act just as quickly as you possibly can.

We have 2,000 employees and I speak for them in attempting to fight this inflationary movement, which is apt to ruin what is left of our good United States of America.

With kindest personal regards and best wishes, we are,

Most sincerely,

WILLIAM HELLER,
*Vice President.*

## Willful Waste Makes Woeful Want

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 27, 1945*

Mr. WHITE. Mr. Speaker, today the American people are paying high taxes as cost of war, and if the Congress and the administration ever tries to place this Government on a self-sustaining basis by making the Government income pay current Government expenses—to say nothing of reducing the stupendous national debt—taxes will be higher and people in every line of endeavor will have to take advantage of every opportunity to save and economize to make both ends meet.

The reports coming from every theater of activity of wanton waste and destruction of property bought with taxpayers' hard-earned money is nothing short of distressing. Today I have received such a report from my home county, up where most of us have put in a lifetime of hard work and pinch-saving economy to reclaim a farm and home from the cut-over lands of northern Idaho. It certainly is discouraging to hear of and see the waste of so many things which would be invaluable to the people everywhere, particularly those engaged in reclaiming the partly cleared farms of the timbered sections of the great Northwest, where so many of our good citizens are just eking out a living as they toil to build up estates by hewing farms and homes from forest lands as they did in Pennsylvania, Ohio, Indiana, Wisconsin, Michigan, and Minnesota as civilization progressed westward.

What would the pioneers of those days have thought of the waste reported in the enclosed press clipping and the letter from a neighbor of mine inserted here:

SAYS WASTE NOT HEARSAY

TACOMA, November 28.—Pfc Robert R. Moore wrote to his mother here that thousands of dollars' worth of Army equipment is being dumped into the ocean at Guam every day and he has seen hundreds of jeeps ploughed under by tractors.

"My lowest estimate would be that I have seen the destruction of $1,000,000 worth of equipment," Moore, a marine, wrote from Guam where he is stationed. "None of this is hearsay but what I have personally observed."

HILL TOP FARM,
*Sandpoint, Idaho, November 30, 1945.*

Hon. COMPTON WHITE,
*Member of Congress, Washington, D. C.*

DEAR CONGRESSMAN WHITE: I append hereto an AP clipping as of this date which is appalling to the lay mind, and leaves one apprehensive as to just where the Army is leading us; evidently to the abyss of economic insolvency.

Either the Army is an ass, or our Uncle Samuel really, truly, and literally is the Purse of Fortunatus—the more you take out the more the replenishment.

This kind of thing is the greatest deterrent against buying Victory bonds to save the peace that could be devised, even by an enemy of our country.

My son, recently discharged, possessor of the Bronze Star Medal, for capturing 27 Germans single handed, and also of the Good Conduct Medal, tells me that 33 percent of the goods, matériel, and supplies of the Army is wasted. He cites me case after case which had come under his personal observation. While all war is waste because all war is destructive, wanton waste is not to be condoned. After reading this excerpt one asks himself the question, Why buy Victory bonds committing himself as an accessory both before and after the fact—to the crime of waste?

There is just one recipe for the total abolishment of war, for all time, and that is for the United Nations, once organized, and with plenary power, to put every signer on the dotted line to the effect that no person, male or female, under 60 years of age, is eligible for military duty. That will effect the complete emasculation of war.

With kind personal regards, and best wishes, I am,

Very truly yours,

MARK HUNT.

## New England and the St. Lawrence Project

EXTENSION OF REMARKS
OF
### HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

*Tuesday, December 4 (legislative day of Monday, October 29), 1945*

Mr. TOBEY. Mr. President, on November 14 last our friend and colleague, the junior Senator from Vermont [Mr. AIKEN], delivered an address in Boston before the Boston City Club on the subject of the development of the St. Lawrence waterway, a development which has been approved as necessary for our defense by both the Secretary of the Navy and the Secretary of War. The address was very well received. Therefore, in order to insure as wide dissemination of it as possible, I respectfully ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It was with a great deal of pleasure that I received the invitation to speak to you today.

I am a New Englander and, next to the Nation as a whole, my loyalties will always be with the people here in the Northeast.

I am optimistic about the future of New England. I am optimistic about the future of the country as a whole.

Any Nation that can do what we have done in a period of 100 years can look forward with confidence that we shall solve every new problem and go straight forward on the path of progress.

I am much encouraged to note that there is now in progress a healthy self-examination to discover the weak spots in our social and economic fiber, and to repair and reinforce it in order to secure our proper position in the future world.

In recent weeks you have undertaken, under the leadership of Governor Tobin and Mr. Joseph Kennedy, a highly useful investigation to find out how you can improve economic conditions in Massachusetts.

A review of industrial development in Massachusetts will indicate that this State has been a leader in manufacturing and commerce just as in the cultural and political field.

It was here that large-scale manufacturing first flourished. It was also out of Boston that 100 years ago the clipper ships ranged the farflung ports of the world, bringing prosperity to Boston and the rest of the country.

It is significant to note that in achieving this leadership New England, and Massachusetts in particular, had the blessing of three important factors contributing to prosperity:

First, Massachusetts was the leader in the development of its water-power resources for manufacturing purposes. It was on water power that its industrial supremacy was established.

Second, it had the blessing of a vast and efficient fleet of ships that utilized cheap water transportation.

Third, it had the advantage of a plentiful supply of skilled labor.

During the last century New England, and especially Massachusetts, held a dominant position in the field of industrial production.

Even as late as 1909 New England produced nearly 13 percent of the total value of manufactured products of the whole country.

Twenty years later, in 1929, a year of prosperity, the contribution of New England to the total manufacturing output of the Nation was only 9 percent. Ten years later, in 1939, the proportion of New England's contribution was down to 7 percent.

Massachusetts was also losing ground relatively to the rest of the Nation during the same period. In 1909 the contribution of Massachusetts to the total value of manufacturing production was 7.3 percent. In 1929 it was 4.9 percent, and in 1939, 4.4 percent.

These figures do not necessarily mean that New England and Massachusetts had lost industries to the extent of 40 to 50 percent during this 30-year period. They do mean, however, that whereas the rest of the country was growing by leaps and bounds, the Northeast was not keeping pace.

The same experience continued during the war years. Industry, as well as per capita income, increased much more rapidly in other parts of the country than in New England.

It is interesting to note that the greatest increase of industry and income was in those States where we had a definite program of river-basin development, such as the States of Tennessee, Washington, and Oregon. The total and per capita income in those areas went up more than the national average, whereas the increase in the Northeast was less than the national average.

What is the answer to this dilemma? Is it to hold back other parts of the country, or to accelerate our own pace?

Should we, through political sabotage, prevent the development of other sections, thereby permanently impairing the industrial vitality and military strength of our whole Nation?

Or should we adopt measures to help our section of the country at the same time as we assist the betterment of other areas, thus increasing wealth and industry all around?

Your representatives in Congress are confronted with this question on every important economic issue. In your sober judgment, do you want us to consider the interest of our Nation as a whole, or do you wish us to take a narrow, sectional view of every issue before Congress?

We have given up, by and large, international isolation, as impractical, unrealistic, and against the enlightened self-interest of our country.

We frown upon the old, discredited colonial imperialism of other countries which retard world economic improvement.

But in this country we tolerate, fortunately in ever-decreasing degree, economic sectionalism which is the national equivalent of international isolation, and there are some among us who want to control or retard economic development in other areas. This is colonialism of the old pattern at its worst.

In a world as small as ours where the actions and economic policies of every other country of the world affect our national security and prosperity, we can ill afford to adopt such narrow-minded domestic policies that we thwart the growth of our own national domain.

How tragic it would have been in our recent struggle for survival if we had allowed a few obstructionists to prevent the development of the Tennessee Valley and the Columbia River. As President Truman said in a recent message to the Congress:

"Without the power from these rivers the goal of 50,000 airplanes a year—considered fantastic only 5 short years ago but actually surpassed twice over—would have been impossible. Nor could we have developed the atomic bomb as early as we did without the large blocks of power we used from the Tennessee and Columbia Rivers. The timely development of these rivers shortened the war by many years and saved countless American lives. * * *"

The answer to New England's industrial problem is not in stopping or slowing the development of the rest of the country; nor is it in any artificial advantages obtained at the expense of the rest of the country. I know you agree with me in this. The solution of our desire for an equal opportunity with the rest of the country is in the spirit of enterprise and adventure, in the eagerness to pioneer in a new and better world.

It is within the scope of our ability to create new opportunities in the production of new products, improved methods of manufacture, development of water resources, and new methods of transportation.

Why do I emphasize these general principles when I was asked to come here to discuss the St. Lawrence project? I do this because it is important to put the discussion of this project in the proper perspective of national and local affairs. For this project, more than any other in the past 50 years, has aroused the worst manifestations of sectionalism; and what is even worse, sectional passions are aroused by misrepresentations and false arguments by a small group who are perpetrating a new colonialism—a remote control over the economic destinies of our people.

I shall, therefore, try to show you that in the best opinion of the country the St. Lawrence seaway and power project is of great national advantage and should be speedily developed. Also that it is to the best interests of New England and Massachusetts in particular; and, that the narrow, self-seeking propaganda that has been loosed upon New England is of comparatively recent origin in the long history of this controversy and is not expressive of our local interest.

First, let me briefly state, for the benefit of those not entirely familiar with it, what the St. Lawrence seaway and power project is.

The project contemplates building the necessary dams, canals, locks, and powerhouses which will permit oceangoing vessels to travel from Montreal to the Great Lakes, and also to develop 2,200,000 horsepower of hydroelectric capacity, to be divided equally between Canada and the United States.

You know, of course, that there is deep sea navigation to Montreal which is 1,000 miles inland from the Atlantic Ocean. There is also deep-draft navigation from Ogdensburg, N. Y., to Duluth and Chicago, 1,300 miles beyond.

The Welland Canal was completed by Canada in 1932 to scale the Niagara escapement, and this canal only needs a little dredging. We built the MacArthur lock at St. Mary's River, and that too is a link in the seaway already completed.

With the exception of some dredging in various channels, the main works still to be built are in the 119-mile stretch between Ogdensburg, N. Y., and Montreal, Canada, where the water drops 243 feet over a series of rapids between the level of Lake Ontario and the level of Montreal Harbor.

There is an agreement between Canada and the United States whereby we undertake to construct the necessary works at the International Rapids section of the St. Lawrence River and Canada undertakes to do the work in the Canadian sections.

Without going into detail here, let me say that the remaining cost of the project to the United States will be less than $300,000,000, of which at least a third will be paid for by the power project, leaving around $200,000,000 for the seaway from the Great Lakes to the Atlantic.

Considering every item of expenditure, the seaway will cost about $10,000,000 a year to maintain. When completed, it will accommodate not less than 25,000,000 tons of traffic annually. At present nine to ten million tons move over the existing 14-foot waterway.

There will also be available at the International Rapids annually 13,000,000,000 kilowatt-hours of electricity, more than the total output produced by the Tennessee Valley Authority in 1944. It is the cheapest undeveloped power in America, costing about 1 mill per kilowatt-hour at the station.

This power will be available for distribution within 300 miles of the site in Canada and the United States.

The project will also make ocean seaports of all the principal cities on the Great Lakes. Rochester, Buffalo, Cleveland, Detroit, Milwaukee, Chicago, and Duluth will be accessible by oceangoing vessels without transshipment.

On October 2 Senate Majority Leader ALBEN BARKLEY introduced Senate Joint Resolution 104, which was referred to the Foreign Relations Committee, to approve this Canadian-American Agreement and authorize construction of the project. The resolution is sponsored, in addition to Senator BARKLEY, by Senators FERGUSON, HILL, LA FOLLETTE, LANGER, VANDENBERG, WAGNER, SHIPSTEAD, TAYLOR, and myself.

That this is a national project of the first magnitude is attested by the nonpartisan and nonsectional support it has received during the past three decades.

On October 3 President Truman urged speedy approval of the Canadian-American St. Lawrence agreement, stating:

"One of the great constructive projects of the North American Continent, in fact, one of the great projects of the world, which was delayed by the exigencies of war, is the St. Lawrence seaway and power project.

"For 50 years the United States and Canada under both Republican and Democratic administrations, under Liberal and Conservative governments, have envisioned the development of the project together, as a joint enterprise.

"Upon the expectation that we would join with them in completing this great engineering project, Canada has already built more than half its share of the undertaking.

"We, however, still have our major contribution to make.

"Every engineering investigation during the past 50 years, every economic study in the past 25 years, has found the project feasible and economically desirable. The case has been proved; the plans are ready."

President Truman is from the State of Missouri where opinion for this project is divided. But the President is speaking for the country as a whole, and not for any one section.

President Truman is but one of the illustrious spokesmen for this great undertaking. In 1941, when the country was upon the threshold of war, President Roosevelt recommended it in these words:

"I know of no single project of this nature more important to this country's future in peace or war. Its authorization will demonstrate to all the enemies of democracy that, however long the effort, we intend to outstrip them in the race of production. In the modern world that race determines the rise and fall of nations.

"I hope that authorization will not be delayed."

Before President Roosevelt, President Hoover was eager to see this project constructed, and he and his Secretary of State, Henry Stimson, negotiated a treaty with Canada for that purpose. On July 18, 1932, President Hoover recommended this project in these words:

"The signing of the Great Lakes-St. Lawrence Waterway Treaty marks another step forward in this the greatest internal improvement yet undertaken on the North American Continent. * * * Its completion will have a profoundly favorable effect upon the development of agriculture and industry throughout the Midwest. The large byproduct of power will benefit the Northeast."

We need not go to Missouri, New York, or California to hear strong voices for this project. One of our own first citizens, President Calvin Coolidge, recommended it to Congress in 1923, calling it a "capital investment which will be reproductive * * *. Upon these projects depends much future industrial and agricultural progress."

In addition to a long line of Presidents of both parties, other forward-looking, distinguished leaders have espoused and advanced this cause. Secretaries of State Charles Evans Hughes, Frank Kellogg, Henry Stimson, Cordell Hull, and now James Byrnes; Governors of New York Alfred Smith, Franklin Roosevelt, Herbert Lehman, and now Tom Dewey have all given it strong support.

Former Secretary of the Navy and Governor of New Jersey Charles Edison, the son of the famous inventor, and the late Secretary of the Navy Frank Knox were for the project.

The list is long. And the theme of all these proponents has been universally the same—the St. Lawrence project is one of the great projects in the world. It will give this Nation abundant cheap power and an unequaled navigation facility from the Atlantic to the heart of the continent.

The support for this undertaking is not partisan. It is not sectional. Nor is it purely political. Even before there were concrete governmental proposals for its construction, substantial business interests were eager to develop this resource.

In 1921 Col. Hugh L. Cooper, the same eminent engineer who later built the Dnieper Dam for the Soviet Government, laid a proposal before the International Joint Commission to make a gift of the navigation facilities if the governments of the two countries would give his clients a franchise to develop the electricity on the St. Lawrence River between Ogdensburg and Montreal.

And who were his clients? The Aluminum Corp. of America, the General Electric Co., and the du Pont Co., who evidently considered that the power production alone would be worth the cost of the entire development.

These companies, as you know, are not in the habit of engaging in uneconomic undertakings. Let me quote a few passages from the extensive report of Colonel Cooper.

"We believe that the greatest single need for the restoration of the public to normal contentment and happiness is cheap power. The construction of the works here proposed will give to the zone east of Niagara Falls, and for a radius of over 400 miles from the Croil Island site, power advantages at least equal to and probably better than those that now exist, or can be hereafter created at Niagara Falls."

Colonel Cooper's report was equally eulogistic about the advantages of navigation, and I quote briefly from that section of the report:

"It will be seen, therefore, that the zone to be supplied with cheap power will also be aided in its commercial development by the coincident creation of new navigation advantages. These navigation advantages properly coordinated with water power and the vast railway systems now existing in this territory will give to this zone industrial advantages that cannot be otherwise created or found elsewhere on the American continent."

At one time, many railroad interests were supporting the seaway. Almost all of the transcontinental lines west of Chicago favored it. The Great Northern and the Northern Pacific, the Chicago, Milwaukee and St. Paul, the Illinois Central, the Chicago and North Western, the Minneapolis and St. Paul, the Chicago Great Western, the Quincy Lines, all favored this project only 20 years ago.

From the point of view of national interest, and as a business proposition, the overwhelming testimony has been in favor of earliest possible construction of this great project.

You may say, "Very well, but how about us? How will it affect New England?"

Here again, the prevailing opinion and all of the factual analysis available has been favorable. The conclusion of all serious studies has been unanimous that this project would benefit New England.

One of your business leaders, Mr. Henry I. Harriman, made a serious study of this subject and published his findings in 1929 in a book of 152 pages entitled "New England and the St. Lawrence Seaway.

Mr. Harriman was at that time President of the Boston Chamber of Commerce. As you know, he has also been President of the United States Chamber of Commerce for several terms. I need not mention to you that he is one of the most successful businessmen of this community and a leading figure in the public utility field. I shall only read you Mr. Harriman's conclusions which appear on pages 32–33, but commend you to read the whole book.

Mr. Harriman concluded in these words:

"I am convinced that the St. Lawrence seaway is of as great importance to New England as to the Middle West, and that New England should unitedly, heartily, and enthusiastically support the project."

The seaway means to New England:

1. Lower transportation costs on much of its food supply, hence a lower cost of living.

2. Lower freight rates on many of the raw materials required by its industries.

3. Lower freight rates to many markets for its finished products.

4. A supply of export grain and flour at prices as low or lower than can prevail in other North Atlantic ports, hence a revival in the export business of the port of Boston and other New England ports.

5. The removal of the handicap of rail differentials, due to water competition via the St. Lawrence.

6. A reasonable supply of cheap power.

Three years later, when Mr. Harriman was president of the United States Chamber of Commerce, he testified before the Senate Foreign Relations Committee as to the amount of business expected between New England ports and those of the Great Lakes. I quote from his testimony:

"The total annual traffic available on the most conservative basis for a water route between New England and the Great Lakes will be not less than 6,000,00 tons, and very probably it will be twice that amount, and the annual saving to our New England industries will not be less than $16,000,000. What holds true for New England holds equally true for eastern New York and Pennsylvania."

There may be those who will try to discount this weighty opinion by saying that this is only one man's view. But that is not true. At one time or another leaders of New England industry and the Associated Industries of Massachusetts favored this project. Furthermore, this position was taken after careful study.

In 1923, at the time President Coolidge recommended the project to the Congress, a New England committee of 36 industrial and public leaders—6 from each State—was established. They devoted a whole year of study to the subject.

Some of them are still with us and quite prominent in public and business circles—just to mention at random—John G. Winant, former Governor of New Hampshire and our Ambassador to England, and Samuel Ferguson, president of the Hartford Electric Light Co.

Col. Charles Gow was the chairman of the committee. He is here today and can tell you more about this important work. I shall only read you the unanimous conclusion of this group of 36 New England leaders:

"The committee looks upon the proposed expenditure for developing the waterway as in the nature of a capital investment of a national character upon which exceptionally liberal dividends will be returned in the form of reduced transportation costs and the general benefit and prosperity of a large and important section of the country which at the present time is laboring under a most serious and difficult economic handicap. It further believes that the net result of the development of such a waterway will incidentally be of considerable advantage to New England and the surrounding community, both from a broad national standpoint as well as that of purely local self-interest.

"The committee, therefore, places itself definitely on record as favoring the early entrance of this Government into negotiation with the proper officials of the Canadian Government looking toward the prompt consummation of a treaty which will make possible the undertaking of the enterprise and urges upon all New England's local and national representatives the desirability of their full cooperation in every reasonable manner to bring this result about."

This is a far cry from the opposition registered by a representative of the Maritime Association of Boston before the House Rivers and Harbors Committee in 1941. This man, previously a long-time employee of railroads, claimed that cheap power would ruin Massachusetts. One of the Congressmen asked incredulously, "Do you mean that giving the people of New England electricity at reasonable rates, and taking this overcharge of $97,000,000 a year off of them would ruin New England?"

And the witness replied, "Yes; I do."

Apparently this witness and his philosophy have been well accepted here, for the people of New York and New England, except Connecticut, pay the highest electric rates anywhere in the country.

I cannot believe that the voice of Massachusetts will continue to be expressed by such unabashed spokesmen for monopoly and public exploitation. The tradition of liberalism and progress is too well ingrained in New England soil to remain covered for long.

If this project is of great advantage to the Nation in peace and in war; if New England, by the testimony of its citizens, will stand to benefit, then where does this effusion of propaganda against the project come from?

I shall be candid and to the point, for it is time to call a spade a spade. The opposition is engendered by the Eastern Trunk Lines and power companies, both intimately connected with the higher echelons of finance in New York.

I shall not here expose in detail the evidence, for that was done effectively by Senator LA FOLLETTE on the floor of the Senate last December 8. It is available for everyone in the CONGRESSIONAL RECORD of that date.

The eastern roads fear competition in their rates, and the power companies fear cheap public power, and this opposition has been consolidated since public development of this project was enunciated by Governor Roosevelt, of New York, in 1931.

These are the sources of opposition and they have succeeded in silencing favorable expressions in the East, as well as in the West. They have initiated hostile and false propaganda throughout the country from coast to coast, and, unfortunately, many well-meaning and public-spirited citizens have fallen for it.

When the western railroads are silenced against their better judgment, when the business voice of New England is made to change its tune within our own generation, when the Southwest is told through the representatives of eastern-controlled railroad and power companies that this project will ruin Texas or Arizona or New Mexico, then it is plain that we are witnessing not only a willful instigation of insidious sectionalism but, what is even more disturbing, we are witnessing a financial colonialism that will ultimately lead this country into an economic straitjacket and commercial strangulation.

I do not believe this will succeed. I do not—I cannot—believe that your representatives in Congress will disregard the national interest and the local interest of the Northeast and turn down this project.

The spirit of liberalism, of progress, and of adventure is stirring throughout the land, and even more so in New England.

The leadership that was New England's the spirit of John Paine and Samuel Adams, of Charles Sumner and Oliver Wendel Holmes and Louis Brandeis is with us again.

I feel confident this spirit will find eloquent expression in the great public servants who represent this State in the United States Senate today.

With such statesmanship and love of public service as our allies, this time we shall win. It is time to return to the first principles of New England prosperity, low-cost power, and low-cost water transportation.

When the St. Lawrence seaway and power project is completed, we will all be proud of it, for it will contribute immeasurably to our economic welfare and to our national safety.

---

## Address by Hon. James M. Tunnell, of Delaware, Before American Slav Congress, Detroit, Mich.

EXTENSION OF REMARKS

OF

### HON. JAMES M. TUNNELL

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 4 (legislative day of Monday, October 29), 1945*

Mr. TUNNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by me before the annual meeting of the American Slav Congress at Detroit, Mich., on December 2, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor and a pleasure to have been invited here to attend this meeting of the American Slav Congress. From listening to what has been said here, I know I am among friends—among men who take a liberal view of the world and speak the same language I do.

To many liberalism is a guiding star, an objective, and a hope for America. To such persons judgment is based on the present and the past. A liberal is one who hopes for something better in the future. In opposition to the liberals are those who have since the foundation of government been advocates of the belief that all wisdom and all power come from above—from the higher walks of life, from the financier rather than the laborer, from the men of wealth rather than from those of lower financial standing. These forces have been as opposite as centripetal and centrifugal tendencies. They are opposite today. The American people have been liberal through their whole history. We have always had a liberal party and a conservative, or reactionary, party. The conservative element in America has always followed the teachings of Alexander Hamilton. The liberal party has followed the teachings of Thomas Jefferson. These parties must follow their respective tendencies. Whenever the conservative party in America turns liberal temporarily, it is met by the opposition of its own supporters. Whenever the liberal party turns conservative, it is met by the opposition of those who would otherwise be its supporters. The conservative party in the United States has but three times in its history reelected its candidate for the Presidency. It has in 156 years had but one man who served two full terms in the Presidency. In the First Continental Congress the natural rights of man were described as being to life, liberty, and property. Thomas Jefferson used a different language—life, liberty, and the pursuit of happiness. Right there was the distinction recognized by Thomas Jefferson between the right of property and the right to the pursuit of happiness, the difference between property rights and human rights. Progressives or liberals believe that the fountain of power is in the people themselves. Jefferson believed in the simple government. He was opposed to an alliance between government and business, between the church and the state; his sympathies were with the mortgagor rather than with the mortgagee.

The American Slav Congress has a record to be proud of. It has always stood with the most progressive forces in America. It always supported to the limit the humane and far-sighted policies of our late President and Commander in Chief, the greatest liberal of his day, one of the greatest statesmen of all times, our beloved Franklin Delano Roosevelt. The Congress has been equally strong in its support of President Harry S. Truman, another warm-hearted friend of the common man, always a champion of Main Street against Wall Street, another determined foe of special privilege of every kind. Already hailed as one of our ablest Chief Executives, President Truman is loyally dedicated to carrying forward the great work so well begun under his illustrious predecessor, now gone to a well-deserved rest—though certain ghouls, for purposes of their own, are noisily at work with pickaxes on his hallowed grave, hoping to dig up buried treasure and scatter his ashes to be blown away by the winds of vicious rumor and petty gossip.

My phrases are cool and measured when I say that never in our history has there been anything as despicable, so altogether contemptible, as this desperate effort of the bankrupt reactionaries to besmirch the character, impugn the motives, challenge the honesty, and integrity of our late President, who went to his grave mourned by all the world as no man in history before him had been mourned. In their present smear campaign, in their cold-blooded character assassination of the dead, the reactionary high command has reached an all-time low in political tactics, as my colleague Senator SCOTT LUCAS observed a few days back—and there were some of us who were convinced after 1936, 1940, and 1944 that they could not possibly sink any lower. Well, we live and learn, and probably should not be surprised. It was all in the cards. It is just what you might expect of a totally bankrupt opposition trying to make a little cheap political capital at the expense of the country as a whole.

This opposition seems to believe that a time when many hearts are tender from the loss of their dear ones on the fighting fields that petty political capital can be made by attempting to prove that our Nation was led into this war by President Roosevelt and Secreary of State Hull. While the whole Nation is sad from our losses, it was not believed that any person or party would attempt to deceive the American people into a state of mind where they would blame their victorious heroes for the casualty list which was comparatively light considering the great victories won, the tremendous length of our battle fronts, and the preparation of our enemies. Certain of the small type politician is seeking to buy the elections of 1946 and 1948 with the blood of our dead heroes. From being stupid, they have become positively indecent. Abandoning the gutter, they have plunged into the sewer. And I say, let them stay there where they evidently feel at home.

Of one thing, I am quite certain—the American people are not fond of ghouls. Almost all of them, including millions of rank-and-file political opponents who regard themselves as patriotic Americans first and political partisans second, have been pained and revolted by the spectacle put on by the Old Guard leadership, with the grinning approval and loud vocal support of some old stand-bys of publicity specialists and newspaper publishers of the more unscrupulous type. And what is the purpose of this unholy show? What is the theme song of this chorus in brass?—and what brass. The purpose is to put our America Firsters back in business again at the old stand, with the idea of sowing dissension and disunity in all ranks, of pitting nation against nation, employer against employee, group against group. The theme is that our isolationists, Munichmen, and chicken-hearted appeasers of fascism, were right after all. They say we could have done business with Hitler, Hirohito, Mussolini, and company. On what terms, of course, and at the sacrifice of all our democratic liberties—but what did that matter to people who had no use for those liberties anyhow? They are our present day reactionary workers. These people would have hotly denied that they were Quislings or Lavals, but they subscribed to the same basic philosophy that the sensible thing to do was to come to a modus vivendi with the "wave of the future," as it was then known in certain blind and ignorant circles. Let me say, this is not past history. It is in the headlines today, and that is why I am talking about it here. The forces of reaction and disruption are not dead—make no mistake about that. Defeated on the field of battle, they are reorganizing their forces on an ideological plane with the hope of confusing the public mind, and their first concern is to rewrite the history of recent years.

Believe it or not, but the Japanese were not really responsible for the sneak attack on Pearl Harbor. Oh, no. Last Monday, November 26, in the Senate of the United States, as recorded in the CONGRESSIONAL RECORD, on page 10959, a Senator of the United States was addressed in the following language by Senator MCMAHON, of Connecticut: "It seems to me that the Senator's thesis comes down to trying to prove that the Japanese were not solely to blame for Pearl Harbor." The reply of the Senator was, "Does the Senator have any doubt about that?" This was language used on the floor of the United States Senate during the past week. They are those who would have us believe that the Japanese were not really responsible for the sneak attack on Pearl Harbor. Oh, no. The language of the Sen-

ator implies that the Japanese were not solely responsible for that attack. We are supposed to believe that the peace-loving Japanese militarists were deliberately provoked and trapped into attacking us by those two great warmongers—President Franklin Delano Roosevelt and his Secretary of State, Cordell Hull. It was they and not the unspeakable Tojo who really pulled the trigger, so we were informed the other day by certain Members of Congress. All the administration had to do, it seems, was to sell the Chinese people down the river, abandon all hope of defending the Philippines and Hawaii, sell the Japanese all the steel and oil and munitions of war they wanted on demand, give up all our rights to conduct trade and commerce in the Far East, and everything would have been hotsy-totsy—at least until the Japanese war lords stepped up their demands and handed us another so-called peace proposal, probably suggesting that we draw back from the Pacific coast.

It seems to me I have heard all this before in slightly different terms, and the voice I hear is that of Dr. Goebbels putting to practice his technique of the big lie. Do you remember how the peace-loving Nazis were first menaced by the Czechs, and the Third Reich had to protect itself by smashing Czechoslovakia? Do you remember Herr Hitler screaming about the aggressive designs of the Poles and their responsibility for starting World War II? The Poles were very unreasonable people, it seems. All they had to do was to commit national suicide and Hitler would have been willing to write them off his list. Do you remember the Nazi radio and press on the equally aggressive designs of the Yugoslavs and the Russians—all of whom were thirsting for the blood of those doves of peace, Die Fuehrer and Il Duce? You people of Slavic descent do remember, and I say that none of us should ever forget.

Fascism has received a mortal wound, but it is not yet dead. We have a job to do, and that is to see that its roots are eradicated everywhere. We have a job to do in seeing that we create an international organization which will allow peace-loving people to live in peace, and that we do our best in support of those who are trying to remove rather than increase national jealousies, suspicions, and distrust. Whether they know it or not, our Russian-baiters and British-haters are playing the fascist game of divide and rule. We have a job to do in seeing that the millions of freedom-loving people in Europe who bravely fought as our allies and bore the brunt of the war, do not starve or freeze this winter. We cannot and will not shirk our responsibility here. We have an equally important job to do in seeing that we remove from our midst every last trace of religious intolerance and racial discrimination. Here are the seeds of a native fascism that must be uprooted. This must be a country in which all have equal rights and opportunities, and in which there are no second-class citizens.

The seeds of reaction, as the histories of Nazi Germany and Fascist Italy make plain, can only flourish where conditions of economic insecurity prevail. Only when people are jobless and hopeless, only when the orderly processes of government fail in their function of making life more tolerable for the average man, is it possible for the black hand of reaction to gather strength. A people marching steadily toward higher and higher standards of life can never be seduced and persuaded to make the wrong turn by the cheap demogagues of the right. It is no accident that those who now crawl out from under the rocks as unconverted Munich men and spend their days trying to create international discord by open or snide attacks upon each and all of our allies, are the very people who relentlessly attack each and every progressive measure of domestic legislation.

They are the people who fought against social security, minimum wages and hours and collective bargaining. They are the people who were opposed to the Security and Exchange Commission, to the insuring of bank deposits, to giving the small farmer a break for a change. They are the people who are today fighting every proposal in President Truman's 21-point program to take us through the difficult reconversion period and keep us on a high level of prosperity.

Last year, when our boys were fighting in foreign lands, there were those who attempted to prevent their having an opportunity to vote. One man, being an anti-Roosevelt Senator, openly stated on the floor of the Senate when a bill to permit the boys to vote was before the Senate, that if President Roosevelt would announce that he would not be a candidate for reelection, the bill to allow the vote of the soldiers could be passed in 30 minutes. To a very great extent those opposing this vote succeeded in preventing the boys the opportunity which they should have had at that election.

These reactionaries don't like full employment. It is "un-American," it seems, to take steps to insure every able and willing American worker a job so that he can feed his family and keep a roof over his head. They don't like adequate unemployment compensation for the millions of loyal workers now losing their jobs as our war plants close down. The American people are so shiftless, they say, that such compensation would only encourage idleness. Let me say, for myself, that I have never heard a worse libel on the American people, but then, these gentry were always contemptuous of the people anyhow. These reactionaries stated that if unemployment compensation should be allowed generally, it would be only an inducement to people not to work. In other words, those who oppose the people anyway now say that by permitting them to be assured that they will not starve during the period when the Nation is being reconverted from wartime to peacetime pursuits would be a method of inducing them not to work at all. Does any real American believe this? Or was it an excuse to strike at the average man. These are the people who have tied up both adequate unemployment compensation and the full employment bill.

And there are a lot of other things these people don't like—for one thing, the continuance of the Fair Employment Practice Committee to put an end, once and for all, to job discriminations against Negroes, Jews, Catholics, the foreign-born, and all minority groups. This, it seems, is an invasion of our individual liberties.

These people are quite as hostile to public housing for low-income groups, to development of our national resources on a sound regional basis, to the continuance of OPA price ceilings to prevent ruinous inflation and ruthless profiteering, and they almost have apoplexy at the recommendation that the Fair Labor Standards Act be amended to raise the minimum wage level from 40 cents to 65 cents an hour.

And what is the moral of all this? It is quite simple, and I hardly need point it out to you people of the American Slav Congress, for you know it as well as I do. You have always stood squarely against fascism and reaction, both in the foreign and domestic fields. You have always stood for progress at home and the closest kind of cooperation abroad.

The ideas for which we stand are the ideas of the common people everywhere, and they have just won a great triumph throughout the world. Today, with the Nazi beast laid low at last, never to rise again—with the Jap war machine hopelessly smashed—there is good reason for the whole civilized world to rejoice—men, women, and children, of every race, creed, and color, in all the lands where human decency is respected, and human freedom is prized and loved.

All over the world the lights are going on again. At this time we intend to see that they stay on, under a strong world organization designed to keep the peace and stop potential aggressors dead in their tracks.

During the past week in the Senate we have been considering a bill having for its purpose the implementing of the United Nations Organization. This bill has specifically for its objective the permission to our representative on the Security Council to see that our operation of the world force can be used without going to the Congress after trouble has started. We have agreed in our adoption of the United Nations Charter to put up a force for the benefit of humanity in despair, and to prevent war. To this plan there has been no clean-cut opposition, but every attempt in the world to amend or delay the passage of this bill to which we are in honor bound. They want every use of force to be preceded by an appeal to Congress. President Roosevelt once said something to this effect—that to require the United Nations Organization to go back to Congress for authority to use force would be like requiring the policeman on his beat when he saw a burglar entering a house, to go back to the town council before stopping or arresting the intruder. This plan, if successful, would prevent the use of any moral or military force to protect the world, and prevent wars. There were approximately 12 amendments offered to this bill. If these amendments are adopted, or any considerable number of them, the United Nations Organization will be so handicapped that it can never function to prevent wars, as millions of anxious people throughout the world are hoping that it may. The United Nations Organization is young. It is as yet untried. It needs the support and assistance of every peace-loving nation and of every peace-loving individual. However, the United Nations Organization is in existence, and will be given an opportunity to succeed. It represents the best thought of the world. It represents an effort on the part of the best people of the world to stop the bloodshed and wholesale destruction of property which goes with each war. We are progressing.

Yes; we have come a long way since those dark days just 3 years ago, in the fall of 1942, when the Nazis were fighting in the streets of Stalingrad and hammering at the gates of Egypt, and the Japs were running wild in the Pacific, threatening to drench a whole continent in blood. We Americans can be proud of the part we played in that heroic struggle, under as brilliant a political and military leadership as the world has ever seen. With the exception of a few congenitally blind partisans, all mankind recognizes President Franklin D. Roosevelt as the chief architect of the most resounding military triumph of history. But military triumph is not enough. In a sense, it is only the beginning. The larger part of our job remains to be done. We must translate our victory into peace and prosperity for all. This can and will be done, and there is work for all of us to do, each in his own place and function.

I want here and now to give voice to a word of warning with reference to the United Nations Organization. When the League of Nations was proposed, a great majority of the American people favored it. The opposition dared not come out and say specifically that they opposed a League of Nations. What they could say was that it could be amended, and with a deliberate purpose to destroy the League of Nations, its opponents suggested a large number of amendments and alterations. The attempt at that time to destroy the League of Nations was, as you know, successful, and from that time on we were headed for the Second World War. Woodrow Wilson saw this. Millions of other Americans saw it, and there were enough of the opposition in places of power to prevent the consummation of this world plan for peace.

There are many indications in the present mass of proposals and suggestions to cause one to believe that another attempt is being made to destroy the second of our great plans to stop world slaughter. Owing to increased efficiency of weapons of destruction and discoveries of new methods of taking life and destroying property, the next war may be shorter and more destructive than either the First or Second World War. It is possible that this war may terminate differently from our standpoint than did either World War I or World War II.

The necessity for an effective world organization, endorsed and backed by the great nations of the world, has greatly increased. However, the organization needs the support of every man, woman, and child in the world. Those bent on turning to petty, political, partisan advantage and prospective world slaughter should not be permitted to have the voice or the vote in high places to bring the world to a state of complete devastation. Civilization and self-interest combine to demand of us and each of us our greatest effort in the colossal struggle which we shall face in the next generation to prevent the world's worst holocaust. In this, you must be of assistance.

That is part of your job—to provide a public forum for the intelligent discussion and clarification of the great questions at issue. It is likewise part of your job to cooperate as closely as possible with other groups about the country interested in achieving the same ends, so that opinion can be solidified behind a forward-looking program. There can be no slightest doubt that the great majority of the American people want to move ahead to better things. There can also be no slightest doubt that their desire will be frustrated if men of vision and good will now start quarreling among themselves about minor details. Let us all put first things first, and keep our eye on the ball. Peace and prosperity for all is our goal. Let us rededicate ourselves, wholeheartedly and with full vigor, to the achievement of that great aim, and we may be sure of the approval of our conscience and the blessings of our children for generations to come.

## Hirohito's Status

EXTENSION OF REMARKS

OF

### HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 4 (legislative day of Monday, October 29), 1945*

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Star of today entitled "Hirohito's Status." The editorial raises a question which will constantly be discussed respecting the inconsistency of the position of this Government in prosecuting as war criminals all of Hirohito's advisers, even to the *n*th degree, and yet permitting him to remain on the throne.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIROHITO'S STATUS

General MacArthur's newest list of suspected Japanese war criminals again raises the question of what Emperor Hirohito's eventual classification is going to be. The list, which is made up largely of businessmen, militarists, politicians, teachers, editors, and writers, significantly includes the first prince of imperial blood thus to be made subject to arrest. He is Morimasa Nashimoto, and since he is 71 years old and has apparently been little but a figurehead adviser to the throne, logic compels asking why Hirohito himself should not be named.

More important still, the determination of Hirohito's position cannot be divorced from the proceedings now being conducted at Nuernberg. As set forth by Supreme Court Justice Jackson, the chief American prosecutor, one of the key principles governing the trial of the Nazi leaders is that heads of aggressor states must be held personally accountable for the crime of aggressive war, and were Hitler alive and in our hands, he would undoubtedly be sitting in the prisoners' dock today. Accordingly, as far as Hirohito is concerned, the question is not merely whether he should be named if one of his unimportant princely advisers is named, but also whether the Nuernberg principle applies to him, and if not, why not.

Considerations of logic and consistency deeply color this situation. As the man advised, how can Hirohito be immune when one of his lesser advisers is named as a suspect on the ground, apparently, of having advised him? And as the head of an aggressor state which waged an aggressive war, how can he escape the sort of trial called for by the Nuernberg principle? It may be, of course, that he will yet be taken into custody. It may be that expediency—the desire to make the initial phase of occupation as easy and orderly as possible—has dictated the hands-off policy followed up to now. It may be, too, that General MacArthur and his superiors here in Washington have excellent reasons to believe that Hirohito did not want and was powerless to prevent what happened in Asia and the Pacific. Meanwhile, though, the voices of logic and consistency keep asking their persistent questions.

This is not to suggest that Hirohito should be arrested forthwith. It is merely to suggest that as matters stand today there is a kind of delicate and embarrassing discrepancy in the way we are handling him on the one hand and the way we are handling some of his advisers and the Nazi leaders on the other. As long as this situation obtains, as long as it lacks a clear and convincing explanation, the law and morality involved will seem confused, and the Nuernberg principle will look like something quite haphazardly applied, meaning one thing for Germany and another for Japan, so that it may excite little or no respect in the world of tomorrow.

## Discharge of Fathers From the Armed Services

REMARKS

OF

### HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. ELLIS. Mr. Speaker, today I introduced in the House two resolutions. One provides for discharge of fathers as rapidly as discharge facilities will permit, and the other provides for the termination of induction upon enactment of the resolution.

After thorough study of the problems involved and a detailed review of the situation since VJ-day, I am convinced that the action proposed by these resolutions is justified and will be to the best interest of the public welfare.

All of us want sufficient military strength to guarantee security, and we shall maintain that. However, I believe you will agree with me that conditions warrant discontinuing the draft.

I would not consider this termination for one moment if it would cause any member of the armed forces who is entitled to discharge under present regulations to remain in the service one extra minute, but I am convinced such will not be the case. Voluntary enlistments are running higher than expected.

In the beginning the President said it was necessary to draft 50,000 per month to prevent any interruption with returning veterans. We agreed with that viewpoint at the time, but now it is reported from reliable sources that 81,094 volunteered during the first half of November, and the number is ever increasing.

In view of these enlistments, it is evident that the draft could be ended without slowing demobilization.

I do not propose a repeal of the selective-service law at this time because it gives certain benefits to the men in the service, but we are happy to observe that the armed forces are rapidly going on a volunteer basis because this is the American way of doing things.

The necessity for the rapid return of fathers is so obvious that I will not take the time of the House to present any argument. I think it will suffice to remind you that the family is the keystone of our spiritual and material life. It is the backbone of this Republic. Let us protect it by the return of these young fathers to their families.

## England—Enemy of Liberty

EXTENSION OF REMARKS

OF

### HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 4 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "England—Enemy of Liberty" delivered by me at the Academy of Music in Brooklyn, N. Y., on Thursday, November 29, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When I voted against the new United Nations league, some people said I committed political suicide.

I ought to explain something of that to you. There were only two of us who voted against the United Nations league—Senator HENRIK SHIPSTEAD, of Minnesota, and I. We voted against it because we thought it wasn't any good. There were many other Members of the Congress who felt as we did but at the time it looked to them as if they ought to vote for the League. Some of these men simply felt that it would fall apart anyway—so what was the difference.

However, as far as I was concerned, I couldn't vote for something I didn't believe in or that I thought was bad for the American people. I voted against Dumbarton Oaks and the San Francisco Charter at a

time when it seemed politically dangerous to do so. It wasn't because I didn't want a world organization—I do want a world organization if we can achieve one which is safe for America. But, I don't want a world organization which is simply a paper creation and a British scheme to keep half the world in subjection. I don't want an organization which is a result of British or any other outside influence over the boys of our State Department, instead of being a result of our own considered best interests.

We are new at this game, but the British have been experienced at it for hundreds of years. I knew that we were being taken in by it and that the new league would not and could not work except as a matter of backing up British interests throughout the world. Now we find that this is true. Almost any sensible man admits it.

A few days ago Pat Hurley came back from China. He had the courage to say what all our high officials have thought who actually have been in the Far East, and that is that we are being sucked into a power bloc on the side of colonial imperialism against Communist imperialism.

Now, what do you think Pat Hurley meant? I think I can tell you. He meant that the British who are having a first-class quarrel with the Russians have succeeded in getting us to back their policy throughout the world, particularly in the Orient. He meant that we were being drawn into a new world war in defense of alien interests, a new war which would have nothing whatsoever to do with our own security.

Having committed myself against the league, I am about to commit myself now to another proposition—I want no more war. I think we have had enough war. War means that we are going to have to put our young men in uniform again and have them shot up all over the world. It means many wore widows in my native State of North Dakota. It means a lot more boys with wooden legs and hopelessly hospitalized in institutions. It means more lease-lend. It means final poverty to this Nation.

The only one there is left to fight in the world is Russia. Now, it may be that if the British stop interfering and inciting us on that we can come to some agreement with Russia whereby they will give us what we want to be secure and safe so we won't interfere with each other. If we can do that there will be no war; but if we let ourselves be pushed around because of British interests in Iraq or Iran or anywhere else, then there is certain to be a war.

I dare say there will be some people who will say that this makes me a pro-Russian. I don't know about that. I am not pro-anything but pro-the good people of America who have a right to live and breathe freely again and to ride around in automobiles with real tires on them for a change. I am against tangling with a wild tiger in a cage, too. Maybe some people would say that this makes me pro-tiger.

As far as I am concerned it just means that I have common sense.

Now, I want to tell you this, too, and it takes some courage for a man to say it now: I not only think the British are trying to get us into World War III to defend their world-wide imperialism; I also say they got us into World War II and World War I. I repeat that: They got us into World War II and World War I.

Of course, we had to be anti-Nazi and anti-Japanese; but who built up the Nazis and the Japanese? It was the British who encouraged the Japanese to ravage Asia, just as it is the British who are slaughtering the people of Indochina, just as they are now shooting down the unfortunate people of Java with American lease-lend guns, and murdering the people of India with American ammunition.

The British played the old divide-and-rule game. They didn't care for a free and democratic Germany. They hated what they thought was the Socialist regime put into existence by the decent people of Germany, so, together with the Vickers people, the munitions kings, and people like Sir Henry Detterding, the oil king—all of them British subjects—they conspired to build a real first-class war party in Germany. They never believed that party would turn against them as it did.

It was the British who broke the Versailles treaty in order to give Hitler airplanes and arms; and it was their undercover agents who supported him everywhere in his diplomacy. If the British had supported the democratic leaders of Germany as they later supported Hitler, we would not have had a world war. Europe would not now be in ruins and the world in danger of real collapse.

What do you think these British actions said to the decent Germans? It discredited those who argued for freedom in Germany. It made it clear that Great Britain, then the great power in Europe, was anxious to build up a Fascist state in Germany in order to have it act as a cat's-paw in the war against Russia or even against France, which the British then mistook to be the great military power on the Continent.

The British miscalculation was that the Nazis after suppressing all the good people in Germany turned out to be what hoodlums are everywhere—they refused to obey their masters anymore. It was soon clear that they would challenge the British themselves and that there would be a struggle for the international loot between the pious British Fascists and the out-and-out German Fascists. Therefore, the British had no recourse but to fight, and they did so under the name of democracy.

We had to fight, too, once the enemies of freedom were established in Germany and throughout Europe, but had the British not acted to place them in power there would have been no world war.

What I maintain is that nazism is a world disease. We have just fought a war trying to knock it out of Germany and Japan. Certainly it exists in England, even though England is so self-righteous in its democracy at home.

What do you call it but fascism when you see the British shooting down Indian patriots in their own country and bombarding Javanese towns from the air? What do you call it when the Greeks are unable to run their own government even though they are one of the allies: When you see the Poles sold down the river: when you see British bureaucrats conspire to keep the unfortunate Jews out of their own home in Palestine; when you see the poor Arabs all over the world kept down by the most despotic governments which have been placed and kept in power by British gold; when you see hundreds of millions of people throughout Asia, Indochina, and in almost all of Africa enslaved, and slaughtered when they rebelled against it?

I don't see why one kind of fascism is better than any other kind of fascism. Fascism means the exploitation of other people by force, and here we have a perfect example of it.

At the present moment the British are in conflict with almost half the people of the world. The people of Europe believe they are even trying to turn that continent into a sort of colonial reserve, the same as they have India and Arabia and other countries. They are making every possible effort to bring our financial and military support behind them for a war which they are inviting with Russia.

I am not arguing in behalf of the Russians. I am only arguing in behalf of the United States of America. All I know is that the Soviet Union is not some little country like Ethiopia. It will not be conquered easily. They are not going to lay down their arms and submit, but will fight with everything they have. In short, they are as big as we are, and maybe as tough.

If we go to war with them, we will have to get ready for a tussle far worse than any we have ever been through before. Maybe even our cities will be bombed like the German and Japanese cities.

To my mind, that means we can only go to war with them for cause after all efforts to get together with them have failed.

I don't think we have gotten together yet, of course; but I don't think we can even try as long as the British are interfering.

Our forefathers fought the Revolutionary War to get rid of the rotten system of human exploitation the British introduced here as they have all over the globe. It was they who brought the slaves to this country. Now they are back again, eating us out of our sustenance like the 7-year locusts. What we need is another revolutionary war to regain our independence from Great Britain.

Right at the moment, Britain is in this country asking for a $4,000,000,000 loan. Do you know what this loan means? It means that every man and woman in the country has to work harder and produce more in order to make this gift to the British. Our income tax in the normal year of 1939 was just a little over $2,000,000,000. In order to pay for this so-called loan, it will be exactly the same as if the normal income tax as of 1939 were tripled. Income tax is hard enough on most of us without, in effect, tripling it for the purpose of helping the British keep down half the world. I want you to reflect on that.

Now, this loan, everyone knows, is a frankly disguised gift and is not a loan at all. For the first 5 years it will bear no interest whatsoever. After that it will have some ridiculous interest like three-fourths of 1 percent.

At any rate, it will not be repaid by the British because they cannot pay it. They have not paid any of the loans made before. They didn't pay the loans made after the last war. They owe us an inconceivable sum on lease-lend which they will not be able to pay back and their situation is so bad that they have practically become a third-rate nation.

If we have so much money left after the tremendous costs of this war as to be able to make a $4,000,000,000 loan, let's make it to the poor American farmer who is trying to bring his business up to date again. Let the farmer and the small home owner have a loan at 1-percent interest and give him 45 years to pay. At least we will get our money back and the entire country will benefit by the use of it.

Now, when a third-rate nation suffers from hallucinations and aspires to rule the world there has to be trouble. What actually is happening in our relations with the British is that the tail is wagging the dog.

As far as this Nation is concerned, we would like to help Great Britain, but we would not like to help her put our country at war.

Great Britain is without question the great international danger point. Anyone who has seen her shoot down the helpless peasants of Balbriggan in Ireland, or the students of Indochina and Egypt, knows what she is capable of doing. Now, the same black and tans who used to operate down in Ireland are in Palestine, are shooting down a lot of unfortunate Jews who are asking nothing more than to be allowed to work out their own destiny.

Do you know how the British system works? In the first place, it is necessary for Britain to take cotton goods from India and Egypt and ship it all the way back to England, make it into cotton cloth, and then ship it back to India and Egypt and sell it there. This means that they must suppress these countries and prevent them from manufacturing these goods themselves. And so it goes in still other instances.

This is what the British colonial system means.

This is why you see British soldiers shooting Jews in Palestine, suppressing the natives of Indochina, and jailing the leaders of India, and keeping almost all of Africa in slavery.

It is why you find that even the Caribbean islands at our own back door are complaining bitterly about colonial exploitation which they cannot escape.

In addition to using force Britain practices the old scheme of incitement. She urges on one part of the population of every country against the others. In India she uses the Moslems against the Hindus, in Palestine the Arabs against the Jews, though none of these people had any real quarrels with each other until British self-interest interfered.

In order for Britain to maintain her system throughout the world it is necessary for her to keep in power reactionary governments—the very kind of governments we fought to end. Everywhere they are fighting against the republican form of government. They are supporting a little tin-horn king in Greece against the people. In India they keep the people in poverty and ignorance and support the maharajahs and totalitarian kings.

They even support such murderous and despotic scoundrels as Ibn Saud in Arabia, in whose kingdom no Christian can live.

They even got the late President Roosevelt, who was Mr. Easy Mark to them, to give one of our big C-54 transport planes to Ibn Saud as a gift of the American people. What do you think Ibn Saud did with it? He took this airplane with an American crew and American soldiers and proceeded to use it for the purpose of joy-riding his hundreds of wives around Arabia.

Now, if Ibn Saud wants to have several hundred wives I can't stop it. But, it is against my religious belief and my sentiments as an American to make him a present of an American airplane in order to joy-ride them around the heavens. As far as I am concerned, he can provide several hundred camels for them.

Neither do I see why an American crew has to be humiliated by acting as servants for this type of disgraceful business. Do you know that when Ibn Saud's wives stepped into this big airplane the American soldiers had to stand with their eyes turned away? If they so much as looked at one of Ibn Saud's wives they would have been shot.

Whatever the airplane was worth it was paid for by American money and by American taxpayers. In making the gift and in its subsequent use, America abetted the whole system of human slavery which now exists in Saudi-Arabia, supporting these hundreds of concubines in their jail harems—though these unfortunate women pass under the name of wives.

I am not against Ibn Saud, the British, or anyone. I believe in absolute equality for all people and live and let live.

But I am against any form of racial discrimination here or anywhere else. It only makes for war, and it is anti-Christian and anticommon sense.

And, I cannot agree to slavery in Arabia or to a man handling himself like a billy goat, whether his name be Ibn Saud or whatever it be. I think immorality is immorality whether the British are for it or not.

And another thing, I see no reason why this little British nation, which in today's world is no bigger than a peanut, is entitled to rule almost one billion people. Why are they any more entitled to do so than the Germans—or the Norwegians—or the Swedes?

England in the past has always made good the deficits of all these Arabian kings and others in maintaining their power in those territories. Part of the $4,000,000,000 we are asked to put up is going to go to pay the deficit of Ibn Saud and his 300 wives who must be kept up somehow. I repeat, it will have to pay for British operations in Egypt, in Italy, in Palestine, in Java, and elsewhere, and for the shooting down of democratic elements throughout Europe. All of these people are merely trying to attain their independence and to build a decent life for themselves without interference.

One of the British methods of keeping peoples turned against each other is to force Moslems always to vote as Moslems, Hindus as Hindus, Jews as Jews, and Christians as Christians. None of these people can vote on the issue. In India if a Moslem wants to vote for a Hindu he can't do it. Usually it doesn't make any difference how you vote anyway since the British appoint all the actual rulers.

In India in the leading clubs in a big city like Bombay, no Indian, no matter how distinguished, can join. Now, there are 400,000,000 Indians. What effect do you think this has on them?

On the river boats on the great Yangtze River in China, Chinese dignitaries have to ride second class, simply because the British control the boats. What effect do you think this will have on the Chinese?

The British are desperately trying to keep the Chinese from industrializing in China and the Indians from building industries in India.

What this means is, if we are backing up the British in this despotic practice, we are making enemies of half the world and sooner or later will have to fight them. In an age of atomic bombs where our cities are perfect targets, I think we are taking a long chance.

In addition to this, I can see why the Russians are maneuvering as they are. For generations the British have succeeded in keeping Russia cooped up in an area a little more than three times as large as the United States and without access to the sea. Russia doesn't even have access to the Mediterranean or Atlantic Ocean. In order to get through the Mediterranean she has to go through the straits, through the Dardanelles, and through the Strait of Gibraltar. In both cases the British have acted to close the Russians off and keep them cooped up. This is an old design, and Britain has already fought three wars with Russia over the same thing. Maybe they are getting set to fight another war, but if they are, I don't think we should be in it.

And I do know that the situation is a bad one and that the dead hand of British exploitation lies all over it.

Let me explain the straits proposition to you. These straits owned by the Turks are now governed by an agreement called the Montreux convention which the Russians were forced to accept in the past. It is the British and not the Turks who are the dominating element, just as it is the British and not the Egyptians who actually run the Suez Canal. The quarrel then, seemingly between the Russians and the Turks, is in reality between the British and the Russians. Whatever London demands in this matter, the Turks are compelled to do.

The Russians are seeking a revision of the Montreux convention so that their ships can get to the Mediterranean.

Now, what are the British willing to do for us in return for the support they expect? The answer is exactly nothing.

In Palestine where the Jewish settlers showed a preference for American cars which they consider superior, the British, though they did not have the legal authority to do so, placed a tax on cars which brought the duty on an American car, like an old second-hand Buick, to the fantastic sum of $2,700. This is just for duty alone. They have practically shut off American trade from the Middle East and north Africa. When the Jews tried to get around all this by opening up a car assembly plant for parts, the British put on a duty 50 percent higher for parts than for complete vehicles.

In India, when Britain needed rubber during the World War, they allowed Indian rubber growers to go ahead and develop. Now that they don't need rubber, they are doing their best to stop the Indian rubber growers from raising rubber. One trick way of doing this is to prevent the Indian rubber growers from getting the kind of insecticide they need.

This again places America at the mercy of the big British Malayan rubber cartel, and that is its purpose.

Another example is lend-lease. We gave them these freely. We gave them everything they required, not only to fight a war but to live. For example, we did not charge them tolls for their ships going through the Panama Canal. In return, Britain gave us a small amount of so-called reserve lend-lease—just enough to put on the record. But they even charged us for the use of their ships in the handling of lend-lease material which we were giving to them. They charged us for handling all these goods which we were handing out to them and which represented the labor of the American people. They also charged us for sending it through the Suez Canal, even though it was an out-and-out gift.

There is something ridiculous in all this.

You may believe it or not, but the fact is—and our State Department will be compelled to acknowledge it—that Great Britain has asked us to give up part of our trade in favor of their failing manufacturers. That means the American people seeking work and the American businessmen have to give up part of their sustenance.

We now have about five times as many ships as the British for the transoceanic carrying trade. The British have asked us, and expect us, to give up our preeminence in shipping so that England can once more rule the waves.

I want to repeat to you—when you talk about giving up something you are not talking hot air. You are not talking of something abstract. You are talking about the labor of men in North Dakota and elsewhere who have to work harder and sweat more in order to support some rascally exploitative privilege.

I believe in capitalism to the degree that I believe in fair and free competition, but I don't believe in cartels and repressive capitalism. Particularly I don't believe in the English brand, which keeps everyone from competing with the man who holds the guns. I repeat, Great Britain is holding the gun at the head of democracy all over the world, and we are asked to pay for the ammunition.

In Great Britain there are mountains of tires and other military equipment which Americans have made and paid for. I should like to know where all this is going; also, I should like to know why it is not being brought back. Is it being given to the British as another gift?

What I do know is that American farmers still cannot get tires or overalls or even lumber, and there seems to be no prospect of their getting these things for a long time. This stuff is our property and should be shipped back to let Americans, who desperately need them for postwar reconstruction, utilize them.

I should like to point out to you, my friends, this blanket. Take a good look at it. It was purchased a short time ago in the basement of Selfridge's Department Store in London. It is made of a combination of cotton and wool and sold at approximately $3. That is very cheap for a blanket like this. It should have been worth at least $10 here in America before it was shipped. Let me read the label which is on this blanket, exactly as it was when it was purchased in

Selfridge's Department Store in London. This is what it says:

"Gift of the American people through the American Red Cross."

These blankets and many types of material are all over London and being sold dirt cheap. The poor and freezing people in Europe for whom the American people donated this stuff are still poor and freezing.

What I should like to know is how this stuff got to Selfridge's Department Store in London, by whose authority, and by what right?

Is this same sort of thing to happen to all of the mountains of tires, trucks, overalls, clothes, and other supplies now piled up all over Britain?

Judging from this record, I should say that the American people are getting a pretty shabby deal on this.

I should like to point out, for example, the recent resignation of certain officials of UNRRA, the big relief organization which was supposed to help the starving people of Europe. The reason these men gave for resigning was that UNRRA, whose great expenditures again are being paid for by the sweat and labor of Americans, is being used by the British for purely political purposes in Europe—that is to build up a fight against the democratic elements, in favor of the kings, and to get Europe lined up for another war.

Everything that Pat Hurley said was true in China is also true in Europe, and the people in back of it are the same people.

The object is a war with Russia, and perhaps later with China, if China should get strong.

I again say that we should avoid a war with Russia if we can in good dignity, and I think we can. We have never had a war with Russia.

We may not like the Russian form of government, but, on the other hand, I don't like the British form of government either, and I don't suggest we go to war with Britain over it.

Therefore, all I suggest is that, as it is a struggle between Great Britain and Russia, we should keep out of it. These people have been fighting each other for over three centuries, and if they want to fight another three centuries, it appears to me that it is up to them.

Frankly, I don't even wish to see our soldiers remain in Europe one day longer than they have to remain. I certainly don't want them in Arabia or anywhere else which isn't American territory. Above all, I don't want them backing up British-backed kings and princesses and repressive trusts and cartels. I want a free world in which freemen can live and benefit by their own labor.

One of our major troubles is that our statesmen are no match for the British, who have been at it a long time. The British system of civil servants is the best in the world. From the day these men can go to school as little boys they are taught the best of international intrigue, and they are taught to be independent on the Parliament. You should see the Parliament try to get these officials even to answer questions. The way they parry them is a marvel of ingenuity and insolence.

The British are spending millions of dollars in this country for an out-and-out propaganda campaign to put us squarely behind them in this policy. They control the international communications in their territories, in which they sit as rigidly as the Russians do. If you were in Arabia, Palestine, or India, or any other British place, you couldn't get information out easily. The information the British are willing to let you have is always twisted to suit them.

Talking about "twisted," in America, I am afraid they have most of our head men twisted in Washington. They do it by that system of social mummery. They impress our men with their parties and their titled gentlemen, who are all over Washington. Subjected to this type of influence, our statesmen act like overwhelmed school children.

As far as I am concerned, this British social stuff is just an act. It doesn't impress me at all. No titles impress me. Certainly not anyone that some hypocritical foreign dynasty can confer. The only title I want is that of servant to the people of North Dakota and to the American people.

I am not saying that we ought to reform the British; I simply say we should stop supporting them in any of their schemes which are to our disadvantage or which might put us at war. When I discover that 60 percent of all the food eaten in Great Britain has to be imported from abroad I begin to see how their economic system has to exploit other people in order to exist; when I see the British piously Socialist at home and savagely shooting others abroad in order to prevent them from developing their own nation I throw up my hands in despair. I see no reason whatsoever why the world should be kept in turmoil in order that the road to India should remain British. I think the road to India belongs to the people who live in those territories, just as the right of freedom ought to belong to them also.

I am utterly appalled to find this little Nation of 40,000,000 people not content with over half of Africa, and a great part of Asia, and still other territories, now trying to swallow up still more. They are trying to take over the Dutch territories in the South Sea, the Italian territories in Africa; they have swallowed Ethiopia and French Indochina and Syria. Many Europeans even suspect they are trying to make a colony of Italy itself, Greece, and perhaps Belgium and the Netherlands. That is a terrific appetite for a little bankrupt nation. It indicates to me that its rulers are more than a little mad. It means they are on the way to destruction, and I don't want Uncle Sam to join them in it.

We may be walking into a postwar crisis here in America in which we will find real enough difficulties in securing adequate employment for all our people and maintaining a decent standard of living. Let us stop being bankers to the world unless we have some real American gain in sight. Let us stop being "Uncle Sucker."

As far as the British are concerned, let us tell them flat-footedly that we are not going to back them up in any of their conspiracies, just as we should tell the Russians what it is that we want in order that both our nations can exist harmoniously in the same globe.

Looking around we see that even in our own hemisphere the British are going to be in trouble. Great Britain owns the railroads and the public-utility companies of the Argentine, and if Argentina has any sense they will want to recover them. They certainly will want to recover the strategic Falkland Islands which lie directly off their coast and are also owned by Great Britain, just as we should like to obtain the Caribbeans that are so necessary to our defense, and just as De Valera wants to recover the six northern counties in Ireland. I think it outrageous that Ireland should be kept divided against itself. The Chinese will want Hong Kong and Indochina, and even the Spaniards will want Gibraltar. Arabia will want to be free and the Jews will want Palestine, which they certainly are entitled to under international law. Africa will have to either be free or be handled by an international commission for the benefit of all mankind. India will certainly have to be free, as will Java and the other countries of the Pacific now suffering under British rule.

That is the way the matter goes.

If we want to save ourselves from being involved in these British schemes it will be necessary for us to resist everything which divides Americans from each other. If there are some of you who think that you can play a racial game in this country and be against people because of racial reasons, you are playing the game of the enemies of America, whether they be British Nazis, German Nazis, or whatever Nazis, and you are playing it against the interests of the decent people of America or the hard-working people of England and Germany, too. We are all Americans no matter what our religion is or our racial antecedents, and all are entitled to equal rights and equal opportunity and on this I stand foursquare. I do so not only because it is in the interests of the United States that this be done but also as a convinced Christian. Instead of playing the enemy game by turning our fire against each other in this country, let's all get together and fight world imperialism of any kind. At least we want to fight its influence here in this country. I don't care who is guilty of imperialism—whether it be the British or the Russians or anyone else—we shouldn't abet it and throw the weight of our power behind it.

Let's try to build a free and democratic Europe and let's find some way of getting together with the Russians so that there will be no war and so that whatever our difficulties with them, they can be settled to our mutual satisfaction. Let's throw our weight into a program to build a world in which peoples everywhere can be free. Above all, let's be sure that everyone in the United States, and I mean everyone, has a right to be free and to live free of prejudice and discrimination because of his racial antecedents or his religion. This is the spirit of our Nation, which will continue to be strong so long as this remains its spirit.

## Mr. Hull's Views

EXTENSION OF REMARKS

OF

## HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of November 24, 1945.

MR. HULL'S VIEWS

With the death of the late President Roosevelt, no man is better qualified than Cordell Hull to discuss the hopes and the fears which directed the course of this country's foreign policy in the critical years preceding the advent of World War II. Consequently, his statement to the Pearl Harbor Investigating Committee deserves the most careful consideration.

Considerable attention has been centered on Mr. Hull's denial that his November 26 note to Japan was an ultimatum which "pushed the button" for the launching of the war. The Star fully agrees that his note was not an ultimatum. But the fact of the matter is—and Mr. Hull's testimony confirms it—that the course of events would not have been altered at that time in any significant respect by anything that Mr. Hull might have said or refrained from saying in his note to the Japanese.

By November 26, 1941, war in the Pacific was inevitable. It is conceivable that a policy of total appeasement might have postponed the war. But it could not have prevented it, for by that time the fatal collision of national interests could not be averted, and the Japanese thought that they were

strong enough, and that we were weak enough, to risk the challenge.

The essence of Mr. Hull's testimony is to be found in this excerpt: "To have accepted the Japanese proposal of November 20 (to which his note of November 26 was a reply) was clearly unthinkable. It would have made the United States an ally of Japan's program of conquest and aggression and of collaboration with Hitler. It would have meant yielding to the Japanese demand that the United States abandon its principles and policies. It would have meant abject surrender of our position under intimidation."

In this situation, and with the war in Europe pressing upon us, it was determined to adopt a firm but cautious policy with respect to Japan. Our military leaders were pleading for time in which to gain strength. They knew that we were weak, and they knew that Japan knew it. Accordingly, in August 1941, the President handed the Japanese a watered-down version of a strong note of warning which had been proposed by Prime Minister Churchill. The fleet was kept based at Pearl Harbor in the hope that its mere presence there would restrain Japan. Mr. Hull persisted in negotiations which he knew to be futile, hoping only to defer the inevitable.

But this effort failed, and it failed primarily for two reasons: First, because we had not the military strength to support the vital foreign policies to which we were necessarily committed, and, second, because the Japanese, in the decade from 1931–41, knew that we were lacking in military strength.

It is easy to say that all of this is water over the dam, and that since we won the war it matters little now. But that, really, is the greatest danger, for if we do not take to heart the lesson implicit in Mr. Hull's statement, the chances are that some future crisis will find us once again trying to support an international political policy which is vital to the preservation of our national interests without the requisite military strength, and the next time we might not have the good fortune and the good allies which contributed so much to our success in World War II.

## Negroes in the Armed Forces

EXTENSION OF REMARKS

OF

### HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. DE LACY. Mr. Speaker, the performance of Negro soldiers in combat during the recent war is one of courage, bravery, and devotion. It is a record second to none.

Yet, Mr. Speaker, there are those within this country and occasionally those within this Congress who have so buried their powers of observation and assimilation of fact beneath their prejudices, that they have ventured from time to time to attack the courageous record of Negroes in this war.

Recently, the War Department has canceled the restriction on a survey which was compiled during May and June 1945 in the European theaters, as to the opinions of white soldiers about their Negro comrades. This survey is deeply revealing not only of the courage and ability of the Negro soldier but of the fact that when white soldiers were given an opportunity to witness the performance and share experiences in the same company with Negroes, their prejudices melted away.

I would point out, Mr. Speaker, that 64 percent of both white officers and white noncommissioned officers who were surveyed, were relatively unfavorable toward the idea of serving in the same company with Negro troops when they first found themselves in that position.

However, after serving with these Negroes, 77 percent of this number changed their views, felt more respect for the Negro, liked him better.

Had the policy of complete segregation—of isolating Negro and white in the armed services into separate companies—been followed, this experience would never have been given these white soldiers. There are those who tell us that a Fair Employment Practices Commission is not the way to solve the problem of the un-American attitude of certain employers who discriminate against workmen because of the color of their skin or because of their national origin or because of their religious beliefs. I have heard the word education misused a hundred times in such a discussion.

Yet it is true—it must be true—that unless we place white and Negro, Baptist and Catholic, Jew and Gentile, Scandinavian-American and Ukrainian-American together beside each other at the work bench, this educational process will have no chance to work.

It did work in the Army of the United States, where the vast majority of officers and noncommissioned officers who had a chance to serve in the same companies with Negro troops learned that such service was the better way as well as the American way.

Not all the prejudices which block true acceptance of the practice of democracy in America were dissipated by the experience of these soldiers in the European theater. They had not time, nor was the situation ideal for the complete disintegration of all prejudices. But it does point a great lesson for America.

Therefore, Mr. Speaker, I wish to include at the close of these remarks the now unrestricted survey made in May and June, 1945, by the Research Branch, Information and Education Division, Headquarters, European Theater of Operations under authority of General Eisenhower. It is:

OPINIONS ABOUT NEGRO INFANTRY PLATOONS IN WHITE COMPANIES OF SEVEN DIVISIONS

What do the white company grade officers and the white platoon sergeants in ETO think of the combat performance of Negro rifle platoons which were attached to their companies in March and April and fought side by side with white platoons through VF-day?

This question is answered by a survey, made in late May and early June 1945, by personally interviewing 250 respondents, namely, all available white company-grade officers and a representative sample of platoon sergeants in 24 companies containing Negro platoons in several infantry divisions, namely, the First, Second, Ninth, Sixty-ninth, Seventy-eighth, Ninety-ninth, and One Hundred and Fourth. Standardized questions were used in the survey, which was conducted by five trained interviewers of the Research Branch, I and E Division, ETO.

In all except one of the companies visited, the standard organization of three rifle platoons and one heavy infantry platoon had been augmented by one rifle platoon of colored soldiers. The colored platoons were made up of men from rear echelon units who volunteered for service with the Infantry and were trained for approximately 6 weeks in reinforcement depots, usually by a white officer or noncom who later led them into combat.

In generalizing the opinions here reported, the fact that the Negro infantrymen in these platoons were volunteers must be kept in mind, as must also the fact that not all of the platoons experienced heavy and arduous fighting.

OPINIONS OF WHITE OFFICERS AND ENLISTED MEN IN COMPANIES WITH NEGRO PLATOONS

Question. How did you feel at first about serving in a company that had white platoons and colored platoons?

| | *White officers (percent)* | *White noncoms (percent)* |
|---|---|---|
| Relatively unfavorable ("skeptical," "didn't like it," "thought it'd cause trouble," etc.) | 64 | 64 |
| Relatively favorable ("willing to try it," "made no difference," "didn't mind," etc.) | 33 | 35 |
| No answer | 3 | 1 |
| | 100 | 100 |

Question. Has your feeling changed since having served in the same unit with colored soldiers?

| | *White officers (percent)* | *White noncoms (percent)* |
|---|---|---|
| No, my feeling is still the same | 16 | 21 |
| Yes, have become more favorable toward them[1] ("feel more respect for them," "like them better," etc.) | 77 | 77 |
| No answer | 7 | 2 |
| | 100 | 100 |

[1] No cases were found in which an individual reported his attitude had become less favorable.

Question. How well did the colored soldiers in this company perform in combat?

| | *White officers (percent)* | *White noncoms (percent)* |
|---|---|---|
| Not well at all | 0 | 0 |
| Not so well | 0 | 1 |
| Fairly well | 16 | 17 |
| Very well | 84 | 81 |
| Undecided | 0 | 1 |
| Total | 100 | 100 |

NOTE.—In commenting on this question, respondents frequently gave detailed accounts of combat performance. Positive qualities stressed were aggressiveness in attack, effective use of firepower, adeptness at close-in fighting, teamwork in battle. Negative qualities reported in a few instances were that at first the men sometimes went forward too rapidly—too far in an attack. Some officers stressed the fact that these colored soldiers, being volunteers, may have had exceptional combat qualities. Others mentioned that in their units there had not been an adequate test under the most severe type of fighting, such as sustained attacks under heavy mortar or artillery fire. It should be noted, however, that the performance of the colored troops was rated just as high, if not higher, by the white officers and noncoms in those companies in which the colored platoons have had severe fighting as by respondents from other units.

Question. With the same Army training and experience, how do you think colored

troops compare with white troops as infantry soldiers?

| | *White officers (percent)* | *White noncoms (percent)* |
|---|---|---|
| Not as good as white troops | 5 | 4 |
| Just the same as white troops | 69 | 83 |
| Better than white troops | 17 | 9 |
| No answer | 9 | 4 |
| Total | 100 | 100 |

Question. How have the white and colored soldiers gotten along together?

| | *White officers (percent)* | *White noncoms (percent)* |
|---|---|---|
| Not well | 0 | 0 |
| Not as well in garrison as in combat | 14 | 4 |
| Fairly well | 7 | 36 |
| Very well | 73 | 60 |
| No answer | 6 | 0 |
| | 100 | 100 |

NOTE.—Replies are somewhat more favorable from white officers and white noncoms with a northern background than from those with a southern background, but differences in opinion are not great. Actual friction between white and colored soldiers is said to have been confined to isolated cases involving white soldiers from "outside" units who did not know the combat record of the colored troops. Evidence indicates that white and colored soldiers have gotten along best together in those units in which they have shared the heaviest combat. While many of the officers in further questioning expressed some doubt as to how well the situation would work out if their unit remains in the Army of Occupation or other semipermanent status, 9 out of 10 said there had been no difficulties as yet.

Question. If colored soldiers are used as Infantry, do you think they should be set up by platoons as they are here, or would some other way be better?

| | *White officers (percent)* | *White noncoms (percent)* |
|---|---|---|
| In the same platoon with white soldiers | 7 | 1 |
| In a platoon within the same company | 62 | 89 |
| In separate companies | 18 | 12 |
| In separate battalions or larger organizations | 10 | 2 |
| No answer | 3 | 0 |
| | 100 | 100 |

NOTE.—Most of those interviewed volunteered one or more reasons for their answer.

Among those who favor the platoon basis, the reasons given, in order of frequency, are:

1. Competition-emulation ("encourages friendly competition"; "each tried to make a good showing"; "gives them something to come up to").

2 Avoidance of friction ("saves any chance of trouble to have them in their own platoon"; "because of the old feeling of boys from the South").

3. Better discipline and control among the colored soldiers ("whites have a steadying influence on them"; "colored boys feel more secure in combat this way").

4. Feeling of participation or nondiscrimination on part of the colored soldiers ("gives them the feeling of being with the white boys"; "avoids that feeling of being set apart and discriminated against").

5. Improved interracial understanding ("work close enough together so they can each get to know the other better and see what they do").

Among the minority who favored separate companies or larger units, the main reasons given were avoidance of friction (especially in garrison situations) and better discipline. A few men gave as their reason their personal feeling of not wishing to be in a company containing colored troops.

INDEPENDENT CHECK IN A CROSS-SECTION SURVEY

In the course of a survey of a representative cross-section of 1,710 white enlisted men in ETO field forces, to ascertain men's information and orientation needs, two questions were asked about the use of Negro troops. This survey was independent of the interviews tabulated above.

The responses to the two questions asked in the cross-section survey were tabulated separately for four sub-groups indicated below. The sample in some groups is small and therefore subject to a larger margin of error than is customary in research branch reports.

Question. Some Army divisions have companies which include Negro and white platoons. How would you feel about it if your outfit was set up something like that?

*Percentage of white enlisted men answering would dislike it very much*

| | *Percent* |
|---|---|
| Cross-section of field force units which do not have colored platoons in white companies (1,450 cases) | 62 |
| Men in same division, but not in same regiment as colored troops (112 cases) | 24 |
| Men in same regiment, but not in same company as colored troops (68 cases) | 20 |
| Men in company with a Negro platoon (80 cases) | 7 |

Question. In general, do you think it is a good idea or a poor idea to have the same company in a combat outfit include Negro platoons and white platoons?

*Percentage of white enlisted men saying "very good idea" or "fairly good idea"*

| | *Percent* |
|---|---|
| Cross section of field-force units which do not have colored platoons in white companies | 18 |
| Men in same division but not in same regiment as colored troops | 50 |
| Men in same regiments but not in same company as colored troops | 66 |
| Men in company with a Negro platoon | 64 |

NOTE.—These differences in attitude, varying with extent of experience with platoons of colored troops, can hardly be attributed to differences in geographical origin. For example, 31 percent of the white soldiers whose company has a Negro platoon are from the South, as are 34 percent of the soldiers in the cross section of field-force units.

BACKGROUND INFORMATION ABOUT COLORED TROOPS IN THOSE INFANTRY PLATOONS

The soldiers in the Negro platoons were somewhat superior to other colored troops in ETO in education and AGCT, but the differences actually are not striking.

| | |
|---|---|
| Percentage who had graduated from high school: | |
| Colored in infantry platoons | 22 |
| Colored in ETO (cross section) | 18 |
| White riflemen (cross section) | 41 |
| Percentage with AGCT scores above class IV: | |
| Colored in infantry platoons | 29 |
| Colored in ETO (cross section) | 17 |
| White riflemen (cross section) | 71 |
| Percentage from the South (including border States): | |
| Colored in infantry platoons | 67 |
| Colored in ETO (cross section) | 76 |

As compared with white riflemen the Negro infantrymen were somewhat younger. Ten percent of the colored were 30 years old or over—as were 20 percent of the white riflemen.

Branches of service from which the transfer to infantry were made were as follows:

| | *Percent of total Negro volunteers* |
|---|---|
| Corps of Engineers | 38 |
| Quartermaster Corps | 29 |
| Transportation Corps | 26 |
| Signal Corps | 3 |
| Ordnance Department | 2 |
| All other branches | 2 |

Of all who were converted to riflemen, 63 percent came from the following six military occupation specialties, in order of frequency: Truck driver, light (MOS 345); duty soldier III (590); longshoreman (271); basic (521); foreman construction (059); cargo checker (470).

## Our Chinese Policy

REMARKS

OF

## HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. ANDERSON of California. Mr. Speaker, the recent resignation of General Hurley as Ambassador to China, his forthcoming appearance before committees of both the House and Senate, as well as recent statements by certain Members of Congress have all served to focus the world spotlight on this country's policy toward China. This is a subject of the utmost importance to every citizen of the United States who is entitled to be kept fully informed of our foreign relations policies throughout the entire world. In an effort to clarify the question I wrote Secretary of State Byrnes some time ago asking him to furnish me with a statement of our Chinese policy. Today I have a reply to my inquiry in the form of a communication from Secretary Byrnes which I desire to include with my remarks.

The letter reads as follows:

DEPARTMENT OF STATE,
*Washington, November 30, 1945.*

MY DEAR MR. ANDERSON: I have received your letter of November 17, 1945, requesting information in regard to our policy towards China.

In response to your inquiry, I should like to offer the following brief comment on this subject:

We favor the creation of a strong, united, and democratic China which will contribute to peace and stability in the Far East and which will enable China effectively to support the United Nations Organization.

In line with this policy, we deem it desirable and essential that China solve her internal problems. While we recognize that this is a task which China must carry out largely through her own efforts, we seek by all appropriate and practicable means to pursue such policies and action as will best facilitate China's achievement of internal unity and stability.

Among the means toward this end, we propose, with due regard for the realities of the internal situation in China, to assist China to rehabilitate her devastated economy and to develop a higher standard of living for her masses.

We seek to enhance China's international status, as evidenced by the recognition accorded to China in connection with the San Francisco Conference. We feel that collaboration among China, the United States, Great Britain, and the Soviet Union is essential to

the maintenance of peace and security in the Far East, and that such collaboration among these and other peace-loving nations should extend to all legitimate fields of economic and other endeavor on the basis of equality of opportunity and respect for national sovereignty. We hope that China, for her part, will further such collaboration by instituting and carrying out reasonable policies in the great tasks of unification and reconstruction that lie before her.

During the course of the war it was our policy to assist our Chinese allies to the greatest possible extent in the joint prosecution of hostilities against Japan. Such assistance took the form of credits, the grant of civilian and military lend-lease supplies, the training and equipping of a limited number of Chinese military units, the utilization in China of our Air Forces, and other related activities. Since the capitulation of Japan we have been assisting our Chinese allies in effecting the surrender, disarmament and repatriation of the very substantial Japanese armed forces who are now in China.

I trust that the foregoing brief comment will indicate to you the broad lines of our policy with respect to China and will enable you to reply to inquiries which you may have received from your constituents.

Thank you for your courtesy in writing.

Sincerely yours,

JAMES F. BYRNES,
*Secretary of State.*

Mr. Speaker, I wish to congratulate the Secretary for his forthright enunciation of our policy in China. Particular attention should be called to the statement:

We favor the creation of a strong, united, and democratic China which will contribute to peace and stability in the Far East and which will enable China effectively to support the United Nations Organization.

Heavy emphasis should then be placed on the following:

In line with this policy, we deem it desirable and essential that China solve her internal problems.

The Secretary then goes on to say that although this is a task that must be done largely by China herself this Government will "seek by all appropriate and practicable means to pursue such policies and action as will best facilitate China's achievement of internal unity and stability." These are the policies, Mr. Speaker, which must be kept clearly and constantly before the American Congress and the American people. If united support for our country's policies abroad is necessary and desirable, and surely it is, then we must be kept fully informed of all future developments.

Those of us who served in the House of Representatives prior to December 7, 1941, will recall that we were kept very much in the dark on any important international negotiations and commitments that were taking place at that time. We were asked to support our Government's foreign policy without knowing what it was. We were asked to amend the Neutrality Act, to vote for peacetime military training, to support lend-lease, and numerous other important and far-reaching legislative proposals without knowing why. This cannot and must not occur again.

General Hurley's devastating disclosure of a State Department divided against itself at one of the most critical times in the world's history and his appearance before congressional committees will undoubtedly give us most of the information we desire as far as China is concerned. However, we also should have similar information, at regular intervals, with respect to our policies elsewhere in the world. It is my fervent hope that the administration and the State Department will afford us that privilege.

## Delaware Day (1944) Address by Hon. James M. Tunnell, of Delaware

EXTENSION OF REMARKS
OF
### HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

*Tuesday, December 4 (legislative day of Monday, October 29), 1945*

Mr. HILL. Mr. President, annually in the State of Delaware the date December 7 is proclaimed as Delaware Day by the Governor of Delaware. This anniversary is observed to perpetuate in the minds of the citizens of Delaware the action of their forebears in being the first representatives of any State unanimously to ratify the Federal Constitution. It was ratified by Delaware on December 7, 1787. As in former years, on December 7, 1944, the State of Delaware celebrated the occasion. As a part of the celebration there was held a joint meeting of the Rotary and Kiwanis Clubs of the city of Dover, Del. At this celebration Hon. William J. Storey, secretary of state, extended greetings in behalf of His Excellency Hon. Walter W. Bacon, Governor of Delaware. The principal address, entitled "Ratification of the Federal Constitution by the State of Delaware," was delivered by the distinguished senior Senator from Delaware [Mr. TUNNELL]. The address is very able and inspiring, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RATIFICATION OF THE FEDERAL CONSTITUTION BY THE STATE OF DELAWARE

(By Hon. JAMES M. TUNNELL, United States Senator from Delaware)

The Constitutional Convention which was to write the great charter of our liberties was called to meet on the second Monday of May in 1787. The second Monday in May fell on the 14th. However, some of the delegates were not present at that time, and the Convention was organized on the 25th of May in 1787. There were 74 delegates elected to the Convention. Washington was selected as its chairman. In fact Washington was undoubtedly the most influential man in the Convention. However, he spoke but once during the months that the Convention was in session. The Convention did not finally adjourn until September 18. Madison was the floor leader, and it is generally believed that Washington's views followed closely those of Madison. This Convention was one of the most notable in the world's history. It was attempting to prove that democracy could work. This Convention proved that people are capable of ruling themselves. Delaware had five members, George Read, Gunning Bedford, John Dickinson, Richard Bassett, and Jacob Broom. They were all men of ability.

The first great question which divided the delegates was as to whether the Convention was to provide for a national government or a federation. The people of the Colonies and of the Convention had become familiar with a federation. While this organization had not been entirely successful, it had as a matter of fact been around it that the most momentous revolution of the world's history had raged and had been prosecuted to a successful conclusion. However, there was already a good deal of State loyalty at that time. Those who favored a national government did not all hope for the abolition of the governments of the States. But they believed in a strong central government, and one which would overtower any authority and prestige of the State governments. Those who favored a federation believed that the States could join in an organization in which each of the Thirteen States would share its power and prestige. The thought of an improved federation was strong in the minds of many of the delegates. The Articles of Confederation were in the form that many of the delegates believed should be improved and strengthened, but not forgotten. In other words, those who favored a federation believed in an improved or amended draft of the Articles of Confederation. On the other hand there were those, who proved to be a majority of the Convention, who believed that a new Constitution should be written and a new form of government adopted.

This was the first great difference of opinion around which the Convention threatened to divide and possibly dissolve. There were those who believed that the individual independence of the State was entirely irreconcilable with the theory of aggregate sovereignty. There seemed to be no precedent by which the sovereignty of the individual States could be maintained and an over-all sovereignty of a national body recognized. This theory of individual independence interefered with the conduct and the voting of the States in the Constitutional Convention. Maryland was evenly divided on almost every important issue. New York sent Yates and Lansing with Hamilton. Yates and Lansing believed in guarding sovereignty of the State, while Hamilton was in favor of a strong central government, many even saying that he desired a king. Hamilton, because of his beliefs in such a strong government, was not a great factor in the Convention. Patrick Henry was opposed to the proposed new government, but for a different cause. He feared the power of a president. He said, "Your President may easily become king." However, the delegates in the Convention appreciated the solemnity and the magnitude of their task. It was apparent that the new government could be neither a centralized system nor a league, and the question as to just what kind of government could meet the requirements was the first great problem which faced the delegates. If no agreement could be reached on this subject, the whole effort must necessarily fail. The fear of the so-called small States of the power and prestige of the large States seemed to furnish an almost insurmountable difficulty. Strange to say, among the so-called small States were New York and New Jersey, as well as Delaware. Maryland was evenly divided, but was classed as a small State. Connecticut divided its vote sometimes, but was usually on the side of the large States. Madison declared that the division of interests did not in fact lie between the large and small States, but between Northern and Southern States. This is difficult to understand when we find that Virginia, North Carolina, South Carolina, and Georgia joined with the three northern States of Massachusetts, Connecticut and Pennsylvania to constitute in many of the votes the so-called large-State class. Many believed that there could be no real

antithesis between the small States as such and their more powerful neighbors. The real danger, if danger there was, arose from differences of economic interests or diversities of attitudes of minds, and not from the wealth or power of the respective States. The national plan was known as the Virginia plan or the Randolph plan. Three of the characteristics of this plan were as follows: (1) The National Legislature should be empowered "to negative all laws passed by the several States, contravening," in its opinion, "the articles of union." (2) It should be empowered "to call forth the force of the Union against any member of the Union failing to fulfill its duty under the articles thereof." (3) That the "legislative, executive, and judiciary powers within the several States ought to be bound by oath to support the articles of union."

The Randolph plan was a design for a strong national government. The Randolph plan attempted to provide for a government built around proportionate representation. The Patterson or New Jersey plan had the following three characteristics: (1) It attempted to bestow upon Congress authority to regulate foreign and interstate commerce, to levy import and stamp duties, and to make rules and regulations for their collection. (2) It contained a declaration that the acts of Congress and treaties should be "the supreme law of the respective States so far as those acts or treaties shall relate to the said States or their citizens, and that the Judiciary of the several States should be bound thereby in their decision." (3) It also provided that if any State, or any body of men in any State shall oppose or prevent the carrying into execution of such acts or treaties, the Federal executive should be authorized to call forth the power of the confederated States, or so much thereof as should be necessary to enforce and compel an obedience to such acts, or an observance of such treaties. Thus it is seen that even the small-State party saw that the Union could not survive if reliance were based entirely on the whims or inclinations of the several States. Both plans contemplated the use of force to maintain the Union. On a vote between the advocates of the two plans, the seven States of Massachusetts, Connecticut, Pennsylvania, Virginia, North Carolina, South Carolina, and Georgia voted for the Randolph plan. New York, New Jersey, and Delaware voted for the New Jersey plan. Maryland was divided, but Connecticut voted for the Virginia plan. Rhode Island did not participate in the Convention, and the New Hampshire delegates did not arrive at the Convention until July 23, 1787. The national plan, as against the State plan, or the federation, was adopted without a dissolution of the Convention. Bedford, of Delaware, contended that there was no middle way between a perfect consolidation and a mere confederacy of the States. He declared that the large States dare not dissolve the Confederation. He said if they did the small States would find some foreign ally to take them by the hand. This was the boldest threat of the Convention.

The next great question which grew out of the Convention's deliberations was as to the sort of legislative body or bodies the new Government should have. On the question as to whether the first branch of the Legislature should vote according to the Articles of Confederation or in proportion to the number of citizens was decided in favor of proportional representation. Thus we have the House of Representatives to this day elected on that principle. The States of Massachusetts, Pennsylvania, Virginia, North Carolina, South Carolina and Georgia voted for proportional representation in the House of Representatives. These 6 large States voted against an unicameral Congressional plan. Delegate Ellsworth of Connecticut moved for equal representation in the second branch of the Congress. A vote on this was taken on the second day of July, 1787. The result was a tie, 5 votes for and 5 against the motion. Georgia was now divided. Baldwin from that State voted for equal representation and Houston against it. The vote of Maryland which had been so often tied was cast for the New Jersey plan by Martin alone because of the tardiness of his colleague, Jenifer, in coming to the meeting. If Jenifer had been prompt in attendance on that morning, or if Baldwin had continued to vote as he had previously voted, the Virginia plan would have been successful. On this narrow margin did the fateful decision depend. However, the small-State men, including those from Delaware, were beyond persuasion. If the Convention decided against them as to the second branch of the Legislature, or the Senate, the Convention would have been a failure. A committee was then appointed after Martin warned the Convention that no modification could reconcile the small States to the least diminution of their equal sovereignty. There was one member of this committee from each State. Those were the days when the success of the Convention was in the balance. The small States were bound to win if there was to be a success of the Convention. However, some of the delegates realized the importance to the separate States and to the world of the success of the Convention. Gouverneur Morris said he came to the Convention as a representative of America, in some degree as a representative of the whole human race. His patriotic stand was undoubtedly potent in the outcome of the Convention. Thus while the actual vote as to proportional representation in the Senate was a tie, the equal representation delegates, among them being the Delaware delegation, won their point, and we today have equal representation in the Senate under their plan, and as a result of the fight made by our delegates. After a time there were those who believed that equal representation was not the sole method of protecting the rights of the small States. The great compromise as to the Legislative branch of the Government was the second and perhaps the most important of the compromises of the Convention.

There were those who realized that by the delegation of specific and well-defined powers to the National Government there could be a specific protection for all of the States of the new Union. It is a peculiar fact that during the first 2 months of the Convention the question of exact distribution of powers between the States on the one hand and the central Government on the other did not receive much consideration. The delegates had been first interested in the establishment of a permanent union. When this question was determined, the next thought was as to the representation in the legislative branch. When this question was adjusted in one of the greatest triumphs in diplomatic maneuvers in the history of the world, the delegates turned to the thought of the specific powers which were delegated to the National Government. The Virginia plan at first advocated coercion to compel obedience by individual States. However, this was soon abandoned by the advocates of the Virginia plan, but was then embodied in the New Jersey plan. Again, one of the points of difference between the delegates was the right of the Federal Government to veto the laws of the States. This problem was amicably adjusted or passed over. The question of the determination of the constitutionality of laws was discussed in the Convention. Martin of Maryland declared as follows, "As to the constitutionality of laws, that point will come before the judges in their proper official character. In this character they have a negative on the laws." However, no specific provision was placed in the Constitution giving the power to the judges to declare any law unconstitutional.

Again, slavery was a problem which for some time threatened to disrupt the Convention. The failure to prohibit slavery was at the demand of North Carolina, South Carolina, and Georgia. Connected with the question of the West and its participation in the new Government was the question as to whether slaves should be counted in fixing the basis of representation. In the earlier days it was proposed to enumerate three-fifths of the slaves. This seemed to be acceptable to most of the delegates. However, certain men from the far South declared in favor of enumerating all of the slaves. Some delegates from the North were opposed to counting any of the slaves. Thus slavery, the problem which later divided the Nation into two hostile sections, was even then a dangerous question threatening the solidarity of the Convention and the future of the Government.

Then the question of the Executive caused much discussion. There were those who desired great powers to be placed in the Executive, but the delegates from many States feared the power of the Executive. Again, there were those in the Convention who foresaw the development of the great West, and feared the power that the West might wield on the National Government, particularly because of the slavery question. The manner in which the Executive should be elected resulted in the adoption of the provisions for the Electoral College. At that time it was feared and believed that most of our elections for the Presidency would not be determined by the Electoral College. It was thought that there would be numerous candidates for the Presidency at that election, and that the Electoral College would not be able to elect a President by a majority vote. In the provision for the election of President by the House of Representatives is seen the effect of the determination of the small States to have an equal voice in the election of a President by the House of Representatives, each State being entitled to one vote. The federal state which these men succeeded in formulating had the following salient features: (1) sovereign powers were distributed between the States and the National Government; (2) the National Government had only the powers granted it explicity or by implication; the States individually retained the residue; (3) each government within its sphere of authority operated immediately over the individual citizen; (4) neither government was to be inferior to the other or in ordinary operation to come into contact with the other; (5) the constitutional system was established as law enforceable in courts and was superior to the authority of every State acting either through its government or by convention of its citizens; (6) the National Government recognized and made applicable the principle of the separation of powers with certain modifications.

The question of how this Constitution should be adopted by the various States was finally determined by requiring each State to hold a constitutional convention. Delaware had its constitutional convention in December 1787 and by unanimous vote of its 30 delegates was the first to adopt the Constitution on December 7. The other States ratified in the following order:

Pennsylvania, December 12, 1787, 46–23.
New Jersey, December 18, 1787, unanimous.
Georgia, January 2, 1788, unanimous.
Connecticut, January 9, 1788, 128–40.
Massachusetts, February 6, 1788, 187–168.
Maryland, April 26, 1788, 63–11.
South Carolina, May 23, 1788, 149–73.
New Hampshire, June 21, 1788, 57–47.
Virginia, June 25, 1788, 89–79 (89–78).
New York, July 26, 1788, 30–27.
North Carolina, November 21, 1789; August 2, 1788, refused by a vote of 184–83 to ratify until a bill of rights and other amendments were put forth; ratified November 21, 1789, by a vote of 195–77.
Rhode Island, May 29, 1790, 34–32.

Vermont, whose entry into the Union was contemplated by the Federal Convention, adopted the Constitution January 10, 1791, and was admitted March 4.

Rhode Island did not adopt the Constitution nor become a member of the Union until threatened with a high tariff against its products being exported into the other 12 States.

In the adoption of the Constitution by the various States there were bitter and long-continued arguments. One of the arguments presented by Mr. Smith in the Massachusetts convention is interesting and in the following language:

"Mr. President, I am a plain man, and get my living by the plough. I am not used to speak in public, but I beg your leave to say a few words to my brother ploughjoggers in this house. * * * I had been a member of the convention to form our own State constitution, and had learned something of the checks and balances of power, and I found them all here. I did not go to any lawyer, to ask his opinion; we have no lawyer in our town, and we do well enough without. I formed my own opinion, and was pleased with this Constitution. * * * But I don't think the worse of the Constitution because lawyers, and men of learning, and moneyed men, are fond of it. I don't suspect that they want to get into Congress and abuse their power. * * * I don't know why our constituents have not a good right to be as jealous of us as we seem to be of the Congress; and I think those gentlemen, who are so very suspicious that as soon as a man gets into power he turns rogue, had better look at home."

Delaware may be proud of the fact that it was one of the States which stood firmly for equal representation, and one of those which so impressed their ideas upon the Convention that the United States is still experiencing the benefits of its ideas and activities at that time. In the conventions of the various States every possible argument against the Constitution was advanced. After the adoption of the Constitution, and from that time until the present, every argument has been advanced against the constitutionality of any proposed change or improvement in the Constitution. There were those who at first argued that the Constitution itself was illegal because the delegates to that Convention had not been empowered to go so far in the writing of a constitution. Some of the State delegations had been limited to improvements in the Articles of Confederation. After the formation of the Union, it was contended that a protective tariff was unconstitutional.

It was contended that the Federal Government had no authority to legislate as to slavery in the territories. Some of the most profound lawyers of the Nation contended that the Interstate Commerce Act was unconstitutional. The Labor Relations Act was believed to be unconstitutional. Social security brought down the condemnation of the great legal lights of the Nation. Federal Housing met a battery of legal talent pronouncing it unconstitutional. The wage-and-hour laws of the Nation had to meet the same sort of attack and opposition. However, it stands as a monument to the genius, the natural ability, and the determination of the common man. Gladstone said in referring to the Constitution: "So far as I can see the most wonderful work ever struck off at a given time by the brain and purpose of man." Perhaps it is better that progress should be followed instead of led by learning. It has been said that the Constitution itself being formed by such laymen as Madison, Franklin, and Washington was not a lawyers' contract, but a laymen's charter. At each of the great steps in the progress of the Nation an army of the common people has arisen to protect, preserve, and defend the Constitution. Notwithstanding the protests of constitutional lawyers, the Constitution has stood, and either by interpretation or amendment the demands of the people have been met. The greatest Nation of the world's history has developed around that Constitution. It was founded on the eternal principle of the rights of man. It will continue, and our Nation will survive and prosper, so long as that principle is accepted by mankind. Statesmen live and pass from the stages of government. Governments arise, thrive, and decay. Principles and verities are eternal.

## War Food Administration Encourages Soap Monopolies

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter to Hon. WRIGHT PATMAN, chairman, Small Business Committee, House of Representatives:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., December 5, 1945.*

Hon. WRIGHT PATMAN,
*Chairman, Small Business Committee,*
*House of Representatives,*
*Washington, D. C.*

MY DEAR COLLEAGUE: Permit me to draw your attention, and that of the membership of your committee, to a very deleterious situation that has been developing in the War Food Administration of the Department of Agriculture. The method of setting up quotas by this Administration for the distribution of inedible fats, oils, and grease panders to and strengthens the stranglehold that a few large manufacturers of soap have achieved.

Lever Bros., Colgate-Palmolive-Peet, Procter & Gamble, Armour & Co., Swift & Co., and the Manhattan Soap Co.—six companies in all—apparently control considerably over 90 percent of the manufacture of soap in this country. The first three companies make 82 percent of all American soap. There are about 1,233 soap manufacturers in the country. Approximately 1,217 soap outfits are limited to considerably less than 10 percent of the soap made in our Nation.

The War Food Administration, in its interpretation of Order 42 B, sets up as a base period 1940–41 and limits the quota to whatever civilian soap was manufactured in that base period. It thus freezes the small operator and strengthens the monopoly enjoyed by the so-called Big Three and Big Six of the soap industry. Perhaps during the war there may have been some basis for this method of assigning basic products. The twelve hundred-odd soap manufacturers participated in supplying the huge demand for soap for our armed forces. With demobilization such a supply will not be required. In the absence of compelling exigencies, justice and equity should discourage the use of quotas to foster and support monopolies of this nature. It is nothing short of barbarous for one branch of the Government—the War Food Administration in the Department of Agriculture—to encourage such monopoly whereas another branch of the Government—the Department of Justice—seeks to destroy monopoly.

I have a case in mind—the Kamen Soap Products Co.—with a plant in Brooklyn and a plant in Barberton, Ohio. It has been in business for a number of years, but during the base period it converted its entire plant to the manufacture of soap for military purposes. Its product was mainly a cheap soap, because the American forces preferred a cheap soap. The so-called big shots of the industry were loath to make this cheaper product and concentrated on the more expensive, perfumed soap for civilian use.

Because Kamen Soap Products Co. made little or no soap for civilian use during the so-called base period, it is now given a quota which is negligible to the vanishing point. In other words, because this organization converted its production to almost total military uses, it is now to suffer severest penalties, whereas the largest outfits, which fought to maintain their civilian production and did maintain it during the base period, are given huge quotas because thereof.

The Kamen Soap Products Co. is not a "war baby" and did not come into being because of war orders. If it had known in 1941 that it would be subjected to such restrictions in 1945, it might not have undertaken to devote its entire production to war orders for the various services. With this development in 1945 it might have been wiser to devote its production to civilian soap.

Recently the rationing of edible fats, oils, and grease was discontinued. The gathering of waste fats from butcher shops, hotels, and restaurants has been resumed, but apparently this increased supply has not been taken into consideration in connection with the allotment of these quotas. My constituent, the Kamen Soap Products Co., advises me that carloads of inedible fats, oils, and grease are offered to him for purchase, but because of the quota imposed, it cannot make any purchase from this excessive supply.

This order, 42 B, has the effect of forcing producers of the raw material, such as grease renderers and fat renderers, to sell mainly to the largest outfits. Many of them, and I know many of them, do not desire to sell all or most of their product to Lever Bros., Colgate-Palmolive-Peet, or Procter & Gamble, but under these quota arrangements they cannot sell to anyone other than the so-called Big Three or Big Six. In this way competition is effectively stifled, and very formidable blocs are set up.

Frankly, the War Food Administration is in error in its maintenance of Order 42 B, as well as in its interpretation of this order.

At your next open hearing I shall deem it a privilege to be permitted to testify more in detail concerning this arbitrary discrimination against the smaller soap manufacturers.

Very truly yours,

EMANUEL CELLER.

## Peacetime Conscription

EXTENSION OF REMARKS
OF
### HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. COFFEE. Mr. Speaker, in the New Yorker there appeared in the Talk of the Town column some interesting comments with respect to conscription of American youth in peacetime. Because this matter is of vital interest to all Americans, and because the observations of the writer in the New Yorker are especially trenchant and provocative, I am including them herewith as part of my remarks:

THE TALK OF THE TOWN

Booth Tarkington, we see, has come out against compulsory military training. He seems to us peculiarly well fitted to speak

on this subject, being the sponsor of a lad named Willie Baxter, who has taken us safely through two major wars without any previous military training whatsoever. Conscripting American youth in peacetime is the most revolutionary domestic idea that has ever been proposed in the United States, and contains the heaviest charge of social dynamite. Big shots in the Army are pushing the idea hard, but they know not what they push. Certainly no one can predict the consequences of taking Willie Baxter away from Lola Pratt, from One-eye Beljus, and from Mr. Parcher and sending him into camp for a year against his wishes. No one can say what it would do to Willie and no one can say what it would do to the society the Pratts, the Beljuses, and the Parchers adorn. Our own mind is still open on this terribly vital matter, but our heart is shut tight, and every instinct hollers that compulsory training is a wrong number. An American conscript army, in peacetime, would be a contradiction in terms: it would advertise a national desperation and it would build into the Nation the thing the Nation has twice taken up arms to lick.

"Look at it," said Mr. Parcher.

"Look at what?" asked his wife.

"That Baxter boy," said Mr. Parcher, as William passed on toward the dancers. "What's he think he's imitating—Henry Irving? Look at his walk."

"He walks that way a good deal lately, I've noticed," said Mrs. Parcher in a tired voice.

Look well, America, as Willie comes walking down the street. Watch out how you change his strange and lordly gait, for he is an extremely delicate mechanism, mysteriously balanced with an escape movement that defies every law of physics. Remove him from his father's evening clothes, put him in compulsory drab, teach him to salute, and you will have something new in this land. And you won't have Willie.

## Priority of Transportation for Men Serving in Leyte

EXTENSION OF REMARKS
OF
### HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., December 4, 1945.*

Gen. DWIGHT D. EISENHOWER,
*Chief of Staff, War Department,*
*Washington, D. C.*

MY DEAR GENERAL EISENHOWER: An increasing volume of complaints is reaching me regarding the conditions on Leyte Island, the Philippines. These reports coincide so closely in the matter of figures and statistics given that they seem to indicate a really critical condition in that area.

I understand that for the past several weeks there have been approximately 20,000 soldiers with point scores of 80 to 100, or more, awaiting return transportation and the number of embarkations from the area within that time has been only a small fraction of the total number of veterans eligible for return.

I understand, also, that because of the evacuation bottleneck on Leyte several thousand additional soldiers with only slightly lower critical scores are awaiting removal from other islands in the southern Philippines. In the meantime, the rate of returns from other Pacific areas, specifically Luzon, Okinawa, and the Hawaiian Islands, is reported to be comparatively high.

I assume the reports are dependable that conditions in the southern Philippines are about as bad as in any area in which American troops are stationed and are, in effect, much worse than in many areas in which the rate of removal is much higher.

I believe you will agree with me, therefore, that every possible means should be taken immediately to relieve this deplorable situation in the southern Philippines. I hope you will agree, in fact, that the highest priority for troop removals should obtain in such areas where conditions for those troops are worse. A high-point veteran deserves to be returned to the United States, no matter where he may be stationed; but I know you will agree that men in such places as the Hawaiian Islands are practically in Paradise as compared with those in the southern Philippines.

It would appear from these reports that our troops serving on the islands in the southern Philippines have been all but forgotten and that they are living under conditions that seem to be almost intolerable. Authentic information coming to me shows that the climate on those islands is probably the most undesirable of any islands in the Pacific; that our men are surrounded by natives who live in filth and squalor, infested with vermin, where disease is rampant, and that the effect upon the morale of the troops is such that immediate action should be taken to relieve their situation.

I shall greatly appreciate it if you will look into this situation personally and advise me as soon as possible what means can be taken to remove these troops from those island.

With kindest personal regards, I am

Sincerely yours,

FOREST A. HARNESS.

## Discharge Problems Dealing With Forgotten Men in Our Armed Forces

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. PITTENGER. Mr. Speaker, one of my great ambitions in life is to be pleasant and agreeable, but the very nature of the duties of my office prevent such equanimity of disposition or attitude all the time. The people of the Eighth Congressional District did not elect me to the Congress of the United States for the purpose of being a "yes" man. While it is a much more difficult task to say "No," I feel better when I do use that word. I am going to use it right now. When I run across some hopeful, happy, and at the same time hopeless, individual who blabbers about the fine work that is being done in demobilizing the armed forces, I find myself out of tune with the summer weather. My answer is an emphatic "No," because there has been and apparently still is a lot of bungling and a lot of mistakes. While the war was going on we overlooked all of those things and the Commander in Chief of the Army and Navy of the United States could spend money like a drunken sailor—if he felt like it or if his general and admirals felt like it—as long as it went toward the war effort. We were patriotic.

Now that the war is over these boys who have been spending all the money they wanted to spend, whenever they felt like it, wherever they felt like it, just like the proverbial drunken sailor, had better make up their mind that the war is over. We want them to continue spending money on a peacetime basis, but not on a wartime basis. But to get down to the subject matter of this talk: we want the Army and the Navy to demobilize in a businesslike and speedy manner. If, for no other reason, they ought to demobilize because it is costing hundreds of millions of dollars to the taxpayers of this country, just to keep the Army and the Navy going and we certainly do not need all of these men while we are on a peacetime basis.

I have had something to do with this demobilization question and have found it necessary to hire additional help in order to make contacts in connection with numerous cases which come to my office every day. I welcome letters of inquiry and I am glad of the opportunity to be of help to people who have someone in the Army or Navy who can be much more valuable in civilian life, than anywhere else, and who ought to be discharged.

CHINA, BURMA, AND INDIA THEATER OF OPERATIONS

So, some time ago I got a letter from a mother living in my district telling me about her son who was somewhere in China or India or Burma, and that he and thousands of others like him were finding the heat in those lands almost unendurable, that the climatic conditions worked a hardship on them because they were accustomed to our northern climate and asking me to please do something for these men. I promptly told the mother to give me some more information and I told her that her son need have no hesitation in writing me and giving me some facts about what was going on in the China, Burma, and India theater of operations. I had heard from some of the boys in the Pacific and some of the boys in the European theater of war, hundreds of them in fact, but I wanted to complete my study in geography. So I was agreeably and pleasantly surprised to receive a long, interesting, and a splendid letter from a young man whose family I happen to know and with whom I am also somewhat acquainted. He is not a private, but is an officer and is, for the purpose of these remarks, somewhere in the CBI territory. He says:

LETTER FROM SERVICEMAN

In your letter you requested information about what is happening in the China-Burma-India theater of operations. I hope that the information contained in this letter will aid you in some measure to get a fair deal for the men of this command and all servicemen instead of the now proverbial "square deal" that they have been getting.

This paragraph in his letter has the right ring to it. He is not asking that he get special consideration and "the devil take the hindmost." He is interested in seeing to it that we get some first-hand information which will enable

Members of Congress to act intelligently in behalf of the men of our armed forces who are fighting for the four freedoms, maybe, in the four corners of the world.

Then I like another paragraph in his letter, and I am sure that it will interest you, too. He says:

I have very little to gripe about for myself. Although I am over 31 years old, have been married over 4½ years, and have almost 3 years of service in the Army, I have only 6 months overseas and only 35 points toward discharge. It wasn't up to me when and where I'd be sent overseas. I had no voice in that. I only did my job and waited for the inevitable time to come when my name would be on the orders for overseas shipment. Of course, I'm being penalized now for not having been sent overseas right out of basic training or for not having fathered a family in the face of the uncertain conditions of Army service. But about that, I do not complain because I feel that the Army has set up a policy, no matter how unfair it may seem to me. I do complain, however, against the inefficiency and what appears to be downright obstruction of the demobilization plan by both labor, Government, and the services. Because if they are going to foul up the program as set up for the high-point men and the men with 2 years or more overseas, when the devil am I going to get out?

Labor unions that are in a position to tie up ships that are sorely needed for transportation of men back from overseas are striking. I guess they have forgotten about their responsibility to the men who went overseas to save their nice fat pay envelopes in defense industry for them. And the Government that was so quick to grab control of a mercantile concern like Montgomery Ward & Co. now hasn't the spine to step into the breach and see that the ships are kept coming overseas to fulfill the promises of getting men home to their families as quickly as was possible.

The foregoing quotation is just exactly as contained in this letter to me and tells its own story. Right now when it's popular to want to bring the boys back home, everybody wants to get on the band wagon, and I will have more to say about some of these days. But let us continue the story, because this young fellow has a real message. In another paragraph of his letter he says, and he is talking about the United States of America right now, or rather its Government:

That Government even limits the number of men that may be returned on cargo ships to 12 in spite of the fact that some of the ships have passenger space for as many as 25 men. Those same ships didn't have any limitations such as that when they brought the men overseas. Many of the ships brought triple loads of men who had to sleep in shifts on the same bunks. A man could sleep 8 hours, but he couldn't go lie on his bunk at any other time, because there was another fellow in it that had to get some sleep, too. Now the ships are sailing without men to fill the bunks that they do have.

The Army? What is it doing? From where we sit, it doesn't seem that they are doing all that they can. Seems that they have too good a deal in the higher ranks and they are not quite ready to give it up. One nice solution would be to reduce the upper crust in this caste system that is called a democratic Army to their permanent rank before the war instead of nominating and confirming their present rank as their permanent rank. I am sure that they would be quite a bit more eager to speed up demobilization instead of impeding it.

Well, Mr. Speaker, I do not want to make these remarks too long, but this young man has a lot of other things to say that are important. He encloses some copies of some documents which I hope to use in my remarks on some other occasion. One of these documents calls attention to the fact that certain students in one of these countries who want to come to this country for the purpose of going to our universities can get passage on ships while GI Joe has to wait until some future undetermined time. This is certainly interesting, and I have no doubt that one of our well-known Government departments downtown is responsible for such atrocious procedure. Can you imagine a Government official who gives priority to someone in these three countries so he can come over here and complete his educational work, while thousands and tens of thousands of our young men are over in China, Burma, or India, unable to come back home and complete their school work? What is the present administration going to do about it? I purposely do not identify the author of this letter because something might or might not happen to him, and I do not want to be indiscreet. If you are interested I have his letter on file. I shall transmit a copy of these remarks to the War Department and the Navy Department, because I know they will be interested in really getting some facts which they apparently have greatly overlooked.

---

## The Federal Government and the Aviation Industry—Partnership or Peonage?

EXTENSION OF REMARKS
OF
### HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Robert H. Wood, editor of the Aviation News:

The subject assigned me takes on renewed importance with the end of the war and return to peace. I was not surprised to learn that the title was phrased by an industry executive. It would tax the imagination to picture a Federal Government official who would worry about the possibility of his being plunged into peonage by an industry.

There are innumerable examples of current disagreement between the aviation industry and our Federal officials, most of them well publicized in our aeronautical magazines.

Industry chafes from a lack of a plant-leasing policy. It feels that failure of CAB to set up a separate cargo aircraft category in the civil air regulations springs mainly from concern over how the Air Line Pilots Association would feel about it. Industry cites the long delay in getting a workable tooling arrangement with Government as a primary reason why our light-plane plants are only now barely getting into production. It feels that policies in surplus aircraft disposal, especially to the air lines, has been a powerful deterrent to production of new and improved transports. It fidgets and worries itself sick because no one in the Federal Government has come up with a national military policy and said, "This is our program." It wonders why the original CAA airport program was not completed many months before it was, and why Government fails to take action on a national air-marking program so even the best pilots, who still get lost, find themselves. It points to the failure of industry and Government to get together on instrument landing equipment so that ultra-modern $750,000 transports need not sit idle on airports in bad weather for days at a time, eating up more depreciation than fuel. All of these disagreements make absorbing reading in the press because of our own personal stake in the outcome.

But to the outsider and the public it must sometimes seem that as far as the Federal Government and the aviation industry are concerned it is not a question of "partnership or peonage" but "partnership or combat."

There is a problem, however, which has not received its share of attention, and which deserves more careful thought from us all. If we do not soon raise some questions we may find a serious threat of peonage to aviation. And by aviation I mean not only the aircraft manufacturers but every facet of aviation activity from that of the individual private pilot or plane owner to the aircraft service operators, the airlines, and our own national defense.

That problem is the future attitude toward aviation of a Federal agency in Washington which we all have ignored for too long a time, primarily because of a striking lack of information and knowledge about it and a fatalistic attitude that nothing could be accomplished if we did know about it.

That agency is the Bureau of the Budget, in the Executive Office of the President. Its prime functions, as far as we in aviation are concerned, are: (1) to assist the President in preparing and administering the Budget; (2) to assist the President by clearing and coordinating advice on proposed legislation and by making recommendations as to Presidential action on legislation. There are other functions, such as to plan improvement, development, coordination, and more economical operation of Federal agencies, and to conduct research into better management.

The power this agency wields is tremendous. It trims and dictates by absolute veto power the budget of every Federal agency. The only appeal the agency has open to it is so complicated that few of them are willing to put up the fight very often. Further, the agency must rearrange its budget to omit any trace of vetoed items before the revised budget is sent to Congress, and no executive of that agency can make any reference whatsoever of an item which has been reduced or eliminated by the Budget Bureau unless he is asked specifically by a member of Congress during appropriations committee hearings. The only hint of the extent of cuts which have been made in an agency's budget is the appearance of the total figure which was originally requested.

The Budget Bureau also has the power to retard and discourage any legislation—proposed, or before Congress—by stating simply that the bill is not in accord with the President's program. Many Congressmen, especially on the majority side, are extremely hesitant to push bills which have been so branded.

An expansion of the Bureau's activities will not be surprising. As a matter of fact it had a hand in formulating our international aviation policy which most of us contend was the mission by established law of the State Department and the Civil Aeronautics Board. The Bureau's rightful function was to see that State and CAB did not work at cross purposes and to act as liaison with the White House.

There is an unhealthful and unnecessary awe of the Bureau of the Budget, and all of its works, traceable probably to its location in the executive office, plus the subordinate fact that its small number of personnel, about 600, are ordered to maintain strict silence on even the most routine activities. Probably no other Federal agency is so free from the public's gaze and the democratic glare of the limelight. Certainly there is no other Federal group with as much power whose ordinary daily workings and organizational set-up are such a mystery, even to high government and industry executives.

Despite the placement of the Bureau in the Executive Office, however, it should be realized that the President cannot consider personally a fraction of the matters he sends to the Bureau. It is also obvious that the Bureau must rely mainly on its own staff. Its personnel are administrative analysts, budget examiners, fiscal analysts, legislative analysts, statisticians, and economists, all reputedly of high professional caliber. Occasionally it may call on outside experts as consultants, but they, likewise, are analysts, examiners, and statisticians. These men are top-flight theorists but with little experience, frequently, in industry, science, or even the world of hard knocks. They are, therefore, lacking in vision and ability to interpret the great transformations going on about them and hesitate to sacrifice perfection for the more realistic job of planning for tomorrow on the basis of the disorganized world which lies before their eyes. They would stop the world for a year until they could start it off again with a better plan.

This was well illustrated a few days ago when an Army general disclosed to a Senate appropriations committee during a hearing that the Budget Bureau, which "acted largely on its own initiative," had cut cut major research items for next year because it felt the Army should pause and take stock of what had been done and what the Army proposed to do. Postponement of research for about a year was actually suggested by the Bureau instead of permitting the Department to consolidate and take advantage of the latest scientific advances.

Perhaps a few other examples of the Bureau's activities in aviation will be enlightening

Despite the recent unanimity of our most respected military and industrial leaders on the absolute necessity of continuing our research, the Bureau cut the Army Air Forces' latest requests for research from $245,000,000 to $115,000,000. The House Appropriations Committee took the Bureau's figures as gospel, passing them without change. The Senate, however, raised the figure to $200,000,000, or an increase of $85,000,000 from the Budget total. This item is now in conference and there is no assurance that the conferees will reject the original Budget Bureau figure, although they have every right to do so.

In the same bill, the first supplemental appropriation rescission, the Navy requested $143,000,000 for aeronautical research. The Budget Bureau slashed this to $61,000,000 before permitting the Budget to be sent to Congress. Again the House accepted the Budget Bureau's action. The Senate, however, restored the full amount for which Navy had originally asked, after it heard the Assistant Secretary for Air, John Sullivan, warn of the seriousness of this reduction. Here again, the final figure is up to the conferees, and Bureau may still have its way.

Many of these funds which the Army and Navy had requested would have been reflected in orders to the aircraft industry.

If these actions by the Budget Bureau are indicative of its attitude on all aviation research and development, then we have still another reason for exerting every effort to wrest from the Government a national research policy. However, Congress can protect us in this interim if it does not hesitate to override the Budget Bureau as often as it deems necessary in the public interest.

Another recent example of the Bureau's myopic tendencies was its flat turn-down a few days ago of a CAA request for civilian-pilot training funds. This followed closely the elimination by the Bureau of a $6,000,000 item from the Navy budget for an aviation training program, to keep the postwar fleet supplied with pilots. The result of this cut was described to Senate members of the Appropriations Committee as "extremely dangerous."

At the time the RFC was struggling to start a surplus-aircraft disposal system the Budget Bureau refused to authorize added personnel to do it. After several months, of course, it was compelled to permit the action, but in the meantime hundreds of additional planes accumulated and the ultimate cost to the Government and the taxpayer was much higher than if RFC's pleas had been met promptly in the first place.

One of the classic examples of Budget Bureau hindsight was the persistent refusal some years ago to permit estimates for the War Training Service to go to Congress in the amounts its sponsors knew were absolutely necessary. WTS then was preparing pilots for our own wartime Army and Navy. Three times the Bureau cut WTS drastically. Finally, after husky support from various aviation groups, and Senator McCarran, the agency was permitted to request the proper amounts.

When CAA finally sent its national airport plan to the President for submission to Congress, it was sent back by the Budget Bureau as ill considered. The plan was rewritten, improved, and returned. Again Budget turned it down. Finally it became sensitive to public demand—a lesson aviation should take to its heart for the future—and relented to the extent of permitting CAA itself to submit the plan to Congress, rather than allowing the President to transmit it with a request for action.

Here again the Bureau had sought perfection because it contended that no airport plan could be drawn up without a Nation-wide survey—money for which, incidentally, CAA did not have. This survey, Budget held, must take into consideration war-built airports which might become surplus. CAA had already tried and failed to get either Army or Navy to give any idea of which, or how many, airports ultimately would be declared surplus.

As in so many other Budget Bureau rejections, its objections were conscientiously arrived at, but impractical and unrealistic. One would have a right to feel that Budget Bureau's analysts should have some conception of the vital need for civil airports and the importance of hundreds and thousands of them in increasing the utility of the airplane to the public.

There is another example which is important because it illustrates the contention being made in this paper that the Budget Bureau takes many actions in the name of the President which the President himself would not agree was in accordance with his policy. One agency, which must remain unnamed, had a vital project which the Budget Bureau disapproved. An appeal to the top Budget Bureau authorities also failed, and the agency was thus unable even to send its request to Congress. One of the agency heads finally went to the President, explained the project and the history of the case, and promptly received a memorandum to the Budget Bureau ordering approval of any budget the agency deemed necessary.

These comments are not made in derision of a hard-working staff in the Budget Bureau, but they are made in an attempt to convince us that we must scrutinize the Bureau critically, as we do our friends at CAA, CAB, State, Commerce, Army, Navy, and Congress, and make known our wishes as freely; and the sooner after the rejection of vital items, the better.

We must remember that Budget Bureau makes many decisions and interpretations, necessarily, without consulting the President, and that, therefore, all Budget action should not be interpreted as having come direct from the President. A political scientist would reject this thesis as a basis for action, but a resident of Washington will accept it as realistic advice, I believe. Let us drop the fatalistic attitude we have had toward projects rejected by the Budget, and campaign for their reinstatement if we are convinced of their necessity.

We must remember that the Budget Bureau is a small agency. It cannot possibly know everything about all things. Certainly, it cannot be an authority in aviation. It has no aviation section or unit or, as far as can be learned, even a single full-time specialist in aviation. It does maintain a continuing study in transportation, in which aviation is considered still as a luxury means of transport, and subsidiary to older modes. Its staff is quoted as favoring the placement of aviation regulation in some single aviation agency such as the ICC or a new consolidated body. It is obvious to you and to me that such action would result in control of not only the air transport industry but perhaps even the nonscheduled operators and private flying by men who are essentially railroad-minded. The threat of a single transportation agency is very real.

With the end of the war, the day is over when the Budget Bureau approves automatically all military requests. Yet we seem convinced, as a Nation, that we must never again be unprepared for war. Furthermore, as the emphasis returns to commercial aviation we must expect to see more and more restrictions attempted by the Budget Bureau. By consistent lack of vision and a negative policy of cost cutting, it can become the No. 1 enemy of an expanded postwar commercial and military aviation demanded by the people. It is lagging far behind public opinion, stressing theories which cannot, in themselves, be criticized, but which are depressing aviation because they are not bound up with realistic appraisal of today's rapidly moving developments and what they will mean tomorrow.

This paper is not an argument for padded pay rolls or pork-barrel legislation. This cannot be overemphasized. But it does seem that too often the Budget is being used, as far as aviation is concerned, more to save money, than to spend wisely. Character of public expenditure changes greatly during a country's development. The public demands from its Federal Government maximum benefit from every new service which attains utility and makes possible a better life. Even the Budget Bureau's personnel will concede that economy and efficiency are not synonymous. Mere retrenchment or niggardly increases in Budget, without consideration for the value of the return, never assure better public service, or security.

We have still another reason to demand that Congress, our elected representatives, act independently of the Budget Bureau in aviation matters, whenever necessary. By the law of the land aviation is not merely another activity to be regulated. For our Civil Aeronautics Act is the only law in transportation which orders the Civil Aeronautics Administration and the Civil Aeronautics Board not only to regulate, but to foster, encourage, and develop.

This unique dictum we should never forget, nor allow Congress itself or others to forget.

## In Opposition to a Proposed Quota of Swiss Watches

EXTENSION OF REMARKS

OF

**HON. EMANUEL CELLER**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. CELLER. Mr. Speaker, the State Department has proposed to the Swiss Government that it set up an export quota for watches coming into this country. This suggestion is the result of a campaign of misrepresentation developed by three American watch manufacturers, the Hamilton Watch Co., the Elgin Watch Co., and the Waltham Watch Co., who are presently under indictment by the Department of Justice for entering into a conspiracy to violate the antitrust laws. It is rather anomalous that the State Department would come to the aid of companies seeking to form a monopoly and who are under such a cloud.

There is herein set forth a communication which I have addressed to Mr. Arthur Paul, Director, Office of International Trade Operations, Department of Commerce, Washington, D. C., outlining some of my views on this proposed quota:

DECEMBER 4, 1945.

Mr. ARTHUR PAUL,

*Director, Office of International Trade Operations, Department of Commerce, Commerce Building, Washington, D. C.*

MY DEAR MR. PAUL: I invite your attention to a very serious situation that is developing with reference to the importation of Swiss watch parts and Swiss watch movements. On October 26, 1945, a hearing was held before the Committee for Reciprocity Information. This committee is comprised of Mr. Lynn R. Edminster, vice chairman of the United States Tariff Commission (chairman of the committee); Mr. H. Gerald Smith, Department of State; Mr. George B. L. Arner, Department of Agriculture; Mr. H. P. MacGowan, Department of Commerce; Mr. Raymond Mikesell, Treasury Department; Mr. Harold H. Neff, War Department; Lt. Phil Young, Navy Department; Mr. Edward Yardley, executive secretary.

This was an informal hearing at which representatives of the American Watch Assemblers Association were present. As the name implies, this association is composed of members of the American watch importing and assembling industry. This association expressed its vehement opposition to the proposal, apparently emanating from a group of American watch manufacturers, to wit, the Waltham Watch Co., the Hamilton Watch Co., and the Elgin Watch Co., which companies are seeking to establish a quota on the imports into the United States of Swiss parts and movements. Such a quota would fly in the face of the theories advanced by the Democratic administration and its desire to expand international trade and be contrary to the present arrangements existing between the United States and Switzerland. High tariffs, quotas, and restrictions of this character have no place in the program announced, not only by President Truman but Secretary of Commerce Wallace, your immediate superior.

The Administration Seeks To Provide for 60,000,000 Jobs. That is the title of a book so ably written by Secretary Wallace. To insure that full quota of employment, we must maintain exports upward of $10,000,000,000. We cannot export unless we import. International trade is no longer a one-way street. It is difficult to understand how we can with one breath express the desire to increase our international trade by way of increased exports and imports and in the next breath set up a quota system.

During the war we built 56,000,000 tons of ships. We must maintain much of that tonnage for obvious reasons. We cannot maintain it unless we have cargoes to load those ships. We cannot have such cargoes unless we expand our exports and imports. Again, any type of quota such as that proposed by the American watch manufacturers would knock the props out from under an essentially expanded merchant marine.

It is very significant that these three American watch manufacturers are now under indictment at the instigation of the Department of Justice for a violation of the Clayton Act and the antitrust laws, in that they arbitrarily restrict sales and distribution of their products at the wholesale and retail levels and so restrained the sale thereof as to discriminate unjustifiably against certain dealers such as retailers, catalog houses, subjobbers and wholesalers. It is charged that they formed together in a conspiracy in restraint of interstate commerce.

I am informed that the State Department has insisted upon a quota of 3,000,000 watches and watch movements from Switzerland per annum.

It is rather anomalous that one branch of the Government—the Department of Justice—has called these three companies malefactors and law violators, while another branch of the Government, by determining a Swiss quota, would intensify that monopoly and thus bestow an accolade of approbation and good will on violators of the law.

Setting up a quota is monopoly both ways. It creates favoritism and monopoly among the Swiss watch exporters and conversely, the same set of conditions for American watch importers.

Cogent proof was submitted to the Committee for Reciprocity Information that there is a tremendous backlog of demand for watches and that this demand in 1946–47 will run up to about 10,000,000 watches. These watches are not the cheap type but the jeweled movements. The maximum number of these watches that the American manufacturers could provide is approximately 2,000,000 per annum. If the aforesaid quota prevails, it will leave 8,000,000 watches to be supplied. This will permit a demand far greater than the possible supply and allow the American manufacturers to reap a rich harvest by greatly increasing the price of their product. This would be legalized highway robbery, with the State Department as an accomplice, and bring about an inflationary trend in the jewelry business.

The retail jewelers have not been apprised of these facts. They have not been invited to testify and their advice and counsel has been deliberately disregarded.

The American watch manufacturers have sought to advance the erroneous idea that there will not be an excessive demand for watches and that they will be left out in the cold. It is pertinent, in this regard, for me to quote a portion of an advertisement which appeared in all the metropolitan dailies throughout the length and breadth of the land. It was inserted by Estabrook & Co., New York bankers, and used in connection with an offering of the stock of the domestic watch manufacturers. In part, it read as follows:

"A spot check of the retail establishments in New York and the department stores in Chicago indicates that there are at least 2 years of full capacity production ahead for the domestic watch manufacturers."

This advertisement is quite consistent with the surveys that show that for the next few years there will be a considerable increase in the sale of American watches.

Recently in the Wall Street Journal a news item appeared to the effect that the Elgin Watch Co. had recently purchased the plant known as the Elastic Equipment Co. at Lincoln, Nebr., and that Elgin purchased this plant in order to secure greater plant capacity to supply the greater demand for its watches.

Frankly, surveys show that there will be plenty of opportunity for the entire watch industry; there will be an unprecedented demand for watches—those of Swiss origin and those of American manufacturers.

To begin our postwar program by imposing a quota on the importation of watches and watch movements from Switzerland would be quite contrary to the administration's international policy. It would be in direct contradiction to the administration's program for freer international trade, freedom from exorbitant rates of duty and freedom from irritating and vexatious trade restrictions.

The American Watch Assemblers Association constitutes a truly American industry. They employ thousands of people and are as genuinely an American industry as that represented by the Hamilton, Elgin, and Waltham watch companies. The latter companies also import portions of their movements, particularly the jewels. The assemblers of watches and the manufacturers of kindred products for them, such as bracelets and gold and silver watch straps, etc., boxes, etc., involve a completely American productivity. The number of workmen employed in various capacities by the American Watch Assemblers Association compare very favorably to those employed by the domestic companies or American watch manufacturers.

In the year 1940, the import value of watches and watch movements amounted to $10,622,000, of which there was a duty paid of $6,356,000. The sales value of the assembled watches made from these imported movements, taken at the retail price level, was approximately $82,500,000. Of this amount, $10,622,000 was paid to Swiss manufacturers and $6,356,000 was paid as duties to this Government. There remained $65,522,000 in the United States which covered the cost of labor, cases, bracelets, boxes, overhead, advertising, selling expenses, taxes, and profits of both assemblers and retail jewelers. Thus, out of a business in the United States at a retail price level of $82,500,000, only $10,622,000, or approximately 12 percent went abroad.

These figures are typical and conclusively show that the watch assembling is almost exclusively a domestic enterprise.

Very strange to relate, there have been no published hearings so that my colleagues and myself, in the House and in the Senate, could secure information as to the basis for the plea of the American watch manufacturers in their desire to set up a quota. We have not been told the story. Why this matter should be shrouded in mystery is difficult to comprehend. I personally should like to peruse the arguments advanced by the American companies in this connection. I think it is incumbent upon you, in your newly appointed capacity, to uncover these facts.

If a quota is placed on Swiss watches and Swiss movements, it will give a great impetus to smuggling of same into the United States inasmuch as this is the customary reaction to such restrictions. If Switzerland is limited in its sales of watches to us, it must expand its market elsewhere. A quota on the importation of these watches and movements from Switzerland will force that country to reduce her imports of other products from the United States.

I have no doubt, also, that Swiss watches will be "bootlegged" into the United States. In 1939, for example, the United States imported from Switzerland about 15 percent of the total number of watches made in Switzerland. During the war, because of the

abnormal demand of our armed forces, Switzerland sent into the United States about 50 percent of its total manufacture. That increase was also attributable to the closing to Switzerland of many of its markets in other countries. In the postwar period, these markets will again be available and it is logical to assume that the demand in this country will be less than 50 percent of the total Swiss output.

As I understand it, the State Department has requested the Swiss Government to consent to this quota of 3,000,000 watches per annum. The Swiss Government may refuse. I think it should refuse. In that event, our Government might then declare the trade treaty with Switzerland at an end. Negotiations would then have to be developed for the purpose of effectuating a new treaty. We have just concluded a treaty with Switzerland and I doubt whether there will be a disposition on either side to abrogate a treaty, and undertake the task of implementing a new one.

Of course, Congress could, by enactment, set up a quota but I doubt whether Congress would do this.

It may be possible that the State Department desires to coerce the Swiss Government into an acceptance of this quota restriction.

I am most anxious to discuss this matter with you fully and perhaps arrange a conference with you at which representatives of the American Watch Assemblers Association will be present.

I am sending a copy of this communication to Secretary Wallace.

Thanking you for a prompt reply, I am

Very truly yours.

## Pat Hurley for President

EXTENSION OF REMARKS

OF

### HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am delighted to honor my personal friend of many years standing, a former fellow citizen of Tulsa, Okla., by having printed in the CONGRESSIONAL RECORD the following editorial by Richard Lloyd Jones, appearing in the Tulsa Tribune of November 30, 1945:

Our Tulsa townsman, Gen. Patrick J. Hurley, has given the State Department a sock in the jaw it needs. Its timidities, its confusions, and its intrigues with our diplomats have made a mess with foreign nations.

The American people are forthright. Until Franklin Roosevelt's New Deal outfit began to play politics with diplomats our foreign relations have always been an open book. We used to be a people of our word.

General Hurley shocked Congress into action on the firing line of duty. General Hurley took Congress by the collar and woke it up. He gave Congress courage. Pat Hurley has done more in the last half dozen days to bring our Government back to American principles and practices than has been done by any man since Franklin Roosevelt went into the White House a dozen years ago.

Gen. Patrick J. Hurley is the kind of man the country needs and is looking for. He is a man of positive action. He will condone no doubledealing, no dirty work. And when he finds he is up against the uncurbed, un-American, seditious activities of public officials, he explodes with heroic righteous wrath. The whole country is hungry for just this unmistakable, stalwart honesty. The overwhelming public applause for Hurley's forthright honesty in publicly proclaiming his resignation protest is a demonstration we have not witnessed in years.

Hurley is a man the people have been waiting for. A man who stands right up in meeting and tells the truth.

Hurley would rather resign an office of great importance than to repudiate the principles for which this war was won. He would rather step out of high office than not be free to tell the Secretary of State that he is a timid man, compromising and wrong. Hurley stepped out of high office to bring to the attention of the American people that the subtle intrigues and the timidities of our State Department are laying the fagots for a third world conflagration. Every American wife and mother will thank God for Hurley if he can prevent that.

General Hurley got our of office that the public might know who the little un-American, foreign-minded members of our Congress and the State Department are. He tagged them. And it took a Hurley to tag them.

Oklahoma has produced the man. He has the stuff we need to President this Republic. He is the kind of man we need to return us to the constitutional laws of the land, and to frank and forthright relations with all the nations of the earth.

What a wholesome thing it would be for this Nation to turn General Hurley's righteous indignations on the push-around abuses that the bureaucratic meddlers have made with the people's constitutional rights.

Labor would have a square deal with Pat Hurley. He knows what it is to toil in the mines, and as a day laborer work as teamster. But the labor bosses who run an infamous racket would have a match in General Hurley that would put them in their place. Labor would get a square deal and be protected from its own racketeering bosses.

Pat Hurley would protect business in its rights. This Nation has been made by business enterprises. Business built our churches, our colleges, our hospitals, and our libraries. Business has promoted our arts and endowed our symphonies. Business has multiplied the gadgets that have unbent labor-burdened backs. Freedom of competitive enterprise gave us the sewing machine and the telephone, the chilled plow and the rubber tire, the electric lamp and the cotton gin. Freedom of competitive enterprise, in 100 years, lifted American life above all the human achievements from the surrender of Cornwallis back to the dawn of time.

For a dozen years we have had nothing but nasty, dishonest, and unjust harassments and annoyances, condoned by cowed Congress and sanctioned by courts that contemptuously cast suspicion upon the men who make work for workers, the men who lightened our labors and embellished our lives.

For a dozen years the men who have made the wheels of industry go round have been looked upon with suspicion by a business incompetent in the White House. Gullible citizens have been taught by the small-minded New Deal politicians that anyone is a foe of society who labors to pave the pathway of progress.

Patrick J. Hurley believes in human rights. He believes in justice and fair play to all people. He would gather about him men who would leave no stone unturned to do justice to every citizen of this Republic. There would be no racketeering and there would be no graft, there could be no taxation to promote the political fortunes of the bureaucratic repudiators of American principles and practices.

Patrick J. Hurley has everything to make a strong candidate for his party to promote for the Presidency. Pat comes out of the life of the frontier. He rose out of the heart of the country. His country fills his heart. He is no fireside crooner, but he is grandly articulate with honesties.

A man arises who has all the fitness to meet the world's imperative needs. Honest and efficient. A forthright fighting American. Pat Hurley for President.

## Some Points on President's Proposed Labor Legislation

EXTENSION OF REMARKS

OF

### HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. MARCANTONIO. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following analysis of the President's labor message prepared by the legislative representative of the United Clerical Workers of America, CIO:

SOME POINTS ON PRESIDENT'S PROFOSED LABOR LEGISLATION

A. Proposal has no relation to present situation and is affirmatively misleading.

1. Labor unions in every major current dispute have been "cooling off" for more than 30 days.

(a) In steel, companies broke off negotiations and refused to bargain in October. It is now December and union has been attempting all that time to get companies to resume negotiations.

(b) In auto, union withheld action for more than 60 days while it made offer after offer to company, to negotiate publicly, to present facts publicly, to arbitrate.

2. Companies are today arrogantly refusing cooperation.

(a) In steel, Secretary of Labor has twice invited parties to confer with him. Union has accepted; company has refused even to meet with representatives of Government.

(b) In auto, company has refused public negotiations, arbitration, and has even refused to come to Washington at request of Government representatives.

3. President has pointed out need for wage increases. All available economic data indicate companies can pay wage increases without price increase. Companies have refused to meet these facts on their merits and flatly asserted that their profit position will not be revealed to union, to Government, or even to their stockholders. Administration has even suggested availability of price increases if 6 months of operation show that they will be necessary.

In the light of above, a legislative proposal that unions "cool off" for 30 days is a gratuitous insult to workers and to the intelligence of the American public. It evades the administration's responsibility for dealing with recalcitrant management and is deceptive in that it offers a proposal which would make absolutely no contribution to solving present-day problem.

B. Proposed legislation from long-range view weakens labor in collective bargaining, puts Government on side of management, and is contrary to sound labor relations policy.

1. Denies basic right of labor to strike. This is patently true on the face of the proposal insofar as the 30-day period is concerned. It is further true far beyond the 30-day period since, as indicated below, the denial for the 30-day period may frequently mean in practical effect a total denial.

2. Proposal imposes forcible delay on workers' right to exercise their economic strength. Employer never suffers by delay, since he always has the power to maintain the disputed working conditions. Workers usually, and

in fact almost always, suffer by delay, since it forces them to keep their organization primed and ready for strike if necessary over a prolonged period.

3. The proposal would prevent the workers from adequately marshalling their forces for strike if necessary. The determination as to whether they will be required to endure the 30-day waiting period is in the hands of the Secretary of Labor. If employer stalls during collective bargaining, union cannot safely start marshalling its forces to meet employer's tactics since they have no way of knowing whether at the end of negotiations the Secretary of Labor will or will not demand the 30-day period. Union is then faced with alternative of allowing employer's tactics to disintegrate union morale or of organizing for strike with possibility that they may be told that they will have to keep their strike organization primed but in leash for additional 30 days. This is an extremely, and often impossible, task with hundreds of thousands of workers involved.

4. Because of this weakening of labor's economic strength, the proposed legislation would impede sound collective bargaining. Employers, aware of weakening effects of law on union, would be even less willing to negotiate in good faith or to grant legitimate demands of their employees.

C. Comparison to Railway Labor Act gives no justification for proposal.

1. Facts indicate that even in railroad industry, Railway Labor Act has not operated to best interests of railroad workers. Despite well organized unions, railroad wage scale substantially lower than comparable rates in other industries. Railway Labor Act has actually tied hands of railway unions in efforts to better conditions.

2. Railway Labor Act operates in industry with long history of organization and in which management has abandoned hope of destroying unions. Throughout the rest of American industry management, as indicated by its tactics at present time, still hopes to and is attempting to destroy organizations of their employees. Enactment of President's proposal would simply strengthen that hope.

## Terminal Leave for Enlisted Personnel

EXTENSION OF REMARKS

OF

### HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, I have today introduced a bill to grant to enlisted personnel in our armed services the same rights that officers now receive under terminal leave. An officer is allowed 30 days' annual leave and, when he cannot take it, the leave period is allowed to accumulate. Under this system an officer can, under the law passed by Congress, stay on the service pay roll for that period after his discharge and receive his base pay for the amount of time covered under terminal leave. Terminal leave, as such, should be granted to enlisted personnel as well as to the officers.

It is true that enlisted personnel receive mustering-out pay but so do officers up to and including the rank of captain. Terminal leave is not a privilege that only one group should be entitled to but one which should be shared by all enlisted men and women of our armed forces serving during the war. The discrimination between officers and enlisted men, as exemplified under terminal leave, is too rank to be allowed to continue and should be adjusted and corrected at the earliest opportunity.

## Peacetime Conscription

EXTENSION OF REMARKS

OF

### HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include several letters and petitions from outstanding church groups of various denominations opposing military conscription. I also include excerpts from a very brilliant speech recently delivered at Roxbury, Mass., by His Excellency, Archbishop Richard J. Cushing, in which this outstanding churchman and spiritual leader vigorously opposed peacetime conscription:

Speaking at the communion breakfast of St. Patrick's Alumni, Roxbury, and later at a similar event sponsored by St. Joseph's Alumni, Archbishop Cushing repeated his opposition to peacetime military conscription. "There is another matter," he said, "on which I wish to comment briefly. It is a matter which would affect the lives of all. It would affect the futures of individuals and their personal, vocational plans. It would affect the futures of families and their morality. It might even have a serious indirect effect upon the church itself, especially upon the future of its education and the vocations to its priesthood. It would radically change, in many important respects, our whole American way of life.

"I refer to the proposal that we adopt a program of permanent conscription of young men for peacetime military training.

"Judging from the daily papers, many people propose to defeat this program for political and military reasons. There are many good grounds upon which apparently they can do so. I am not concerned with these. I am concerned with moral and social reasons why peacetime conscription would be disastrous for our democracy.

"First of all, let it be remembered that this idea is not a new one. If we adopt it, we will not be the first nation to have done so. Wherever permanent conscription has been tried by any major nation it has a bad history. Since first Napoleon used peacetime conscription and Prussia followed his bad example, the system has invariably led to dictatorship, to militarism, and to those competitive armaments which have been the curse of Europe and the crippling of its culture.

"That is what Cardinal Gasparri meant when he counseled the nations to outlaw this system after the last war. Cardinal Gasparri knew Europe well. He knew its history and the causes of its wars. He knew the things which alone could save Europe; he knew the things which had ruined it. He blamed peacetime conscription for the conditions and the atmosphere in Europe which produced wars in every generation. He said 'Peacetime conscription in Europe has been the true cause of so many and such great evils for more than a century, that the only hope (for the future) lies in its total, simultaneous abolition by the nations.'

"The great cardinal was right, and those who refused to heed his advice on this point were wrong. By tolerating the continuance of peacetime conscription in Europe, they made World War II inevitable. God forbid that we now imitate Europe in her worst systems! God forbid that a program which has been so bloodily discredited in Europe should now become part of our postwar program! It may interest you to know that many of America's greatest peoples came to this country precisely in order to escape the moral and social conditions in the Europe of the last century which conscription caused. One of America's most envied characteristics in the years before the war was her freedom from the regimentation and the moral decay which permanent conscription has always brought with it in Europe.

"Our people have never refused their wholehearted cooperation to any military program made necessary by a real emergency. But, emergencies are by their very nature temporary. If a temporary emergency ever exists which appears to require conscription, then people living in a Democracy have a right to know what that emergency is—what is being done about it—and why military measures are necessary in order to meet it. But no temporary emergency should be made the excuse for a permanent program of militarism, a program spelling the end of our total way of life.

"Religious people have further grounds for reservation with regard to these proposals. We are faced with appalling evidence of the effects on national morality of conscription in Japan, in France, in Germany, and in the other major nations which have established this system. We hear disturbing reports of what the Army policies on morality, especially sex morality, can do and have done to the moral philosophies and practices of even our boys. Even temporary, necessary wartime conscription brings with it serious moral problems. I do not need to elaborate that point. But the proposals to make this permanent and part of our permanent peacetime set-up are frightening. If every American boy in his late teens is going to be exposed to this system and to all that goes with it in the way of "moral" and "hygienic" education, then America and religion have some dark days ahead for them. We are going to be a very different people and the history of Europe and of Asia gives us no reason to believe that we are going to be a better people—or a more prosperous people.

"That same history makes us fear that we will not even have the peace which, we are told, conscription will protect. Germany had peacetime conscription, and Germany did not keep the peace. France had peacetime conscription and France could not keep the peace. Every losing nation in World War II was a nation which relied for its defense on peacetime conscription and which had been bled white in its moral and physical life by the conditions which peacetime conscription makes inevitable. I hope you will not be deceived by emotional arguments in favor of this system; read its actual history elsewhere and meditate on its moral implications before you decide that it is a good idea for America."

MASSACHUSETTS CLERICAL ASSOCIATION,
*November 13, 1945.*

Mr. PHILIP J. PHILBIN,
*Member of Congress, Washington, D. C.*

DEAR MR. PHILBIN: Enclosed you will find a resolution passed unanimously by the Massachusetts Clerical Association, comprising 240 clergy of the Episcopal Diocese of Massachusetts.

Knowing that you will give this resolution your deepest consideration, I am,

Sincerely yours,

Rev. DAVID W. NORTON, Jr.,
*Secretary.*

Whereas:

1. The use of the atomic bomb marks the discovery of the most destructive force known to mankind;

2. Any attempt to formulate our foreign policy on the basis of temporary superiority

in atomic weapons will force other nations, as well as ourselves, into an atomic armaments race;

3. A domestic policy providing for free scientific investigation and discussion, as well as public surveillance and criticisms, of the application of atomic energy is the best guaranty that peace will be secured and that the public will be given full use of any scientific developments which, furthered under Government sponsorship, belong primarily to the people;

We, the members of the Massachusetts Clerical Association, comprising the clergy of the Episcopal Diocese of Massachusetts, resolve:

1. That a system of international control and cooperation be established in order to safeguard world peace; and

We urge that the President of the United States immediately invite the Governments of Great Britain and the Soviet Union to a conference to prevent a competitive armament race, to plan international control of mankind's most devastating weapon, and jointly to utilize international machinery to make available to all people the peacetime benefits of atomic energy.

2. That a domestic policy for the control and development of atomic energy, in harmony with an international system of control and cooperation, be established by the President and the Congress of the United States providing for scientific freedom and a peacetime utilization of atomic energy in the interests of the people as a whole.

---

THE CHURCH FEDERATION
OF GREATER CHICAGO,
*Chicago, November 30, 1945.*

The Honorable PHILIP J. PHILBIN,
*House Military Affairs Committee,*
*House Office Building,*
*Washington, D. C.*

MY DEAR MR. PHILBIN: We are opposed to compulsory military training and approve of Congressman MARTIN's proposal urging national abandonment of same and reduction of armaments. If scientific, social, and religious efforts for peace are stepped up to equal or exceed the proportions of our recent war effort, peace is possible. It will never be secured by threats of military force.

Hopefully yours,

Rev. W. CARL NUGENT.
PEARL G. NUGENT.

---

SYRACUSE, N. Y., *November 26, 1945.*

Mr. PHILIP J. PHILBIN,
*House Military Affairs Committee,*
*Washington, D. C.*

DEAR REPRESENTATIVE PHILBIN: As a citizen and as a member of the Methodist Church Commission on World Peace, I wish to write you personally urging you to consider the action taken by this important commission.

"Further, we strongly oppose the adoption by the United States of compulsory peacetime military training before it has undertaken through international agreement and action to make such training unnecessary."

If the United States with its dominant military power adopts this reactionary, outmoded European philosophy of militarism, there seems to be practically no hope for the United Nations effective organization and thus little chance of peace and world cooperation in years ahead.

Sincerely,

TRACEY K. JONES.
*Member of the Commission of World Peace of the Methodist Church, Layman Representative of the Eastern Jurisdictional Conference.*

---

DIOCESE OF MASSACHUSETTS,
DEPARTMENT OF SOCIAL SERVICE,
*Boston, November 17, 1945.*

Mr. PHILIP J. PHILBIN,
*Member of Congress, Washington, D. C.*

DEAR MR. PHILBIN: Enclosed you will find a resolution passed unanimously by the department of social service of the Episcopal Diocese of Massachusetts.

Knowing that you will give this resolution your deepest consideration, I am

Sincerely yours,

Rev. HOWARD P. KELLETT,
*Executive Secretary.*

Whereas:

1. President Truman's action in placing before Congress a recommendation for universal military training is one which demands the most serious consideration of every American; and

2. This proposal appears to run counter to the fact that our foreign policy is committed to the support of the United Nations' Organization which includes arrangements for military sanctions against possible aggressors and breakers of the peace; and

3. The discovery of the use of atomic energy has led even military experts to question the value of the future of universal military training along the lines suggested by the President; and

4. The future of the world is so obviously dependent upon the work and research of scientists in every field whose skills are attained only through long and persistent training that educators are greatly concerned with the serious loss of young men of college and graduate school age such a program would entail; and

5. Many thoughtful citizens are properly concerned with the inadvisability of instituting such training at this time because of considerations varying from the belief that 18 is too young for the training to the belief that for the Federal Government to enter the States with a program of compulsory education is an invasion of our traditional conception of a free educational system upon which our democracy has always depended for its perpetuation:

Therefore, we the members of the department of social service of the Diocese of Massachusetts resolve:

1. That it would be most ill-advised for Congress to act on any of the present proposals for compulsory military education until a more adequate study be made of their implications in terms both of our foreign and our domestic policies;

2. That Congress establish a civilian commission comprising leaders in education, business, industry, and public life who with the aid of military advisers should make a survey of what, in the light of such considerations as those noted above, would be the best over-all plan for the security not only of the United States, but of all mankind from war in the future.

---

## Montana Again in Vanguard

EXTENSION OF REMARKS
OF
**HON. WESLEY A. D'EWART**
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. D'EWART. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Billings Gazette:

MONTANA AGAIN IN VANGUARD

The readiness of the overwhelming majority of the people of the country to do everything necessary to win the war was demonstrated repeatedly during the conflict. No call for manpower, blood-bank contributions, material, or money went unheeded.

Aside from cooperating with programs for equitable distribution of scarce commodities, the thing that the vast majority were called upon most often to do was lend money to the Government in the form of war bond purchases.

The success of the seven war bond campaigns was due to a number of factors flowing from war necessity. Highly important was that of campaign organization, of letting the people know what was needed and why, and setting up an efficient system of receiving their money and issuing bonds in exchange. Success in such a venture called for the interplay of many forces, and much work on the part of banking institutions, campaign directors, and solicitors. For this work no remuneration was expected or received. But the test of the success of any such campaign is the will of the people to respond.

All of the seven war bond quotas were oversubscribed, and with a little more time the current Victory loan campaign will be a national success.

Whether the Montana organization that has handled these eight campaigns is more efficient than those of most other States might be questioned outside our borders. Perhaps our people are a little quicker in their reactions. Either, and probably both, may be the case. Certainly, we have reason to feel that this is so. Montanans have reason to be proud that their State was the first to reach its quota in each of the first seven campaigns. North Dakota topped the field in the Victory loan drive, but Montana was soon over the line for second place.

This unique Montana record is one which every campaign worker and every bond buyer is justified in viewing with pride as we shift our major efforts to the problems of another war-produced peace.

---

## Butter Prices

EXTENSION OF REMARKS
OF
**HON. H. CARL ANDERSEN**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. H. CARL ANDERSEN. Mr. Speaker, Gov. Edward J. Thye, of Minnesota, has written to the Secretary of Agriculture, Clinton P. Anderson, relative to the butter-price situation. The Governor's analysis of the situation is so well brought out that I feel it should be called to the attention of the Members of Congress:

DECEMBER 1, 1945.

Hon. CLINTON P. ANDERSON,
*Secretary of Agriculture,*
*Department of Agriculture,*
*Washington, D. C.*

DEAR MR. ANDERSON: For half a century, the dairy cow has been a major source of income for Minnesota farmers. Many years ago farmers of our State began to band themselves together in cooperative creameries which sought constantly to improve the quality of the butter produced. Encouraged by an increasing demand from other States, our butter production grew steadily until in 1941 it reached a peak of 326,478,066 pounds, valued at $108,535,530, manufactured by 630 creameries, of which fully 621 were cooperative creameries owned by the farmers.

The production of butter continued to grow, here in our State and in many other States, as people came to appreciate the advantages of butter as a food and obtained increasing resources. The industry as a whole continued to prosper until price control and Government regulations made it unprofitable for dairy farmers to continue to sell their cream for manufacture of butter. The action of the Government in establishing and maintaining the ceiling prices it has upon butter,

while allowing cream to be sold for other purposes without ceilings, naturally has shifted great quantities of cream from butter production to the production of other products, including even substitutes for butter.

The point was made that the Government desired to shift a certain proportion of the Nation's cream to other products such as cheese and condensed whole milk, which the officials felt were more readily usable in supplying food for the armed forces. With the war over and this argument no longer tenable, if it ever was, the unreasonable and arbitrary ceilings and regulations discriminating against the production of butter are being maintained. Today creameries can sell their cream all the way from 62 cents to 75 cents per pound of butterfat. Under the present ceiling price on butter, the creameries cannot afford to pay the producer more than 55 cents a pound for butterfat. All during the war, creameries have been restricted on butter production by a low ceiling; whole cream could be sold as a cream mix and used in one form or another without any ceiling whatever.

Result of this policy of discriminating against the production of butter has been to reduce drastically the amount of butter produced. Per capita consumption of butter has dropped from the prewar level of 17 pounds to 10½ pounds, because the ceiling price policies affecting butter, introduced as war measures and being continued now as a peacetime program, have made it impossible for the people to obtain the quantities of butter desired. With a demand for butter that is unprecedented, producers are being prevented by this artificial barrier of a discriminatory ceiling from supplying the desired butter.

If this situation is not corrected, the effect will be a further disastrous reduction in the amount of butter processed. The public will be restricted still more in the opportunity to buy the butter it desires. The effect will be ruinous upon the dairy industry throughout the Nation, and consumers unable to get butter or restricted to substitutes, will be denied the opportunity of purchasing the desired butter because it will not be available on the market. I want to urge upon you and the other men concerned with this problem that steps be taken immediately to correct this situation. If a ceiling is to be maintained upon butter, it is imperative that the Government raise the present ceiling so that producers turning their cream into butter production can get a fair and reasonable price, compared to that received when it is going into other products, so that we can arrest the present serious decline in butter production.

Yours very truly,

EDWARD J. THYE,
*Governor.*

P.S.—I am writing a similar letter to Chester Bowles, OPA Administrator, feeling that he, too, will want to give this matter attention.

## Letter From GI

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein copy of a letter by a GI which recently appeared in a periodical:

TRICE UP

EDITOR: Who's kidding who? They tell us that all ships are being used to get us home. Then we learn from the Maritime Union that ships are being diverted to civilian use. Everyone promptly denies this, and now I buy a copy of the Manila Times and find no less than five steamship advertisements and a column called "Commercial vessels due Manila," listing 13 ships.

Just to make sure that there is no mistake, and so that the alibi boys can't wiggle out of this, let's see what these ads say. They are from the Everett Steamship Corp., the Lykes Bros. Steamship Co., the American President Lines, and the American Mail Line. They contain such alluring phrases as: "Freight and passenger service to and from United States Gulf ports and Philippines." "Freight and passengers accepted for New Orleans, Houston, and Galveston." "Freight and passenger space to and from all Philippine Island ports." "Accept freight for Puget Sound."

How about stopping all the baloney about men with such and so many points being eligible to go home, and tell us when we are going home. Our hats are off to the NMU and Mr. Joseph Curran for threatening to strike all ships not used as troop transports by December 1. This is one strike servicemen are in favor of.

LT. GORDON L. SPIELMAN,
*Three Thousand Three Hundred and Eighty-Seventh Quartermaster Truck Company, APO 73.*

## On $46 a Week, Here's What You Can or Can't Buy

EXTENSION OF REMARKS
OF
## HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. FEIGHAN. Mr. Speaker, under leave to extend my rembarks in the RECORD, I include the following editorial from the Cleveland Press of October 17, 1945:

ON $46 A WEEK, HERE'S WHAT YOU CAN OR CAN'T BUY

(By Ray De Crane)

Last week Robert C. Stafford, a discharged serviceman, returned to his old job at the Press.

To learn the job opportunities for veterans, Mr. Stafford, posing as an unskilled worker, applied for work in Cleveland industrial plants.

He was offered five jobs in 3 hours.

The highest-hourly rate he was offered was 78 cents.

Two other offers were for 70 cents, two employers offered 75 cents.

The total weekly wage at this rate, including the one job that called for 58 hours' work, ranged from $30 to $46.90 a week.

To find out how an average family of four could live on the wages offered Mr. Stafford, the writer asked Miss Sarah J. MacLeod, director of the home economic bureau of the Society for Savings and budget adviser for the Press, to outline five budgets.

Miss MacLeod's budgets showed that:

An automobile could not be operated at even the highest wage.

A telephone in the home was out of the question.

Rent allowance for the highest paying job would be $35 a month.

Highest food allowance (for the $46.90 job) was $17.20 a week.

Only two of the jobs would permit the family to buy a newspaper or magazine.

The relief level food allowance, for two adults and two active children, Miss MacLeod said, is $60.80 a month. For the $30-a-week job, the highest food allowance she could permit was $63, or $14.42 a week.

For the sake of comparison, here is the outlined budget for the $30 and the $46.90 families (figures are on a monthly basis):

| | *$30 Weekly* | *$46.90 Weekly* |
|---|---|---|
| Withholding tax | $2.30 | $5.60 |
| Savings: | | |
| Social security | 1.30 | 1.94 |
| War bonds | 0 | 7.50 |
| Life insurance | 3.00 | 5.00 |
| Hospitalization | 0 | 1.90 |
| Food | 63.00 | 74.00 |
| Shelter | 25.00 | 35.00 |
| Operating expenses: | | |
| Winter fuel | 4.00 | 5.00 |
| Electricity, gas | 4.00 | 5.00 |
| Telephone | 0 | 0 |
| Household supplies | 2.00 | 3.60 |
| Clothing, dry cleaning | 12.00 | 20.00 |
| Advancement: | | |
| Benevolence | 0 | 2.00 |
| Carfare | 5.50 | 5.50 |
| Medical expense | 2.00 | 5.00 |
| Union dues | 1.00 | 2.00 |
| Education | .25 | .50 |
| Furnishings | 0 | 1.00 |
| Gifts | 0 | 0 |
| Recreation | 0 | 3.00 |
| Papers, magazines | 0 | 1.65 |
| Tobacco | 0 | 0 |
| Vacation | 0 | 0 |
| Incidentals | 4.25 | 8.35 |

Miss MacLeod found the allowance for shelter one of the biggest stumbling blocks. With the highest allowance $35, the home economist expressed doubt as to the type of quarters available for a family of four.

Miss MacLeod said the $20 monthly clothing allowance she suggested for two of the five jobs was "workable," but the "allowances are not adequate," she added, for the other three jobs.

## Federal Fair Labor Standards Act

EXTENSION OF REMARKS
OF
## HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement in behalf of H. R. 3914 and S. 1349—amendments to the Federal Fair Labor Standards Act—by the social action department of the National Catholic Welfare Conference:

The social action department of the National Catholic Welfare Conference wishes to record itself in favor of the proposed amendment to the wage-hour law. The social action department is that section of the National Catholic Welfare Conference, the Catholic bishops' organization of the United States, which especially deals with this subject.

The department is the more anxious to speak in favor of the amendment because a guide of its work is the famous bishops' program of social reconstruction which over 27 years ago asked for family living wage laws that would begin with requiring only enough for present normal maintenance but would gradually require enough for protection during sickness, accidents, invalidity, and old age. This amendment is a step toward those standards.

That program also stated that employees have a right to a living wage before an em-

ployer has the moral right to take interest on his investment. That is how seriously we consider the living wage.

The present 40 cents an hour of the law, paid for a full 40 hours of steady work during all 52 weeks of the year, with no holidays, no vacations, and no lay-offs, provides only $16 a week and $800 a year. These amounts are wholly inadequate, and were so when the law was passed.

Neither, for that matter, is the 65-cent minimum proposed by the present amendment a family living wage, nor is the 75 cents which will be mandatory in the third year after the amendment passes, and which can be introduced before then, industry by industry, on recommendation of advisory industry boards.

Seventy-five cents an hour for 40 hours is $30 a week. The approximately 50 weeks of a full year's work reaches only $1,500; and with taxes and social-security deductions, it is much less. Hardly anyone would say that the full $1,500 is enough to meet even a small family's present needs. Yet, prudence dictates the gradual approach to the legal enforcement of the living wage and asks us to be content with a 65 to 75-cent legal minimum now.

The 65-cent rate works out at some $1,300. Five cents an hour more or less means another $100 a year—at full-time work—less or more.

We wish to point out that the amendment does not establish at any of its figures a minimum family living wage. They move toward it, however, and that is so much to the good. We are in favor of the amendment.

Certain further comments on the bill seem in order:

1. The principle of governmental protection of wages is already accepted in law and in American public opinion. No argument needs to be advanced on this matter.

2. The jump from a 40-cent minimum in the law to a 65-cent minimum is a jump in law but not in fact. Very few who are covered by the law will get any increase under the amendment. Those who will get an increase will get very little. The amendment may, however, protect many persons from oppressive wage cuts to far below a decent living.

3. The differentials between the wages of those covered by the Federal law and those not covered will be widened by this law. This is a serious situation. But the Federal Government is not empowered to protect the wage rates of all the people and apparently does not wish to protect all whom it might protect. The plain answer is to go as far as Congress will consent to go within its powers and to work for like State legislation to protect those whom the Federal Government cannot or will not protect. That the Federal and State Governments, in combination, do not protect all is no argument against the Federal Government protecting some; it is instead an argument in favor of both protecting all, in combination.

4. The laws, Federal and State, are not supposed to give full wage justice. They should instead direct themselves toward a minimum living wage and then leave to collective agreements decisions on improvements. Therefore, it is not a valid argument against this amendment to complain that it does not establish the full standard of living which Americans should have. The Government should not try to do everything; that way is the way to totalitarianism.

5. The system of industry boards, which the amendment retains, possesses the great qualities of bringing labor, business, the public, and Government closer together, of making the law more flexible, and of adjusting wage rates to the conditions of particular industries.

6. If a few industries have to increase their prices to meet these wage rates, that is a small thing to pay for the promotion of wholesale justice. If certain individual firms within particular industries cannot meet such wage rates, that is simply proof that labor and the community are subsidizing their inefficiency. There is something radically wrong with an industry or a firm that cannot support its people. I should be overhauled by its employers and labor. If needed, they should call on the counsel of Government. The Government should be forehanded in giving them its counsel and help. Such industries and concerns are diseased.

7. Extension of the law to seamen and to canning and processing of fish, and canceling the ambiguous provision about the area of production seem justified. The people concerned are surely in industry, as the term is commonly used.

8. The committee might well consider an amendment to bring migratory agricultural labor under the law because of the very terrible conditions which that kind of labor meets and because of the special character of their work and the market for the products.

9. We take this opportunity to appeal to the States to pass like laws to protect those under the jurisdiction of the States, including ordinary farm labor.

10. It is sometimes said that the Fair Labor Standards Act is defective since it gives the same minimum wage to both single persons and heads of families. This is, in fact, a defect, if the living wage alone is considered. Yet the wage that is set under the present amendment is barely enough for support of a single individual. Really to correct this defect, the present amendment should be passed so as to pay the 65- to 75-cent minimum to everyone and a further law should be passed to provide more money to a man with a wife and something additional for every child. Failure to introduce that new kind of system makes mandatory a law that covers everyone on the same basis. There are, however, other considerations in this respect, such as the right to equal pay for equal work.

11. The Bishops' Program of Social Reconstruction, referred to above, advocated only State living wage laws. It did so because at that time the Constitution was so interpreted as to forbid Federal laws on general wages. Instead of this limitation of the bishops' program being an argument against Federal laws to cover most of the persons who are now under Federal jurisdiction, it is a further argument for State laws to cover those whom the Federal Government cannot or will not protect.

12. Two other considerations present themselves: People getting enough to live decently can produce better. People getting enough to live decently can buy more goods and services and thus can reduce unemployment. Fuller production and fuller employment will result from this law.

13. We look upon this amendment as a companion piece to and an even more important proposal than the full employment bill. However, that bill, if passed, can help this bill, if passed, by the provision in the Senate full employment bill for mandatory conferences of business, labor, and agriculture to work out the conditions of full employment.

## Minimum Wages

EXTENSION OF REMARKS

OF

### HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which was published in the Washington Post of November 12, 1945:

ON MINIMUM WAGES—COMMUNICATION CONTRADICTS NAM

May I congratulate you on your fine editorial of November 7 on minimum wage. I am glad that you have not taken seriously the propaganda being issued in opposition to the Pepper-Hock amendment to the Fair Labor Standards Act.

The National Association of Manufacturers testified before the House Labor Committee that $15,000,000,000 will be added to the price tags of American merchandise and to individuals' tax bills" by the passage of the amendment. These are "scare" figures intended to enlist opposition to the pending measure. Therefore they need very careful scrutiny. The figures depend on three false assumptions:

First, the minimum wage is confused with general lifting of all wage rates. The former is a matter of law; the latter, of collective bargaining. It is true that raising the minimum would undoubtedly result in higher wages for many of those already receiving the minimum or above it, but the NAM oversimplifies the case by adding 15 cents to the hourly wage of everyone now receiving 65 cents or over. There are a number of industries in which a negligible number of workers receive under 65 cents. Why assume that all of these will get 15 cents extra as a result of the law?

In the second place, it is assumed in the final table that all employees except agricultural and governmental employees will be covered by the minimum wage. "It is quite likely," says the statement, "that eventually coverage in the bill will greatly be extended beyond manufacturing industry alone," but such extended coverage is not proposed in any line of the bill. To say it may happen in the future is a deliberate twisting of the facts.

The third assumption—and the most astounding one—is that the $14,600,000,000, which the NAM estimates will be added to the wage bill when the minimum becomes 75 cents, results, according to their statisticians, in a $15,000,000,000 increase in prices—over 100 percent.

Wages are only one element of cost. The census of manufacturers in its most recent figures (1939) showed that the product of the tobacco industry valued at $1,320,000,000 was produced with a wage bill amounting to $69,000,000—approximately 5½ percent.

The percentage varies among industries. The NAM must know that the effect of wage increases on prices depends, among other factors, upon volume of production and efficiency of management. If American industry had added all its wage increases in the past to prices, we would have been unable to make any advance in living standards; workers would have always been playing a losing game, as each wage increase brought an identical increase in cost of living. This has not been the case in the past, and there is no basis for assuming that it will be the case today.

Robert Johnson, textile manufacturer, testifying the day after the NAM witness, said: "On every side we see proof of the ability of this country to pay higher wages and sell at lower costs * * * this equation needs no proof beyond the record of the last 50 years."

I trust that the public, which is rightly concerned about an inflationary spiral, will think twice before being frightened by the NAM's astronomical predictions.

ELIZABETH S. MAGEE,
*General Secretary, National Consumers' League.*

CLEVELAND, OHIO, *November 8.*

## The Relation of the St. Lawrence Project to the Railroads of This Country

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 3, 1945*

Mr. PITTENGER. Mr. Speaker, an enormous amount of propaganda has been and is going to be released by the railroads of this country in connection with the proposal to develop the St. Lawrence seaway and power project.

It is traditional that the eastern railroads have always felt it necessary to oppose this worthwhile project. At one time something like 15 years ago every western railroad which connected with the Great Lakes was in favor of this project. This means that 40 percent of the railroads of the United States were favorable to it. Then something mysterious happened. It happened at the same time that the Association of American Railroads was formed in the year 1934. After that date, without developing the ramifications, every western railroad kept gloriously silent. They knew 15 years ago, and they know now, that waterway development is beneficial in creating new freight products for the railroads. But I prefer to let an expert tell the story.

I have had my attention called to a remarkable address on this subject of the seaway and the railroads by Julius H. Barnes, LL.D., of Duluth, Minn. In addition to his other attainments, Mr. Barnes is rated as an outstanding businessman and without taking time to enumerate his record, I will say that his opinion measures up with the best. He delivered an address before the Economic Club of Detroit at Detroit, Mich., on Monday, November 26, 1945, and the proceedings on that occasion, including Mr. Barnes' address, are as follows:

ECONOMIC CLUB PROGRAM

The meeting was called to order by President Allen B. Crow.

Mr. DONALD S. KISKADDEN. If our historian, George Stark, was making this introduction, he might say, "First there was the river and that is how Detroit was born." Detroit, the City of the Straits.

It may be in bad taste for me to mention the Buhl Building, but I do so only because on its roof is built the Savoyard Club, named for the Savoyard River, which once ran through our now financial district into the Detroit River. In the lobby of the Savoyard Club are four stained-glass windows bearing emblems recording the national ownerships of the land on which the building stands. First, the Indians, the Huron and Pottawatomie Tribes. Second, France, 1634 to 1760. Third window, England, 1760 to 1796. And, fourth, the United States of America, 1796–1812, 1815–. The British were back in the picture briefly during the War of 1812. It is unthinkable that there should ever be a date placed after the dash following 1815.

Our first subdivider laid out long linear farms running north, but most important having the Detroit River frontage as the southern boundary of the farms. Every settler wanted his place in the sun to be a place on the river.

Those of us born in Detroit, who have lived here many years will recollect that visitors to this city often commented with amazement on the comparative little use Detroiters make of their beautiful waterway, those fine boats and yacht clubs. They place emphasis on the pleasures we are missing.

Many, many years ago, today's speaker thought of the Detroit River, the St. Lawrence River, and the Great Lakes in terms of low-cost water transportation and world commerce. Thirty years ago one of his first articles appeared in the Review of Reviews setting forth the benefits of the St. Lawrence waterway project to the Great Lakes area. Never in all these years during his busy and honored career has he stopped or even faltered in his devotion to this cause. It was his dream and hobby, ever backed up by foresight, vision, and hard work.

Now, with the St. Lawrence navigation and power project being given serious consideration by Congress, he needs our understanding and help to get the job done. Today, as president of the National St. Lawrence Association, he comes to tell us what this project can mean to the people of Detroit.

It is my great honor to present Julius H. Barnes. [Applause.]

MR. BARNES' ADDRESS

Mr. JULIUS H. BARNES. Mr. President and gentlemen, I feel today very fortunate indeed, fortunate in having a forum such as this of men who have played so vigorous and enterprising a part in the whole business fabric of America; and fortunate in having Mr. Kiskadden's introduction, which sketches the historical background for something of what I wish to present to your judgment.

I have been fortunate that while it was 30-odd years ago that I first championed the St. Lawrence, in the days when today's accomplishments were then but vision, anticipation; fortunate in that I have lived to see these factors come into practical play. I have been fortunate in the men associated with me in this cause, men themselves of long years of complete faith and devotion to a cause which we believe is in the whole national interest.

I do wish to speak to you primarily as Americans of a certain philosophy typified by the St. Lawrence project. Detroit, in all the world, is known as a miracle industrial city, and that is what Detroit means in the popular conception all the world over. Here was conceived the automobile, possibly the supreme object of man's desire; probably the culminating contribution to life's social service and to business efficiency.

It seems to be that here in Detroit developed two fundamental philosophies. Its supremacy in industry was achieved by management genius recognizing two typical American philosophies. The economy of standardized production and the reduction of selling price secured by assembly line labor skills was the primary achievement of Detroit's genius, followed since by almost every line of successful industry.

Second, the philosophy of giant merchandizing; the philosophy that costs were reduced by the genius production methods and that that saving should be shared with the cosumers, and, by that very sharing, enlarge the market for itself. These things are typical of Detroit, and Detroit will always stand in advance of other industries which have adopted them, as a pioneer of the two great philosophies which have served the public so well.

Detroit is fortunate at that time that this philosophy came into play with the automobile as its object, probably, as I said, the supreme achievement in human service. It was fortunate also that it was timed, this market philosophy, with the rising buying power of great American sections of people who had the aspiration to own and were achieving the ability to own these things that counted in building giant industries which we denote as Detroit.

Detroit has done much and deserves much. It has new problems for the future if it would maintain its attained leadership. It has a vast vista of possible achievement in the world of rising standards, of new peoples with new earning power, new knowledge, and new skills, informed and guided by such new agencies as the movie, the radio, and the airplane. In all lands, great populations are beginning to earn a buying power that means for Americans industrial leadership.

We believe that the brilliant future of Detroit rests largely in opening this great waterway that passes your door.

I do not presume to be an authority on shipping costs, although I have operated a fleet of ships, small ships, specially designed, on the Great Lakes, Erie Canal, and down the coast of the Atlantic and Gulf ports, and the Indies. I think I know something out of a lifetime of experience as a grain exporter, and out of the direction of the food administration in the last war, and out of 15 years' practical experience in operating ships, and I think I know something of the response which comes with cheap transportation, of which deep water is the very king.

I believe that it is no exaggeration for me to say that in the St. Lawrence opening, with its deep, stable channel, opened to the large ships of our own Great Lakes, and the ocean type as well, that Detroit will deliver the products of its giant industries in far markets, like the Baltic ports of Russia, at a cost not higher than it today is paying to reach New York.

Now, what does that mean to Detroit? Doesn't it give you the security of transportation access for inbound materials and outbound products for which every industry plans and labors? I believe it does.

Here in Detroit two generations of men of management genius, have brought this city to its present prominence. In the two generations, we have had half a century of industrial progress that it would behoove us to survey from time to time. Think of what has happened in this half century in industrial practice.

The wheelbarrow has become the bulldozer; the pickax, the caterpillar; the plow, the great farm combines; the buggy, the closed auto; the horse-drawn streetcar, the motorbus; the mud roads have become concrete highways; the open platform railroad coach, the streamliner; brick and frame cities have grown the skyscrapers; the hand-cranked phone, the instant long-distance, world-wide connection; office work by hand and pen, graduated into the universal typewriter and complex office machines; we daily use products of inventive skill not dreamed of a half century ago. The movie, the radio, the airplane, the auto itself only a crude beginning. Life has moved so swiftly and contributed so much. Human life expectancy in those early days, of 40 years, has almost increased half again. Refrigerated and year-round foods, miracle drugs, highly trained professions—these have flowered also with this industrial revolution. Give this progress human meaning in wider spaced sickness, daily competency, and death itself deferred, and it then has significance which rises above the mere desire of gain.

In those early days on the water corridor past your water front, were still sailing vessels engaged in commerce. Steamships had grown to the then impressive length of 250 feet. Today the 600-foot ship goes by your water front without daily notice. So much has happened in that time between the 250-foot ship with its 2,000 tons and today's ship with its 20,000 tons. At the falls of Sault Ste. Marie the first shallow canal lifted its 20 feet of water access from Lake Huron to Lake Superior, and brought out the first cargo that sailed past Detroit village carrying 100 tons of iron ore. Think of the industrial revolution typified by this growth in three or four

generations, from cargoes of 100 tons of iron ore to those of 20,000 tons feeding your mills and the eastern mills today.

When we review thus the real achievements of Detroit and cities which it typifies, we should understand as well how this leadership developed, not alone on certain natural advantages in America, but on the spirit of confident enterprise which inspired this progress. There is a philosophy here of great interest to us.

Throughout all history, whole peoples have sought the natural waterways of the earth. Before the days of power-driven vehicles water routes offered for centuries the cheapest method of transportation and travel. The rivers thus with fertile valleys and ready transportation centered along their banks for centuries, the world's growth of population.

Review these rivers briefly, and appreciate what use we have made in America of these natural resources of water channels.

The Nile, 4,000 miles in length and 6,000 years in service, cradled its early crude civilization. The Yangtze, 3,000 miles in length and 10,000 years in service. The Volga and the Danube, each 2,000 miles in length and 4,000 years in service. These rivers of the Older World cradled many generations. Yet even today the three oldest valleys with their long history present a civilization barely above the primitive peasant civilization.

Then in that short span of new-world history opened, 300 years ago, three great river valleys of the Western Hemisphere. The Amazon in South America, offering with its tributaries 30,000 miles of waterways serving the vastest drainage area of the world, remains even today almost bare of commerce, serving an almost unpeopled area of unproductive dense forest. The human well, the human skill, the human enterprise has not yet developed there.

In North America the Mississippi and its tributaries, the Missouri and the Ohio, 4,000 miles, aided the rapid development of inland America. It still was handicapped with floods and drought and shifting shoals.

And then the other great waterway bestowed by Nature was the deep stable channel of the St. Lawrence, and its connecting Great Lakes. The Great Lakes contain half the fresh water supply of the entire world. They are free of tides, affected not at all by floods or drought. This deep-water channel reaches from Newfoundland to Duluth and to Chicago with 2,400 miles of the cheapest water transportation in the world.

Almost as if Nature foresaw the power era that would create America's industrial supremacy it planned from Duluth to the Atlantic 600 feet of falling energy, and with the great reservoirs behind them offered the cheapest and most reliable power generation ever known.

Then Nature, as if to test the qualities of this new people, put progressive barriers across that waterway. The 225-foot fall between Lake Ontario and the level St. Lawrence, the 320-foot fall of the great Niagara, the shallow channels of the Detroit and the St. Clair Rivers at your door, the 20-foot drop from Lake Superior to Lake Huron. How have we answered this challenge? American enterprise and engineering skill asserted their mastery of natural obstructions by successive steps. Today, the bypass around Niagara waits with ocean-size locks of 800 feet and ocean depth of 30 feet over the sills, the trade of an expanding world. The shallow channels, almost at your door, have been deepened as commerce grew. They can be deepened again when the great carriers of the ocean are admitted. The Sault has become the symbol of vast transportation achievement. The early portage of the horse and cart has, step by step, developed into the five great locks of today. Off that, single Lake Superior moves in 8 months each year more tonnage than the aggregate of every constructed waterway in the world—Panama, Suez, Welland, Manchester. Nature favored Lake Superior and its shores at the very heart of America with vast deposits of iron, copper, timber of great forests, which built the cities and homes and industries at a speed and economy not conceivably possible without the great waterway on which they based.

And in this development, free America developed the finest example of teamplay between the authority and resources of government, and the stimulant to private enterprise which makes for a people's progress. The frontier line of relation between government and private enterprise has here been remarkably effective.

American invention and American business judgment developed by private enterprise the transportation economies by special ships and special docks, impossible except on a developed waterway requiring the larger authority and larger resources of government itself. That method should be extended to the completion of modernization which has progressed unfailingly everywhere along this great waterway except in the 50-mile stretch of the St. Lawrence. In violation of every concept of American progress, there still wait the locks and channels built for the carrier that has been outgrown. The St. Lawrence Canal authorized in 1882 and completed in 1900—nearly half a century ago—has not been improved or modernized since. It is a sad contrast with the vision and skill and enterprise inspiring the channels above. The 260-foot ships of the early century, carrying on 14-foot draft the modest cargo of 2,000 tons, have passed away. Today's 20,000-ton Lakes cargo ship can travel its 1,500 miles toward the ocean and then stop above the St. Lawrence rapids for expensive transfer. The newly constructed vast fleet of Libertys and Victory ships serving the ocean highways covering five-sixths of the surface of this globe can steam 1,000 miles up the great river and stop short at the foot of the same rapids in the St. Lawrence. Its cargo should instead be delivered 1,500 miles farther inland at Lake ports that nature equipped to be ocean ports as well, with every contribution to industrial growth, enlarged employment, and farm security.

I feel this story with a special emphasis. Pioneers like myself in the grain business of the western ports used this water economy to market the grain of inland America against the cheaper labor competition of Russia, India, and the Argentine, so that the streets of our inland towns became lined with automobiles. In those early days I may qualify through experience for I shipped grain intended for overseas marketing down the Erie Canal on horse-drawn towboats. Today I operate a specially designed motor-driven fleet using the economy of even the 12-foot waterway and paralleled by the great fleets of the oil companies as well.

Where private capital and management skill had free play as in the bulk cargo trades on the Great Lakes, transportation costs are a world marvel. You see the ships go by your docks, on the way up without cargo, earning maintenance and income on the downbound traffic in which the almost one hundred million tons of iron ore each year headed for the furnaces of the East and your own, 1,000 miles of carriage, require a transportation charge per ton less than you would pay to deliver a ton of coal across your sidewalk into your furnace bin.

The modernization of the St. Lawrence proposed in the legislation now in Congress and favored through a quarter-century by men of vision, would give Detroit industries and all Great Lakes ports the cheapest and shortest access to vast new markets for the thousand things which American industry leads in producing.

Do you realize that beside the economy of all-water carriage, without the expense of transfer, the distances to reach these new markets are so much shorter than the present routes via Atlantic ports? It is substantially 500 miles and more shorter from Detroit through the St. Lawrence, to all the north Europe countries—Norway, Sweden, Finland, Russia, Poland, and Denmark, and to the British and the North Sea ports—Liverpool, London, Antwerp, Rotterdam, Bremen and Hamburg. It is a trifle shorter to Gibraltar which typifies trade routes to all the Mediterranean countries, to the Middle East, and via the Suez to India and the Far East. And remember, the whole distance is the economy of water carriage. This means the advantage in delivery cost for which all industry strives by location and method.

Raymond Moley, editor of Newsweek, and Kiplinger, of the Washington Letter, both have recently emphasized that developments in transportation promise stimulated growth in the Middle West and West. The open seaway would deliver imported products needed for our industries, for alloys and special products. The open seaway would be a reassurance against the exhaustion of American reserves of natural resources.

Secretary Ickes recently sounded a sober warning of the drain on our own iron ore, oil, and copper. Lumber and pulpwood will not last forever. The great inland steel plants may need, in not too long, cheap access to imported high-grade ore to mix with our large lower grade deposits, left in our own reserves. Foreign origin alloys may be in demand, and may be needed in even the steel industries of this central Midwest. It is, I believe, mistaken judgment to look on that created movement as mere diversion of existing tonnage. We think all transportation history shows that the economy of transportation always creates new volumes, new business, new employment, and new earnings. Give American industry its access. Its own high skill and energy will do the rest.

What is the world waterway record?

The Panama, opposed in its early years by the railroad industry, opposed today in its intercoastal service, early ridiculed by a great railroad leader, James J. Hill, who described it as a lily pond, nevertheless grew from its 5,000,000 tons in 1914 to 30,000,000 tons in 1940. Even more, we need its vital contribution to national defense. Suppose railroad opposition had defeated its construction even as railroad opposition deferred the St. Lawrence. The Welland Canal, partly dead-end as it is, until America carries out its part with Canada, quadruples its tonnage in the last quarter-century. The Suez doubled its service to commerce.

We believe it is stubborn prejudice that refuses to admit what cheap transportation in and out will do not only to the area immediately affected, but through the overflow of tonnage in a thousand forms, a thousand ways, a thousand places.

We believe historians will wonder at the national lethargy or the powerful influences which held back for half a century the modernization of the half-century-old locks in the St. Lawrence which block the way. They will wonder the more when they compare it with the engineering skill and the business enterprise which developed 1,500 miles of waterway beyond that barrier.

The forces of opposition have been clear. The greatest influence of obstruction centers in the Association of American Railroads and especially since its formation on a national scale in 1934. The dominant influence in that railroad association rests in the three eastern trunk lines from the Atlantic seaboard—the New York Central, the Pennsylvania, and the Baltimore & Ohio.

Since its formation, since the formation of the Association of American Railroads, the western trunk lines, whose terminals rest upon the Great Lakes and whose interest would clearly be an exchange of traffic with the ocean carriers at the ends of their own lines, have been silent. Forty percent of all

railroad mileage rests on the Great Lakes and these lines were not always subservient to eastern trunk-line influence. In the development era following the last war, not a single western line executive failed to approve and endorse the St. Lawrence project. They were railroad executives in a true sense and openly supported the improvement which seems so obviously in their interest. Listen to the list:

President Pennington of the Soo Lines and his successor, Jeffrey; President Ralph Budd of the Great Northern Railway; Howard Elliot, chairman of the Northern Pacific Railway, and his successor, Charles Donnelley; President Byram of the Milwaukee Railway and his successor, Scandrett; President Felton of the Chicago Great Western; President Fred Sargent, of the Northwestern Railroad; President Hale Holden of the Burlington Railroad; President Downs of the Illinois Central. Not a single western railroad failed to recognize the service it would be to the transportation line under their direction.

Why have the western railway executives been silent? Why have they yielded the stage to the eastern trunk lines with their loudly proclaimed fear of tonnage diverted from the lines serving Atlantic ports? Is there financial and transportation colonialism in America to use a phrase of Senator AIKEN? What other explanation is there?

The utility industry formerly so active in opposition, so emphatic in its statement that the water power was not required, has softened as our electric generation has grown in America from 14,000,000,000 kilowatt-hours in the last war to 240,000,000,000 kilowatt-hours in this. Only occasionally today is any voice brash enough to attempt to argue that the power is not needed or that steam plants anywhere, anytime, could hope to equal the cost economy of this great St. Lawrence undeveloped power. And is it fair for the utilities, the utility industries, to oppose a project described by our President as "one of the great projects of the world" on the ground of a utility interest that fears a conflict between public power distribution and private? There is time to solve that character of distribution after the power is first created to distribute. Public opinion which will define that policy in the end can be enlisted behind private distribution more surely by helping to develop the resources of this country and not to suppress a great resource for single private interest. It is encouraging to us that Owen Young, former president of the General Electric Co., and a great figure in the growth of utility service, is a member of our association. There must be others who believe that the development of cheap power means the extension of power service over private lines to a wider range of mills, factories, shops, homes, and farms. Surely that would be in the broad public and national interest.

Then we have the opposition of certain commercial bodies in the Atlantic ports and even in the Gulf and Mississippi Valley which to some minds seems to be competitive.

Some men are opposed to the St. Lawrence for fear that it is a theatre for the development of river authorities. There is no similarity. The St. Lawrence has no problem of flood control or irrigation, such as the river valleys must rest upon. Why do they discredit a great project by an undefined fear of effecting an issue which bears no relation to the character of the St. Lawrence.

Some of the recent acts of business organizations in the great cities of the East have not been clearly based on accuracy of statement and logic of argument. We hope their leaders will determine that at least before their arguments are presented before a congressional committee, they shall be tested for accuracy and truth. They will certainly be challenged.

I cite, for example, the statement made in the last few weeks in the argument for a resolution opposing the St. Lawrence in the Chamber of Commerce of the State of New York, of which I am a member. Among the reasons for opposition were many inaccuracies not worthy the deliberations of so influential a body. For example, to try to discredit the cost estimate, repeatedly checked and verified by able Army engineers, it stated:

"Actual costs of other canals like the Panama, Suez, Chicago drainage and the Welland were twice or three times the original estimates."

It is time that this statement was nailed as the misstatement it is. Any impartial study would have shown its falsity.

The Department of Commerce in a recent publication on the St. Lawrence commented on the 9 lives of this inaccuracy and quoted officially a letter of January 16, 1934, in which General Markham, Chief of Army Engineers, answered by an inquiry from Senator VANDENBERG by quoting the actual record. He showed that when in 1908 the increased dimensions and widening of the channel through the Culebra Cut was authorized, the estimate approved was $375,201,000. On June 30, 1918, after the canal was opened and in permanent operation, the actual cost was $372,000,000. Let's at least discuss this great project with the dignity and accuracy that it deserves.

The Association of American Railroads is fairly open to question, as to their judgment on national projects and national policies when there is a conflict which seems to threaten their selfish interests.

For example, every transportation act of Congress, I think without exception, declares for the regulatory bodies to preserve the peculiar advantages of every form of transportation. I think it only fair to say and to quote from the public record that the railroad industry has almost generally opposed every act or policy that would help any other industry like water, highway, or air, even when that opposition seemed to be violating the first principles of fair play. If, in 1934, the Senate vote on the then St. Lawrence Treaty had followed the recommendation of the Senate Foreign Relations Committee, which was just, and had voted two-thirds required approval, instead of 49 in favor and 43 against, we would have had the deep and short water corridor opened for this last great war.

What would that have meant, with 1,000 miles shorter submarine exposure, we would have saved scores of ships, turned all ships faster with more cargoes delivered, quickened our allies war effort with larger and faster deliveries of lend-lease weapons, saved millions of dollars expended on cargoless deliveries of lake-built ocean ships down the long, shallow route via Chicago and the Mississippi, ships too large for the outgrown St. Lawrence locks. In money, we would have saved many times the $200,000,000 required from us. In war, we would have saved hundreds of lost submarined sailors, and with a shortened war, many, many lives of gallant fighters.

The opposition of 1934 has much to answer for, even if World War II was not foreseen. It came and we have suffered much.

I could illustrate what I mean about railway opposition by a very recent official communication to the Interstate Commerce Commission by Admiral Emory S. Land, Chairman of both the Maritime Commission, building a miracle fleet of merchant ships, and also head of the War Shipping Administration which governed the movement in the war years of practically every fleet in the world. Recently, with the lessened pressure of ships for war, Admiral Land asked the ICC to aid in reinstating the coastal and intercoastal ship services that war had forced the operating lines to suspend for years. The Association of Railroads, in what seems to be an unbroken custom, opposed this reinstatement of service. Admiral Land records officially to the ICC his judgment of the attitude of that Railway Association thus:

"It is a matter of keen regret," he writes, "to me that at the very first opportunity following the close of hostilities, the railroads have adopted a narrow point of view reminiscent of the 'dog-eat-dog' philosophy which so adversely affected their own interests as well as those of the water carriers during the prewar days."

He goes on:

"Objections from the railroads come with bad grace. The rails were not asked to abandon their business to competing transportation. They benefited by the misfortunes of the water carriers. Under our national economy, both forms of transportation are essential. To some extent, the problems of the shipping industry resulted from depressed and noncompensatory freight rates established by the rails in section 4 proceedings."

Any traffic expert will know what section 4 means, the exception of rates to meet so-called water competition.

"I hope that railroad management will see the problem in its proper perspective and adopt a broad-gage view of the solution; that they will see the wisdom and necessity of permitting a privately owned and operated steamship industry to survive and prosper and abandon all lingering hopes of destroying water competition."

We of the Great Lakes hope so, too. This is hardly a heartening instance of supporting national policies in the public interest, and especially when the railroads opposed so sturdy a champion of private operation as Admiral Land has proved himself to be.

The Interstate Commerce Commission, often described as railroad-minded, in its fifty-second annual report, recorded many criticisms of railroad policies and practices. In their comment occurs ICC jugment as "contrary to the public interest" and "in numerous respects unlawful." It does not indicate unlimited confidence, nor tend to create it in the public.

The report comments on the lack of resourcefulness in the railway industries as to laboratory work, experiments, and engineering. It would be hard to make men in the automobile business, like Zeder and Kettering and Ford, sympathize with railroad attitude in respect to constant laboratory work.

We do not desire to disparage railroad performance in this war. It was good. So also was the performance of all American industry—some with conversion problems the railroads did not have to face.

But good war performance cannot hide the questions of public policy which they invite by their activity in opposing a great public improvement.

This brings me to review the hoary old accepted practice of so-called differential line. Admiral Land refers to that in his criticism referring to section 4 proceedings; also, the ICC clearly refer to this practice.

What would you, as businessmen, think of this kind of a policy? As industry operators, you would concentrate production, simplify exceptions, achieve cost economy by such mass concentration. Well, the railroads had other ideas. They established a standard rate of freight between New York and Chicago, say 900 miles. Then they allowed a "differential route" to load freight on a steamer at New York, transport it 300 miles south to Norfolk, stand the extra handling charge on and off the ship, load it in a railroad car headed for Chicago, but farther from Chicago than when it loaded on the steamer in New York. And then because the roundabout delay is not attractive to a shipper, they tried to overcome that by offering a lower rate of freight for the 1,200-mile haul than for the 900-mile haul on the direct line

referred to by the ICC in their fifty-second annual report. And that is not all. Past my office in New York, prior to the war, I saw a steamer leave every night its dock in the North River, headed directly away from New York with freight for Chicago and other points. They went to a Long Island port, transferred again from ship to railroad car, run the car north and through part of Canada, bring it to Georgian Bay, stand another expense of transfer from car to boat, deliver it to Chicago after a total journey of about 1,500 miles instead of 900, and again attract shippers by offering a lower rate for the longer route with all its expenses. Obviously, you can see that this violates every sound principle of American industrial practice. Does that inspire respect for railroad judgment?

I suppose, following that to its natural conclusion, if they could devise a route long enough, say 3,000 miles, they would carry the freight for nothing.

I could tell you with intimate authority my earlier experiences as chairman of Duluth's traffic commission, fighting for its rights before the ICC many years ago. Three big cases before the Commission all won against persistent railroad opposition, and that opposition is still there in other forms.

The railroads publish a weekly, Railroad Data. They have plenty of money for publication, for propaganda work, for conferences, and dinners. They need all these aids to try to disguise the fact that the only substantial argument they present today is their claim of possible diversion of tonnage.

Last week the Railroad Data quoted a president of one of the smaller eastern trunk railroads at a conference in opposition to the St. Lawrence. How is this for a new argument against the St. Lawrence, and I quote—and this was said by one of the minor trunk lines of the East:

"The railroad spokesman opposed the power feature on the ground that atomic energy made questionable the need for further expansion of electric power utilities."

American industry has always faced revolutionary problems raised by perfected invention, mechanics, or chemistry. It will continue to face them and adapt itself to changes as they come. To suspend development by fear of change has never been our way. Nor ever will be. Let's go forward.

I cannot finish this discussion without reference to the most important subject close to all our hearts, the future of our children and our grandchildren. Many of these are just returning from the trials and tests of inhuman warfare in the far corners of the world forced on this peace-loving people. What kind of society, what kind of economic opportunity, what kind of Government are we going to bequeath to them? Shall we forfeit our progress to them by closing new trades, new transportation, or shall we throw open the wide gates of economic progress? This more than any other project is a challenge to the American genius to do big things in a big way. It is within the competence of just such a gathering as this to bring this practical dream into reality. This project, like the Suez and the Panama, is fit work for kings and presidents, for men who rule by ability and purpose.

It explains why every American President in a quarter century has given it first thought and then support. I know it to be true that in the most critical periods of our existence during the months after Pearl Harbor, President Roosevelt took the time from other pressing emergencies to urge the construction of this project. In the hectic days of the San Francisco Conference, the Potsdam Conference, and the Japanese negotiations, President Truman has held many conferences, and, as a result of mature consideration, sent last month a special message to Congress urging its enactment. The State Department emphasizes opening this highway to commerce with the world as an important factor in their program of international collaboration.

Your own Senators, VANDENBERG and FERGUSON, together with Majority Leader BARKLEY, Senators AIKEN, WAGNER, Mr. HILL, LA FOLLETTE, and many others have devoted long and serious study on ways and means of obtaining approval with its international phase. These activities by our national leaders are recognition and a proof of importance of the issue.

This project deserves well of your personal attention and support. Every one of you has influence as a leader of business and public opinion. You owe it to your city, to the Midwest, and to your country to give this practical encouragement which is necessary to fully acquaint the country with its advantages, its importance to national welfare and prosperity, and to apply that analysis to your own self-interest.

Thank you.

[Applause.]

Mr. KISKADDEN. Thank you, Dr. Barnes. Meeting adjourned.

## Resolutions of Wapello County, Iowa, Farm Bureau

EXTENSION OF REMARKS

OF

### HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. LeCOMPTE. Mr. Speaker, Members of the House will be interested in the resolutions adopted by the Farm Bureau of Wapello County, Iowa, one of the important agriculture counties of the greatest agriculture State. These resolutions were adopted at the recent annual meeting of the Wapello County Farm Bureau.

Under leave to extend my remarks in the RECORD, I include this set of resolutions:

We, your resolutions committee of the Wapello County Farm Bureau, present the following for consideration of the membership. We dedicate our every effort and resource in full cooperation with the efforts to maintain and expand the principles of world democracy for which our armed forces have so successfully fought. We pledge ourselves to a postwar program to establish jobs and production of such agricultural goods as may be necessary for the prosperity of our Nation and the reestablishment of those from the armed services into civil life. We insist that our representatives at the peace conference continue to take such steps as are necessary to insure a lasting peace and that agriculture have a representative at the peace table.

IMPROVING FAMILY LIVING

To work for better farm family living from the standpoint of social, cultural, spiritual, and physical well being we encourage the rural home as the center of activities for all members of the family. To assume the responsibility of leadership among our own ranks in the community and beyond.

Ever mindful that our spiritual as well as physical needs are of utmost importance in the influence of better family living we pledge our support and cooperation in the activities of our churches.

Realizing that good health makes for a better family life we urge our Farm Bureau give careful consideration to the matter of organizing a health program among rural people. Such a program to encourage a voluntary prepayment health insurance plan for medical aid and hospitalization in case of illness.

To further work for improved family living we shall endeavor to follow the practice of a good nutrition program giving careful consideration to a school-lunch program.

RURAL LIBRARY SERVICE

We urge aggressive action toward the establishment of adequate public library facilities for rural districts. Strong farm organizations, active extension programs, rural study clubs, and the high educational rating of Iowa's farm population, have created a pressing need for library service. Iowa leads the Nation in the proportion of citizens able to read and write. Let us reach a similar position in respect to libraries easily accessible to these same citizens.

SCHOOLS AND EDUCATION

We recognize the need for an improved school program whereby all the children of the State may have an equal opportunity for education. We feel that this can best be accomplished by reorganization of school districts in the interest of economy, efficiency, and equality of educational opportunity. We pledge our support to legislation providing uniform State aid, higher standards for teachers and adequate salaries.

TAXATION

In support of a better school program we feel that ample funds should be collected by taxation to properly maintain an improved system. We favor the collection of the State income tax at the full 100 percent rate and that such funds as are not necessary for the regular cost of government be earmarked for schools.

We favor a simplified Federal income-tax return form. That taxes be levied on ability to pay.

ROADS

We favor a program for the improvement of the secondary road system of the State to the end that every rural home in the State is served by a surfaced road.

We believe that the distribution of State and Federal funds should be made on the basis of need rather than on the area basis. We urge that in this county better road administration is highly desirable and that we should have value received for the money spent.

FOOD PRODUCTION AND SOIL CONSERVATION

We believe that a sound food production program is essential to the well being of agriculture and must be correlated with any enduring prosperity in the fields of labor and industry.

We believe that agricultural prices must be maintained at a level which will allow food production which is adequate to provide high nutritional standards for all peoples. That the present parity formula should be used as the basis for establishing price levels.

That food production should be held at a level which will insure a safe and farsighted soil-conservation policy.

Soil is a national heritage and the Government should take added responsibility in aiding and abetting soil conservation, by making it the predominate consideration in the formulation of all future production-control programs.

We believe that adequate payments should be made direct to farmers for soil-conserving and soil-building practices.

That phosphate, lime, and soil-building fertilizers be made available to farmers on a cost basis.

We believe that the Soil Conservation Service should be authorized and given the responsibility of promoting an aggressive program of informing and educating farmers of the benefits and necessities of soil-conservation and soil-building practices.

LIVESTOCK-DISEASE CONTROL

We believe that since a sound livestock program is the foundation of agricultural

prosperity no efforts should be spared to protect the health and sanitation of livestock.

That strong efforts should be made to prevent the spread of disease. That we should have rigid laws and enforcements regarding the sanitary operation of sale barns. That research be promoted and information be made available regarding the control of new diseases. That a more uniform system of laws regarding the interstate shipment of livestock be promoted.

GOVERNMENT PROGRAMS

We believe that a sound-farm program is essential to the well-being of agriculture and that during the postwar reconversion period the combined efforts of the extension service, Soil Conservation Service, and the Agricultural Adjustment agencies will be needed to help rebuild our soil and maintain farm income at a parity with other groups.

We believe that the Extension Service is the agency best fitted to carry out the educational features of all farm programs and should continue in this work as it has in the past.

We believe that the work of the Soil Conservation Service in cooperation with legally organized soils districts in combatting soil erosion and maintaining soil fertility is vitally important, not only to agriculture, but to the Nation as a whole. The type of work performed by these agencies should be expanded. As one means of facilitating this work, we recommend that earth-moving equipment which has been declared surplus, be placed at the disposal of the Soil Conservation Service, to be used in erosion control and drainage work.

We believe that the elected township and county AAA committeemen are the logical men to carry out the provisions of the Agricultural Adjustment Act.

Since the prosperity of the Nation is dependent on the maintenance of the soil, we recommend that the payments for the soils conservation practices under the act be increased.

We are heartily in accord with the plan to take an inventory of the conservation needs for each farm and to give the township committeeman authority to allot the payments on the basis of the need. We recommend that ample funds be allotted for the administration of this program.

We believe that the ever-normal granary should be filled as soon as possible consistent with good soil management, and that the production control feature of the act should be used only as needed to help maintain farm income.

We believe that the over-all crop insurance program should be extended to corn and other basic crops as soon as the necessary data are available.

We recommend that the surplus war property useful to agriculture be made readily available to farmers, and that it be distributed through the township and county AAA committees.

We are in accord with the efforts of the Rural Electrification Administration to bring electricity to farming areas not serviced by the private utilities, and pledge our support to the end that every farm family have access to electric current.

FARM CREDIT

It has been clearly demonstrated that the type of long-term credit extended by the Federal farm-loan associations, which is based on the ability of the land to produce, is particularly suited to the needs of agriculture.

The short-term credit furnished by production credit associations, which takes into account the expected income of the farm, as well as the expense, has proved to be very sound.

We commend these two organizations for their services to agriculture, and we recommend that private lending agencies who have not already done so might well use this system in making loans.

The Farm Security Administration of Iowa has an enviable record in furnishing credit to farmers who have failed to obtain credit from other existing agencies, and deserves our continued support.

INFLATION CONTROL

To assist in preventing another period of inflated prices and a subsequent period of depression, we recommend the following:

1. Retain price and rationing controls as long as scarcities of important commodities unduly influence the price.
2. Postpone permanent improvement until needed materials are readily available.
3. Make investment in land only on the basis of its productive capacity, and encourage the family-sized unit by the use of a taxing system which penalizes large holdings.
4. Keep a large percent of surplus earnings invested in Government bonds.

POSTWAR POLICIES

We realize that service demands for agricultural products will be greatly reduced as discharges are rapidly returning our armed forces to civilian status. Another crop year will see many food needs met by production in devastated countries. With the improvement of farming techniques and a lessening of demand there is a probability that we may find ourselves with burdensome surpluses of food and fiber. We urge that our organization give careful attention to each of the following in an effort to prevent or overcome such a condition:

1. Encourage further research and its application in converting farm crops and agricultural byproducts into industrial material.
2. Provide food for the needy through a two-price system or food-stamp plan, and promoting hot school lunches.
3. Expand our foreign trade on the basis of reciprocal trade agreements.
4. Continue the system of crop loans and ever-normal-granary program until storage stocks have reached an amount considered adequate against a period of short crops.
5. If surpluses continue to grow to a state where they become burdensome, then we urge the addition of a system of crop-acreage controls similar to those so successfully used under the past AAA program.
6. Realizing that demand for agricultural products is closely correlated with industrial employment, we recommend that our organization actively support such postwar programs as will encourage full employment.
7. Our organization should render whatever possible assistance to our returning servicemen in helping them to adjust themselves to normal peacetime occupations, whether on farms, in industry, or among the professions.

CREDIT TO VETERANS

We believe that any returning veteran with the qualifications to become a successful farmer should be given ample credit to establish his operations on a sound basis. Credit loosely extended to all veterans who might apply for farm loans would be disastrous to the veterans as well as to agriculture and the Nation as a whole.

We believe that the Farm Security tenant-purchase program should be expanded as one means of helping veterans to become established as farmers.

ORGANIZATION

Realizing that a unified agricultural front can be maintained only by an organized program, we feel that a much greater effort should be made for a larger membership within the county as well as State and national groups.

We further recognize that the problem of developing an informed membership is as important as obtaining a satisfactory number of members. We believe that the program of work as outlined for 1946 to be a sound approach or means to meet these conditions.

We are now more convinced than ever that the challenge as to success or failure of the intentions and success of the Farm Bureau program rests in a large measure on each individual member and will be measured by the completeness of the cooperation of the entire membership in carrying out the program of work.

## UNRRA Appropriation

EXTENSION OF REMARKS
OF

## HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, as this Congress faces the second large appropriation in a matter of a few weeks for use by the United Nations Relief and Rehabilitation Administration, I am concerned to present to the readers of the CONGRESSIONAL RECORD some fundamental things that have to do with farm production in the United States of America and its relationship to this great agency.

From the standpoint of the American farmer, no problem is more far-reaching and more likely to affect our general trend than the question of markets abroad. It would seem to me that in our consideration of this appropriation, first we must give due consideration to the condition of the United States Treasury. There should be available to us the judgment of experts, and from them we should ascertain whether or not our Treasury can well afford to move farther into the field of relief for the starving peoples of Europe.

If we are convinced that this is possible, then it would seem to me that we should give due concern to the agricultural aspect of the situation. It is food that will keep the distressed people of Europe alive this winter. Food if it is to be had must of necessity come from the farms of America.

UNRRA'S PROGRAM FOR AGRICULTURAL REHABILITATION

Mr. Speaker, if the UNRRA program only included the shipment of food, clothing, and perhaps a few basic medical supplies, the need for relief in Europe and in Asia might continue for years to come. But it now looks as though relief with rehabilitation may be successfully terminated for the European countries by the end of 1946, and in the Far East 3 months after that.

The future program—and the amount of money required to run it for which the United States is asked to allocate its share—is based on that assumption. By that time, so the estimates run, Yugoslavia should be able to feed herself. Poland will probably have surplus food for export. Czechoslovakia has always been a food-importing country but will probably be able to get what she needs from her neighbors. Italy and Greece will be able to raise the usual portion of their own foodstuffs and will have goods

to trade for the others. In Europe, at least, the countries receiving help from UNRRA will be on their own feet again by the end of 1946, provided next year's harvests are good.

This is the important point, gentlemen. We must keep our eye on next year's crops. Given good climatic conditions and one good harvest, it will be possible for people in these liberated countries to look after themselves. It is true that individual farm families, communities, and even nations will not be back where they were. But they should be able to see their way out. After 1946 they will be able to complete their recovery by themselves under their own power.

It is the UNRRA program of rehabilitation coupled with relief that is making this recovery possible. If UNRRA were shipping only wheat and wheat flour for making bread and not the seed for planting and growing wheat this would not be so. If we sent canned milk and powdered dry skimmed milk, as we have been doing, but did not ship dairy cattle to raise the quantity of milk production, we could not expect the rebuilding of war-shattered herds. If we sent only dried peas and beans for emergency relief feeding, and did not supply draft animals and farm machinery to plant, harvest and market fresh fruits and vegetables we would keep these people dependent on us for years to come.

But the UNRRA program is not limited to meeting relief needs. It calls for sending in supplies to make agricultural and industrial recovery possible. UNRRA is watching crop production in Europe and Asia in order to gage the quantity of relief food shipments which must be sent as supplement. But even more important, it is doing everything in its power to back up a program of direct immediate relief by shipping in supplies to assure the success of next year's harvests.

Farm people in the countries receiving the aid of the United Nations through UNRRA are universally asking for draft animals, and other livestock, fertilizers, tractors for power, and the larger farm machinery for plowing, planting, and harvesting. They will make the simpler machines in their own blacksmith shops. They want seed and cleaning machinery to improve the quality of their own seed. Their requirements are modest in comparison to the destruction that has taken place.

Farmers had to plant their crops this spring in mined battlefields, without draft power and with improper fertilizer. To the war-caused difficulties in the way of adequate production, the disastrous effects of severe drought have been added.

It is understandable therefore that the yields this fall are less than the needs of the people. In view of the handicaps it is remarkable that the 1945 harvest was as good as it was. In a good many areas, however, people will be hungry in spite of the fact that each country is doing everything it can to assure harvest of all available crops and their movement and storage for use during the coming winter.

But 1945 must be the last bad winter. The desperate people and their governments have already steeled themselves to accept one more winter of hardship. Let us hope we can put an end to what they are asked to endure—not only for the sake of thousands who may die of hunger, if we do not move swiftly, but for the sake of our own peace and security, if we fail next year to provide a new spring full of hope and promise.

To meet urgent needs for wheat for direct human consumption this winter, UNRRA raised its requirements and shipping schedules. For instance, UNRRA is now planning to send 90,000 tons of wheat per month to Greece instead of 50,000 as originally planned. Wheat for the war devastated countries receiving aid of the United Nations through UNRRA can be obtained principally in the United States and Canada, and possibly from Australia. These countries have more than they need for their own consumption, and there are ships in which to send it. Money, however, is lacking. You may well ask if we appropriate funds now how do we know we shall not be asked over and over again to provide funds for feeding the world. I think all of us are agreed that this country does not want to be a handout country. And from what I know about farmers generally, the European farmer would be quick to resent it if we ever attempted to assume that role, either as an individual nation, or as a member of the United Nations.

After the enemy was driven out from these war-torn countries, the farm people were the one group that knew their job and started doing it. There is no unemployment in the rural areas. People are busy there. They know what to do. They do not wait to be told. They go ahead as best they can.

I think that if we could see them working in their fields the American farmer would have nothing but respect for these European cousins of his. Many of them are actual blood relatives of whom he could very well be proud. He would admire the application of physical energy as they go about their tasks without the tools to which they have ordinarily been accustomed. He might be horrified at some of their methods. He would perhaps be shocked to see the men and the women and sometimes the children working the plows, but he could not help but admire their energy and industry, and when UNRRA supplies come in he would be the first to applaud the way the farm families of these UNRRA countries use the materials and aid we are able to send as a means for helping themselves.

There is a section in Yugoslavia called the Voivodina. It is in the fertile region to the northeast in the Danube Basin. It would remind you of Iowa except that much of it is still crisscrossed with the trenches which were dug when it was a battleground for the contending forces. Some of the corn now ready for harvest was planted before the last battle began. Other lands in the battle zone had to be replanted as soon as the enemy was driven out. There was no time to fill in the trenches, so the corn marches down one side of them and up the other like soldiers in a conquering army.

Helmets are still in evidence along the roadside and occasionally in the fields. It took a tremendous effort on the part of people and the Government to get this land planted again. All available draft animals were used. Men and women hitched themselves to the plows. Children helped. Seed corn was made available from military stocks; it was too late to get in any of the small grains. As an emergency measure during this period, UNRRA actually flew a few tractors into Yugoslavia in airplanes. These tractors were placed in immediate operation on a 24-hour-a-day schedule and made possible the planting of large acreages that otherwise might have gone unsown.

Today this late-planted corn is the doubtful element in the Yugoslavia food supply. It is nearly mature now, and the farmers over there are worrying just like the farmers in Iowa. If the frost stays off until the corn is ripe, there should be nearly enough cereal food in Yugoslavia for the winter. If the frost comes before the late-planted corn is matured, the grain shipments into the country will have to be revised upwards. When the Yugoslav Minister of Agriculture talks to the farmers there he talks in terms that any American farmer would applaud. He tells them if Yugoslavia is going to get on its own feet it is going to be through its own efforts. Neither he nor his people are unmindful of the help that is coming from the West. They know that many of the tractors are Canadian and American machines and that the seed corn they planted, given by UNRRA from military stocks, originally came from the United States.

Livestock especially is a great morale builder. When a boatload come in, word is spread quickly throughout the back country. They see the ships unload and they know that most of the animals they are getting through UNRRA's livestock rehabilitation program were raised in the Western Hemisphere.

The important point here is not the gratitude of these farmers, but their independence. They have a deep sense of appreciation for what UNRRA is able to send, but they are eager to go on from there. The Yugoslavs know how to use materials and equipment from UNRRA as a lever with which to lift themselves from hopeless despondency to a position of self-respecting self-help.

The same feeling prevails in Poland, even though some 40 percent of the land is idle. Where rye has been planted it is only yielding two-thirds of a crop, but the reason for this is not lack of industry. In relatively large areas the farmers put their rye in during the night while still under the German occupation. They were not permitted to plant. All rye was requisitioned by the enemy for food. They had to steal rye from the Germans for seed. They knew the war was going badly for the Nazis, so they planted as much as they could—with no fertilizer and in seedbeds poorly prepared. They planted in the dark of night but in complete faith of an Allied victory, knowing that when the time came to reap their crops they could do so in the full light of day and liberation.

In Yugoslavia, Czechoslovakia, and Poland the farmers have done a marvelous job under extremely trying conditions. Their livestock was depleted, draft animals taken by the armies, cattle killed for beef, and in many areas taken out either by the Germans or Russians in their sweep across the areas.

Transport is extremely short everywhere. Near Athens it is usual to see carts and wagons of farm produce coming toward the city. Many of them are pulled by women and children. Some are pulled by cows and donkeys, with the people pushing from behind or helping to pull. You can see any numbers of two-horse wagons with the extra singletree tied back pulled by one thin horse or by a cow with only about a half load. There are also people coming to the city with no transport, plodding along carrying goods on their backs. Although only a few minutes by jeep, it is a day's journey from farm to market on foot.

In many, many places bridges are out. Goods must be transported across streams by boats, picked up again on all sorts of handcarts or on the backs of men and women for further transportation on the other side. Every American farmer who has pioneered in his own community for better farm-to-market roads can understand why the governments of all countries are making earnest efforts to restore the road systems and transport goods to strategic points in anticipation of a winter of suffering.

In this connection I would like to point out that Europe has always depended on animal power to a far greater extent than the United States, not only for cultivating the fields, but for interior transportation. Not in three centuries have rural areas been so completely isolated as they are now. When farmers harvest their grain in one community people 50 miles away go hungry, for there is no way to cover the distance except by walking. Greece was hampered in waging an all-out war against the locusts this summer not only through lack of pesticides, but because of the difficulties of getting the insect-killing materials to the breeding grounds in time to check the locusts as they hatched. These are the conditions which we are asked to vote against, gentlemen, when we cast our votes in favor of living up to our pledged obligations.

Is it small wonder then that in projecting the program for 1946 UNRRA finds that the need for draft power is greater than anticipated? To balance this I am told the needs for pesticides and seeds for next spring are somewhat less. The four countries of Poland, Czechoslovakia, Yugoslavia, and Greece have asked UNRRA for over half a million head of utility horses, mules, cattle, and something over a half a million head of breeding stock. That includes a few swine and sheep. Even with these amounts, which are not likely to be supplied in full, the deficits will still be very great in these countries. The herds can only be brought back by very careful planning of slaughter and the substitution of other foods for meats over a period of several years.

The situation which these countries face today is familiar to every American farmer. We all know of a friend or neighbor whose barn was struck by lightning and destroyed by fire. Or perhaps drought and dust have cleaned him out. Or he may have been first in line when a forest fire swept the country. Though he could not save his own buildings, he fought with his neighbors in ditching and dynamiting to stop the spread of the holocaust. But whatever tragedy struck his farm, some of his best stock were killed. He has to start out again with 2 or 3 dairy cows in place of the 10 or 12 he lost. His purebred bull perished. His draft horse is gone. He has no way to plow his field or to transport his goods to market, or his supplies from town.

After reviewing the extent of damage, his first thought is to get back on his feet. He dips into his bank account, if he has one. He calls on his insurance company. His friends offer to help. It may be impossible at the outset for him to replace his livestock numerically, but he selects new animals with a view to the future. He thinks of the breeding season. While he is picking a few animals to meet his immediate needs he thinks in terms of the qualities he wishes to pass on to the progeny of his present stock. By careful selection he knows that in time he can rebuild the strength and value of his depleted herd.

The help he wants from his neighbor and from his insurance company is help to help himself. He knows that if he can be helped to acquire a few of the right kind of animals he will be on the road to recovery.

Today in Europe hundreds of thousands of farms are depleted, fields are mined, pesticides and fertilizers are lacking, children are without milk, and there is not enough draft power to plow the fields or to carry supplies to and from market. Most of the remaining animals are weak and puny. They show the same unmistakable signs of undernourishment as do many of the people.

Some countries like France, Holland, Belgium, and Denmark are like the farmer who can dip into a bank account. They have bank accounts in the form of foreign exchange. Others like Czechoslovakia, Poland, Yugoslavia, Albania, and Greece are in the position that many of our Dust Bowl farmers found themselves in during the thirties. Their banks went broke as a result of the same crop failures which wiped them out. The invaded nations need the helping hands of neighbors and the type of "insurance" that the United Nations have combined to offer through UNRRA. They paid their "premiums" during 1940–44—in blood. And now they need a lift to get back on their feet.

Every breeder knows what happens on an individual farm when a few well-chosen animals are added even though the existing herd may be small and puny. With careful breeding and a controlled slaughtering program, livestock numbers will increase and the quality of animals improve. Just as it would take an individual farmer some 5 to 10 years to recover from a disaster, so will it take the farm economy of Europe 5 or 10 years to completely recover the war losses of livestock. UNRRA will long since have passed from the scene, but the animals we are sending now through UNRRA form the basis of this recovery.

In areas stripped of livestock by the Nazi invaders, UNRRA has already delivered or procured for distribution 12,500 mares and mules and 2,400 milk cows. If we make the money available, UNRRA can continue shipments of animals to Greece and Yugoslavia during the winter and can resume shipments to Poland and Czechoslovakia in the spring.

The Church of the Brethren and several other groups understand the situation very well. Months before the war was over they started a program to raise livestock especially to aid in the rehabilitation of European agriculture. They have turned to UNRRA to deliver the goods for them. Only a few days ago, UNRRA accepted 150 heifers from the Church of the Brethren for Poland. Six very fine blooded bulls were also given by this same organization, through UNRRA, to the farmers in Greece. They, together with six other animals furnished by UNRRA, are being used now in an artificial insemination project to build up the depleted herds of Greece.

There is a gift coming, too, of 30 head of Jerseys, 40 Holsteins, and about 14 Guernseys contributed by the Falls City Milk Producers Association through UNRRA for Athens, Greece.

These gifts of livestock made through UNRRA are over and above the money appropriated by the contributing nations. They are the personal contributions by members of these organizations. The bulk of the livestock for rehabilitation has been, and will be, paid for from UNRRA funds.

We want to keep up this good work, gentlemen. The shuttle service of livestock boats across the Atlantic has got to continue until UNRRA's full quota of animals has been delivered.

In the area around Athens, 9 out of every 10 dairy cows have been destroyed. You can jeep for miles through Poland without setting eyes on a farm animal. In the prewar milkshed of Warsaw and Lodz there is a little milk on the market. The highest ration is at Lodz. There the children are lucky. If they are under 2 they may have 1½ liters. That is less than one-half pint of milk a day for the luckiest kids in Poland.

Now there are two kinds of help needed in that situation. And UNRRA is providing both of them. Canned and powdered milk has gone in and must continue to go in for the mass feeding of starving children. That is relief. And dairy cattle and breeding stock must continue to go forward, to help restore war depleted herds. That is rehabilitation. The equation is a simple one. The more agricultural supplies we can make available, the sooner will we be able to let up on direct relief.

Next to livestock the other major need is for fertilizer. If we are able to send in more fertilizer next year we will not have to send in as much food. Requirements for fertilizer are great, and the yield of the crop will be low unless fertilizer is available. For several years these lands have had no commercial fertilizer. They have been poorly prepared. They are weedy and they show signs of neglect in many ways. Many of you can understand that situation. You know that if you have a field under cultivation for a number of years and have to let it

go maybe one season or two without proper fertilizer or cultivation you may not notice much difference right away. But after the third or fourth year of neglect the yield begins to go down. That is the way it is in most of Europe today. Expressed in terms of standard fertilizers the combined needs of Poland, Czechoslovakia, Yugoslavia, and Greece are 407,000 tons of nitrate of soda, 272,000 tons of raw rock phosphate, 423,000 tons of superphosphate, and 11,200 tons of potash.

UNRRA's search for fertilizer materials has been world wide. There has been a shortage almost everywhere. We know how hard it has been to get adequate quantities here in this country. But our own United States fertilizer plants are going to keep going at 175 percent of prewar capacity for some time to come.

Then, too, some of the ordnance plants used for explosives during the war will continue to make ammonium nitrate, a basic item for mixed fertilizers. Most of their output, which is in addition to our expanded domestic production, has been earmarked for use overseas. UNRRA is able to draw from this source. Chile is one of the United Nations also furnishing nitrates for the liberated countries—some 100,000 tons of it. A small quantity of ammonium sulfate is coming from England.

One hundred thousand five hundred tons of rock phosphate is also expected from north Africa, 50,000 tons of potash from Russia, and 10,000 tons of potash from Palestine. So it looks now as though UNRRA will be able—if granted funds—to supply some 40 percent of the needs of the countries by shipments from the outside.

The actual break-down of the material that UNRRA is seeking to assure the 1946 harvest runs like this: 173,000 tons of nitrate of soda or its equivalent in nitrogen, 187,000 tons of superphosphate, 272,000 tons of raw rock phosphate, and 112,000 tons of potash.

In addition, every effort is being made to stimulate indigenous production. If sufficient coal and raw materials can be had, requirements for outside fertilizer may possibly be reduced. Because of livestock losses there is practically no manure to be had.

UNRRA has several technical men in Europe now working with agricultural ministries finding out what it will take and how long it will take to get local factories in production again. Last year a considerable tonnage of rock phosphate was brought from Russia in an American bottom to Belgium. The idea was that after the manufacturers there had processed enough superphosphate to meet their own needs there will be an exportable surplus for other European countries. This past season a good bit of land was gotten in cultivation under the most trying of circumstances, but because of the lack of fertilizer the yields of these crops were much less than the terrific efforts of the people warranted. The farm people of Europe this fall and next spring are going to exert the same strenuous efforts, and adequate quantities of fertilizer will do much to step up yields that might otherwise be too meagre.

To date a total of $91,400,000 has been committed for agricultural rehabilitation equipment and supplies. Of this amount $69,000,000 was from the United States with the remainder coming from the United Kingdom, Canada, India, Brazil, Chile, French North Africa, Australia, and New Zealand. As shipping possibilities increase, additional goods will be made available from other UNRRA countries. Approximately 76 percent of the total agricultural rehabilitation supplies have come from the United States of America.

"Capital investment" in agricultural supplies in Europe should end by July 1946. By that time the normal crop acreages should be planted, although fertilizers, and better tillage will be required before yields of crops reach normal prewar levels.

Is it enough, gentlemen, to remember the child in Poland who dies for lack of milk, or the farmer who stumbles under his load on the highway to Athens? Or must we remind ourselves that Greece and Italy cannot buy our surplus wheat and other commodities unless they have exportable oil from their olive orchards. As we struggle with our own reconversion problems during the next few years, we shall need desperately the foreign trade that only a recovered agriculture in these liberated countries can provide.

Therefore UNRRA's broad program of relief and rehabilitation is an answer to many of our problems at home as well as abroad. For that reason, if for no other, we must keep UNRRA going to finish its job.

---

## Address on Elks Program

EXTENSION OF REMARKS

OF

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address delivered by me at the special Elks memorial program conducted over Station WLAW, Lawrence, Mass., on Sunday, December 2, 1945, by the Lawrence Lodge, 65, Benevolent and Protective Order of Elks, in memory of the departed members of the organization who have passed away during the past year.

Memorial service program was in charge of Exalted Ruler John J. Harty, assisted by Esteemed Leading Knight Arthur B. Mahoney, Esteemed Loyal Knight William J. O'Brien, Esteemed Lecturing Knight Raymond E. Kennedy, Secretary Daniel P. Desmond, and Chaplain Bernard F. Donahue. The soloist for this service was State Representative J. Everett Collins, who was accompanied by Raymond E. Wilkinson, organist at the First Calvary Baptist Church of Lawrence, Mass.

The address follows:

This is a memorial service for those members of Lawrence Lodge, Benevolent and Protective Order of Elks, who are outward bound, journeying to that place from which no traveler returns. It is a time during which we fondly recall the faces and the voices of those who were once with us, nourishing ourselves with the memory of the good they did. Thus strengthened, we go forward to the tasks of this life, with a spiritual kinship that knows not the barriers of death. For they have left us a heritage which we cannot fail.

As we think of our brothers who are gone, we feel regret. Blinded by the speed and the material things of this earthly life, too often we did not see and encourage the quiet virtues of our friends. We wish that we could speak to them once more, to say the words of human fellowship which we were too busy to say while they were walking by our side. "One more chance, one more chance," we cry, as all humanity has cried since the beginning of time, but there is no answer from the beyond. The men we knew have gone, never knowing what they gave to life, not knowing the respect and affection which we meant to speak while they could hear. And, so, through a memorial service such as this, we send out our prayers to eternity, hoping and believing that our loved ones there will understand.

We rise from our prayers, cleansed by humility and fortified by the faith that if we say and do to others what we failed to express to our departed brothers, we shall redeem our mistakes. Through regret and repentance and the renewal of spirit that comes from this communion with the dead, men go on from self to serve the larger needs of family, neighborhood, community, State, Nation, and now the world.

The Lawrence Lodge of Elks has served its community well. For a few moments of memory, we look back to the beginnings of our city. Little more than a hundred years ago, Lawrence was rolling hill and field and meadow, a sylvan paradise, where the creatures of Nature sang and played. The Merrimack teemed with fish, and its waters were as clear and healthful as the fountain of youth. Lawrence had one house, belonging to a farmer who did his daily chores, far removed from the commercial activity of Salem and Boston and Portland.

Then a traveler came this way, filled with the ferment of the industrial revolution. He knew that in Europe the spinning and the weaving were no longer done in the homes. Men had invented machines which could do the work of many men. These machines were housed in large buildings where hundreds worked. In this manner, the production and the profits were great. And when the traveler saw the wide waters of the Merrimack, flowing unused to the sea, he got an inspiration. This flow of water could be harnessed to make cheap power for machines. He hurried back to Boston. Soon many men were coming to this plain in the valley. They built large mills along the banks of the river, and people came to work in the mills, and that is how Lawrence was born.

Then came the war of the brothers—the War Between the States. Men went from Lawrence to fight and die in that 4-year war, and through this sacrifice for something beyond the borders of the town, the people of Lawrence were developing roots of courage and enterprise and cooperation for the common good, in keeping with the American way. After the war, there was much work to be done, and the town had growing pains.

Suddenly, tragedy struck. The Pemberton Mills collapsed, pinning hundreds in the wreckage, and fire broke out. The people of Lawrence rushed to the scene, organized bucket brigades to fight the flames, burned and blinded and exhausted themselves, trying to save the helpless victims. And when it was over there were many dead. But out of this agony and its fearful cost came a deeper awareness of the community and the human dependence of each man on his fellow man.

Production went on and the work was hard as people labored from 6 to 6. In the winter months they went to work in the dark and came home in the dark, never seeing the light of day. When the work was over, many simply crossed the canal to the corporation houses to eat their frugal suppers and fall into an exhausted sleep.

If you look at the stones in the old cemetery, you will read the story of those days. On tablet after tablet you will read the names of four, five, or six in each family who died in infancy. The people wore themselves out in those early slave factories and the mothers could not afford the good food they needed for their children. Production at a profit for the few was the whiplash of this pioneer industrial community. Generations lived and died with no other possible future than these mills.

Then, in 1912, the oppressed workers took matters into their own hands. The long and bitter strike of that year focused world attention on the impossible economic plight of the textile workers. There were bread lines and soup kitchens as the workers suffered together to win some measure of the new freedom, the right to earn a fair share of production's profits for themselves. By their standing together in this common cause they encouraged the development of organized labor which is winning for them better working conditions and better pay.

In 1917, the Nation went to war with an aggressor across the seas and the Nation needed men for the Army and Navy. The people of Lawrence did not hesitate. They did not say: "Let the rich, who got from the country, now give to the country." The mill workers sent their sons by the thousands to fight the world bully on the cold Atlantic and on the shell-swept fields of France. The war was won, and some of the boys who went away never returned. The people, however, did not complain. They shared the burden of their grief and they carried on in the ways of peace. By common sacrifice, they had been brought closer together.

During the 1920's, it seemed that the golden age for which the workers had so long toiled, had at last arrived. There was work for all at decent hours and good pay. The city of Lawrence enjoyed prosperity with all the communities of the Nation. We did not know that it was an artificial prosperity, stimulated by false bookkeeping until the bubble burst in 1929 and the Nation was paralyzed. For 10 years, in a struggle that was, in some respects, more wearing than war or industrial strife, the workers faced fear, despair, and the constant challenge of trying to make both ends meet. In this long and belt-tightening period, families doubled up, individual helped individual, clubs and societies engaged in philanthropic work that taxed every human and material resource. It was a long-drawn-out battle by the community for survival and in the fires of this ordeal were forged even stronger bonds of cooperation.

As our people were slowly though surely winning their fight for economic democracy, the Nation was attacked by aggressors, assaulting us from the east and the west. Undaunted, the Nation rose as one man to beat back the attacks. For 4 years, the people gave labor and skill and faith and life itself to win the most terrible of all wars.

The people of Lawrence stand, on this December of 1945, on the threshold of a new age, beside which the month of July 1945 seems like a point hundreds of years back in time.

Having come so far, they will not falter. Behind them is the record of great obstacles overcome in the forward march of the common man. Foremost among those who have helped them in this pilgrimage is the Lawrence Lodge of Elks. No fair-weather friends are these. They combine the lifting cheerfulness of human fellowship with a day-in-and-day-out devotion to the welfare of the needy and the underprivileged.

The Elks know the meaning of Americanism, which is faith in God and country. They welcome men of all races, all creeds, and all classes in our society, and therefore are truly representative of the communities which they serve. In fire, flood, hurricane, economic distress, and war—at all seasons of the year—the Elks are working with the good will and practical helpfulness which are the roots of American character. These virtues are needed today as they were never needed before.

Peace has come, bringing a great and sobering responsibility. This is the first memorial service to be conducted by the Lawrence Lodge since the coming of peace and the first since the beginning of the atomic age. Today, man is confronted with a power of his own making which can bring unlimited blessings to all, or it can bring complete destruction. Is man ready to meet this responsibility? Has he developed his mind and character to control this power for the general welfare?

To do so, he will need to summon every good that is or was, as we tonight, at this memorial service, recall the exemplary lives of brothers who have gone, that we may be spiritually strengthened to meet the great task which is upon us.

We recall the good which those now dead once did in life, holding it before us as a guide to our own conduct.

As the Elks of Lawrence have worked hand in hand with their fellow Americans, encouraging and helping our community to surmount every trial, so, too, will they work with the communities of State, Nation, and the world, to make the fraternity of mankind upon which the fate of our civilization depends for survival.

In the name of the departed members of Lawrence Lodge, Benevolent Order of Elks, we pledge that we shall work for this high goal of human brotherhood.

With the inspiration of our dead, and with the help of Almighty God, it will be done.

---

## Full Employment Promise Trapped Workers of Europe

EXTENSION OF REMARKS

OF

### HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including the text of a speech delivered over the Columbia Broadcasting System, November 27, on the Congress Speaks program regarding the so-called Murray-Patman full employment bill:

Fellow Americans, as a youngster I used to listen open-mouthed and wide-eyed to the soap-box, patent-medicine doctor who sold that famous magic Indian remedy, rattlesnake oil, absolutely guaranteed to cure all the aches and pains of the human body. I was charmed by the glowing promises of health guaranteed to result from using one bottle costing $1.

The old patent-medicine man is gone, but today his magic appeals are being used everywhere by those who would regiment the people. The health claims for the snake-oil remedy of the gay nineties have been replaced by prosperity claims for cure-all legislation.

The Murray-Patman full employment bill is such a remedy. It uses the propaganda slogan method so successfully used in other lands—lands where the people surrendered their liberty for seductive slogans.

The Communists gained absolute power in Russia by magic promises. Here they are: "Land for the peasants—factories for the workers—bread for the hungry." Let me repeat them—"Land for the peasants—factories for the workers—bread for the hungry." Can you think of a more appealing set of promises to trap a hard-pressed people—unless it would be this slogan used by Hitler "Better wages for the workers"?

These slogans are alluring and tempting, just as the magic promises of the snake-oil doctor were. He took your dollar for his bottle of worthless liquid and disappeared. But the modern political doctors exact a terrible price in exchange for their remedies. In Germany, Italy, and Russia, they promised government full employment and they delivered it—but the price of that slogan was not measured in dollars. The price the people paid was the loss of liberty, justice, and opportunity for their children.

And all these vital rights are a part of the final price of the Murray-Patman full employment bill.

It is this simple. To guarantee your employment, the Government must have the power to force you to live in accordance with its plans—just as the commander of an army, responsible for his troops, must have slave-like obedience from them. If the Government is to have full responsibility for your employment, Government must have the power to regiment you into taking any job it picks for you. This means it will have the power to tell you where you must work, how much you shall be paid, and how you shall spend your wages.

Is this appraisal too critical of this scheme? Listen to the 1944 report of the Social Security Board, which points out that "even full employment could not obviate unemployment in any but a regimented economy." That is the judgment of the United States Social Security Board. And, Sir William Beveridge, author of the Beveridge plan in England, admits:

"Full employment cannot be won and held without a great extension of the responsibilities and powers of the state exercised through organs of the central government. * * * To ask for full employment while objecting to these extensions of state activities is to will the end and refuse the means."

The exact effect of the Murray-Patman full employment bill is "to will the end and refuse the means." It is not reasonable to asume that the authors of this bill mean it to be simply an empty promise—thus you may only conclude that, underneath the bait of the words "full employment," must be the hook of full regimentation, with the same consequences that followed the same promises in Germany, Italy, and Russia.

Well, you may ask, how can we bring about full employment?

Fortunately, today in America, there is a golden and unparalleled opportunity for the Government to encourage full employment. Just two of the regular and normal duties of Government must be done immediately and honestly. Here they are:

1. The administration should set up a genuine plan to balance the budget within 2 years.

2. The administration should prepare an orderly program to wind up the OPA by a definite date.

These two actions would assure workers and industry alike of honest dollars for their production.

Then the unsatisfied needs of the American people, especially our veterans and their families, for housing, automobiles, and other things would create maximum employment and production for many years.

An orderly plan for ending the OPA and the assurance of a balanced budget would end the concealed creeping inflation at the root of most of our strike troubles. For

American industry and labor, like a good football team, must have a set of rules that will not be changed by Washington every few minutes during the game.

Has this administration the ability and the political courage to tackle these duties? For balancing the budget and restoring free production for workers and industry are the vital tasks before the administration and the Congress.

We must not be led by slogans into the dismal European swamp of full employment by enslaved labor. Instead we should take the American four-lane highway of full production by free workers.

## Report From Overseas

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 27, 1945*

Mr. WHITE. Mr. Speaker, the boys in the Army from north Idaho like those from every other section of the country, now that the war has been won, want to get home, as evidenced in a letter just received, signed by a number of Idaho veterans, inserted herewith:

AUTOMOTIVE REPAIR COMPANY,
TWELFTH MOTOR TRANSPORT BAT.,
FMF, PACIFIC, CARE OF FPO,
*San Francisco, Calif., November 10, 1945.*

Hon. COMPTON I. WHITE,
*Representative, State of Idaho,*
*Washington, D. C.*

DEAR SIR: Everything in Washington seems to be done on the point plan, so I would like to offer you a point plan from Sasebo, Japan, and we, the enlisted men, would like to have it acted on in whole or part.

1. Straighten out demobilization: When an order comes out, let it be acted on as it is without having it worded in a manner that it can be twisted and distorted into a shape that will suit any situation our leaders choose it to fit.

2. Tell us the truth: We are no longer children and the war is over. Why can't we be told the truth of why we are over here in such great numbers and why can't we be told when we will get home, or don't our great leaders know?

3. Better our conditions: Is it necessary that we should be eating C rations and dehydrated foods for most of our meals when the States are only 20 days from here by ship? I've heard that the Japanese internees in the States ate better than we do, but, of course, I realize that we are of a great democracy and must show these people that we are a shining example to all, except the men who fought from Guadalcanal to their internment in Japan.

4. Get back to democracy: Let our Government again be run by our Congressmen instead of being bulldozed by military men. If an example of what military control of a country can do is needed, then send one of the many congressional committees to Japan and see what it did for these people.

5. Stop strikes: Is the United States Government powerless in stopping these strikes that are holding up shipping facilities and the things we need? If Mr. Lewis and Mr. Green cannot be handled there, send them and their strikers over to us. We would be glad to return to the United States in the ships that they would come in. We, too, have problems but we can't strike.

6. Get us home: Of course, we all realize that there was a war on and with the help of our draft boards we gladly joined the service, but now the war is over and we are very anxious to join our wives, children, and families again. It isn't just exactly a happy family life to be stuck here, thousands of miles from home, in the midst of a group of filthy, stinking, diseased race of people.

Please, sir, put your every effort into helping us fellows get back to the homes that we miss so much.

Sincerely,

W. L. Ellis, Private, USMCR; D. E. Blake, USMC; Carl Schmidt, USMCR; T. M. Myers, USMCR; D. E. Cutting, USMCR; F. W. Rush, USMCR; H. A. Hutchins, USMCR; C. P. Chamberlain, Jr., USMCR; O. A. Colclasure, USMC; L. C. Lee, USMCR.

## Address by the Ambassador From Mexico

EXTENSION OF REMARKS
OF
### HON. W. LEE O'DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Wednesday, December 5 (legislative day of Monday, October 29), 1945*

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by His Excellency Dr. Antonio Espinosa de Los Monteros, Ambassador of Mexico, at the dinner in his honor at the New York Board of Trade and the Mexican Chamber of Commerce of the United States, at the Hotel Plaza, New York, November 28, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It afforded me great pleasure to accept the kind invitation from the New York Board of Trade and the Mexican Chamber of Commerce of the United States to be with you tonight, and I count myself particularly fortunate that I am privileged to meet this brilliant company. Although I appreciate very deeply your magnificent reception, permit me to accept it, not as an unmerited personal honor, but rather as a token of your high regard for the Government and the people of my country. From the bottom of my heart I thank you for this tribute to Mexico.

I am especially grateful for the presence of so many ladies who with their charm and loveliness enhance the enjoyment of this gathering. I sincerely hope that the ladies will forgive me for taking this opportunity, graciously offered by their husbands and friends, to discuss matters to which we men—admittedly the weaker half of the species—attach so much importance.

I have been in New York City many times. I have spent here long periods while working on economic and financial matters with Government officials, bankers, and financial executives. I am very happy to see among you so many old friends. Yes, I am still happier because now that I am in Washington, I shall see more of you than heretofore.

Since most of you gentlemen are businessmen, I would rather limit my remarks to the all-important subject of trade between your great country and mine. It was only a few weeks ago that I relinquished a financial post which I held for many years in Mexico. No wonder, then, that I would rather talk shop with you. I want to speak informally and plainly.

My work in Washington will be based on the principle that, while it is of paramount importance to maintain the relations between our two governments on the present high level of friendliness and good will, we must place special emphasis for many years to come on advancing and expanding our common economic interests. I am firmly convinced that the safest way to attain true and lasting peace and friendship among nations lies precisely in a community of business interests, grounded on sincere trust and reciprocal fair dealing.

Mexico, as you all know, has been traditionally a market for consumers' goods of all kinds. We have bought manufactured products from you and from other countries, many of which products we could have easily produced on an economic basis, had we had the necessary machinery and technical skill.

We believe that this situation must undergo substantial changes. Henceforth we shall do everything possible to become, in the main, a market for producer goods and for such consumer goods as we cannot produce on a sound economic basis.

In this respect, if I may remind you, we wish to follow the example of your own country, precisely as advocated more than a century ago by that great American statesman, Alexander Hamilton, to whose prophetic genius and creative ability this country owes much of its fabulous wealth and power.

Let it be known, then, that Mexico is now vitally interested in buying the most modern and efficient types of machinery, tools, and other plant equipment and that the size of our orders shall be limited only by our capacity to pay.

But let not the manufacturers of consumers' goods become unduly alarmed because of this change in our policy. Certain manufacturers may no longer find a market in Mexico, but greater compensation will be found in the unlimited opportunities for new items which the United States is to export to Mexico in increasing quantities, resulting in a larger volume of trade. Experience shows conclusively that the best clients for consumers' goods are the highly industrialized peoples of the world. If Mexico's industrialization program is successful—and we see no reason why it should fail—then our standard of living will improve and consequently we shall soon become ready buyers of consumers' goods of a higher quality and in greater volume than ever before.

It is interesting to note the significant economic and fiscal changes that have taken place in Mexico during the war years.

Since 1942, when the United States practically discontinued production of civilian goods while increasing at the same time its purchases of raw materials, we Mexicans had to tighten our belts in doing away with practically every type of imported consumer goods, while at the same time, our traditionally favorable balance of trade, increased to levels never before attained.

We have as a result accumulated a reserve of gold and foreign exchange without precedent in our financial history. Our currency circulation has expanded many times, and the cost of living has considerably increased in spite of all our efforts.

It is then up to those of us in Mexico who have lived close to these problems during the past 5 years to face them and devise means for accomplishing two things: First, to hold down our inflationary trends with all the means at our disposal; and second, to fulfill a sacred duty, indeed, that is, to make sure that the gold and foreign exchange we have amassed with such great hardships shall not be squandered in an orgy of wild spending in luxury and superfluous goods. We must, absolutely must, see to it that whatever we buy with these funds will guarantee the Mexican people a higher per capita income. We, the people of Mexico, must learn to use our savings both wisely and profitably.

One point of paramount importance arises in connection with these problems:

Since we are to ask our friends in the United States that they sell to us their machinery, equipment, and "know-how" in order to insure the success of our industries, it is only fair that we should also invite them to take, if they so desire, a share in our ventures. This is bound to turn into mutual profit.

I place this thought before the bankers and manufacturers of the United States. We want to work with you and we are willing to risk our money and give our time and effort to reach our goal. We invite the industrialist and the financier to combine their efforts and join us with their capital and techniques as good partners, good friends, and good neigabors.

American banks and bankers have for many years teamed up with American men of vision and courage to build up the greatest industrial empire the world has ever known. The miracle of production which made this country the arsenal of democracy bears witness to the gallant spirit of American businessmen.

We invite and cordially welcome you to join us in our modest but brave effort to industrialize Mexico and thereby lay the foundation for an economy of abundance which will in time bring about an expanded and profitable trade between our nations.

When you invest in Mexico we expect you to bear in mind the same purpose we have of promoting and developing the Mexican economy, as well as of making that development the source of increased profits and other mutual advantages. All we expect of the foreign investor who wishes to go into Mexico is that he abide by the rules of fair play, such as are established by your own legislation for the proper behavior of capital and its management within your own country.

I thoroughly agree with the principles enunciated by your great President Truman. In his Navy Day speech he clearly and forcefully stated the fundamental principles of your Government's foreign policy. One of these principles is that this country believes "that full economic collaboration between all nations, great and small, is essential to the improvement of living conditions all over the world and to the establishment of freedom from fear and freedom from want." We know American businessmen are of the same belief, and that they are willing and ready to translate that belief into action.

In this pioneering effort we have already made some progress. During the past few years many surveys have been completed and we have now the blueprints for several industrial projects. We have built a few plants in association with American industrialists. For instance, we have a new steel mill at Monclova, we are building a plant for aluminum products, we have started production of synthetic yarn and of asbestos products, and soon shall have in operation a can manufacturing plant.

Just recently we completed negotiation with an American firm to build a plant for the manufacture of electrical equipment and household appliances. And it is interesting to note that this plant was made possible by the assistance of one of your largest industrial concerns and by the cooperation of a distinguished group of American private bankers. The American share of this investment, gentlemen, has not come, of course, from American banks; it came from that great source of prosperity the United States has and enjoys, the American investor, who has shown his faith in a greater and more prosperous Mexico.

The Export-Import Bank of Washington, I should add, has been of great assistance to us. We have, for some years, obtained financial aid which has been of paramount importance to us, in meeting some of our most pressing requirements. But I should here place particular stress in pointing out that the Export-Import Bank has studied our plans and analyzed our figures with as cold an eye as any professional private banker could possess. We have been able to borrow money from the Export-Import Bank only when we have shown that the individual project per se is of benefit to Mexico, is self-liquidating and, in general, meets the requirements of sound banking practices.

In closing, allow me to add a few words concerning the future relations between Mexico and the United States of America. The United Nations, with the United States of America as the leading power, have fought and won a costly and terrible war. The Mexican people have had in it their share of "blood, sweat, and tears." After untold anguish and sacrifices without number, mankind has earned the right to live in a world where the settlement of disputes among states shall be left no more to the arbitrament of war. Mexico, as well as every other member of the United Nations, expects to be able to pursue the welfare and happiness of her people under an international system, where social and economic cooperation shall be the rule, rather than the exception.

We want to work hand in hand with all the peace-loving nations of the earth, but more particularly with our closest neighbor—the United States of America. We firmly believe that reciprocal assistance shall be the basis of relations among peoples. Faithful to the glorious tradition of the Americas, may our beloved countries always show respect for each other and dwell in constructive cooperation. Thus, Mexico and the United States of America will always follow the road of justice and good neighborliness to lasting peace and enduring friendship.

---

## Compulsory Military Training—Statement by Donald Du Shane

EXTENSION OF REMARKS

OF

### HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 4, 1945*

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I present for printing in the CONGRESSIONAL RECORD a statement on compulsory military training made to the House Committee on Military Affairs on November 28, 1945, by Donald Du Shane, secretary of the National Commission for the Defense of Democracy Through Education, as follows:

STATEMENT AGAINST COMPULSORY MILITARY TRAINING

(By Donald Du Shane, secretary, the National Commission for the Defense of Democracy Through Education)

The National Commission for the Defense of Democracy Through Education which I represent at this hearing of the House Committee on Military Affairs was appointed and is maintained by the National Education Association, which represents about 900,000 teachers through direct membership and through its State and local affiliated organizations. Since 1943 the commission has given careful consideration to the problems of peacetime compulsory military training. It has come to the following conclusions:

1. That compulsory military training is not at present necessary for the best possible defense of the United States against attack or invasion.

2. That the passage of this measure at this session of Congress would be unwise, wasteful, and injurious to our best interests both at home and abroad.

3. That there are other defense measures of greater importance some of which would be interfered with or prevented by the high cost of compulsory military training.

I. COMPULSORY MILITARY TRAINING IS NOT AT PRESENT NECESSARY

We have come out of this war with the strongest Navy and the best Air Force in the world and with the world's best equipped and trained but not largest Army. As men are released from our armed forces the Selective Service Act of 1940 provides that they automatically are to be transferred to a reserve component of the land and naval forces of the United States. These men and the large number of volunteers now entering our forces will fully protect us from invasion or surprise attack for the next 5 years or more.

A realistic appraisal of our possible foes during the next five or more years justifies the conclusion that we will not be attacked. Great Britain is a firm ally and a future war with her is inconceivable. There remains only Russia, another of our allies, who is potentially stronger than we are, but war weary and with pressing problems of reconstruction. Her naval and air strength are such that she could not successfully invade us for many years, and there is no indication that she wishes to do so.

Compulsory military training is not only not needed for our defense at the present time, but its adoption might also increase international suspicion of our purposes and encourage armament races which might endanger world peace.

II. THE PASSAGE OF COMPULSORY TRAINING AT THIS TIME WOULD BE UNWISE

Conscription is an un-American institution which is regarded with distrust by large elements of our population. Many believe that its passage will mark the beginning of the militarization of America and of the weakening and ultimate destruction of our democracy. Certainly, the continuance of conscription over a long period of years will have a profound effect upon our political decisions and our dependence upon force in world affairs.

The possibility of the development of a powerful military bloc based on universal conscription should be given careful consideration. While Congress is not fully aware of it, there are plans to be presented later for refresher training and organization of the Reserves into which every class of trainee graduates. The submission to military discipline and indoctrination of our entire young male population, the granting to them of payments and benefits, the catering to them by political elements, will make a military political bloc probable and should be taken into consideration before such a bill is passed. We well may remember George Washington's statement: "This greatest single threat to a republic is an overgrown military establishment."

The use of the atomic bomb in the Japanese war and the intimation that bombs much more powerful can now be produced have raised questions regarding military tactics and defense that cannot as yet be answered. At the moment there seems very little reassurance in the training of millions of men in military drill and the use of pump guns. When the world finds out about atomic bombs, as it inevitably will, the subsequent world war, if it comes, will be much shorter and there will not be time to call up and retrain our compulsory trainees. I understand one of our atomic scientists is about to publish a booklet entitled "The One Minute War." It is possible that Congress will dissolve into thin air before it has time to declare our entrance into the next war. It would seem most unwise to adopt military

conscription, which can be justified, if at all, on experience in past wars, when the entire character of future wars may already have changed without some of our military and naval leaders knowing very much about it.

With the advent of the atomic bomb the United Nations Organization becomes the major means available for controlling atomic energy and preventing the next war. The American people have entered into it with good faith and high hopes and yet some of our military leaders are convinced that another war is inevitable as evidenced by their efforts to pass military conscription immediately. Fortunately, we have an interval of a few years during which we do not need to worry about war and which we will, if we are wise, devote to the utmost efforts to win the confidence of other nations and to convince them of our good faith and our rejection of intimidation in international affairs. The passage of military conscription at this time might injure the chances of improving and vitalizing the United Nations Organization.

III. THERE ARE OTHER DEFENSE MEASURES OF GREATER IMPORTANCE THAN MILITARY CONSCRIPTION

Of more importance to our national defense than compulsory training is the maintenance of a sound economy, large-scale production, and a high national income. Much of our success in the Second War was due to mass production by our trained mechanics, engineers, and managers, and to the drawing into the Army of mechanical experts, technicians, and scientists who were trained by American schools and shops. Whatever it costs in effort and sacrifice, we must maintain a sound economy and a widely distributed high level of national income.

One of the shocking revelations of this war was the rejection of over a third of our young men from service in the Army because of bad health, physical defects, and lack of education. The loss of production in our factories during the war because of strikes was infinitesimal compared with the losses due to sickness and physical defects. Only to a small extent can these conditions be improved during 1 year's military training of selected young men. The major solution must be found in better medical and dental services from the kindergarten through high school and in better medical service to the masses of our people.

Other improvements which are needed for the welfare of our country as well as for our defense in case of another war are the highest possible education and training of the masses of our people, increased training of technicians, engineers, and scientists, the extension of thorough scientific investigation, the elimination of racial and group conflicts, and the development of national unity.

The accomplishment of these objectives equally important from the standpoint of national welfare and defense might be retarded or prevented if marginal public funds were consumed in the payment of the high annual cost of compulsory military training.

The cost of compulsory military training, as estimated by the War Department under the May bill, will be from $1,750,000,000 to $2,000,000,000. It is probable that these estimates are low as they do not include refresher courses and payments to the reserve force of which the military training system is a part. It may well be assumed that the costs when the system is fully in operation will approximate $3,000,000,000 annually.

To Members of the war Congress $3,000,000,000 may not be overwhelming as it is to me, yet I ask your indulgence while I attempt to show some of the social betterments that could be obtained with this sum of money, and which I believe would add much more to our national defense than would military conscription.

With $3,000,000,000 per year it would be possible to:

1. Construct a 10-room modern school building in every county in the United States each year.
2. Construct a $50,000 library in every county in the United States each year.
3. Construct annually a $150,000 hospital in each county.
4. Employ 10 full-time school and public health doctors and 10 full-time school and public health nurses in every county in the country.
5. Purchase 10 new modern school busses in each county in the United States each year.
6. Maintain 1 psychiatric and behavior clinic in every county in the United States.
7. Provide 10 full-time recreation and juvenile guidance workers in every county in the United States.
8. Bring all schools of the country up to a reasonable standard of efficiency.
9. Provide free education for the 3,000,000 children under 18 who are now not attending school.
10. Meet the pay roll of 1 junior college with 10 instructors in every county in the United States.
11. Provide all the expenses of a 3-year postgraduate course for 10,000 selected students each year.
12. Pay the full maintenance and tuition at college or technical school for 1 year of the 900,000 boys who would be conscripted under the May bill.
13. Erect a three-quarter-million-dollar trade and technical school in each congressional district each year.

This would leave an unexpended balance of $15,200,000 annually.

If in the second and subsequent years additional busses, hospitals, and libraries were not needed in each county, and a second technical school were not needed in each congressional district, the cost would be reduced to less than $2,000,000,000 a year.

While there are various possible plans of spending $3,000,000,000 annually for the social improvement of the United States, the above proposals indicate methods by which our national welfare and defense could be tremendously improved for the same amount that would be wasted at the present time on compulsory military training.

We have from 5 to 10 years during which we dare work for peace, during which we must improve our economy, correct bad conditions, solve some of our serious social problems, make democracy work. By then, we will probably know whether the United Nations Organization can give some assurance of world peace, whether the atomic bomb can be controlled, whether some other nation or group of nations is arming and preparing for a war with us. If after this period it should appear that another world war is probable, then would be the time to devise the most effective methods of warfare for the defense of our country, irrespective of expense, which might or might not include peacetime compulsory military training.

## They Call It Peace

EXTENSION OF REMARKS

OF

### HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Wednesday, December 5 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "They Call It Peace," from the Chicago Tribune of December 3, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEY CALL IT PEACE

The Senate confessed its disbelief in justice and freedom in rejecting Senator TAFT's amendment to the measure establishing the powers of the American representative on the United Nations Security Council. The proportions of the vote, 41 to 18, make it virtually certain that a majority of the Senators, as crassly stupid as they are unpatriotic, are prepared to surrender to Mr. Stettinius, the white-haired boy of Wall Street, the congressional power to make war.

It is hard to see how any decent American could object to the adoption of the Taft amendment. It provided that the American member of the Security Council, in voting on any proposal to use American troops against another Nation, be instructed to consider international justice as well as the maintenance of peace. The Senate majority is all for peace, and to hell with justice.

The peace they are going to maintain is the peace of the grave and the concentration camp. It is the peace maintained by strafing Indonesian patriots with lend-lease planes. It is the peace in which the rubber barons of the Netherlands and the colonial capitalists of France will continue to bleed slave labor in Asia and Africa for imperial glory and personal profit. It is the peace being maintained by Russia in Iran, where the Iranian Government is being prevented by armed threat from suppressing a rebellion fomented and armed by the Russians. It is the peace in which the Red Army is loosed to loot all of eastern Europe, and Polish miners are impressed to dig coal for Russia at a third of its cost.

The utter cynicism of the San Francisco Charter is made apparent to the whole world by the action of the Senators. There is no justice in it, no freedom, only the peace of a status quo, in which the enslavers of half the world are banded together in a new holy alliance to perpetuate that slavery.

There is nothing for America in such a system except the opportunity for more American sons to die—to die this time that the shackles of the oppressed may be made tighter. Men who will consent to such an arrangement, who vote against the proposal to ameliorate it by the consideration of justice, don't belong in the highest council chamber of the Nation. They belong in an insane asylum.

## Our National Debt and the British Loan

EXTENSION OF REMARKS

OF

### HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mr. WHITE. Mr. Speaker, our national debt now is, as reported November 30, 1945, $265,894,473,502.49, almost $266,000,000,000, with a Budget estimate for interest on the national debt for the 1946 fiscal year of $4,600,000,000. Now when our taxes are high and must go higher if the Congress and the administration is ever to raise sufficient revenue to pay the interest and the Government's operating expenses, we learn our Government officials are planning to make a loan of some $4,000,000,000 to Great Britain under conditions that—even if the loan is repaid—will represent

a serious loss to the people of this country.

In considering this transaction, it appears that some of our leading publications are attempting to condition the public mind to accept the arguments being made in support of this loan program. It is intimated that unless we make a liberal donation as to interest and terms, the old cry of Uncle Shylock will be raised against us; that we must open wide the Nation's purse to England or else "the British would cling to closed Empire trade and blocked sterling, thus shutting off a large part of the world—including the United States—from the general flow of commerce"; that the United States Congress and the public did not understand that United States prosperity and hope of peace depended to a significant degree on the British loan.

The following press report is taken from the October 29 issue of the Washington Post:

LOAN OF FOUR BILLIONS TO BRITAIN REPORTED—AGREEMENT AWAITS APPROVAL BY LONDON; TERMS ARE REVEALED

British and United States delegates discussing financial arrangements between the two nations were reported yesterday to have agreed tentatively on an American loan to Great Britain of approximately $4,000,000,000.

The following reportedly were terms of the agreement:

An interest rate of seven-eighths of 1 percent to run for 50 years.

No repayment of principal or interest until 1951, the loan falling due after that year in 50 annual installments.

Suspension of payments on principal or interest in any year in which Great Britain had an unfavorable trade balance.

The agreement was said to have been sent to London recently for a decision by the British Government, and an answer was expected over the week end.

This is followed by a clipping from the November 5 issue of Time magazine:

UNWITTING SHYLOCK

The United States terms sent to London were harsh enough to revive the old Uncle Shylock cry.

Britain could have the $5,000,000,000 loan she needs to reconvert her war economy, and she could have 55 years to pay. But the interest rate would be 2 percent (the United States Treasury, which can borrow for less, would make a profit at this rate); ill-prepared Britain would have to plunge again into fully competitive world trade and cast off her sea anchor, empire preference.

These prohibitive terms were eased a bit by a provision that interest payments need not begin for 5 years, and by an escape clause under which interest could be postponed in years when Britain had an unfavorable balance of trade. Both were logical United States concessions. Without the 5-year grace period Britain would simply pay the United States interest out of United States loaned capital; the escape clause flowed logically from United States assurances to the doubting British that world trade was bound to revive and float British exports up with it.

But to the British, who came to Washington in hopes of an interest-free loan and who looked upon one-half of 1 percent as the maximum interest, the terms were little short of catastrophic.

THE UNSOLD CASE

The United States negotiators had not wanted to turn the screws on the British. Secretary of the Treasury Fred M. Vinson and Assistant Secretary of State Will Clayton sympathetically understood the British case, wanted to give Britain the best deal possible.

What was possible meant what the United States Congress would stand for. And the Congress, appraising the postwar mood of the United States people, was against charity to Britain. Congress was also highly sensitive to the probability that a British loan would encourage other nations, notably Russia, to come knocking on Uncle Sam's door.

The United States Congress and public did not understand (because it had not been told clearly and authoritatively) that United States prosperity and hope of peace depended to a significant degree on the British loan. If Britain, appalled by the terms, refused the loan, these results were probable: (1) Britain would cling of necessity to closed Empire trade and blocked sterling, thus shutting off a large part of the world from the general flow of commerce; (2) Britain could scarcely participate, as the United States hoped she would, in the Bretton Woods plans for freeing currency exchanges and stimulating world trade; (3) currency controls and bilateral trade agreements would restore the dangerous economic warfare of the thirties.

Moreover, the United States Congress and people had never been shown that the loan was a credit for United States food, raw materials, machinery. The United States economy in a critical period would be stimulated by exports to Britain.

Nub of the failure was that the United States negotiators and Britain's persuasive Lords Keynes and Halifax had concentrated on technical points in their 7 weeks' negotiations, instead of taking time out to do a real selling job. Result: Public opinion in both countries was more against the loan after the 7 weeks than before.

BELTS AND MILLSTONES

Britons refused to feel guilty about Empire preference trade restrictions. British negotiators in Washington argued that high American tariffs caused Empire preference in the first place and that it was Britain's only weapon for forcing down United States trade restrictions in the future.

Afraid to lose the meager economic defense afforded by preference, Britons, as unschooled as the United States public in the loan's real meaning, were an easy mark for imperial isolationists. Chubby Tory M. P. Robert John Graham Boothby, who all along had been against the loan, against unblocking sterling, against Bretton Woods, took one look at the United States offer, said it would mean "dismemberment of the British Empire." He asked Britons, whose belts have been tight for 6 years, to tighten them further, and predicted, "We can get through in any circumstances."

Belt tightening might preserve Britain from disaster. But it could never restore her to prosperity, nor substitute for dollar balances, nor could it open up free world trade.

The Labor Government was likely to agree with Tory Spokesman Boothby that the United States terms would be an impossible millstone for Britain to carry. Washington expected the British Cabinet to send back a counterproposal which would not be even close to the present United States proposition.

Then, only statesmanship of the highest order could swing the public of both countries behind the deal, and save a keystone of postwar international economic order and progress.

The American people in considering this loan should take into consideration British resources and the record of our dealings with the British Empire to say nothing of the sacrifices we have made to make good Churchill's proposition that the British Empire is not to be dismembered. This record should be of extreme interest to the American people.

LEASE-LEND

There is inserted here a schedule of lease-lend figures obtained from the State Department:

| | |
|---|---|
| Total lease-lend aid to British Empire from March, 1941 to June 30, 1945 | $29,000,000,000 |
| (This includes value of goods shipped, various services rendered such as boats repaired, also cost of shipping goods to various parts of Empire.) | |
| Total reverse lease-lend to United States from British Empire | 5,295,000,000 |
| (Of this $3,797,000,000 came from United Kingdom, rest from Australia and other British countries.) | |
| Lease-lend aid from United States to: | |
| United Kingdom | 13,499,000,000 |
| Egypt | 1,995,000,000 |
| India | 2,021,000,000 |
| Australia | 1,154,000,000 |
| New Zealand | 209,000,000 |
| South Africa | 233,000,000 |
| Bahamas | 57,000,000 |
| Canada | 618,000,000 |

(Canada did not receive this aid—went on United Kingdom account for British munitions or reshipments.)

(Figures just above just represent value of goods shipped. Difference between that total and 29,000,000,000 is for services, cost of shipping, etc., and small outside loans.)

In addition to our lease-lend contribution to the British Empire, and the reverse lease-lend payments received at exorbitant prices, we have made many other contributions. The report of another class of these huge outlays is taken from an Associated Press dispatch appearing in the November 6 issue of the Washington Post:

WAR INSTALLATIONS BUILT ABROAD BY UNITED STATES COST $2,413,000,000

Ninety-five percent of the construction abroad consisted of military installations. And more than half the total amount spent in construction—$1,327,000,000—financed the building of bases in the British Commonwealth, the report noted. The break-down:

United Kingdom, $23,000,000; Australia and New Zealand, $238,000,000; Canada, $370,000,000; India, $126,000,000; Bermuda, $77,000,000; British Caribbean possessions, $186,000,000; British Pacific islands, $146,000,000; Newfoundland and Labrador, $123,000,000; other areas, $38,000,000.

Of the grand total spent on construction abroad, including the British Commonwealth expenditures, $192,000,000 was spent on Japanese islands taken in the Pacific; $173,000,000 in the Philippines; $252,000,000 in the American Republics; $73,000,000 in China; $54,000,000 in Greenland; $122,000,000 in France and her possessions; $67,000,000 in Iran; $64,000,000 in Italy; and $89,000,000 in various other sectors.

We know that United States ships carrying British troops were required to pay Suez Canal tolls while British ships during the war passed through the Panama Canal toll free, and that we gave 50 destroyers—before we entered the war—for the privilege, under a leasing arrangement, to construct defense bases in the British possessions.

GOLD RESERVES IN BRITISH MINES

The British have proven up and have yet to mine 446,660,000 ounces of gold valued at $35 per ounce, which amounts to $15,633,100,000, but gold has a much

higher value than $35 per ounce abroad. The table of British unmined gold reserves inserted here was obtained from the Department of the Interior:

[In thousands of fine ounces]

| | |
|---|---|
| Africa: | |
| Anglo-Egyptian Sudan | 10 |
| Bechuanaland | 300 |
| Egypt | 50 |
| Gold Coast | 12,000 |
| Kenya Colony | 1,400 |
| Nigeria | 40 |
| Rhodesia | 15,000 |
| Sierra Leone | 1,400 |
| South West Africa | 20 |
| Swaziland | 20 |
| Tanganyika | 2,500 |
| Uganda | 200 |
| Union of South Africa | 260,000 |
| Asia: | |
| British India (including Burma) | 5,000 |
| Malay States | 700 |
| Sarawak | 300 |
| Europe: United Kingdom | ------- |
| North America: | |
| Canada | 100,000 |
| Newfoundland | 400 |
| South America: | |
| British Guiana | 700 |
| British Honduras | 20 |
| Oceania: | |
| Australia (including Tasmania) | 32,000 |
| Fiji | 2,400 |
| New Guinea | 8,000 |
| New Zealand | 3,500 |
| Papua | 700 |

The estimated grand total is 446,660,000 fine ounces.

The above table is an estimate compiled by the Department of the Interior. We now come to a table limited to the measured unmined gold reserves of the British Empire compiled by the Treasury Department, together with a rough estimate of the total unmined gold reserves of Great Britain amounting to 700,000,000 fine ounces.

MEMORANDUM ON THE GOLD ORE RESERVES OF THE BRITISH EMPIRE

The measured underground gold ore reserves of the British Empire have been estimated by the Bureau of Mines as follows:

*Measured gold ore reserves*

[In millions of ounces]

| | |
|---|---|
| Country: | |
| Union of South Africa | 57 |
| Canada | 34 |
| Southern Rhodesia | 4 |
| Gold Coast | 9 |
| Australia | 11 |
| British New Guinea and New Zealand | 4 |
| Fiji and Tasmania | 1 |
| Tanganyika | 5 |
| Total | 125 |

Measured ores refer to those ores which have already been surveyed and staked out. Although the bulk of these measured ores are commercially workable, it cannot be assumed for the total, which may include known and measured ores not worth mining at present prices.

The practice of mining companies varies, but many companies measure a sufficient quantity to cover the amount they expect to extract during the next 4 or 5 years.

Total commercial reserves for the British Empire, that is, total ores which are economically workable, are estimated to be in the neighborhood of 700,000,000 fine ounces. This is based on the assumption that South Africa has enough ore to continue its present rate of production of approximately 12,000,000 ounces for 40 years, which would amount to a total of approximately 500,000,000 fine ounces of gold underground. It is estimated that another 200,000,000 fine ounces of gold will cover the other gold-producing areas of the British Empire. These figures are, of course, very rough estimates.

The 700,000,000 appears to be nearer the correct figure when the fact is taken into consideration that an estimate of the gold reserves in South Africa alone, obtained from the Department of the Interior at the time the first lease-lend bill was under consideration, placed the South African unmined gold reserves at well over 400,000,000 ounces.

THE PRESENT VALUE OF GOLD

The following table on gold values in the several nations is taken from the Mining Journal of October 15, 1945:

GOLD AS HIGH AS $89 PER OUNCE

The following is a partial schedule (obtained from the U. S. Treasury) of gold prices prevailing in foreign countries:

| Country or city: | *Per ounce* |
|---|---|
| Chile | $88.00 |
| Argentina | 48.00 |
| Bombay | 62.40 |
| Greece | 80.00 |
| Cairo | 88.50 |
| Bagdad | 89.00 |

When foreign countries will accept gold at these prices in payment for their products, shipped to other countries, the United States is going to find itself out on a limb in demanding over twice as much gold for its exports. Trade is going to go to the nations which will accept the least quantity of gold in payment.

The amount of the gold reserves of the Government of England and its dependencies, as well as the dollar holdings of the British family of nations, is a deep dark secret. But we do know that during the war period the British have been permitted to make heavy withdrawals of our monetary gold stocks from the United States Treasury and transfer to British ownership. One reason given by informed sources and off the record is that in making British purchases during the war, United States currency was not acceptable in some quarters of the Empire. United States gold was demanded and given.

The following statement and table of the United States gold withdrawals from the United States Treasury was obtained from the Treasury Department:

CHANGES IN THE MONETARY GOLD STOCK OF THE UNITED STATES, JANUARY 1, 1943, TO OCTOBER 31, 1945

On January 1, 1943, the value of the monetary gold stocks of the United States amounted to $22,726,000,000, as is shown in the attached daily statement of the United States Treasury for that date. On October 31, 1945, the value of the monetary gold stocks of the United States amounted to $20,037,000,000 (daily statement attached). The decrease of $2,689,000,000 in the value of the monetary gold stocks of the United States which occurred between these two dates was due to the sale of gold to foreign governments and central banks. The attached tables show purchases and sales of gold in the United States by foreign countries through June 30, 1945. Later figures are not available.

This decrease in United States monetary gold stocks reflects primarily changes in our balance of international payments on goods and service account which have resulted from developments arising out of the war. Among these changes are the increase in our purchases abroad of strategic and other materials needed in the war effort and the curtailment in our exports of civilian goods not essential to the prosecution of the war.

*Withdrawals of gold in the United States, by foreign countries*

[In millions of dollars]

| Country | 1943 | 1944 | First 6 months of 1945 | Total |
|---|---|---|---|---|
| Argentina | 219.5 | 159.6 | 91.8 | 470.9 |
| Brazil | 131.7 | 69.8 | 10.0 | 211.5 |
| China | 20.0 | 25.0 | 124.4 | 169.4 |
| Chile | 18.5 | 29.0 | 1.0 | 48.5 |
| Cuba | 30.0 | 65.0 | 60.0 | 155.0 |
| Portugal | 10.9 | 62.8 | 27.9 | 101.6 |
| Switzerland | 38.9 | 78.8 | 53.9 | 171.6 |
| Turkey | 30.9 | 59.8 | 5.0 | 104.7 |
| Uruguay | 31.4 | 35.9 | 18.0 | 85.3 |
| United Kingdom | 50.0 | 600.3 | ..... | 650.3 |
| Venezuela | 21.5 | 41.0 | 50.0 | 112.5 |
| Other countries | 173.8 | 77.0 | 21.5 | 272.3 |
| Total | 786.1 | 1,304.0 | 463.5 | 2,553.6 |

It will be noted from the figures presented in the above table that our ally, England, alone withdrew well over a half billion dollars in gold at a time when in many parts of the British Empire the value of gold was much higher than the fixed price of $35 per ounce in the United States.

UNITED STATES SUPPLIES BRITISH SILVER COINAGE WITHOUT COST

In addition to supplying England with half a billion dollars in gold, our Government generously furnished Great Britain 300,000,000 ounces of silver, practically all of which was coined and put into circulation at a higher currency value than the American silver dollar.

The following table has been obtained from the Monetary Research Division of the Treasury:

*Silver lend-leased by the United States to foreign governments*[1]

| Country: | *Millions of ounces* |
|---|---|
| United Kingdom | 88.1 |
| India | 226.0 |
| Australia | 11.8 |
| Netherlands | 56.7 |
| Ethiopia | 5.4 |
| Saudi Arabia | 18.9 |
| Fiji | .2 |
| Belgium | .7 |
| Total | 407.8 |

[1] All silver lend-leased to foreign governments must be returned to the United States on an ounce-for-ounce basis. The silver lend-leased was used for industrial purposes related to the war, for purposes of price stabilization, and for coinage.

This loan of 325,000,000 ounces of silver is to be melted down and returned to us when the British reestablish their credit control and paper money circulation in their own country and in their dependencies.

Right here, our Government and the American people should take warning from our past experience with British manipulation of silver money after the last war when they extracted and sold 90,000,000 ounces of silver obtained by debasing their subsidiary coinage which was reduced from 0.925 fine to 0.500 fine and then shifted the money of India from a gold exchange basis to a gold bullion

basis. This money manipulation was operated to retire and replace India silver coinage with paper currency and was followed by dumping the melted-down silver bullion on the world market—a scheme that broke the price of silver bullion to lower than 25 cents per ounce, thereby destroying the purchasing power of our oriental customers, which started a price decline and business stagnation that spread across the country with disastrous results to our national economy.

In light of this experience, surely the United States Treasury officials will not stand idly by and let another depression overtake the country by a repetition of British silver manipulation.

BRITISH MONEY TABLE

The money value of silver in the United States silver dollar is $1.2929 per ounce. By consulting the following British money table, we find that the money value of silver in most British countries is in excess of the nominal value of silver in the United States silver dollar:

BRITISH MONEY TABLES

One shilling is equal to approximately 20 cents.

There are 20 shillings to the pound.

There are 12 pence in a shilling.

The value of a penny in our money is equal to 2 cents.

Sixpence equals one-half shilling.

The minor coins of the British are represented by: 2 pence—tuppence; 3 pence—threepence; 4 pence; 6 pence.

Anything above 2 pence is minted from silver.

One-half penny—hapenny—is equal to one of our cents.

*Value of ounce of silver in silver currency in the British Empire*

| | |
|---|---|
| Australia | $1.1146 |
| Indian rupee ($^{11}/_{12}$ fine) | .8728 |
| Indian rupee (0.500 fine) | 1.5950 |
| Canada | 1.6666 |
| Egypt | 1.2797 |
| Ireland | 1.4790 |
| New Zealand | 2.0688 |

BRITISH DIAMONDS

The value of diamond jewels measured by carats varies according to quality and size and is variously estimated. Your investigator is unable to obtain any estimate of the unmined British diamond reserves. Investigation discloses that the Government and the operating companies are very close-mouthed as to their diamond resources and mining operation. The figures on the British diamond reserve have been obtained from the Department of Justice, who has had occasion to investigate the diamond industry cartels recently. The Assistant Attorney General's letter is inserted herewith:

DEPARTMENT OF JUSTICE,
UNITED STATES COURT HOUSE,
*New York, N. Y., November 29, 1945.*

Hon. COMPTON I. WHITE,
*House of Representatives,*
*Washington, D. C.*

MY DEAR CONGRESSMAN WHITE: Your letter of November 26, addressed to Edward S. Stimson, was received today. Mr. Stimson advises that the diamond reserves of the British Empire, according to an estimate made by Don C. Bliss, of the American Embassy in London, are 43,847,000 carats. The same estimate places the diamond reserves of the Belgian Congo and Portuguese Angola at 116,000,000 carats. The British Empire reserves are largely reserves of gem diamonds, while the Belgian Congo and Portuguese Angola reserves are chiefly of industrial diamonds.

Mr. Bliss has a whole series of mimeographed reports on the diamond industry which can be obtained from the State Department in Washington. The information above is obtained from his report No. 90, American Embassy, London, England, February 17, 1944, the subtitle of which is "VI. Production Trends." The general title of the whole series is "Production and Distribution of Industrial Diamonds."

With kind regards,

Sincerely yours,

WENDELL BERGE,
*Assistant Attorney General.*
LAWRENCE S. APSEY,
*Chief, New York Office, Antitrust Division.*

The value of diamond jewels is variously estimated from $200 to $1,200 per carat. In making a conservative estimate of the British diamond reserve at $200 per carat, it appears the British have a reserve of diamonds amounting to $8,769,400,000.

BRITISH-OWNED SECURITIES

The most recent estimate of British foreign investment including those in this country has been obtained from the British Empire Section of the Department of Commerce which is inserted herewith:

In 1938 British investments were estimated to total approximately £4,100,000,000 according to the computations made by Sir Robert Kindersley and adjusted upward to allow for his acknowledged understatement of British investments in the United States. A later estimate for the same year has placed the total at nearly £4,600,000,000, but this estimate includes some securities which Kindersley evidently omitted as of doubtful value. The distribution of these investments was, roughly, as follows:

| | |
|---|---|
| Canada | £537,000,000 |
| Australia and New Zealand | 667,000,000 |
| South Africa and Rhodesia | 254,000,000 |
| India | 545,000,000 |
| Other British countries | 315,000,000 |
| Total British countries | 2,318,000,000 |
| Europe | 345,500,000 |
| United States | 549,000,000 |
| Argentina | 390,000,000 |
| Brazil | 160,000,000 |
| All other foreign countries | 820,000,000 |

The magnitude of some of these items is open to question, but the relationships are undoubtedly along the lines indicated.

At the end of 1944 the estimated total of British investments in all countries was between £3,000,000,000 and £3,500,000,000.

British Government had two and one-half billions in bonds and investments in this country in 1942 and have since sold eight hundred million.

They secured an RFC loan of $390,000,000, which they reduced by selling the $800,000,000 mentioned above. The loan is now $260,000,000, covered by pledged assets amounting to $700,000,000.

THE OLD BRITISH DEBT

The British still owe us money from the last war, and it does not appear that they ever intend to pay. As reported by the Treasury, the amount owed to the United States by Great Britain as of January 1, 1945, under the funding moratorium agreement of the last war was $2,452,714,782.58.

The American people are being cautioned concerning the proposed British loans from many high financial sources. Particular importance attaches to an editorial appearing in the home-town paper of the former Federal Loan Administrator, Jesse Jones, which is presented herewith:

[From the Houston Chronicle of October 16, 1945]

CAUTION ON BRITISH LOAN NEEDED

American and British representatives attempting to establish the terms under which the United States may extend financial aid to Great Britain are now reported to be centering their conversations on a $5,000,000,000 loan running for a period of from 50 to 55 years at an interest rate not yet established but described as purely nominal. The discussions are said in addition to contemplate an agreement under which there would be no payment of interest or principal for a period of 5 years.

Any such plan would mean that the American taxpayers would have to pay rather dearly for the privilege of extending aid to Britain. The Government at the present time is paying approximately 2½ percent for its borrowing of long-term money, so that it would have to pay $125,000,000 annually—or a total of $625,000,000—for the $5,000,000,000 loaned Great Britain during the 5-year period during which the borrowers paid us nothing. To this must be added the differences between the interest which the United States receives in subsequent years and what the Treasury pays for the money. It is probable that the differential may increase to $1,000,000,000 what it will cost the taxpayers of the country to give Great Britain the assistance her representatives say she must have. The cost would be greater if Great Britain failed to pay any part of the principal.

The negotiators are, in addition, looking very far into the future when they talk of making a loan with a maturity of from 50 to 55 years. That covers a length of time in world history in which much can happen.

Two world wars have been fought at an interval of only 25 years, and it took Great Britain less than half that time to repudiate the debt she owed the United States after World War I. That is not an encouraging record on which to base a future commitment running for half a century. No ordinary borrower could expect to get a dollar's worth of credit under similar circumstances.

That this may be the view which Congress will take has been indicated by as powerful a figure as Senator WALTER F. GEORGE, of Georgia, chairman of the Senate Finance Committee. Commenting on the reports that the American and British negotiators were about ready to recommend the terms of the loan, Senator GEORGE said: "I don't think this is the time to be pouring out a lot of money to any nation on earth. There are sound reasons why a policy of extreme caution should be followed."

Senator GEORGE is right. A loan to Great Britain should be considered with extreme caution. It should not be made at the expense of the American taxpayer, and only if so secured that by its terms and conditions the United States is assured of repayment.

POPULATION OF THE BRITISH EMPIRE

The following table has been obtained from the Bureau of the Census today:

*Most recent estimated population of the British Empire, 539,870,000*

| | |
|---|---|
| England and Wales | 41,460,000 |
| Scotland | 5,006,700 |
| North Ireland | 1,279,745 |
| Eire | 2,949,713 |
| Australia | 7,229,864 |
| British India | 295,810,000 |
| Union of South Africa | 9,589,898 |
| South Africa | 1,083,121 |
| West Africa | 26,191,342 |
| Mandated territory in southwest Africa | 347,442 |
| South Rhodesia | 1,448,000 |

| | |
|---|---|
| North Rhodesia: | |
| Native | 1,366,641 |
| European | 18,745 |
| Canada | 11,506,655 |

THE QUESTION

How much must a nation of 130,000,000 people give to an Empire of 540,000,000 people with all the vast land and water resources, the rubber, petroleum, timber, minerals, and precious metals found in an Empire on which the sun never sets?

## Peace Needs World Conscience

EXTENSION OF REMARKS
OF
**HON. LOUIS LUDLOW**
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 4, 1945*

Mr. LUDLOW. Mr. Speaker, on last Sunday the Indianapolis Star printed a leading editorial which I think all Americans should read. It was entitled "Peace Needs World Conscience."

We face this fundamental fact: World security—and that means our national security—depends upon the establishment of a united world brotherhood. If we miss our opportunity to contribute to the establishment of the brotherhood of man and militarize our country to the *n*th degree through forced military training and thus provide ourselves with a big gun to brandish in the face of the world, we will negative all plans for a united world brotherhood and the individual, to use the expression coined by this editorial, will find himself "the helpless pawn of faltering leadership."

As the editorial so well puts it, "America is the natural leader in the world's crusade for peace." Now is the time for the world's conscience to assert itself. I commend this editorial to all Americans. It is as follows:

PEACE NEEDS WORLD CONSCIENCE

More than the opportunity to utter grateful prayers for peace is involved in widespread attendance of devout folk at church services. The world must rely to a greater degree on the spirit of religious faith if that peace is kept.

Blundering statesmanship, selfish greed, old hatreds made a mockery of the idealism which soared to new heights after World War I. The same elements of militant nationalism so far have ignored the little people of earth as suspicion clouds the bickering over secrets of nuclear energy.

More than ever there is world consciousness, but no world conscience. Leaders talk glibly of the good-neighbor policy, but little progress has been observed toward achieving the brotherhood of man.

Millions are fearful that the world will become a shambles in another war. Every normal individual, wherever he may live, longs for peace, yet seems once more to be nothing but the helpless pawn of faltering leadership.

In this period of confusion man looks beseechingly for some practical application of the Sermon on the Mount to guide despairing humanity from the murk of despondency to the sunlit heights of world friendship.

This does not entrust to religious leaders the responsibility of making a new peace organization of the Nation's work. Few churchmen are equal to that task. But the spiritual conscience of the world must be mobilized to sweep aside the old pattern of suspicious diplomacy by the strong. The small countries have the right to a voice in determining their fate.

America is the natural leader in this world crusade for peace. It covets no territory. It seeks no buffer states bent to its political will. It regrets the compulsion of reasonable preparedness.

The other countries must acknowledge dependence on the Almighty. There can be no other way to reach the distant goal of brotherhood, where echoes the coming Christmas message of "Peace on earth; good will to men."

## Tom Turkeys Halved for Shipment

EXTENSION OF REMARKS
OF
**HON. HOMER D. ANGELL**
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mr. ANGELL. Mr. Speaker, the raising of turkeys is a big industry in Oregon. When I was in my district recently I visited the plant of the Northwest Poultry and Dairy Products Co., which has recently made extensive improvements in its modern plant for processing and preparing for the market a substantial portion of Oregon's huge turkey crop. Many of these delicious birds make Thanksgiving and Christmas more enjoyable here in the far East. This plant alone has a capacity of 150 carloads of turkeys during a single season by utilizing mass-production methods in a modern plant. Another innovation which has increased its output materially is a method invoked by it of cutting the big birds weighing 25 pounds or more in half by an improved machine and shipping them in refrigerator cars to eastern markets after the fowls are Government inspected, wrapped in cellophane, and packed in attractive boxes. I include as a part of these remarks a descriptive article by Frank Barton, which appeared in the Portland Oregonian December 2, which explains in some detail this Oregon industry:

TOMS HALVED FOR SHIPMENT—PLAN EXPECTED TO IMPROVE MARKET

(By Frank Barton)

An improved market at better prices for the exceptionally large broad-breasted tom turkeys produced by Oregon turkey raisers is expected to be the result of an experiment in marketing these birds now being tried out by the Northwest Poultry & Dairy Products Co., it was announced Saturday.

The Portland concern is cutting these mammoth birds in half and shipping them to the eastern market in refrigerator cars. Each half is sufficiently large for a substantial turkey roast.

The new method does away with the sales resistance caused by the fact that some of Oregon's prize gobblers are too big for many of the present-day small families.

C. W. Norton, president of Northwest Poultry & Dairy Products, pointed out that Oregon gobblers have been selling at 5 cents a pound less than the hens on the New York market in spite of the fact that the meat of the tom is recognized to be superior. He said he expected to cut this differential to not more than 2 cents by developing a market for the halved gobblers.

Not only that, but he forecast that a year-round market could be created for these birds compared with the festive market around Thanksgiving and Christmas for the whole turkeys. A 25-pound turkey gobbler will provide two 12-pound roasts in the halved condition and thus furnish turkey dinners for two families instead of one.

NEW BUILDING BUILT

So far, a quarter of a million pounds of the halved birds have gone east from the Portland plant at 232 Southeast Oak Street, and Norton said he was encouraged by the reception.

The innovation has been carried out in connection with an expansion program which has more than doubled the capacity of the Portland plant to handle and ship turkeys, and at the same time more than doubled the pay roll.

A new two-story addition, 78 by 102 feet, has been erected and new equipment installed at a cost of $65,000. Included is a modern conveyor system which places the operations of picking, dressing, and packaging the turkeys on a mass-production-line basis. Picking is done by machinery as the turkeys move along the conveyor. All fowls are Government inspected, wrapped in cellophane, and packed in boxes for shipment to eastern markets.

The Portland plant, which started its new conveyor system last week, now has a capacity of 150 carloads of turkeys during a single season. The pay roll is 125 to 130 persons.

## The Idaho Farmers Speak Up

EXTENSION OF REMARKS
OF
**HON. COMPTON I. WHITE**
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 5, 1945*

Mr. WHITE. Mr. Speaker, one of the most wholesome influences in our country today is that of the people engaged in agriculture speaking through their farm organizations.

It is certainly reassuring to attend meetings of the local of the Farmers Union or the local grange and listen to the discussions of those informed people on national policies and national issues.

The members of these farm organizations represent the very backbone of our Nation and the hope of the Nation's future stability. It appears that the membership of the Washington and Idaho Farmers Union have had under consideration some of our national problems and have embodied their opinions and recommendations in a set of resolutions which it is my privilege to place before my colleagues. I earnestly recommend the following resolutions for their thoughtful consideration and appropriate action:

Whereas there are vast surplus war commodities the United States Government has bought for the prosecution of the war; and

Whereas many of these commodities are stored in various Government owned warehouses throughout our region; and

Whereas a vast amount of these commodities are needed on our farms in Washington and Idaho; and

Whereas our farm cooperatives are in a position to buy these commodities on the par with private dealers: Therefore be it

*Resolved*, That the Farmers' Educational and Cooperative Union of America in Washington-Idaho State convention urge the Surplus Commodities Board make said surplus commodities available to our farm cooperatives the same as to private dealers; and be it

*Further resolved*, That there be included on the Board establishing policies relative to surplus property a representative of the farm groups.

---

Whereas the Columbia River Valley has vast undeveloped resources and is the last frontier in this country for a large increase in population, and the natural resources have only just begun to be developed; and

Whereas a Columbia Valley Authority promises the full development of the vast potentialities of the region and promises the coordination of measures for flood control, irrigation, reclamation, navigation, soil conservation, reforestation, watershed management, promotion of wildlife and aquatic life resources under direct management of the respective States, development of mineral and recreation resources, industrial development, and the full utilization of the power potentialities of the Columbia River Basin, with resulting low rates for the people of the region; and

Whereas the establishment of Columbia Valley Authority at present session of Congress offers assurance of an increased economy for the people of the valley, and security to many thousands of returning servicemen and demobilized war workers: Therefore be it

*Resolved*, That the Washington-North Idaho Division of the Farmers Union in convention on October 18, at Spokane, Wash., do hereby urge the immediate establishment of a Columbia Valley Authority, an autonomous board directly responsible to the President and the National Congress.

Copies of this resolution to be sent to our Congressmen and Senators.

---

*Be it resolved by the Ross Point Local, No. 395, of the Farmers' Educational and Cooperative Union of America*, That we oppose the letting of any individual or group of individuals or corporations have any control whatsoever over the atomic energy principle or patents.

That we further favor the use of these discoveries for the benefit of each and every individual of this Nation, that through socialization of such principles and patents the interest of the United States and the people thereof will benefit commercially and be in a position to compete with other nations who may in the course of time make these same discoveries.

---

In the reconversion period, groups are desperately seeking to obtain special privileges for themselves without regard to others. If we are to avoid disaster in agriculture, it is essential that we maintain a balanced economy, as agriculture is the base of our economy and it must be kept on a parity with the rest of our industries: Be it

*Resolved by the Farmers' Educational and Cooperative Union of America, Washington-Idaho Division*, That we demand all necessary programs and action be taken to keep agriculture on a parity with the rest of our industries.

---

*Be it resolved by the Ross Point Local, No. 395, of the Farmers' Educational and Cooperative Union of America*, That we go on record against compulsory military training, because we believe that our youth has certain inherent ability and initiative to cope with situations as they arise and that such an act is contrary to the American system of freedom.

---

Whereas Army engineers are proposing the building of a huge earth dam by the Government near Springston, Idaho; and

Whereas said dam would flood 31,000 acres of farm land and make it necessary for hundreds of farmers to find homes elsewhere; and

Whereas the benefits of said dam would be practically entirely for the interests of private power companies; and

Whereas a greater threat of flood is added as well as a threat to the mining industry: Therefore be it

*Resolved*, That we go on record as opposing the building of the Springston dam.

---

## 1919, Siberia—1945, China?

---

EXTENSION OF REMARKS

OF

## HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 5, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I include an article by Marquis Childs from the Washington Post of December 5, 1945. This is an article on China, which I think magnificently states the case:

WASHINGTON CALLING

(By Marquis Childs)

AMERICA'S POSITION

Twenty-five years ago there was great pressure on the Government in Washington to line up in Russia's civil war on the side of the Czarist officers who were fighting the Bolsheviks. American troops were in Siberia, and a few American soldiers fought in trenches with the British outside Archangel, on the other side of Russia's great empire.

That futile effort to put down a mass movement helped to feed the suspicion with which the Russians regarded the rest of the world. It is one of the reasons why it is so hard today to come to any real understanding with the Soviet Union.

There were Americans then who shut their eyes to reality. They ignored the long conflict between Czarist absolutism and the fermenting unrest of the mass of the Russian people. They ignored the terrible hardships and suffering of the Russian people in the war; worse than in any other country, in World War I as in World War II.
